NEW YORK, THURSDAY, JULY 3, 1873.

The Week.

THE General Term of the Supreme Court of this District has just decided, Judge Barbour dissenting, in the suit of Mrs. Putnam for damages for the murder of her husband in a street-car, that a common carrier is bound "not only to guard each passenger from violence and the assaults of its own agents and employees, but from the assaults and violence of other passengers carried in the same conveyance, and from other causes of discomfort or injury which could have been reasonably anticipated or prevented." Judge Barbour concurs in this as regards steam railroads and steamboats, but dissents as to street-cars, on the ground that a passenger may make his escape from these latter vehicles. Now, it is not for us to say whether the decision of the majority of the court is good law—the Court of Appeals will decide that; but no reasonable man can doubt that it ought to be good law, and that until it is good law the public will, in the present state of corporation morals, have no proper guarantee for the proper selection and good behavior of car conductors and drivers, on whose temper, courage, and general efficiency the comfort and safety of so many women, children, and delicate persons are every day dependent. But we ought to call the attention of reformers interested in this subject to the fact that recent decisions of the Court of Appeals of this State tend to establish a law that the conductor of a horse-car is not "the driver of a carriage" under the statute; and, moreover, that if he commits any act of violence or outrage on a passenger, as long as it is plainly not committed in the discharge of his duty, and as long as he cannot suppose that it is, the company is not liable at common law for his acts. This, of course, if sound, removes at once one of the strongest motives for the employment of respectable, careful, and good-tempered men. If a conductor thrashes a passenger for reproving him, for instance, the company is not responsible, because no conductor thrashes passengers, or supposes himself empowered to do so, in the ordinary course of his duty. The remedy, we need hardly say, is not to change the law, but to elect judges, Illinois fashion, to decide all car cases against the companies.

The death of Mr. W. W. Whiting may have some modifying influence upon Massachusetts politics; if not, the facts in that matter may be said to stand as follows at the present writing: Senator Boutwell and Secretary Richardson are reported as asserting, on their return from Cambridge and Boston the other day, that Butler would assuredly get the regular nomination. This is held to prove that at least he will have control of the Federal patronage, which, it is added, will be his main reliance. It is asserted that the appointment of Sanger as District-Attorney in Boston was, after all, not a personal triumph of Sanger's, as some anti-Butlerites have said, but really a triumph for the Butlerites and Boutwellites, Boutwell having earnestly begged that Sanger should have his reward, the President being at the moment in the mind to yield to Mr. Hoar's advice and give the office to Judge Devens, an old companion in arms. But Boutwell's urgency broke up this plan. On the whole, then, says a correspondent who ought to be well informed, "my impression is that Butler has now as good a chance to be nominated as Governor Washburn or any other man has, but that this chance will diminish with each succeeding week. Still, there is great apathy among the leading Republicans in all parts of the State. . . . And they may let the nomination go by default."

On the anti-Butler side of the account, certain other considerations are put forward. Nearly all the Boston press—all of it that is of much account—and nine-tenths of the country press, are already outspoken in opposition to Butler. The *Advertiser* speaks of receiving "assurances from all parts of the State that its name must be kept exalted and pure." For this and other reasons it expresses a confidence equal to the *Journal's* that Butler is certainly doomed to disappointment, and that the political prospect is perfectly satisfactory. The various Republican State Conventions recently held have, with one accord, denounced the Salary Bill, which Butler and his yoke-fellow, Senator Carpenter, uphold and applaud, and in particular the Maine Convention (understood to be speaking for the adroit Mr. Blaine) has very pointedly declared that the bill must be repealed. Thus, then, whether the Worcester Convention, nominating Butler, approves or condemns the bill, Butler is hurt by its action. Furthermore, Butler has within the past few days been publicly upbraided in a United States Court, by a well-known Republican, as having been thievish while in command at the South. Altogether, the contemplation of these pros and cons is rather a melancholy task, and is not made less so that the two parties of reform—the temperance men and the labor reformers—are understood to be quite as fond of Butler as of any other candidate. Outside of the State the Democratic press appears to think that Butler is a candidate about good enough for his party, and that it is a piece of impudence for the Republicans now to undertake to condemn the back-pay bill which they themselves passed. There is, indeed, a certain amount of what may be called dilatory prudence in it; but these Democratic journals say nothing of the relative honesty of the Democratic and Republican members in that transaction.

It will be recollected that the question of the reading of the Bible in the public schools came up some three or four years ago in Cincinnati, and made a great stir, the population of the city being, we think, not very unevenly divided in opinion. The action of the Board of Education was to issue two rules, of which the first declared that "the true object and intent of the rule is to enable the children of all sects and opinions in matters of faith and practice to enjoy alike the benefits of the school fund"; and the mandatory part of the rule was to the effect that "religious instruction and the reading of religious books, including the Holy Scriptures, are prohibited in the schools of Cincinnati." The second obnoxious rule repealed so much of another rule as directed that the opening exercise in all the intermediate and district schools should be the reading of a portion of the Bible. These rules were naturally displeasing to many persons, and legal steps were taken to overthrow the action of the Board. The Superior Court of Cincinnati being applied to, made perpetual an order enjoining the Board and restraining it from carrying the rules into effect. Ever since then this decree of injunction has been before the Supreme Court of the State, and that Court has now removed the injunction, and the Board's order stands. It is not true, however, that the whole question known as "the Bible in the Cincinnati schools" was before the Supreme Bench. How far it was before them their decision makes plain: The reading of the Bible in the schools is one of two things—a mere exercise in reading from a text-book, as from McGuffey's 'Readers,' or else it is a religious exercise, a mode or form of worship. Now, if it be the first, the Board's authority is paramount, and not to be controlled by any court; if exercised rashly or otherwise badly, the people have the remedy in their own hands, and can elect a new Board. If, however, the Board orders the reading as a religious exercise, and some taxpayer objects on the ground that one of his rights are invaded, why, then the question will be before the judicial tribunals for decision. We may well believe that it will be no easy one to decide. Meantime, for the benefit of the sticklers on either side, we may point out that Protestants can no more make a history or a philosophy, or perhaps a reading-book, for a certain large section of their fellow-citizens, than they can translate the

Bible for them after a satisfactory fashion, or so read it as to please them. The matter is a deep one, which merely issuing school rules is not going to settle finally, and all parties may as well consider carefully what ground they will take, and why.

The law of libel in Pennsylvania is such as to imbue the mind of the Philadelphia journalist with caution, it being very like the law that found so much favor in the eyes of Mr. Oakey Hall a year or so ago, and it has been reserved for a New York paper, the *Times*, to print some exposures of the Philadelphia Rings. This class of exposures have lost most of their power to startle the American mind, inured as it is to rings; but these exposures, notwithstanding, are not less than horrible. As a brief indication of the whole state of things in the second city of the Union, we may say that public opinion and the popular will have now almost nothing at all to do with the selection of officers in Philadelphia, and that the Philadelphia leaders pretty much rule not only the city but the whole State. "We don't care a damn who is elected; we are going to count our man in," are words actually used last year by one of these men when he was told that Hartranft would be beaten, and no one doubts that the counters lived up to the spirit and letter of the words when the October count was made. "We did do the thing pretty rough last October," was the remark made the other day to the *Times* correspondent by one of the Ring officials, himself, it is freely charged, holding office through fraud. How they have been able to tie the city hand and foot in this manner was that, by their influence at Harrisburg, they passed through the Legislature a special election law for the government of elections in Philadelphia. In the rest of the State, the judges of election are chosen under the system of minority representation; by the special law, the judges of election in Philadelphia were to be the city aldermen.

A Philadelphia alderman may be described as an excessively noisome politician, whose sole function, outside of practical politics in his ward, is that of a justice of the peace. He is not at all a legislator, as a New York or Boston alderman is. His legal fees as justice amount to little; he can only desire his office for the sake of its illegal fees and its political influence over "roosters," "strikers," and other politicians of similar grade; and he is in practice apt to be a ruffian, capable of any and all sorts of violence and cheating. This he performs by using every art of Tammany, from bloodshed and illegal arrest on election day to ballot-box stuffing and ballot-burning and falsifying the count of votes in all ways conceivable. Among the results of his rule and that of his employers have been the "magnificent majorities" which Philadelphia has rolled up whenever they were required, and as high up as they were required to be rolled; the enormous increase of the city's expenses and debts, so that while our New York Ring's plunder was estimated as equal to a mortgage of 7.02 per centum on the total value of the real estate of the city, the like mortgage in Philadelphia's case is 10.06 per cent.; the deep corruption of the various branches of the municipal and State governments; the prostitution of the Federal patronage; even such degradation as that of the pardoning power when Marcer, City Treasurer, prosecuted into the penitentiary by the Citizens' Reform Association, was promptly pardoned out. The Rings' latest victory was the easy nomination of their candidates last week—a nomination equivalent, doubtless, to an election, if, as they say, they are ready to give 60,000 majority against the constitutional convention's work in case it should prove unsatisfactory.

We cannot say that as yet we see much that is encouraging in the proceedings of the Farmers. They have held several conventions, and succeeded in electing a judge pledged in advance to decide railroad cases against the law, though there seems to be some doubt whether his election is not entirely satisfactory to at least one of the principal railroads within the jurisdiction of his court. They have secured the passage of a freight law, without knowing at all whether it will be advantageous or injurious to them, and they have given but few signs as yet that they have any idea of the connection between free trade and transportation. Moreover, all their proceedings have been founded upon a belief in a sheer fallacy, that equal charges must be fair charges. The farmer's argument that, if a railroad company charges a dollar for carrying a package a given distance, and a dollar and a quarter for carrying the same package to a different point half as far away, it thereby commits an injustice, is sheer absurdity. It would seem to be obvious, if it were not so evident that it is by no means obvious, that rates of freight do not depend on distance, but on the amount of business done in proportion to the expense of carriage. Between competing points and to and from large cities, the large business makes the rates low; between other points, the light business makes them high. To take distance as an invariable standard is to mistake the character of the whole question. The transportation tax can only be levied by experts, and as yet the farmers have not only not summoned experts to assist them, but spend their time passing resolutions and electing candidates in a blind, passionate sort of way, as if they considered that the matter was beyond the pale of rational argument altogether.

A correspondent writes to us to say that we are making grave mistakes about the farmers, and do not seem to be "working any nearer the truth with the lapse of time." The indiscreet proceedings of some of the agitators ought not, he says, to be cast in the teeth of the good farmers. The bad farmers, it seems, control the organizations which wish to "reverse the Supreme Court"; the good farmers all naturally enough belong to good associations. Of course, we may make mistakes, writing at this distance from the field, but to the Eastern spectator it looks very much as if the difficulty with the good farmers was that they themselves are being "run" just now by the bad farmers. A league has also been formed in Kansas, which is said to have ramifications in Nebraska, Iowa, and Missouri, and to be "making headway" in Texas, Illinois, Indiana, and Ohio. This, too, is a secret body, and has for its primary object "the repudiation of the railroad bonds issued by various county, town, and municipal governments throughout the Northwestern States, and the seizure and common division of lands that have been granted away to corporations by the United States Congress." A membership of 260,000 is "claimed," and the temper of these 260,000 is said to be as revolutionary as their plan of action is comprehensive. One of them is reported to have used this language: "We have arms; we will have justice—peaceably if we can, but we will have it by force of arms if we must." This "League of Justice," as it is called, is in reality probably confined to Kansas, where there has been for some years trouble between one of the railroads and a number of squatters. The dispute is one as to title, and no doubt the squatters would be glad enough to organize a new party on the merits. The membership of 260,000 and the rest of the story seem as yet open to considerable doubt.

College commencements being at full flood just now, the newspapers contain a great deal of educational suggestion of which most that is valuable is embodied in speeches by the chosen orators before societies and the elder alumni at dinners, and a little is to be found in the editorial performances of gentlemen and ladies in the newspapers. To these latter might be commended a very just remark by ex-President Woolsey of Yale. Of a college course he said—and he had in mind the American college, as we have all known it for the last quarter of a century—the valuable fruits are three: character, culture, and knowledge, of which character is best worth having, culture second in rank, and knowledge third. And by separating culture from knowledge, and giving it a higher place, he meant, it would seem, that though the young bachelors have in fulness of defect the little Latin and less Greek which every July so much amuses the young editors and editresses, they nevertheless in acquiring and forgetting this lore have made an acquisition of a value hardly to be overestimated. In this there is no doubt a vast deal of generally unsuspected truth. At Harvard, before the Phi Beta

Kappa Association, Mr. Charles Francis Adams made an address, all of which was very good reading, but of which the portion chief in interest was his plea for increased facilities in our colleges for the study of oratory, and his estimate of the value of an independent press and of the service which private scholars and thinkers may render the public in its columns. To ex-President Woolsey's writings on the *Alabama* dispute reference was happily made as examples of the kind of work the educated man and the press together should oftener do for the good of the country. An almost chivalrous view of the citizen's duty to the common weal, Mr. Adams set forth with dignity and force. In handling his other subject, that of the teaching of oratory, Mr. Adams was equally decided, beset as it is with difficulties. At Yale, again, Mr. Evarts expressed what we suppose is a pretty widespread feeling, in deploring the existence of so many secret societies, which we apprehend do as much with their wire-pulling and log-rolling to prepare the young men for the corruptions of our politics as ever the brilliant debating did to prepare them for causing the halls of Congress to ring with eloquence. Mr. Evarts hoped better things from the revival of the old open societies—and certainly where they found an Evarts to work upon these probably were a means of good. What they have made in their time of a certain other sort of young men, more numerous, is another matter.

The news from Spain is so full of changes of all sorts that it is hardly worth following. Since the resignation of Figueras, cabinet has succeeded cabinet with great rapidity, the Cortes apparently having confidence in nobody but Pi y Margall, who is always the head of each new combination. Here is the history of the last four weeks. The Cortes which established the "Republic," and was largely composed of experienced and well-known men, resigns, leaving a Permanent Commission to look after the Ministry. There is a "crisis," and the Ministry dissolves the Commission by force of arms, and the Commissioners fly. A new Constituent Cortes assembles, composed of new or obscure men, ignorant of all business. Figueras and Castelar resign, and Pi y Margall is requested to form a Ministry, and does so; the Cortes violently disapproves of his list; he resigns; associated with Castelar and Figueras, he tries again, and again fails; Señor Orense, the President of the Cortes, becomes frightened by the Intransigentes and resigns, and Figueras is asked to form a Ministry, and tries, but is pronounced a dangerous and reactionary man by the Intransigentes, and, finding the Radical mob collecting in great force in the streets, flies, and is next heard of at the French frontier. The Republicans try to get up a new combination under Salmeron, but are scared out of it; the Intransigentes surround the Cortes in arms and arrest General Socias, the Captain-General of Madrid, as a traitor; he clears himself, and they let him loose; Pi y Margall tries again, and gets up a Ministry half Intransigente and half all-sorts, and demands extraordinary powers; the Cortes approves of his Ministry, but says he may form another if he pleases; under this gentle hint, the ministers again resign; Castelar begins to draft a constitution, and Pi y Margall asks for time to form another Ministry, and, being desirous of making a sure thing of it this time, announces that the programme of the new cabinet will be "Liberty, Order, and Justice"; he gets time and forms one, but the Minister of Marine resigns the first day, and the remainder of the list is not confirmed; the Intransigentes threaten to take up arms if the new Ministry does not suit them, and the Cortes has to be guarded by volunteers.

In the meantime, the troops make it lively for the citizens. The inhabitants of Barcelona appear to be engaged in daily conflicts with the garrison of that place. The people of Malaga, on the other hand, have "risen" and killed their mayor, and at the last news the Seville Radicals had barricaded the streets of that city, with the apparent intention of fighting somebody. In the meantime, mutinies occur in various directions. Many of the Spanish generals seem to pass their time flying from their own troops in company with a faithful few. The smallest thing develops a military revolt. The Carlists, too, gain ground; they are increasing in numbers and resources, and are supplying themselves with artillery. They have inflicted at least one telling defeat on General Nouvilas in Navarre, and as they are the only men now in Spain who have leaders whom they trust and obey, and who know exactly what they want, the impression gains ground in Paris and London that we shall see Don Carlos on the throne of Spain by the end of the year. The performances of Pi y Margall of course is throwing the weight of property into the Carlist scale, and giving the Spanish creditors abroad an interest in pushing the Pretender. The last of Pi y Margall's finance ministers, Carvajal, is said to be a Madrid oculist of no great eminence in his own profession. Of the state of the finances nothing, or next to nothing, is known. Nearly all the men of wealth and prominence are now over the frontier in France, waiting to see what will turn up. It seems strange that the new name—"Federal Republic"—does not produce better results.

The French have hardly yet got over the "incident" of the circular to the prefects about the press. M. Beulé, the Minister of the Interior, it appears, knew nothing about it until it had been despatched; it was the composition of M. Pascal, his assistant, who was promptly sacrificed, and sent in his resignation while the debate was going on. It was sent in cipher, but, as eighty prefects received it, why it was expected to be kept a secret is hard to understand. It was, from the liberal and constitutional point of view, a tolerably atrocious document, being neither more nor less than a plan for bribing all the provincial editors; but we doubt if the Right was very much shocked by it, or the Left either. Indeed, we believe the Left would, in power, be harder on the press than the Right. The brief periods of their reign in French history have usually been marked by more arbitrary violence than any other. There were some amusing illustrations of this while Gambetta was reading the document and commenting on it in his best rhetorical manner. Talking of what a dreadful thing it was to suppress the *Corsaire*, a Radical journal, as General L'Admirault has just done, "without bringing the editor or director before a judicial authority," he was suddenly confronted by M. de Cumont—an editor whose paper, the *Journal de l'Ouest*, he had himself suppressed by decree—who jumped up and called out: "That's what you did for me, M. Gambetta!" To this the ex-Dictator could only reply, that he would discuss M. de Cumont's case another time. But there is probably nothing in the whole history of hypocrisy more barefaced than a French Radical's lamentations over disregard of the forms of law. The lamentations are always good, and generally timely, but he is not the man to make them. The Assembly has granted its permission for the prosecution of M. Ranc, the only leading Communist who has thus far escaped. He had some agreement with M. Thiers, the nature of which was never fully understood, by which he has been hitherto held harmless. M. Courbet is also to be held liable pecuniarily for the overthrow of the Vendôme Column, which is not a bad form of retribution. The Ministry has no doubt been damaged by the press circular, but the Assembly passed to "the order of the day, pure and simple" (laid the matter on the table), and it has blown over for the present.

The fall of Khiva has been at last officially announced. The column from Tjakishlar, from which so much was expected, proved a complete failure, having been overpowered by the heat of the desert, and compelled to retrace its steps after having traversed only a third of the distance, and was even obliged to take refuge at Krasnovodsk, north of its starting-point. The main success appears to have been achieved by the column under General Kauffman, which crossed the river at Shurrakan, captured Hasarasp, forty miles from Khiva, pushing the forces of the Khan northward, where they were met and defeated by the Orenburg column under Colonel Lomakine, after which there was nothing for it but flight or surrender. The Khan is said to have made his escape.

THE SPANISH PROBLEM.

THE news from Spain, which we have imperfectly summed up in another column, becomes more and more interesting, from the close resemblance of many of the leading features of the crisis to those of the first French Revolution. In both cases we have a people who for centuries have regulated their lives by loyalty to the king and church, released completely from allegiance to both, and left to discover, as best they may, some other object of homage or basis of polity. In France, the process of liberation, though long preparing, was attended with great violence, mainly owing to a kind of delirium produced in the popular mind by extravagant expectations as to the results of the change. The experience of eighty years of revolutions, in all parts of the world, combined with greater sobriety of temperament, prevents the Spaniards from going into any of the ecstasies which attended the overthrow of the French monarchy, besides which, the nation has been relieved of its old bonds, little by little, by a long series of convulsions. Kings, nobles, and priests have passed half a century in losing their hold on the popular respect and affection, and the army has taken just as long to secure the control of the government. So that, when at last all attempt to preserve either the monarchy or the state church is given up, and the nation is fairly launched on the ocean of experiment, even without military restraint, the process is a much less frightful one than that which France witnessed between 1789 and 1795.

Nevertheless, we have many of the most striking traits of the French crisis. The great nobles and generals and leading politicians all connived at the overthrow of the monarchy, in the person of Amadeus, and all doubtless believed firmly that they would be able, if they were obliged to establish a republic, to establish one of which they would have the direction. The Cortes which proclaimed it indeed contained a large proportion of whatever political talent and experience Spain possessed. But the Republic was hardly set up when the revolutionary sieve began to work in the old French fashion. The Commission which the Cortes appointed to superintend the Ministry during the recess was soon dissolved by violence, and the members forced to fly for their lives at the dictation of an armed mob, and the Ministry left to reign supreme. When the new or Constituent Cortes was elected, it contained hardly any of the old members, and was composed in the main of obscure men, the notables of the Radical clubs or the more violent and outspoken local demagogues. For them even the compliant and hopeful Castelar and Figueras were too easy-going, so they were driven out of office, and a new idol set up in their stead in the person of Pi y Margall; but after three or four attempts he found himself unable to form a cabinet to please his masters, as the Red element—or, in other words, the more ignorant and violent—insisted on a larger share in the administration than even he could face. At the present writing, the news is that the next stage has been entered on, by the attempt of the armed clubs to withdraw the formation of the cabinet from the control of the legislature altogether, and assume it themselves, rifle in hand. Of a piece with this is the news that Figueras also has been obliged to fly as over-moderate, and every student of French history will find many of his recollections freshened by learning that Castelar, the eloquent orator and friend of humanity, with large expressive eyes, is busy in his modest apartment, amid all this tumult, in drafting a constitution. He is working at it as diligently as if it were a magazine article, and indeed we need have no hesitation in predicting for it a sale of several editions. It is noteworthy, too, that each successive attempt of Pi y Margall's to frame an administration results in the appearance on the surface of men less known to fame, until at last the most disordered national finances in Europe are put in charge of a Madrid oculist. The picture is completed, and most of its lessons enforced, by the collection on the French frontier as *émigrés* of nearly all the leading men of Spain—soldiers, politicians, financiers, and nobles—where they are hatching plots, some in the interest of Don Carlos and some of a military dictatorship under Serrano; and, to crown all, the army is gradually breaking up into disorderly and dangerous mobs, against which the citizens have to defend themselves sword in hand. The proceedings of the Cortes, too, consist mainly of the proposal of schemes of reform of the most sweeping character, in which not only the national traditions, but vested interests of all kinds, are treated as nullities, and yet through which there runs that vein of lofty humanitarian indifference to material surroundings which gave a certain sublimity to the maddest freaks of the French Terrorists.

If, however, we attempt to predict the future course of the Spanish Revolution by reference to that of France, we find that the element which undoubtedly saved France from prolonged anarchy, and preserved her nationality in full vigor, and enabled her eighty years later to astonish the world by the splendid display of recuperative power which we are to-day witnessing, is wanting in the Spanish problem. Order was evoked out of chaos in France, the altar of duty and self-sacrifice again set up, the habit of co-operation restored, and the sense of national pride roused and cherished, by the attack of the Allies. The threat of foreign invasion for the purpose of undoing all that had been done, touched the popular heart, and made the reorganization of the army, the revival of discipline, and the establishment of the conscription possible. Military success did the rest. The gigantic wars of the Empire, following on the heroic wars of the Republic, during which the French standards entered every Christian capital on the European Continent, made the humblest peasant proud of being a Frenchman and eager to share in the national efforts. It made military obedience and military valor substitutes for the old loyalty and religion, and they, if not the highest form of moral stimulus, at least took men out of their petty personal concerns, raised their eyes beyond the boundaries of their farm or shop, and supplied them with an ideal of life in which death at the call of others played a prominent and glorious part. This was undoubtedly a barbarous mode of resuscitation, but it sufficed. It saved French society, reorganized it, and gave it something in the nature of a soul, and gave France an army of which that last and worst thing has never yet been said—that it would not obey its officers.

All this is so far lacking in Spain. Europe looks coldly and jeeringly on at Spanish troubles, and no more thinks of meddling in them than of paying her national debt. The Carlists, who are now slowly winning their way to the capital, are Spaniards, and apparently the most enthusiastic, believing, and energetic Spaniards to be found, and there seems to be no such zeal for the Republic as to make their presence or their success unendurable to the mass of the people; if there were, they must have been driven from Spanish soil months ago. From what quarter Spanish deliverance is to come it is therefore hard to see; most probably, from the frantic eagerness for quiet and security which a prolonged experience of disorder is sure to breed at last in every civilized people which has ever tasted these blessings. The various experiments of the Irreconcilables must work themselves out before long, and then, if Don Carlos has not already seized the crown, some means will be found, under the guidance of the social instinct, if of nothing else, of arming the government, whatever it may be, with the power of giving its commands the force of laws, and of fulfilling the first of its duties. But, then, this view does not carry us very far into the future.

THE PROPER STUDY OF MANKIND.

AS is natural and proper, we engage every year at this period in vigorous discussion of the subject of collegiate education. Some hundreds of speeches are delivered, and some hundreds of articles written about it, apropos of several dozen of college commencements. There is, of course, the usual amount of doubting on the part of "practical men" as to whether a young man gains anything by going to college. Look at Jones, they say, the successful broker, and Smith, the great railroad operator, and Brown, the distinguished politician—none of them ever went to college, and yet see how happy and successful they are. For a long while "the practi-

cal men" had the collegians ranged against them in a solid body. But of late years they have been reinforced by men who set a high value on education, and especially on college education, who do think that four or five years may be better spent in a university than in an office or store, but who maintain that the kind of education universities impart is not the right kind; that, in short, it is by far too literary, and ought to be wholly or mainly scientific; that time spent in learning what dead men have said is well-nigh wasted; and that what we need to study is nature—her laws and processes. Astronomy, geology, chemistry, botany, physiology, biology, should occupy a young man's mind in his early years. It is from studies of this kind that he will really learn to observe, to reason, and to be happy by adapting himself to his surroundings. Literature he had better let alone. The only solid thing in the whole range of human perception is natural science, the only thing that does not deceive and lead astray. It teaches us to prolong life, to avoid disease, to multiply the sources of human comfort and safety. The reply of the collegians to these assaults has been becoming yearly more feeble. Some of them still maintain as stoutly as ever that the study of literature is as good a means of mental discipline as any other, but the main body have been resigning themselves year by year, some sadly, some hopefully, to the infusion of a larger and larger proportion of science into college training; and the spectacle of their retreat is at this moment filling thousands of minds all over the country with a vague expectation of wonderful changes in human society, as the result of the irruption of large bodies of young men and women into laboratories and museums.

Now, we are not going at this time of day to question the claims of scientific men on the gratitude of mankind. We all know what they have done for the world within the last two centuries. It is useless, too, to deny the value of scientific education as a means of cultivating the observing and reasoning faculties. There has been a great deal said on these points by ardent votaries of nature, and most of it is true, but there is much of it that needs limitation and qualification; and we are reminded by some of the suggestions in Mr. Adams's speech the other day at Harvard of the great one-sidedness into which many of us have been led in our theories of education, by the passionate propagandism in which some of the followers of Huxley and Tyndall have of late years indulged. It is assumed in nearly all that many of them say about education, that it is with nature only that man has to struggle in the pursuit of happiness, and that if he can only discover what to eat, drink, and avoid, how mines may best be worked, and crops raised, and distance traversed, and storms foreseen, and the state of the markets transmitted, he will have solved the problem of living. This view has naturally been a very taking one, and has during the last thirty years made a strong impression on the popular mind, so well has it fallen in with the prevailing tastes and tendencies. It furnished to a commercial age exactly what it needed to give it peace of mind and self-respect, by making it appear that the development of material resources was man's great work on earth and the one for which his youth should be passed in preparing.

It now begins to be discovered, however, that no matter how successful we may be in wresting her secrets from nature, or how familiar we make ourselves with her processes, or however conscientiously we may adapt our lives to her requirements, the best scientific education after all only half fits us for the battle of life, and for the simple reason that the battle has to be fought not only with hard, inexorable physical surroundings, but with very troublesome and mysterious social surroundings. In other words, in making a career we have to deal with our brother man as well as with earth and air and water. Let us mine never so successfully, we have to settle with the crowd at the mouth of the shaft before we can carry home our earnings. Let us manufacture never so deftly, we have to establish a rule of distribution before our science or our dexterity does us any good. Let us build railroads as we may, we have to come to an agreement as to who shall work them, and what he shall receive, before they profit us. Heat and light and electricity and steam are great monarchs, but they cannot raise us out of grovelling barbarism, unless we can come to some understanding with our neighbors as to the ends and modes of living. The study of man, therefore, is really the most important of all studies, and must always continue to be so. Nothing can take its place in any curriculum. People must learn how to live in society before they can get any lasting benefit from science, and before they can have and retain anything worth the name of art; and this they cannot do without observing human nature as it is, and without making themselves acquainted with the past experience of the race.

Now the past experience of the race is found in literature, and languages, and laws, and monuments, or, in other words, in things of which our physicists are apt to make light, but to the diligent study of which, nevertheless, physicists are largely indebted for their existence and their influence; and it can hardly be denied that what we are suffering from in this country just now is rather too little study of man's doings and too great study of nature's. For want of even a passable acquaintance with human experience, our legislation is a mass of folly and blunderings. History and political economy and jurisprudence are neither more nor less than a catalogue of the results of experiments in living made by many generations of men, which the art of writing has preserved for our benefit; but to two-thirds of our legislators they are sealed books. People would laugh mightily if Mr. Boutwell were to say he cared nothing about Euclid and the 'Principia' and would not read them, and could get up a geometry and astronomy of his own; but how many laugh when he says there is no science of finance or political economy, or, in other words, that the attempts made by a hundred generations to hit upon the best methods of producing and exchanging and managing corporate revenues, contain neither warning nor instruction for the inhabitants of the town of Groton?

The fact is that scientific education, as the phrase is usually employed, has been rather overdone than neglected; we do not mean in colleges simply, but in society at large. We have been devoting ourselves too much to the extraction of comfort from natural laws to the neglect of our social relations, and the consequence has been a decline in the art of government, which begins already to inflict paralysis on our material industry. Scientists are very valuable, but they are neither jurists nor administrators, and jurists and administrators are not made by laboratories or museums, but by the diligent study of man, both past and present. Far from occupying themselves too much with what "dead men" have said and done, colleges do not, in our opinion, occupy themselves nearly enough. If they do not manage to put our young men more thoroughly in possession of the efforts, failures, and successes of our forefathers, in *all* fields of human activity, we shall find our scientific achievements at the present day taking more and more of the character of Dead-Sea fruit, and shall ourselves more and more sink into the position of well-fed operatives, superintended and paid by luxurious sharpers. It is well to know how the orbit of the planets was discovered, how the binomial theorem was worked out, and how the constitution of the sun was revealed; but all this is useless, or will prove so before long, unless we know also by what struggles and devices and labors we, "the heirs of all the ages," have come to be what we are; by what arts nations have been built up and maintained; by what passions, and hopes, and fears, and aspirations, and temptations the generations that have gone before us have been sustained or harassed in their brief march through the sunlight.

It has to be remembered, too, that there is growing up about scientific education a considerable amount of the cant by which classical education was once surrounded. It is not possible to give to the great mass of boys who go to college anything that can be called a knowledge of science. A smattering of the rudiments is all that the great majority can bring away with them, under any system of teaching. In days when the greatest philosophers confess their inability to explore even one small field in the great domain of nature, there is something almost ludicrous in the pictures which are

occasionally drawn of the advantages which would result to the world if boys and girls would only work in a laboratory, or geologize, or botanize between the ages of eighteen and twenty-two. The fruitful toilers in scientific fields must always be exceedingly few in number, and the great mass of men, college-bred as well as others, must always be content to take on trust what these few tell them. The very most that schools and universities can hope to do for the main body of their pupils is to familiarize them with scientific modes of reasoning, and this work is being already done by popular literature almost as efficiently as any college can do it. In short, one has only to look around at the condition of the modern world, at Spain, France, England, and our own country, and to consider the nature of the problems that press on us for solution, to be satisfied that the most thoroughly *practical* education at this moment, that for which society calls most loudly, is one which will best fit young men to aid in the adjustment of human relations, and in preventing the social machinery from shaking itself to pieces. Savages have corn, and wine, and oil, and iron; the use of civilization is to enable us to eat and drink in peace and thankfulness.

ENGLAND.

London, June 13, 1873.

THE subject which ostensibly excites the greatest interest at the present moment is our expected visit from the Shah of Persia. I sincerely hope that our distinguished visitor does not read English, and that his interpreters make a careful selection of newspaper articles for his edification, otherwise I fear that he will come to the conclusion that the British public regards him from a distinctly comic point of view. He is, of course, to be received with all due ceremonies, and we are to show him our very prettiest toys, but somehow we cannot quite suppress our sense of the ludicrous. We are doubtless very wrong, but we cannot help it. The gorgeous costume of an Eastern monarch is in every way more becoming than the black hats and frock-coats of European usage; but nobody could walk down the Strand in such a costume without exciting the jeers of the street-boys, and there is something of the street-boy even in respectable journalists. It should be rather piteous and pathetic than absurd to watch the representative of an ancient civilization, bewildered, like an owl in daylight, by the clamors of our restless and ungracious crowds. Unluckily, few people have much delicacy of feeling. They twitch the poor old monarch by the beard (metaphorically speaking, of course), slap him on the back, and tell him with sufficient plainness that he is a useless and ridiculous old object, whose best chance for continued existence is to become our humble servant and imitator. Perhaps, as a matter of taste, one would wish that such poetical figures might always be surrounded by an atmosphere of appropriate associations; they look better in the twilight of the East than in the broad commonplace glare of Berlin and London, and, in short, commit as great a fault as a ghost who should show himself in the muddy streets instead of confining himself to his haunted mansion. Meanwhile, writers of leading articles are studying their encyclopædias, and filling themselves with an appropriate armory of allusions from the 'Arabian Nights,' and we hope that they will indulge as little as possible the insulting curiosity of the coarser kind.

The Shah, however, and his experiences here may be left to the imagination of your readers. If they wish for full particulars, couched in glowing language, they may turn to the *Daily Telegraph*, which will doubtless adorn its pages with gems of rhetoric calculated to harmonize with the Shah's diamond-covered coats. I turn to a more commonplace subject. The Parliamentary session is dragging itself along with less than the ordinary excitement. This Parliament, in fact, is running to seed, and showing the decrepitude which heralds a speedy dissolution. And yet one can hardly regret the circumstance. If Mr. Gladstone had succeeded in passing his bill for the Irish University, we should have had a much more amusing series of incidents. There would have been vehement protests on all sides and appeals to popular indignation, and the House of Lords would have once more undergone the process of being bullied into submission. All that trouble has been saved, at the price, it is true, of leaving a very awkward question still unsettled. But then, we have really some compensation in the fact that we seem to have a chance of passing at least one useful bit of legislation. Owing to the absence of other excitement, the Judicature Bill seems to be making fair headway, and to be destined to pass without serious mutilation. English law is a subject upon which it is so difficult for a layman to speak without falling into some grotesque blunder that it seldom attracts much popular interest. By an unlucky combination of circumstances, the evil tends to propagate itself. We know in a general way that some reform is much needed; that some kind of simplification might be effected if our leaders would only make up their minds to set honestly to work; and that an immense saving of money, labor, and time might be effected. But then, if the complexity of our system is a reason for demanding reform, it supplies also a reason for warning off all popular reformers. One must possess so much technical knowledge before one can speak with authority upon the subject, that agitators prefer to take to some easier and more telling subject of popular declamation. It sometimes seems as if we should have to wait until enough grievances had been accumulated to produce not a reform but a summary revolution. As, however, for the moment the more exciting topics have passed out of discussion, some attention has really been devoted to passing a measure which will effect a considerable improvement, and, it is hoped, lead the way to more. The consolidation of the various courts, the abolition of the chief part of the appellate jurisdiction of the House of Lords, the introduction of a uniform system of procedure, are considerable steps, which will help towards the amalgamation of law and equity, and ultimately, it may be hoped, to a coherent system of codification. A great deal of jealousy has, of course, been excited upon particular questions, and long controversies have been carried on between common-law and chancery barristers. Still, if we cannot quite say that the unanimity of the lawyers is wonderful, it is more than we had any right to expect; and the fag end of the session will be turned to good account by the passage of a measure of reform far wider and more complete than any which has been proposed for many years. I am indeed quite incompetent to express any judgment as to the details of the measure under discussion, and I profess only to repeat what seems to be the general opinion on the subject. Whether the bill be or be not satisfactory, one is at least glad to see Parliament occasionally occupied upon a serious measure of reform which is not dictated to it by the pressure of speeches from the hustings.

It is not very likely that this comparative freedom from legislation of the sensational kind will long be preserved. More exciting matters are in the background. The old educational quarrel, for example, has by no means finally died out, and Mr. Forster made a statement last night which was far from satisfying his opponent. The conflict of opinion grows more irreconcilable, if not actually warmer. The school-boards created by Mr. Forster's act have built schools enough to supply a large proportion of the existing deficiency, if only the children could be coerced or persuaded to enter them. Unluckily, this is just where the difficulty occurs. Many of the school-boards have made laws for the attendance of the children, and more or less effect has been produced. But, then, if poor children are forced into school, their fees must be paid for them; as they cannot be forced into a school where an obnoxious religion is taught, their parents must be allowed to choose for them, and thus denominational schools will in one form or other receive assistance from the rates. This is the result which the Dissenters and Secularists cannot digest. The Church of England having long had possession of the ground, most children would naturally go to Church of England schools, and thus, undoubtedly, the Church would support its school system by the help of the state. How far this is any great grievance, or a grievance for which it is worth while seriously to obstruct the working of the act, is a point upon which there is an interminable controversy; and each party accuses the other of intolerance and indifference to our educational necessities. Mr. Forster is doomed to attempt the thankless task of satisfying both parties; and, as it seems practically impossible to devise any system which shall hold the balance perfectly even between the rival sects, and as they cry out indignantly at the slightest real or supposed tendency of the balance in either direction, the chances of his giving universal satisfaction are very small. At present, the League, which represents the Dissenters, is in a very discontented state, and the small bid which he made for their support last night seems doomed to a contemptuous rejection.

The danger, however, of alienating the Dissenters and the Secularists, though it may be serious enough in regard to the interests of the ministry, is comparatively insignificant. People are slightly tired of these educational squabbles for the moment, and are inclined to think that reformers might spend their energies in a more practical direction than in wrangling over the precise set of dogmas to be taught to children who, for the most part, are and will probably remain indifferent to all dogmas whatever. The more threatening difficulty is that connected with the labor question. The performance of the Chipping-Norton magistrates has excited a great amount of bitterness. The punishment inflicted was not very severe, but the circumstances were unfortunately picturesque. There is something unpleasant in the spectacle of a couple of clergymen sending a lot of ignorant women to prison, not for actual violence, but for protesting against the supplanting of their husbands by other laborers. A country squire might be pardoned for an over-zealous vin-

dication of the rights of his class; but the clergy are in theory at least the protectors of the poor, and should be the last to give a harsh interpretation even to necessary laws. A good deal of indignation has therefore naturally been expended upon the magistrates, and upon clerical magistrates in general. There is, however, a still stronger feeling behind. The more vehement Radicals declare that the clergy have indeed acted badly enough in this case, but that they have only done what judges of greater name and of more legal training have done before. According to such agitators, the Chipping-Norton magistrates are being unfairly made into scapegoats for the sins of their superiors. The attempt to rouse indignation aginst a clerical magistracy is an attempt to turn a righteous indignation upon a false scent. The true grievance is not that clergymen should have inflicted a trivial though an unjust punishment in a particular case, but that the law should allow such punishment to be inflicted in any case. The injury done to the women in Chipping-Norton was trifling compared to the injury inflicted upon the gas-stokers, on whom Mr. Justice Brett imposed a sentence of twelve months' imprisonment. It is therefore demanded that the law which enables laborers to be imprisoned for a breach of contract should be summarily repealed. Mr. Frederick Harrison, who is the ablest spokesman of the agitators, maintains that the existing law is grievously unjust in its operations. A working-man who refuses to fulfil his contract is summarily imprisoned; a master would, in the same case, escape with a fine. The answer, of course, is easily given. The law, it is replied, is really impartial, and workmen are more frequently punished than masters simply because they more frequently break the law. It would be equally plausible to say that a law against petty larceny was unfair because it generally affects poor men instead of men with plenty of money in their pockets. Imprisonment is often the only punishment which can be inflicted upon a man who lives from hand to mouth, and is therefore fitly employed against a poor man when it would be unduly severe against a rich man. Whatever the justice of such arguments and of the controversy as to the working of the law of conspiracy, it is plain that such questions occupy a much larger space in the mind of the working-man than purely political debates in which he has no immediate concern. There is a natural feeling that very little has been done by the Liberal Government for the benefit of the working-classes whose votes brought them into power. The disestablishment of the Irish Church, the alteration of the land-laws, and the abolition of purchase may have been very good things in themselves, but they have only the most indirect influence upon the comfort of the English laborer. Consequently, a great many of the laboring class are beginning to ask whether a Whig is a much better ruler than a Tory; and whether they should not force upon the next Parliament a very different order of questions from those with which its predecessor has been occupied. The working-man, in fact, holds that, though he has a vote, he has as yet had very little influence upon legislation, and that a more thoroughgoing change is required than has yet been effected. The consequences of such a feeling generally diffused through the large centres of population are difficult to calculate. This only may be said, that, considering how many bitter struggles between laborers and capitalists are spreading over the country, we may not improbably be on the eve of social agitations of a serious character. The immediate effect in the political world is a sense of general uncertainty. Though Mr. Gladstone has never shown greater ability than in the present session, his hold on the country has certainly not gained in strength, and Liberal agents speak with ominous forebodings of a probable loss of seats at the next elections sufficient effectually to turn the tables. After the long possession of power by their party, a short stay on the Opposition benches might possibly convert the present leaders to views more in harmony with the extreme wing of their nominal supporters. But it is useless to speculate on these remoter problems.

Notes.

DR. KONER'S annual list of geographical publications, of all kinds, from November, 1871, to December, 1872, appears in No. 42 of the Journal of the Berlin Geographical Society (New York: L. W. Schmidt). It occupies nearly 100 pages. Petermann's *Mittheilungen* for May 26 gives a railroad and steamboat map of the German Empire and adjacent countries.

—A number of guide-books appropriate to the season lie upon our table. Mr. Henry Morford's 'Short-Trip Guide to Europe' (New York: Sheldon & Co.) offers, in a very frank and even blunt way, and with a wholesome disregard of the susceptibilities of a certain class of American tourists, much sound advice. The edition for 1873 has been revised chiefly with reference to the Vienna Exposition, but we cannot say that it has been particularly well done. The editor shared the common hope, rather than belief, when he wrote (p. 212 *b*): "There is no doubt that in the ability and energy of Gen. Thos. B. Van Buren, the U. S. Commissioner-General to the Exposition, all American interests entrusted to his hands will find the best attention." A pretty full list of the American exhibitors is given, and a political and commercial map of Europe accompanies the volume. For Vienna, and for much of the route thither, Mr. C. W. De Bernardy's 'Hand-book to Vienna and the Exposition' (Philadelphia: Porter & Coates) will prove more useful than the foregoing. It gives railway distances and fares, names the best hotels, and the *personnel* of the American consulate in each place. The annexed plan of Vienna seems to have been rendered indistinct by reduction from the original. 'The Atlantic Coast Guide' (New York: E. P. Dutton & Co.) professes to be a companion for the tourist between Newfoundland and Cape May. From Newport, south, however, it is quite perfunctory, the editor being at his best in the more northern waters, of which he speaks from personal experience. The chapter on the Isles of Shoals compares very favorably with Mr. J. Scribner Jenness's 'Historical Sketch' of the same islands (New York: Hurd & Houghton) in its gleanings from the old records of this interesting group. It is the most elaborate in the book, that on Grand Menan being next in fulness of treatment. Mr. John B. Bachelder's 'Gettysburg: What to see and how to see it' (New York: Lee, Shepard & Dillingham), we judge answers well the needs of the visitor to that epochal battle-field; but the gain in clearness would have been very great if the mostly worthless and meaningless "illustrations" had given place to a few diagrams explaining the features of each of the three days' fighting. Mr. John E. Lester's 'The Atlantic to the Pacific' (Boston: Shepard & Gill) is composed of letters to a Providence newspaper, and is a very dry and unimaginative account of the trip to and from the Pacific Coast. However, a "dry" light is sometimes best for seeing things as they are, and this may so far compensate for the lack of Mr. Nordhoff's rosy enthusiasm. After all, we doubt if the book has a sufficient *raison d'être*. We may include in the category of guide-books Dr. Geo. E. Walton's 'Mineral Springs of the United States and Canada' (New York: D. Appleton & Co.) and Dr. J. J. Moorman's 'Mineral Springs of North America' (Philadelphia: J. B. Lippincott & Co.), especially the former, which indicates routes and hotels. The comparative medical value of these works we will not undertake to determine. Both are well provided with maps, Dr. Moorman's also with lithographic views of several resorts. The latter uses a geographical, Dr. Walton a therapeutic, classification; and Dr. Moorman is most at home when treating of the Virginia springs, to which more than half his book is devoted.

—The third volume of the Ninth Census deals with the statistics of agriculture, manufactures, mining, and fisheries, and also exhibits tables of wealth, taxation, and public indebtedness, and of occupations. The several prefaces to these topics are distinguished by nothing more than the perfect frankness with which the Superintendent points out the defects of the enumeration, and condemns the law to which most of them are attributable. Thus, in his remarks on the tables of Manufacturing Industry, he declares that "the census returns of capital invested in manufactures are entirely untrustworthy and delusive"; and further, "It is a pity, and may almost be said to be a shame, that statistical information, in many respects of high authority and accuracy, should be discredited by association with statements so flagrantly false, even to the least critical eye." This is refreshing talk from a Government official, and it is to be hoped that our Congressmen may have the benefit of it. But over against the chances of their seeking out in these quarto volumes and studying General Walker's clear, concise, and pithy résumés, there is the chance of none of them being alive or still Congressmen seven years hence, and the likelihood that after vain efforts to get an improved census act we shall fall back upon the imperfect and mischievous statute of 1850. The suggestion has recently been made for England, that a census bureau should be created with a permanent organization, and the reasons in favor of this are so obvious and so obviously applicable to our own case as well as to England's, that we wish active steps might be taken to bring it about. We need not have more frequent censuses, though we might have them if we chose; but our preparation for them would be vastly improved, and the necessary legislation easily obtained. The agricultural statistics in the third volume are illustrated by five shaded and colored charts—of wheat, corn, cotton, hay, and dairy products; and by a large geological map of the United States, folded separately. Minnesota, Iowa, and California are the great wheat-growing States; New York and Vermont lead in dairy products; cotton creeps up into Southeastern Missouri, "Egypt," and Southwestern Missouri, and where its dominion ends that of hay begins.

—In practising the profession of journalism, we have often found it agreeable to cease for a moment from exposing the ignorance and vice of our

fellow-journalists, to turn away also from reading in the columns which those gentlemen control how big a thief and liar conducts this journal, and to direct the eye of the mind on the fair picture of what journalism is going to be by-and-by. Sometimes the limners are "professionals" and perfectly well-known offenders, and sometimes they are laymen; but that makes no difference in the character of the picture. In all cases, the editorial fraternity of the next generation is going to be a wonder. The ransomed saint, when his spirit takes its flight, will not be any nicer nor any wiser than the coming newspaper editor. A Dr. Jackson is the latest of these artists whom we have happened upon. He appears to be a New Yorker, and addresses his work to the editors of the Yonkers *Gazette*, the Le Roy *Gazette*, and the Dansville *Advertiser*. The Doctor says that he who seeks to fill the editorial chair must be a person "who cherishes with great enthusiasm a love for whatever is noble and true." His editorial business, in which he will delight, will be to disseminate "whatever is original in thought, artistic in feeling, catholic in sentiment, powerful in truth, rich in beauty, or divine in genius," and to preach "the elevation of the masses and the good of humanity." Every year he will "pass into higher ranges of knowledge and truth, and occupy advanced positions." And to do this he will not only set forth the true and noble in his newspaper; he will represent them in his daily life But can he do so "while as yet he lives on a plane of habit or of mere physical gratification?" We have found it a rule often holding good, that after we have heard a medical gentleman say as much as we have quoted from Doctor Jackson concerning "the plane of habit" and "the true and the noble," and kindred matters, it is as well to ask him whether he does not wish us to leave off eating meat. We then, without further occupying his valuable time, can let him know what is our practice upon that point, and what it will probably continue to be. Doctor Jackson, observing that "men of thought need mental sublimation," would not allow of our eating "the flesh of animals" except "in emergent circumstances"; the coming editor will feed on "grains in their various preparations, fruits, and the better and more nutritious classes of vegetables." What he will drink is not stated; but not any tea, coffee, light or heavy wines, distilled or fermented liquors. Sun-baths will be good for him, but "he should not go into the woods unless he wishes to pass into revery." If he is a woman, he will not show that "incapacity for extended motherhood" which is now notorious among the female editors and correspondents of the American press; and his children will not exemplify that change "in form of build" in the direction of hydrocephalic indigestion which the Doctor sees in many of "the descendants of the oldest families in our country."

—Mr. Oscar T. Martin, of Springfield, Ohio, "formerly editor of the *Advertiser* of that place," takes, it seems, a different view of the noble profession of journalism from that expressed by the Rev. Robert Collyer and Dr. Jackson. Mr. Collyer recently delivered a sermon on this subject, in which he described the journalist as one who holds the people of America and other countries in the hollow of his hand and moulds them to his will. He sits above, at the centre of thought and intelligence, a sort of *Deus ex typis*; far beneath, busy man, in his constitutional conventions, his legislatures, his halls of Congress, his Boards of Trade, his corporations, his theatres, his music-halls, and his beer-gardens, works out slowly but surely the editorial will. Mr. Martin, however, does not consider this a correct picture, for at a recent journalistic convention held at Columbus he said:

"There is not an editor here or elsewhere who is not writhing in chains, who does not daily choke back sentiments of an honest heart from fear or favor. This is a bitter truth, but none the less truth. The offal that is thrown to you, in the shape of county printing, buys your silence, just as the midnight burglar buys the silence of the faithful watch-dog with meat that is thrown to it. Neither can bark; their mouths are full. You ride free to this convention over the railroad of a corporation notorious for its bad management. A 'complimentary' to the theatre is the paltry price paid for an unfaithful and untrue critique of the performance; and you sell yourself, body and soul, for an infinitesimally less sum than Judas received for the betrayal of his Master. The corrupt award of public contracts, for which the exorbitant bid of a favorite, on slim security, is preferred to the conscientious bid of a master workman, is not exposed by the journal that advertises the bids. The fraud and corruption of your municipal bodies is not unmasked, because you are a member of the ring. You quake with holy horror at the only symptom of virtue manifested by our legislators, in reforming our postal relations, whereby your privileges may be abridged, and break out in bad eruption of double-leaded indignation, with frowning black head-lines, over the salary steal of your poverty-stricken Congressmen. On the title-page of your paper you fly such flaunting lies as 'The freedom of the press is the safeguard of the nation,' 'Truth crushed to earth,' etc., and you prostitute the patriot's motto, 'Give me liberty or give me death.' You are bound hand and foot. The remorseless clamps of clique, party, and corporation hold you fast."

The only notice we have seen taken of this outspoken address is in the columns of a brother journalist of this city, who says that there is one editor in Ohio "justly known as the truly good man," to whom this criticism does not apply. "He never withholds the truth from his readers, and never himself tells anything but the truth, although we grieve to say he sometimes allows the thundering lies which his wicked partners habitually compose to go forth under the sanction of his honored name."

—The Committee appointed by the Bar Association of this city to examine the New York system of law reporting has made an interesting report. There are no less than 348 volumes of reports of cases in this unhappy State (about one-sixth of those of the whole country), and of these 348, a large part, owing to "multiplication of reports of the same case," "indiscriminate publication of whatever is presented," "prolixity," and "reckless reporting," are very worthless. The Committee, noticing one of the well-worn commonplaces of Judge Story, to the effect that even in 1821 "the danger seemed to be, not that we shall want able reports, but that we shall be overwhelmed by their number and variety," says that,

"If anything could draw the spirit of the great commentator back to the earth, it might well be a wish to retract his opinion as to the ability of the reporters; and if anything were needed to keep it away, the 2,000 volumes of our decisions might have this effect."

As an illustration of the "multiplication of reports of the same case," the Committee shows that in the volumes of 'Howard's Practice Reports,' from vols. 35 to 43, there are

1	case	which is reported	7	times	in the various reports.
2	cases	are	6	"	" "
7	"	"	5	"	" "
33	"	"	4	"	" "
73	"	"	3	"	" "
109	"	"	2	"	" "

The Committee also says that two-thirds of the cases reported are "worthless," it being the custom of most of the reporters to publish opinions of inferior courts, not only after they have been affirmed by superior courts, in which case they are of little or no value, but also after the judgment has been reversed below. Besides this, we may mention one of their idiosyncrasies which has come under our own notice—a passion for reporting cases involving long and very complicated statements of fact, but containing no new principle of law whatever—the facts generally so complicated that they never can occur a second time, and the law so simple that there was no time within the memory of man when it was not established. Besides this, there is the prolixity of many of the opinions and the interminable delay of the publication of the reports. As an illustration of the character of some of the reports, the Committee refers to the head-note in the People *v.* Parkes, 15 How. Pr. R. 557, which begins, "This little case shows what a justice of the peace can do when he tries," and the disquisition on cider in the foot-note to 19 How. Pr. R. 266. There is also to be found in 20 How. Pr. R. 96, "a letter from a former judge of the Common Pleas to Mr. Howard, acknowledging writing an opinion in the case of Fox *v.* Lewis, but denying that in any sense it resembles the one attributed to him in 19 How. Pr. R. 561. In 16 How. Pr. R. 288 there is a similar letter from a judge of the Supreme Court."

—To explain the causes of this condition of things, the Committee points to the system of reporting now in force—if it can be called a system. There are seven reporters at work in New York, the interest of almost all of whom it is to turn out as many volumes of reports per annum as possible. Some of them are authorized by law; others are volunteers. The result is the existing chaos. The Committee examines the new English system of law reporting—which we have recently discussed—and they lean strongly to the adoption of some such system, though they prefer for the present to circulate their report and receive suggestions on the subject. There is no doubt to our minds that the whole matter of reporting ought to be in the hands of the Bar. The system of State reporting has proved a complete failure, the work, as the Committee truly says, not being of a kind to be well done either by an elective officer, nor by one who, if appointed, goes out of office with changing administrations. On the other hand, the courts ought not to have the appointment, because this makes the reporter necessarily dependent upon the judges whose opinions it is his duty to report without fear or favor. Neither of these objections applies to the superintendence of the work by the Bar, and we trust that the adoption of this method will be recommended by the Bar Association without unnecessary delay. In the only country in which it has been adopted it has proved a great success, while the methods of judicial appointment, and State appointment, and volunteer reporting have all been tried, either in the United States or England, with bad results. The Bar Association have voted to adopt the report and circulate 2,500 copies; the Committee are at a future meeting to report a scheme for the amendment of the present system.

—Urbano Rattazzi, the veteran Italian statesman who passed away on the 5th of June, was buried on the 11th with great circumstance in the

Piedmontese city of Alessandria, his birthplace (1810). Though intensely disliked of late years by the Moderate party in Italy, and though his career as premier is associated with some of the gloomiest events in his country's history—Novara, Aspromonte, Mentana—no one could accuse him of a lack of patriotism, nor deny his great services in promoting the resurrection of Italy. Perhaps his earliest efforts in this direction, when he had Cavour for a colleague and chief, and when his restraining influence was exerted with good effect, were his most useful. As a "precursor" he appeared to better advantage than as a Radical executive, without the well-settled principles and the resolution necessary to the delicate task of government. His admirers say of him, as has been said of Victor Emanuel, of Cavour, of Garibaldi, of Mazzini, that he "made" Italian unity (*ha fatto l'unità d'Italia*). His opponents reply with an anecdote of Manzoni. Mazzini paid him a visit in 1860, and remarked for their common gratulation on the fact that the two had so long (*durante un pezzo*) been the only persons (*noi due soli*) who believed in this unity, and that now they could say that they were right. The poet, in reply, cited the habit of a chilly friend who, at the first frost in September, used to declare it was going to snow; this he would repeat through each succeeding month, till along in January or February sure enough down would come a heavy snow, and the prophet would exclaim: I told you it was going to! In other words, unity was as inevitable as the return of the seasons. Rattazzi in one respect was without a rival, He was a consummate parliamentarian, and leaves no one behind him to take his place. But then, neither does he leave a coherent and vigorous party, the Opposition being much in the condition of the Democratic party ever since the death say of Stephen A. Douglas.

BARON STOCKMAR.*

CHRISTIAN FRIEDRICH STOCKMAR was born at Coburg, in 1787, of a respectable middle-class family; his patent of nobility was the gift of his friend, King Leopold. He studied the profession of medicine, and was appointed physician-in-ordinary to Prince Leopold of Coburg, afterwards husband of Princess Charlotte of England, and later King of the Belgians. Manifesting a high capacity for politics, he soon gave up his profession, and passed his life as confidential friend and agent, first of King Leopold, afterwards of his nephew, Prince Albert. He seldom held any distinct office or appointment, whether diplomatic or otherwise, but occupied a position somewhat similar to that which used to be known in this country by the disparaging term "kitchen cabinet"—a position which is capable of being abused, but which an able, upright man like Stockmar can make the instrument of valuable services. The peculiar relations of both his patrons to the English royal family gave him almost the character of an English diplomatist, and give his memoirs an especial interest to the English public. English politics, properly speaking, are hardly touched in them; but we meet the English view of Continental politics, and are constantly brought in contact with English statesmen. These volumes contain, therefore, a commentary on most of the important questions of European politics, from Stockmar's active entrance into political life, about 1830, to his death in 1863. During this period he was always behind the scenes of diplomacy, and often an active agent in it; and he was a person of such integrity of character and clear-sighted sagacity that his observations, here recorded, are always instructive, and, if we are not mistaken, contain in more than one instance really new and important information.

The several questions which came into prominence during his time are, as is natural, treated with quite a different degree of fulness, according to Stockmar's greater or less participation in them. The first volume may be said to be devoted to the Belgian question; that is, nearly half the volume is concerned with this, the rest consisting of chapters upon several subjects of general interest, such as happened to fall within the writer's observation down to the year 1838. One of these chapters, upon Leopold's candidature for the throne of Greece, will be read with special interest and instruction. The precise reason why this negotiation fell through has been little understood. It appears that the young prince, afterwards so distinguished for practical sagacity, well-balanced judgment, and even astuteness, allowed himself to be carried away in the beginning of his career by the philhellenic enthusiasm of the day, and to enter with too great eagerness into conditional engagements from which it was afterwards necessary for him to retreat. No doubt his ill success in this enterprise helped to school him to the practical ability that he afterwards displayed; for the time, however, it placed him in a false position, and gave him a bad name in the European courts. No doubt, also, the reputation of his failure followed him in his next enterprise, and rendered his position in Belgium less easy. But he had now learned from experience, and met with remarkable success in his new and difficult task—in establishing his new kingdom on a sound basis, and guiding it through all the complicated perils of the years that followed.

The attempts at reorganizing Germany after the revolution of 1848 occupy nearly as large a proportion of the second volume as the Belgian affairs do of the first. In these attempts Stockmar himself took an active part—almost the only portion of his career in which he exchanged his advisory and confidential position for one of public responsibility. He declined the position of Minister of Foreign Affairs in the new Empire on the ground of his health, but was a member of the Frankfort Diet, and aided in the movement to the extent of his powers. The account here given of the long consultations and negotiations, which at last resulted in nothing, is interesting, but need not now occupy our attention in detail. Like most sagacious statesmen, Stockmar was convinced that the true policy of Germany was that which has been since adopted—a union under the hegemony of Prussia; the principal practical difficulty residing in the question, What would become of Austria? Here again he was right in his judgment that Austria would withdraw from Germany, although he had some expectation of eventually securing the German provinces of Austria. His views of the historical relation of Austria to the German problem are stated in a letter written in 1849:

"By the territorial arrangement of Germany on which Napoleon built his Rhine Confederation, it was really torn more asunder than had ever been the case before. He divided Germany into three parts, Prussia, Austria, and the Rhineland, as effectually as Poland had been divided. After the fall of Napoleon, the Austrian-Metternich policy took his place. This policy was an attempt to govern Germany again, as before, merely as a means to an end.

"For this end Austria had to acquire a complete supremacy. The natural opponent to this supremacy was Prussia, which was, after the peace, stronger in German elements than Austria. The more Metternich succeeded in upholding the territorial scaffolding of the Rhine Confederation, the more allies he had against Prussia, and the easier it became for him—first, to assume the same position with the princes of the Rhine Confederation which Napoleon had once held, and, secondly, to neutralize the influence of Prussia in the rest of Germany. In this way, Napoleon's position as protector of the Rhine Confederation was perfectly assumed by Metternich; and, with regard to Germany, his position was even stronger than Napoleon's had ever been, from the circumstance that he succeeded in inducing two kings of Prussia to place themselves for thirty-three years in the leading-strings of the Austrian policy. Metternich certainly did not use this supremacy for foreign wars of conquest, as did Napoleon, but for a moral warfare against the influence of Prussia, against the spread of revolutionary doctrines, against constitutional government and Protestantism, and in favor of the Jesuits and absolutism. This policy, just as faulty as had been the former policy of Austria, was certain first to entangle again, and then to ruin, the affairs of Germany. The flood of Democracy which spread over Germany in 1848 is pre-eminently the result of the policy of Austria from 1814 to 1847" (vol. ii., p. 231).

As to the manner in which Prussia was to assume the hegemony of Germany, Stockmar's views were at least striking and original. His plan was that the Prussian territories should form what he called the "immediate imperial territories," having no national existence except as *Germany*, and "ruled without a special Prussian parliament, without a special Prussian administration, by the Prussian king [king no longer], as actual hereditary German Emperor, by means of the German Imperial Parliament and the administrative organization of the German Empire" (p. 246)—very much as the District of Columbia is governed by Congress, only that, of course, these Prussian provinces must have been represented in the Imperial Parliament. The other states, on the other hand, except so far as they should choose to become *immediate* by surrendering their individual sovereignty, would be *mediate*, being governed by the Imperial Parliament just as our States are governed by Congress, and in other respects retaining their local autonomy. A weak feature of this plan, and which would probably have been fatal, as the editor points out (p. 249), is that it calls upon Prussia completely to sink its individuality in the sovereignty of the nation, in consideration of the national advantage and the honor of serving as the central point of the new nation—an abnegation which could certainly not be expected of it.

A very interesting chapter in the second volume gives an account of the affair of the Spanish marriages, which made so much noise at the time, and which Stockmar considers to have been a chief cause of the overthrow of Louis Philippe, as it certainly deserved to be. It would require too long an extract to show fully his grounds for this belief, but it is to Guizot personally that he attributes the bad faith of the French Government at this time; adding that, in his belief, "but for Guizot's arrogance, pride, carelessness, and want of knowledge of men and things, Louis Philippe would have died on the throne, and his grandson would now be king" (p. 229). In his masterly discussion of the policy of the Guizot ministry, he says: "Without their guilt we should have seen, even under the rule of this mistaken sovereign, that an honest constitutional discharge of their duty on the part

* 'Memoirs of Baron Stockmar. By his son, Baron E. von Stockmar. Translated from the German by G. A. M. Edited by F. Max Müller.' In two volumes. London: Longmans, Green & Co; Boston and New York: Lee & Shepard. 1873. 12mo.

of the ministers would have converted the fiction of the infallibility of the sovereign into a reality, so that his mistakes and self-will alone could not have effected his own ruin and, at the same time, that of the state. The English kings of the House of Brunswick, and more especially George IV., applied in the same manner all their energies to ruin themselves and the monarchy, but in vain" (p. 218).

We have mentioned those chapters of the book which are of most importance in the study of the political history of the times. The Belgian affairs and the abortive German Empire were questions in relation to which Baron Stockmar had the closest personal knowledge and interest; the Spanish marriages, the Eastern question, and French relations, also receive light from these memoirs; the Schleswig-Holstein question is only slightly touched, neither do we find much instruction upon the internal affairs whether of Germany, Belgium, or England. His activity was essentially diplomatic. The English court, however, was Stockmar's chief residence for many years; Prince Albert was his pupil in politics, and Queen Victoria was strongly attached to him. The chapters which treat of his relations to the English royal family are probably those of most interest to the generality of readers. In this family he appears to have enjoyed the greatest intimacy until the end of his life.

It will be interesting to see the opinion formed by so keen an observer of some of the leading English statesmen. Of Wellington he says:

"The natural sobriety of his temperament, founded upon an inborn want of sensibility, was unable to withstand the intoxicating influence of the flattery by which he was surrounded. The knowledge of himself became visibly more and more obscured. The restlessness of his activity, and his natural lust for power, became daily more ungovernable. Blinded by the language of his admirers, and too much elated to estimate correctly his own powers, he impatiently and of his own accord abandoned the proud position of the victorious general, to exchange it for the most painful position which a human being can occupy, viz., the management of the affairs of a great nation with insufficient mental gifts and inadequate knowledge. . . . It required the full force and obstinacy of this strange self-deception in Wellington, it required the full measure of his activity and iron persistency, in order at last by a perpetual reiteration of errors and mistakes to create in the people the firm conviction that the Duke of Wellington was one of the least adroit and most mischievous ministers that England ever had" (vol. i., p. 129).

Of Peel:

"His most peculiar and important faculty seemed to me to consist rather in a quick and sure understanding of all the relations of men generally, but especially of their business relations. As understood by him, all high impressions found, as by themselves, their right place, and acquired in the shortest time so true a coherence that the whole and its parts could be surveyed with the greatest clearness. . . . Peel's mind and character rested on moral foundations which I have not once seen shaken, either in his private or his public life. From these foundations rose that never-failing spring of fairness, honesty, kindness, moderation, and regard for others which Peel showed to all men, and under all circumstances" (vol. ii., p. 420).

On the whole, he did not have a very high respect either for English statesmen, as he knew them, or for parliamentary government. "One great scarcity is felt at present in England," he writes, "viz., that of able statesmen. Through it the evil from which we suffer since the Reform Bill, is always becoming greater: I mean the growing omnipotence of the House of Commons, and its interference with things belonging to the executive" (vol. ii., p. 448). And again: "I do not despair, but it is enough to make one low-spirited and afraid, when one considers to what ministers, and to what an absurd, usurping House of Commons, the fate of England is at present entrusted. England will not perish, but it has already lost much of its former position in the world, and the loss may be increased in the next few years" (p. 546). This dislike of parliamentary government is, however, by no means due to a liking for absolutism, but to a feeling that it has destroyed the true constitutional balance—"the line which separates a republic from a constitutional monarchy is not sufficiently appreciated." "This English mania of making all political wisdom to consist in the art of satisfying Parliament, and of tickling it by means of clever speeches, makes me sick." Perhaps there is something in this criticism which we Americans can lay to heart.

LOSSING'S LIFE OF SCHUYLER.*

WE regret that Mr. Lossing has called this work the 'Life and Times of Philip Schuyler.' It is a grave error both of taste and of judgment; for General Schuyler, though an eminent man, does not hold that prominent position as the originator and controller of great events which makes the story of a life the history of an age. During the old French war, he rendered obscure though useful services in the commissariat and at the head of a company. In forcing a full narrative of that war into the 'Life of Schuyler,' the biographer loses sight of his hero for pages together in order to make room for the thrice-told tales of the death of Lord Howe, the defeat of Dieskau, the disaster of Fort William Henry, and the triumph of Wolf on the Plains of Abraham. This is much to be regretted, for the life of Schuyler, even when strictly confined to its subject, supplies abundant materials for an instructive biography; but it would not have filled half its present space.

General Schuyler holds an important place in the civil history of New York, a still more important one in its military history, and a very interesting one in its social history. We meet him as a leader in the Colonial Assembly, as a subordinate in the old French war, as a commander in the war of Independence, and as a member, both in right of birth and of marriage, of that colonial aristocracy so well described by Mrs. Grant of Laggan. We catch pleasant glimpses of him, also, in those memoirs of the Baroness de Riedesel, which have so softened the historic truth as to have almost made us forget that her husband was a mercenary, defending an alien cause for gold and rank. In all of these characters, Philip Schuyler appears to great advantage, enjoying in each the respect and confidence of those whose good opinion was most to be desired. We do not think that Mr. Lossing has made as much as he ought to have done of these phases in the life of his hero. They supply the materials for a good deal of spirited narrative and fine historical painting. His personal appearance was striking. His eye and mouth were full of character. His manners were simple and dignified, and had that graceful ease which early familiarity with society and consciousness of position give. In later life, his natural amiability is said to have been sometimes affected by the gout—an hereditary disease, which he bore with heroic fortitude under circumstances which would have broken a common spirit. It is seldom that physical infirmities can be dwelt on at length without awakening a suspicion of mental weakness; but Schuyler bore gout and rheumatism and fever so bravely under the most trying conditions that you instinctively say, This is the stuff whereof heroes are made.

Yet his fate has been a hard one. He was one of those who fall short of their mark, not through shortcomings of their own, but through strange combinations of adverse circumstance. He labored hard for success, but only to see his laurels transferred to an undeserving brow. His early promise was brilliant. A knowledge of Indian life and character was an important element in the education of the young men of those days. He made himself familiar with them, and rendered important services as Indian commissioner. The old French war was a school for him, and, though he does not appear in its history, gave him a practical knowledge of the duties and mechanism of the staff which made things possible for him which would otherwise have lain entirely beyond his reach. When the war of Independence broke out, all eyes were turned to him as peculiarly fitted for the command of the Northern department. Here began a career which promised great glory. The tragedy of Quebec added a new name to the two great names which give such interest to the banks of the St. Lawrence. While Montgomery lived, there was perfect harmony between him and Schuyler, and their letters show how fully each trusted the other. But here began also those difficulties with the New England troops which, in the campaign of 1777, led to an act of great injustice. Little did Schuyler foresee the trials and mortifications that he was preparing for himself when he entered so warmly into the question of the New Hampshire grants. He had studied New England character in the wrong school, and brought some of the antipathies of his Dutch blood to the study. He had aristocratic habits and aristocratic tastes, and was a stern disciplinarian and a rigid enforcer of the distinctions of rank. Graydon has preserved an anecdote of him which shows how he looked down upon Yankee colonels and captains. A New England captain came to Schuyler's quarters on business while the general and his family were at table. "He came in," says Graydon, who despised Yankees, and was a thorough aristocrat himself, "with that abject servility of manner which belongs to persons of the meanest rank. He was neither asked to sit nor take a glass of wine, and, after announcing his wants, was dismissed with that peevishness of tone we apply to a low and vexatious intruder." Schuyler forgot that this "low and vexatious intruder" held a commission from the same authority with himself, was engaged in the same cause, and came to him upon business that arose from their official relations. He probably forgot the "intruder" in the next five minutes, but the despised man did not forget him. It was not, therefore, without blame on his part that the New England troops disliked him. When they accused him of arrogance towards them, they were not altogether wrong; when they denied him their confidence, they followed a common though not a noble instinct; but when they called his judgment and military talents in question, they erred gravely; and when they suggested that he wanted courage, they were guilty of gross slander.

* 'The Life and Times of Major-General Philip Schuyler. By Benson J. Lossing, LL.D.' New York: Sheldon & Co. 2 vols. crown 8vo.

Mr. Bancroft has revived these slanders, and Mr. Lossing has refuted them with a just appreciation of what belongs to history and what to the chronicle of scandals.

Mr. Lossing has not altogether escaped the *lues Boswelliana*. We know of no authority for attributing Hamilton's early perception of the defects of the Confederation to Schuyler. Mr. Lossing indeed writes:

"This was a movement towards nationality which Schuyler hailed with joy; yet it was much short of what he wished in its scope and tendency. He earnestly desired a national convention, to decide upon some positive measures for that kind of centralization seen in our National Constitution which should make the Congress the supreme head of the Republic. So earnest were his convictions and so urgent were his arguments that he inspired the active mind of his son-in-law, Alexander Hamilton, with that ardor for such centralization which ever afterwards distinguished him."

This is a strong statement, and Mr. Lossing must not accuse us of undue scepticism if we ask for his proofs. It has always been regarded as one of the marvels of Hamilton's mind that he came into public life at nineteen with convictions already formed and a judgment already ripened. We know of nothing to justify a change of opinion. With all his shortcomings, however, Mr. Lossing has made a valuable contribution to American history, and done much for a juster appreciation of one of its eminent men.

TUKE'S INFLUENCE OF THE MIND ON THE BODY.*

IN this very curious and interesting book, the author collects from all the sources open to him authentic illustrations of the influence of the mind on the body, and attempts, by arranging these "on a definite physiological basis," to show the extent of this influence in causing disease, its use and importance to physicians as a practical remedy, "and to elucidate by the whole enquiry the nature and action of what is called the imagination." He says, in somewhat turgid English:

"I want medical men who are in active practice to utilize this force, to yoke it to the car of the son of Apollo, and, rescuing it from the eccentric orbits of quackery, force it to tread with measured step the orderly paths of legitimate medicine."

Dr. Tuke's eminent rank in his profession dissipates the suspicion of charlatanry which might well arise from the publication of any book upon the subjects here treated of, considering the libraries of volumes signifying nothing which do duty as the literature of mesmerism, animal magnetism, and modern spiritualism. Whether or not the author accomplishes the very difficult task he has set himself, it may be admitted that he has done the best possible for his subject, and we cannot but admire the catholic professional spirit which is ready to accept assistance from any quarter—a spirit only too unusual in a profession where bigotry and prejudice against new lights are sometimes in an inverse ratio to the scientific knowledge of its members, and the certainty of the principles upon which their system is founded. "Medicine," says Dr. Tuke, quoting with approval from Dr. Rush, "has its Pharisees as well as religion; but the spirit of this sect is as unfriendly to the advancement of medicine as it is to Christian charity."

It is impossible to give anything but the barest analysis of the very complex plan of Dr. Tuke's work. The author, ignoring for the purposes of his book the metaphysician's subtle definitions of the word imagination, means by it, "as regards the present enquiry, that a man imagines certain (bodily) phenomena to have occurred which have not; or it is meant that certain bodily phenomena which really have occurred are due to no other cause than that he imagined they would," and he adopts as his "fundamental principle" the words of Hunter: "I am confident that I can fix my attention to any part until I have a sensation in that part." He assumes that the mind acts on the body "through its threefold states of intellect, emotion, and volition," and arranges his "illustrations," four hundred and thirty in number, so as to show the influence of each of these elements upon, first, sensation; second, the voluntary muscles; third, the involuntary muscles; fourth, the organic functions. These illustrations are drawn from a variety of sources—medical works, the columns of newspapers, and the professional observations of the writer or his correspondents; and, whether of any further value or not, have at least the merit of interest. Space will not admit of extended quotations, but we may mention that, in Dr. Tuke's opinion, which seems authorized by his cited cases, it may well be that

> "Deadly fear can time outgo
> And blanch at once the hair,"

and that Byron was quite justified in speaking of men whose hair grew white in a single night. Of interest also, as illustrating a curious tendency among physicians to forget the end and aim of their calling, is the fact that many English surgeons of eminence stoutly opposed the use of sulphuric ether as an anæsthetic, not on the ground that it was ineffectual to prevent pain, or unsafe, but because, as Magendie, the French Academician, declared, "it was trivial to suffer, and an invention to annul pain under the knife was only of mediocre interest to surgery."

Dr. Tuke is hardly successful in his attempt to prove that the mental states, especially the emotions, act specifically upon different organs, and that the methods and consequences of such action can be arranged in a scientific form. The author himself, in summing up the results of his investigation, after stating the admitted fact that a specific relation does exist between certain emotions (as grief), and certain glands of the body (as the lachrymal system), admits that he cannot safely go much further. He says, somewhat obscurely:

"Probably we cannot go much beyond these general principles, which, combined with the law that any emotion which, either by its character or its suddenness, depresses the activity of the controlling power of the cerebrum, allows of the irregular or excessive action of the encephalic, spinal, or sympathetic nerve-centres, will generally serve to explain the changes induced in the body by varying mental states."

In his chapter entitled "The Practical Application of the Influence of the Mind on the Body to Medical Practice," the writer gives many instances of the admitted influence of hope, fear, and other emotions, in effecting the cure or hastening the progress of disease, but he does not seem to have elicited anything very new or very valuable. In fact, his only practical conclusion on this branch of his subject seems to be that the physician should acknowledge the possible power of the imagination in effecting cures, and use it as a help in his art, and may, in so doing, properly invoke the aid of the mysterious force called mesmerism, which the author does not attribute to the agency of animal magnetism, so called, but the results of which he seems to regard as due to the active will of the mesmerizer acting upon the passive imagination of his patient.

While Dr. Tuke adopts for the title of his work "terms which accord with popular usage," he does this "only for the sake of clearness," and under a kind of protest, saying, as he does, that "it is more than probable that no amount of scientific knowledge will ever displace the time-honored phrases of 'mind' and 'body.'" But the author himself does not accept these words in their popular meaning, as denoting independent existences as separable from each other as the elements of rock and iron in metallic ore. On the contrary, he recognizes the existence of an "inseparable *nexus* existing between the two, arising out of the fact that the organ of mind is but the outgrowth and ultimate development of the tissues and organs of which the body itself is composed; that it not only unites them in one common bond, but is, in truth, a microcosm of the whole." Here we suppose he occupies common ground with the best scientific thinkers, but beyond the admitted truth thus expressed, the bases of mental science are wholly speculative, and therefore just as many systems of metaphysics and theories of mental and bodily relation are possible as there are intelligent minds in existence, each being at liberty to assume whatever premises it needs to work out the conclusions which it begins by taking for granted. It is for this reason, as it seems to us, and not from any lack of learning or industry, that Doctor Tuke has failed to add much to the sum of exact knowledge, or to build up his facts and phenomena in a homogeneous scientific form.

The style of this book cannot be commended as a model either of clearness or elegance. In many of the longer paragraphs, subjects and predicates flounder about in hopeless confusion, and, failing to find their right places, only serve to obscure the writer's meaning. We have already given one specimen of Doctor Tuke's fine writing, but what shall be said of the taste which puts the simple fact that an old man compelled his wife to emigrate with him to America in this wise: "He insisted that his wife, toothless for years, and her hair as white as the snow on Mont Blanc, should accompany them to the land where God's creatures were permitted to inhale the pure old invigorating atmosphere of freedom"? In a word, the book adds one to the many existing specimens of a style that may be called Medical-English—sometimes stilted, and too often disfigured by attempted witticisms and trite quotations from the poets—a style that may pass without comment in the medical lecture room where it had its origin, but which is utterly unworthy of use in a sober scientific treatise.

HILLEBRAND'S FRENCH OF TO-DAY.*

THOSE who want to understand the present condition of France and the French people will do well to read this book. Professor Hillebrand has undertaken to give his countrymen, an accurate, unbiassed view of the society and politics of the nation they conquered. In doing this he does not hesitate

* 'Illustrations of the Influence of the Mind on the Body in Health and Disease. Designed to Elucidate the Action of the Imagination. By Daniel Hack Tuke, M.D., M.R.C.P., etc., etc.' Philadelphia: Henry C. Lea. 1873.

* 'Frankreich und die Franzosen in der zweiten Hälfte des XIX. Jahrhunderts. Von Karl Hillebrand.' Berlin: Robert Oppenheim; New York: L. W. Schmidt. 1873.

to make comparisons that tell against Germany, and the preface begins with some remarks upon German arrogance which are as severe as any that follow upon French vanity. The author is entitled to be heard with respect. Driven from Baden in early life by political trouble, he was hospitably received in France, and spent there the twenty years from 1850 to 1870 to which his book refers. A keen and educated observer, in a situation which would naturally tend to make him impartial, he has studied and reasoned upon French character and institutions with the interest, and without the prejudices, of a citizen.

In this work he takes up successively French society, French education, life in the provinces and in Paris, literature and politics. Superficial writing on these subjects is common enough, but the thorough acquaintance with them here manifested is extremely rare, and the treatment of each topic does no less credit to the soundness of Professor Hillebrand's judgment than to the sharpness of his insight. The sketches of French social life will be especially pleasant to those who are somewhat familiar with it, and who can appreciate the fidelity as well as the caustic frankness of the touches. Naturally, some things creep in that are to be found in all writers on French character from Cæsar down, and there is once in a while too much repetition. But it is not often that the author is either trite or tedious; and, considering the subject, it was very easy to be both. He does full justice to the prudence and practical wisdom of the people, to the perfect organization and charm of their social life, to their skill as administrators of justice and of affairs. Their deep regard for family ties is fully admitted. Some passages will suggest a comparison of the widely different effects upon social life produced by the French marriage relation, based on the understanding and upon practical wisdom, and the marriage of the Anglo-Saxon and German races, resting for the most part upon personal attraction. The far-reaching influence of the respective systems upon society deserves more study than it has yet received. That there is throughout the book a vein of deep dissatisfaction with the national training and life, will not surprise those who have lived longest abroad. "Their virtues," he says, "make daily life agreeable and easy, cheerful and convenient. They are satisfactory for ninety-nine days of life, so long as it rolls on in its accustomed track; but they are unsatisfying on the hundredth day, when that happens which cannot be foreseen, and the storm bursts over their artificial building. . . . 'Scratch the Russian, and you will find a Tartar,' is a French witty saying. With more justice might we add, 'Scratch a Frenchman, and you will find an Irishman.'"—The comparison that follows is not without force.

French education is a subject of which Americans generally know very little, and on which the author is especially at home. While professor in the University at Douay, he was called upon by the Government to prepare a report on the improvement of French instruction, and in 1868 he published a work in Paris on the reform of higher education. He gives interesting details about the present system, and conveys a good idea of the "université," that highly artificial machine, which in its principle, and in its close relations to the state, perhaps resembles China more than its author, the first Emperor, imagined. Both teachers and students are viewed from the standpoint of a professor, and sometimes assailed for faults which are more or less universal. But he complains of the instruction that seeks knowledge, not for itself, but for immediate practical use, in words which will recall Professor Tyndall's parting lecture in this country; and he criticises deservedly the lack of mental training, the attention paid to committing to memory, their chemistry and physics taught without experiment, and their geography, which is simply an acquaintance with the departments of France.

The most thoughtful and able portion of the book is its sketch of the present condition of French political life. The broadly differing views of the various classes of the people, and the difficulties which any government must encounter, are little appreciated, particularly by the daily journalists who instruct us in foreign affairs. With a great capital which is always in opposition, which unites the best intellect and the most dangerous ignorance of the country, where the lower classes hate all restraint, and the educated are devoid of the very idea of political responsibility; with a provincial middle-class that is selfish, timid, and hesitating, and a peasantry absolutely barbarous, the task of government cannot well be harder. Perhaps an additional reason for the instability of French administrations is that they are all so much alike. The word "republic" carries with it in American minds a host of assumptions which often mislead us. If President Grant appointed and removed at pleasure every Governor and State official; if teachers and judges looked to a Secretary for advancement; if our domestic relations were regulated by Congress, and even the police and the sale of cigars placed under the control of a Washington bureau, we might understand how little a republic may differ from a monarchy or an empire. The superscription on the franc changes, but the same system and institutions remain. The permanence of the latter is well illustrated in a remark which the author, in speaking of the multiplicity of French judges, quotes from a speech of Baron Jouvenel: "I know," said he, "that we live in a country where it is more difficult to suppress a court than to overturn a throne."

Professor Hillebrand's sketch of Napoleon III., and of the constitutional history of the Second Empire, is the first fair, accurate, and intelligent account we have seen of the Emperor's character, his policy, and the attitude of the nation towards it. He adjusts the responsibility for the Empire and its terrible downfall as we think history will adjust it, and, while condemning the Emperor, he is obliged to condemn equally the French people. There is much on this subject that is worth quoting, and the portraits of Napoleon and of Thiers are particularly deserving of thorough study, but want of space forbids us to do more than commend the book itself to the attention of our readers.

THE DOMINANT LANGUAGE OF THE TWENTIETH CENTURY.*

PRESIDENT GRANT'S creed, "I rather believe that the Great Maker is preparing the world to become one nation, speaking one language," is professed, so far as regards language, and within certain limits, by others who are far from expecting, or even desiring, the civil commonwealths of the future to coincide with the commonwealth of letters. For instance, Alphonse de Candolle, the author of the interesting essays one of which we are now considering, is a Swiss, of a city which prides itself upon the purity of its French, but is none the more willing on that account to be absorbed into *la grande nation*, even if that tongue were to become dominant in the twentieth century, as assuredly it will not. The French language, in our author's view, has had its day; and the masterful speech of the coming century is to be English.

The essay in which the reasons for this opinion are set forth is by no means one of the most considerable in this volume, but it is worth a moment's attention. As a naturalist, De Candolle does not fail to observe that Latin is hardly longer to be styled the universal language of science, any more than of the church. It holds its place in descriptive natural history alone, and there we may hope it will continue. But this is Linnæan Latin, which is as much unlike classical Latin as the "French of Stratford-atte-Bow" is unlike French of Paris. It is a technical language, in which the terms are all clearly defined, the vocabulary limited, and the use precise. By it the characters of genera and species can be expressed more succinctly and clearly than they possibly can be in any living modern language, except by a transference of the terms themselves, for which, indeed, the English language offers great facilities. But, in other departments of science, and in natural history as well, apart from purely descriptive matter, as in the presentation and discussion of physiological, anatomical, and morphological investigations, the inconvenience of Latin is more and more evident, and modern languages—the vernacular of each writer—are now very generally employed. The great advantage of a common or even a prevalent language is thereby lost, and the inconvenience is becoming grave enough now that French is less important in science than German and English. That French should have taken the place of Latin throughout Europe as the means of intercommunication was natural. An Englishman and a German half learned French in learning Latin; a Spaniard and an Italian had three-quarters of it already. Moreover, its clearness and precision well adapted it to scientific uses. But, as De Candolle remarks, the scientific centre of gravity is moving northward in Europe, and the Scandinavian, and even Russian, as well as the English and German scientists are speaking "every man in his own tongue," to the growing embarrassment of his fellows of other countries. Very few people can be expected to read more than one modern language besides his vernacular; but in these days he needs to be a polyglot. Our author is persuaded that the naturalist of the future will be less embarrassed; that, after the example of the Greek language in the Roman Empire, and of French in modern times, some one language is almost certain to dominate. He indicates two essential conditions which the coming language must fulfil: first, it must have enough both of German and of Latin words or forms to commend it both to the Teutonic and the Latin races; secondly, it must be spoken by a considerable majority of civilized people. Grammatical simplicity, clearness, and especially brevity are also important. The English language alone fulfils these conditions, or will fulfil them fifty or a hundred

* 'Histoire des Sciences et des Savants, depuis deux siècles, suivie d'autres études sur des sujets scientifiques, en particulier sur la Selection dans l'espèce humaine.' Genève: H. Georg; New York: F. W. Christern. 1873. 482 pp. 8vo.

years hence. It is half German and half Latin. It holds a position among the principal languages now used in scientific intercourse very like that which was held by French between Latin and several modern languages. The discovery of America doubled its use, and the movement of populations in both hemispheres fixes its destiny. It is now spoken in Great Britain by 31 millions, in North America by 46, in Australia and New Zealand by 2 millions—in all, 77 millions of people. German is spoken at the present time by 62 millions, French by 40½ millions. Then De Candolle estimates that, as the population of England doubles in fifty years, and that of the United States, Australia, etc., in half that time, the probable number of English-speaking people in the year 1970 will be 860 millions, when, at their present rate of increase, German will be spoken by 124 millions and French by 69½ millions. Moreover, English is much more spoken in Africa and in Southern Asia than all other European languages put together. The language of more than three-quarters of Christendom, and of the most active and the most reading people, will necessarily be the one into which all valuable works in other tongues will be translated, that in which they will have many times more readers than in their originals. Already, as our author remarks, German works are largely read by French-speaking people in English translations. As this goes on, English must become the dominant, if not the universal, language so far as science and literature are concerned.

In the prevalence of a language, perhaps the character and situation of a people are more important than the character of the language. Otherwise, the Italian instead of the French language should have prevailed during the last two centuries. It is as clear, more harmonious and elegant, nearer the Latin, and with an earlier and very remarkable literature. The geographical position of France and the number and activity of its people turned the scale. De Candolle assigns another reason: the words in French are shorter, and the verbs less complicated. For similar reasons, the German language, with its three arbitrary genders, its fashion of cutting words in two, and dispersing the fragments, and reserving the most important to the close, could under no circumstances well prevail in these busy modern days—will hardly hold its own without modifications. Grammatical simplicity and, above all, directness and brevity are essential requisites; and in these the English language most conforms to modern tendencies and habits. As compared with Italian, French, and especially with German, it offers the shortest road from one point to another. De Candolle illustrates by several anecdotes and personal experiences the fact that when the two languages, French and German, are spoken in a family, the former gains the day; that English wins over both; and he deduces the general rule that in the conflict of two languages, other things being equal, the briefer and simpler prevails. He naturally finds that English has one great fault, "an absolutely irregular orthography, so absurd that it takes a child a year longer to learn to read than any other European language"; and in pronunciation, the vowels are not well articulated. The orthography, he thinks, may slowly be amended.

The article closes with a homily upon the great responsibility with which the Anglo-American races are charged, the importance of preserving the actual unity of the language, which may be in some danger of breaking up into English, American, and Australian, although certain causes which contributed to the breaking up of the Latin tongue will fortunately not apply to the English populations. And he appeals to the Americans as having the greatest interest in the stability of the language which is to dominate, since it is to have its largest development upon this continent.

Monographs, Personal and Social. By Lord Houghton. (New York: Holt & Williams.)—The desultory sketches here gathered into a volume are all, whether they are of perfectly well-known persons or of persons almost perfectly unknown, based upon Lord Houghton's own acquaintance with the men and women sketched. Thus the book is very fresh; and reading it is like listening to the talk of a clever and cultivated man about some of the noted and noteworthy people he has met in his time. That any part of it is weighty; or that the various parts of it are of equal interest; or that some parts of it may not be of but very little interest to some intelligent audiences, is not pretended. Probably, for example, it must be with a certain remoteness of interest that the New Yorker at Long Branch reads about the Misses Berry—ladies who died the other day, indeed, but who were beauties when George the Second was king, who were correspondents of Madame du Deffaud, and who, out of respect for the beloved memory of a certain friend of theirs, "never, after his death, would wear rouge." The same, too, may be said of the sketch of Cardinal Wiseman, of whom Lord Houghton talks pleasantly, but in such a way that a knowledge of twenty-year-old English politics is requisite to interline what he says, and make it completely intelligible.

The "Heine" and the "Landor" will be read on this side of the water with avidity, those being favorite names with the American general reader; and the same may be said of the paper on Sydney Smith—while those on Suleiman Pacha and Lady Ashburton will be turned to with a curiosity which each will satisfy, and, as we might perhaps say, each will both satisfy and repay. The former certainly will, as indicating in outline an adventurous and gallant career. The Pacha was born in Lyons, and was the son of a citizen of that town who fought against the Directory when the Lyonnais rebelled against its tyranny. Young Selves began soldiering by daily carrying his father's dinner to the ramparts. Later, he was an *aspirant de marine*, in which capacity he served during that conflict which Napoleon announced to his Council as "the loss of some vessels by the weather, after a combat imprudently engaged in"—the combat imprudently engaged in being that known as the Battle of Trafalgar. Selves, in that action, was on board the ship out of whose tops was fired the shot that killed Lord Nelson. By-and-by the young midshipman had the mischance to kill a superior officer in a duel, and fled to the Army of Italy. Thenceforth followed many years of service with the French armies, in Italy, in Germany, in the Russian campaign, and at Waterloo, where he was on Grouchy's staff. Lord Houghton narrates, too, briefly Colonel Selves's career after his entrance into the service of Mehemet Ali. His really was the conquest of Syria while in the employ of that prince. Afterward, he lived a dignified, honorable, and beneficent life in retirement, the great scheme of an Arab empire between the East and the West having failed, and he being untempted by offers of preferment outside of Egypt.

Of Sydney Smith, Lord Houghton has some new anecdotes, which, however, yield in interest to his analysis of the extremely common-sensible Canon's view of the relations of the clergy to the church and to their flocks and to the state. There can be no greater social anachronism, Lord Houghton remarks in substance, than to suppose that the standard gradually established since 1800 and by which we now judge the sacerdotal character, is at all like the standard in vogue when Sydney Smith made choice of his profession. At that period the ministers of the Church of England were "serious, not austere; pious, not devout; literary, not learned." He went to his profession with no special aptitude and no pretence of a spiritual vocation. "He undertook to perform its duties in the different spheres in which they might be presented to him, to form his life on a certain basis of belief, to submit to its recognized restrictions, and to defer to its constituted authorities." And if in addition to these compliances and services he became a credit and ornament to his profession; if he strengthened its position by his learning or wit or reasoning, he thought it a fair demand that he should have his full share of the dignities and the wealth of the corporation whose interests he had advanced or maintained. In short, he believed the church "to be a valuable branch of the civil service, to guard the morality and guide the education of the people"; he was pleased with its judicial attitude amid the raging of controversies; he liked its cutting off of the Nonjurors on the one hand and its ejection of the Nonconformists on the other; he thought it a sensible man's church, and the church for a man of good taste—it did not expose to the open air "an order of thought and feeling which it was neither good sense nor good taste to make general and familiar." Says Lord Houghton: "'How beautiful it is,' I heard Sydney Smith preach at Combe Florey, 'to see the good man wearing the mantle of piety over the dress of daily life; walking gaily among men, the secret servant of God.'" It is beyond doubt that this gaiety of walk, as understood by him, was the cause why the Whigs neglected to repay his party services with a bishopric—a neglect which Lord Houghton thinks there is good reason for asserting Smith to have felt deeply and blamed freely. Accordingly, Lady Holland's statement that her father treated the rather cowardly conduct of the ministry with dignified indifference Lord Houghton pronounces incorrect. It is beyond doubt, too, that we may readily enough find excuse for both parson and party. He knew his value and his services, and, as he had shown by his adhesion to the party cause in its dark days, he himself would have had the courage to do what he asked them to do for him. But, on the other hand, the ministry knew better than he seems to have known the degree in which he had shocked some of the religious and some of the stupid of the many sects and sets which they had to placate. This Lord Houghton seems not to make sufficiently clear; if, indeed, this be the true explanation.

The longest essay is one of nearly ninety pages on Landor, which is good to read for this if for no other reason, that it will be found no bad corrective of the impression which Mr. John Forster's biography of the poet contrives to make; the younger poet, seeing with better eyes than the man of business, shows us the lofty, gentle, and pitiable sides of Landor's character as prominently as the perverse and ungovernably violent. These latter are, however, not forgotten. We must praise also Lord Houghton's chapter on Heine—partly his own and partly communicated by a lady whom Heine had known as a little English girl, and who afterwards soothed his latest hours on his "mattress grave" in Paris. It is a chapter that may profitably be read

together with the short and one-sided chapter on the same subject by Mr. Matthew Arnold, who certainly was further from adequacy in his 'Heine' than in any other portion of the 'Essays in Criticism.' Lord Houghton enriches his kind and pleasant pages with a translation of some of Heine's last lyrics.

Plays and Puritans, and Other Historical Essays. By Charles Kingsley. (London and New York: Macmillan & Co. 1873.)—This volume consists of three essays, of which one gives its title to the book and the others are entitled respectively: 'Sir Walter Raleigh and his Time,' and 'Froude's History of England.' All these were already well known in an American edition published some years since, with several other papers from the same hand, the collection then going under the title of 'Sir Walter Raleigh and his Time.' The admiring reader of the earlier volume will find that nothing of importance is changed in this one. He will find unabated in any degree all the eager partisanship and smoking-hot rhetoric of the days when 'Tract Number Ninety' and its offspring—that daughter and prolific mother of debate—had set all English Churchmen by the ears and caused the English history of a certain period to be pulled hither and thither with so much diligence and so little fairness. But if he finds nothing altered in the essays, he may probably find something altered in his view of them. It was, for instance, in 1856, rather than in 1873, that he very likely took most delight in Master "Zeal-for-the-Truth Thoresby, of Thoresby Rise," with "a sincerity of a right awful kind in him," with his cuirass and long sword, and with his Bible in his boot-leg, who at Naseby-field plays the man in Israel, hewing Agag in pieces "in the face of death and hell." Whether or not Master Thoresby is delightful any longer, here he is at any rate, as in 1856, "the long rapier swinging round his head, redder and redder with every sweep," so that it is as silly in 1873 as it was formerly to assert that "the Cavalier produced more poetry than the Puritan." Henry VIII. is here, too, as aforetime—as scrupulous, almost over-scrupulous, as he ever was; and his daughter, "that wonderful maid," still says to her Leicesters and Raleighs and Essexes, "Out of the dust I took you, sir! Go and do your duty humbly and rationally henceforth, or into the dust I humble you again"—all in the most royal and majestic manner. The recent visit of Mr. Froude to this country, and the discussion which that gentleman's lectures caused throughout the country, give the volume a certain opportuneness. Hardly less disfigured by Mr. Kingsley's peculiar defects than the other two essays, is the essay entitled 'Plays and Puritans,' which, however, appears to us to be the best of the series. On the other hand, it lacks some of their good qualities of effectiveness. But it is less misleading.

Students' Series of Classic French Plays, edited, with explanatory notes for the use of students, by Edward S. Joynes, M.A., Professor of Modern Languages in Washington and Lee University, Va. I. Le Cid, by Corneille; II. Athalie, by Racine; III. Le Misanthrope, by Molière. (New York: Holt & Williams. 12mo, pp. 356.)—This series of French text-books is already pretty well known to the public, the first of the three having been published some three years ago, and all having gone through several editions. Their appearance now, revised and corrected, in a single volume, furnishes an opportunity for our mentioning them with a few words of recognition of their merits. It may be said with truth, we think, that no other French texts have been edited for class use in this country so carefully, and with such competence of learning. Unfortunately, that is not so high praise as it ought to be, for we have had few editors of such works who have not been content with a facile turning of French idiom into English idiom; that is to say, with doing what would help a French boy make an English version, but not what would make an English student understand his French text. The latter is Professor Joynes's object, and it is throughout successfully attained. No two persons, we presume, would entirely agree as to where a note was needed and where it was superfluous; but certainly no reasonable person can fail to give his general approval to the scale on which the editor of this series has constructed his commentary. With such aid, these masterpieces of the French classic stage are put within the reach of many a class which would not otherwise be equal to undertaking them. And this is no slight favor to many high-school and college teachers, who have longed for the liberty to take up a higher class of texts than has been hitherto accessible. The selection, too, is to be commended without any reservation. Mr. Joynes, in the preface to the "Athalie," shakes his head a little over the decided preference generally accorded to that play over the other works of Racine; but we must confess to sharing that preference heartily. And experience with Molière in the class-room has shown that his "Misanthrope," though less entertaining than some of the other plays, is decidedly the best for purposes of instruction, the one that best repays working through with a set of intelligent pupils. We heartily commend, therefore, Mr. Joynes's editions, singly and collectively, to the attention and favor of American teachers of French.

In the course of our use of these works, we had marked here and there a note as calling for emendation; but we have found almost every point already rectified in the present revised issue. We will only note here that the explanation of *Athalie*, line 588, "*manquerait-on pour moi de complaisance?*" though much improved, does not seem yet quite right. The queen has not yet begun to command, but only to intimate a desire, and she asks, at the suggestion that her request may be refused, "is it possible that they should lack a readiness to comply with my wishes?" We will add that close by, lines 612-616, we find occasion for a brief additional note or two: "*un enfant est peu propre à trahir sa pensée*" will be certainly rendered, nineteen times out of twenty, "a child is little apt to *betray* its thought," instead of "to *falsify*, render unfaithfully"; then there is the quasi-negation implied in *sans*, which requires *d'alarmes*, instead of *des alarmes*, to follow; and that very peculiar French construction whereby *faites prendre* is treated as a single verb, a causative conjugation, and that which is logically the direct object of *faites* is made indirect object of the combination—"*à tous mes Tyriens*"; since no French verb is allowed to take two direct objects. Perhaps the editor has explained this construction somewhere (none of the ordinary grammars do it); but if so, the place has escaped our notice.

BOOKS OF THE WEEK.

Fine Arts.

RECENT ENGLISH PHOTOGRAPHIC PUBLICATIONS.*

THE selection from the Cesnola antiquities which a London publisher put forth while the public attention in England was attracted to them, is a very small part of these interesting *trouvailles*—only 36 plates and about 100 objects from nearly 10,000—and these are naturally the examples which are most interesting archæologically, *e.g.*, those of works such as have either not been found in other places or which derive new value from having been found in Cyprus. There is nothing in the series photographed interesting as art, and the few examples of fine Hellenic work found are not even represented by a single figure. This was natural, perhaps imperative, in so small a selection from a collection so intensely interesting archæologically, and which artistically is, in its best phase, so far inferior to the splendid Hellenic works in the British Museum.

The chief point of interest brought out by the publication under notice is the marked and curious mingling of archaic work of essentially different types, and showing the presence of two or more emigrations from stocks already partly civilized. Mr. Colvin, in his introduction, dwells on this fact, but curiously makes it an evidence of an influence on the art of other nations emanating from Cyprus, while the only logical deduction is that the early art of all nations in the reach of maritime intercourse with Cyprus drifted into it as a commercial depot, and that, as in all places of this comingled parentage, nothing locally peculiar existed in it. And this, indeed, the collection of the types goes far to prove—there are those of Egyptian *provenance*; others, purely archaic, of Assyrian; and others still, more distinctly marked, and probably the earliest of all, of Etruscan (Pelasgic?) kin. The Hellenic art proper, as Mr. Newton has shown (*Academy*, December 15, 1872), was here exotic, and never, even in the most virile days of the Hellenic intellect, produced a school in Cyprus. It is, indeed, highly probable that the Hellenic colonists were few in number, mercantile; and the utter want of local sympathy or affinity with the original stock prevented any artistic motive of Hellenic type from ever taking form there.

It is only possible to conjecture the history pointed out by the slender evidence of style in technical results, but of all the evidence artistic archæology

* 'The Antiquities of Cyprus, discovered principally on the sites of the Ancient Golgoi and Idalium, by General Luigi Palma di Cesnola, from a selection made by C. T. Newton, M.A., Keeper of Antiquities at the British Museum. Introduction by Sidney Colvin, M.A.' London: Mansell & Co.

'A Series of Photographs from the Collections in the British Museum. Photographs by S. Thompson. Introduction by Chas. Harrison.' London: Mansell & Co.

gives us, the manner and make of household implements are the best, because they are necessarily the earliest and the most difficult to change. The tenacity with which incompletely civilized people cling to their household vessels is shown in the fact that most of the ancient common utensils now in use in the East were used 2,000 years ago, and the vases which the water-bearing youths on the frieze of the Parthenon carry on their shoulders, may still be seen poised in the same way going from the wells of some of the Greek islands. There are in the collection (Plates 1 to 4) some examples of pottery, of which some will be recognized at once by any one who has rummaged amongst the curiosity-shops of the Archipelago and the cities of Italy, and which Dr. Conze, as quoted by Mr. Colvin, protests against putting down to Phœnician makers. "He argues that those vases of which the decoration is purely linear and geometrical, are the work of the Pelasgic or, at any rate, of a primitive Aryan race, and that the advent of the first Asiatic colonists is shown by the introduction of the fictile ware bearing flower forms and rude animals." And this so fully accords with what we find at Cyprus and elsewhere in the Archipelago, as well as in the Morea and Etruria, that as well founded a conjecture as any which can be formed is that the early settlers of Cyprus, or of Crete and other islands, were the Pelasgi of Dr. Conze, after whom came the Assyrians, of whom Mr. Colvin (following Newton and Poole of the British Museum) says:

"Plates —— show a wave of Assyrian influence passing over the art of the island. Still, beneath this, too, there is the peculiar, experimental, and local something of which we have spoken. It is not only the peculiar cast of features, the receding forehead, the high cheek-bones and sunken cheeks, the thick, protruding nose, chin, and lips, which constitute a type apart. *That, travellers say, is the type of the Cypriote population to this hour.* . . . There is a point in the progress of the style where these sculptures closely resemble examples of the most archaic Greek work found in other places—a point where *archaic Greek and Etruscan and this* are almost indistinguishable—with the set, unmeaning smile of the mouth, and the more or less rigid attachment of the arms to the body, according to the traditional type of the helplessness of art before the innovation of Dædalus. M. Longpérier and Mr. Newton have pointed out the very singular similarity that exists in more points than one between the Cyprian statuary and Etruscan statuary found at Cervetri."

The prominence of Hercules in these sculptures points to another curious chain of evidence in this direction, for, wherever the Pelasgi have been, Hercules is eminent, and if, indeed, we put "Pelasgi" for "Phœnician" in all the traditions of Hercules, Crete, the Peloponnesus, westward, and on the shores of the Ægean, we shall find evidence enough to maintain a theory that Hercules and the Heracleidæ are only names for the Pelasgi—if, indeed, the Phœnicians were not Pelasgi of a second departure.

Of the photographs themselves of this series, I have said nothing. They are by a new process, a photo-chemical one, which, from these examples, does not seem to possess any advantage over the usual silver prints which compose the British Museum series, while it has peculiar defects.

This latter series is certainly one of the most remarkable undertakings of its kind of any time. It includes over a thousand photographs, divided into prehistoric and ethnographical, Egyptian, Assyrian, Grecian, Etruscan and Roman, and mediæval British and foreign series, and a series of the seals of sovereigns, of personages, orders, and corporations, beginning with those of Charlemagne, Offa, king of the Mercians, and Dagobert I. Not least in interest amongst the Greek works will be found the newly discovered sculptured columns from Ephesus, which have great significance in art-history. What may be said of photography as a means of record of whatever facts and forms are worth recording, may be said of Mr. Thompson's work. The limitations of locality and atmosphere are severe in the British Museum, but so far as they could be overcome they have been, and better work than may be found in this series is not to be seen to-day anywhere; and when one can estimate the labor involved in executing a thousand such negatives, he will credit the photographer with a courage and patience not often met even in his craft—the enterprise in its inception being due entirely to him, and, to a certain extent, the pecuniary risk.

The introduction of Mr. Harrison is not, by much, equal to the body of the work. Its analysis of the Assyrian records is full and extremely interesting to the casual reader, but save for the collation of dates and styles there is nothing else which gives serious value to the introduction, while the value which this collation might have had, done wisely and simply, is to a great extent interfered with by the expression of unconsidered theories and conclusions which are not in accord with the data. There is no need to repeat what has been said in noticing the Cesnola publication, but Mr. Harrison has added gross inaccuracies to the debatable positions which Mr. Colvin is compelled to take in default of anything beyond conjecture to build on.

It is hardly too much to say that every popular museum in America should be in possession of this series of photographs.

W. J. Stillman.

Just Published in the Leisure Hour Series:
SPIELHAGEN'S NEW NOVEL,

WHAT THE SWALLOW SANG.

By F. Spielhagen, author of 'Problematic Characters,' 'Through Night to Light,' etc.

$1 25.

"To F. Spielhagen must be granted the first place among German novelists."—*Boston Post.*

"In tenderness, passion, and pathos, he seems to us quite unsurpassed by any writer of fiction, English, German, or French."—J. G. Saxe.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS, Franklin Square, New York.

MR. ROE'S GARDEN, from which, as he tells us in his entertaining book, 'Play and Profit in My Garden,' $2,000 worth of fruit and vegetables were sold in one year beside a large home supply, promises equally well the present season. On the 31st of May, his sales amounted to $257. On the 6th of May, he had seven distinct varieties of vegetables in abundance at his command. The story of this successful garden is told at length in his book, PLAY AND PROFIT IN MY GARDEN, which DODD & MEAD publish.

SEASICKNESS.

Vienna, Austria, May 10, 1873.

H. M. Anthony, Esq., No. 51 Murray Street, New York—Dear Sir: The Acid Phosphate of Professor E. N. Horsford, which you kindly gave me before leaving your city, has given great relief to many persons afflicted with *seasickness*, and I can recommend it from personal experience, during a very unpleasant passage across the Atlantic, as a *most valuable remedy*. I would suggest, in order to prepare the body and build up the nervous system, to commence its use a week or more previous to sailing.

Yours very truly,

Dr. Adolph Ott,
Special Correspondent of the *American Chemist*, and delegate of the Government of Switzerland to the Vienna International Exposition.

THE WEEK IN TRADE AND FINANCE.

JUNE 30, 1873.

IT has rarely been our fortune to witness a duller week than the one just passed. Money has been a drug at 4 per cent., with the bulk of call loans standing at 3 per cent. The summer bids fair to remain extremely dull in the different markets, and this feeling has led to quite an exodus of Wall Street men to Europe and the different watering-places in this country.

The advices from London are favorable. The Bank of England reports a gain of £419,000 in bullion. No change was made on Thursday in the discount rate, which remains at 6 per cent. The Bank of France gained last week 2,250,000 francs in specie.

The weekly statement of the Clearing-house banks of this city is very favorable. The excess in reserve over the amount required by law now held by the National banks is $13,114,975. The State banks, although not required by law to keep a reserve of 25 per cent., hold $7,929,125 in legal tenders and specie, against $31,716,500 total liabilities, or $827,475 more than the National banks are required to hold. The percentage of reserve o liabilities in National banks, 30.97; State banks, 27.61. The excess of both National and State banks in reserve is $13,942,450, against $12,166,375 last week—a gain of $1,776,075. The statement is the more favorable owing to the gain in reserve being so largely made up of legal tenders.

The following are the statements of the last two weeks:

	June 21.	June 28.	Differences.
Loans	$278,903,800	$281,506,600	Inc. $2,602,800
Specie	27,398,300	27,661,500	Inc. 263,200
Circulation	27 352.000	27.311.400	Dec. 40,600
Deposits	220,392,500	224,040,800	Inc. 3.648.300
Legal tenders	46,704,200	49,119,000	Inc. 2,414,800

The following shows the relation between the total reserve and the total liabilities:

	June 21.	June 28.	Differences.
Specie	$27,398,300	$27,661,500	Inc. $263,200
Legal tenders	46,704,200	49,119,000	Inc. 2,414,800
Total reserve	$74,102,500	$76,780,500	Inc. $2,678,000
Circulation	27,352 000	27,311,400	Dec. 40,600
Deposits	220,392 500	224,040,800	Inc. 3,648,300
Total liabilities	$247,744,500	$251,352,200	Inc. $3,607,700
25 per cent. reserve	61,936.125	62,838,050	
Excess over legal reserve	12,166,375	13,942,450	Inc. 1,776,075

The stock market remained dull throughout the week in common with everything else. Prices closed firm on Saturday, with some indication of an upward movement in Lake Shore. The death of Mr. Clark left a vacancy in the presidency of the Company, and rumor is already at work setting afloat stories regarding his successor. One of these, which, by the way, is used freely among parties who are active buyers of the stock, is that no less a personage than Commodore Vanderbilt is hereafter to hold the reins, and will shortly be elected President. The price of the stock advanced again to-day, and left off at the close 94, bid after selling at 94¼. Pacific Mail is weak. After talking all the week about issuing bonds to the amount of $6,000,000 for the purpose of paying for new steamers, the directors have ascertained from their legal adviser that "it can't be done." On Saturday, the stock sold down to 37⅛, and to-day this was followed by a further decline to 35⅝. The "talk" in the Exchange is that the parties interested in the decline desire to put it down to 30 before covering their "shorts." The general market has remained nearly stationary as regards price. Michigan Central has been rather pressed for sale, owing to some doubt as to the payment in any form of its next dividend. From what we can hear, it is probable that the July dividend will be passed altogether.

The following shows the highest and lowest sales of the leading stocks, at the Stock Exchange, for the week ending June 28:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.
N. Y. C. & H. R.	101½ 101⅝	101⅜ 101½	101½ 101¾	101½ ...	101⅜ 101⅝	101⅛ 101⅜
Lake Shore	92¼ 92⅜	92 92⅜	92⅜ 92⅝	92¼ 92⅜	92⅛ 92⅜	92⅜ 93⅜
Erie	62⅞ 63¼	62⅜ 63⅜	63 63⅜	62⅜ 63¼	63⅛ 63⅜	62⅞ 63
Do. pfd	... ...	... ...	... ...	... ...	... ...	... ...
Union Pacific	24¼ 25¼	23½ 24½	24½ 27⅛	24⅜ 24⅜	24⅜ 25⅛	24⅝ 25⅜
Chi. & N. W.	72 72½	71¼ 72	70½ 71	70⅜ ...	70⅜ 71⅜	71⅛ 71⅜
N. J. Central	106 ...	105½ ...	106 106⅜	106¼ 106½	106 106⅛	105⅛ 106
Rock Island	108¾ 109⅛	108½ 108¾	108¾ 109	108¾ 108¾	108⅜ 108⅜	108⅜ ...
Mil. & St. Paul	51 51⅛	50¼ 50⅜	50⅜ 51¼	50½ 50⅝	50⅛ 50⅜	50⅜ 51
Wabash	67⅜ 68¼	67½ 68	67½ 67⅜	67½ ...	67¼	67⅜ ....
D. L. & Western	98 99⅜	96 97⅜	97½ 98	97½ 97⅜	97½	97½ 97⅜
B. H. & Erie	2⅜ ...	2⅜ ...	2⅜ 2⅜	2⅜ ...	2⅜ ...	2½ 2⅜
O. & M.	37⅜ 38⅜	37⅜ 38½	38¼ 38½	38 38¼	38¼ 38¼	38¼ 38⅜
C. C. & I. C.	27½ 28	27 27¼	27½ ...	27 27½	27⅜ 27⅝	28 28¼
W. U. Tel.	85 85½	84⅝ 85	84⅛ 85¼	84½ 85	84⅜ 84⅞	84½ 84⅞
Pacific Mail	37⅜ 38¼	37⅜ 37⅞	37½ 38¼	37⅜ 38¼	37½ 38⅜	37¼ 38

Business in Government bonds has been very slight, the market here and in London not admitting of purchases for shipment. The larger part of the July interest belongs to foreign bondholders, and it is probable that the money will be kept here for reinvestment in bonds.

The market for State bonds is extremely dull. Meetings of holders of North Carolina special-tax bonds have been held, and the opinion of Mr. Johnson, that suits can be brought to compel the payment of the interest, is favorably received, and will probably be acted upon.

The decline to 115 for gold on Monday of last week was followed by a reaction which carried the price up to 115⅞ on Friday. The large amount of gold bid for at the Treasury sale on Thursday, $15,963,000, gave rise to a rumor that a new clique had taken hold of the market for an upward movement. Subsequently the price fell off to 115¼ on Saturday. The range of prices has been between 115 and 115⅞, closing at 115⅜ Saturday.

BANKING-HOUSE OF FISK & HATCH,
No. 5 Nassau Street, New York, June 30, 1873.

☞ We recommend to our friends and customers for investment of surplus capital, or in exchange for Government bonds,

THE CHESAPEAKE AND OHIO SEVEN PER CENT. GOLD BONDS; Principal and interest payable in Gold in New York City; interest payable Jan. 1 and July 1; bonds of $1,000 each, coupon or registered. Price 90 and accrued interest.

THE CHESAPEAKE AND OHIO RAILROAD, A GREAT EAST AND WEST TRUNK LINE, 420 miles in length, extending from Atlantic tidewater at Richmond to Huntington, the most favorable point of railroad connection with the Ohio River, is completed, and *doing a large and profitable business.*

ITS TRAFFIC in the transportation of Agricultural Products and general merchandise between the West and the Eastern and South Atlantic States, and in the development of the IMMENSE IRON, COAL, AND TIMBER RESOURCES OF THE ALLEGHANIES AND THE GREAT KANAWHA VALLEY, is growing as rapidly as it can be organized.

ITS PASSENGER TRAVEL between the East and West and Southwest, and to the White Sulphur and other CELEBRATED MEDICINAL SPRINGS on its route, is large and rapidly increasing.

ITS EARNINGS during the current year will be much larger than has heretofore been anticipated, and will largely increase from year to year.

NONE OF THE OTHER GREAT EAST AND WEST TRUNK LINES and Coal and Iron thoroughfares, whose revenues are so enormous, commenced their business with anything like the traffic which has greeted the opening of the Chesapeake and Ohio, and its growth promises to equal in magnitude and excel in rapidity that of the most successful of its predecessors.

These facts, together with the thorough construction and substantial character of the Road itself, and the great value of the Company's property and franchises, enable us to recommend their Securities with the utmost confidence.

Pamphlets, containing full information concerning the Road and the country it traverses, will be furnished upon application.

We continue to deal in Government Securities, CENTRAL PACIFIC, WESTERN PACIFIC, AND CHESAPEAKE AND OHIO SIX PER CENT. BONDS, buy and sell Stocks and Bonds at the Stock Exchange on commission, for cash, make Collections, receive Deposits, on which we allow interest at the rate of four per cent., and do a general banking business.

FISK & HATCH.

JUST ISSUED.

ALLIBONE'S DICTIONARY OF POETICAL QUOTATIONS.

A NEW DICTIONARY OF
POETICAL QUOTATIONS,
Covering the entire Field of British and American Poetry, from
CHAUCER TO TENNYSON.
With copious Indices.
Both Authors and Subjects Alphabetically arranged.
By S. AUSTIN ALLIBONE, LL.D.,
Author of 'A Critical Dictionary of English Literature and of British and American Authors, Living and Deceased.'
One vol. 8vo, extra cloth, $5.

☞ For sale by Booksellers generally, or will be sent, carriage free, to any address, on receipt of the price by
J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

TEN PER CENT. HOME INVESTMENT.

FIRST MORTGAGE SINKING FUND
GOLD BONDS
OF THE
LAMOILLE VALLEY, ST. JOHNSBURY AND ESSEX COUNTY RAILROADS,

One hundred and seventeen miles long, from the Connecticut River to Lake Champlain, and forming the Vermont Division of the Portland and Ogdensburg Railroad Trunk Line, issued in denominations of $100, $500, $1,000, and absolutely limited to $20,000 per mile,

WITH A BASIS OF A CASH CAPITAL STOCK OF $1,200,000 PAID IN AT PAR.

Interest payable in Gold Coin in Boston or New York, November 1 and May 1. They yield, at present rates of Gold,

8⅞ PER CENT.,

and held to maturity, 10 PER CENT. per annum interest.

Orders for Bonds, Certificates of Stock, Insurance Policies, Checks, Drafts, Letter and Note Headings, and Commercial Blanks of every description, promptly executed, in the highest style of the Art, at reasonable prices. Designs and Estimates furnished. P. O. Box 2791.

The Nation.

NEW YORK, THURSDAY, JULY 10, 1873.

The Week.

THE Fourth of July was celebrated throughout the country with much good feeling and spirit. For the time being, the animosities of the Democrat, Republican, Liberal Republican, Granger, Patron of Husbandry, Grantite, anti-Grantite and ex-Greeleyite, Monopolist and anti-Monopolist, Conklingite and Fentonite, were sunk in the common kinship of the American name, and such innocent pleasure as might be derived from recitation of the Declaration of Independence and the explosion of several millions of crackers, torpedoes, squibs, and serpents. The speeches delivered by the orators of the day do not, so far as we have been able to observe, dwell in the old-fashioned way on the country's glory and progress, and, indeed, both orators' and journalists' ardor were perhaps damped by recollections of the Crédit Mobilier and the Vienna Exposition. The newspapers which used to harp at this time of year upon the old patriotic themes, upon the services done mankind by the Fathers, and the service we were doing mankind in being the descendants of the Fathers, now speak rather contemptuously of the national holiday, and allude with much sarcasm to the drunkenness, fires, and other accidents inseparable from the celebration, and especially to the noise, and to a personage partly invented and partly discovered, known to the press as the Small Boy, whose activity is disheartening at all times, but on the Fourth is portentous. The *Tribune* of the 5th inst. cynically says: "To-day we resume our ordinary avocations as private citizens, while the Republic tallies one and takes up again its 'stately march in the van of human progress.'" On the whole, we are perhaps getting to be somewhat older and wiser than the Fathers, and whether we tally one or not, prefer coolness in the shade to the fireworks, literal and metaphorical, and the heat and confusion of the former days.

The killing of Judge Cooley in Louisiana by Mr. R. Barnwell Rhett, in a duel growing out of the so-called "Hawkins case," appears to have combined in a remarkable manner the elements of Northern carpet-baggism and Southern chivalry. Rhett is of the half-distinguished, half-notorious family so long known as active in South Carolina politics, and always known as fire-eaters. Some little time since, his occupation as a Charleston editor being gone, he betook himself to New Orleans, and began conducting the *Picayune*, and conducting it in the usual Rhett manner—that is to say, with small show of political sagacity and with plenty of unbusinesslike language. A while since his paper was sued for libel by the Mr. Hawkins of whom all the country has been hearing for months as a member of the famous Lynch-Hawkins Returning Board, and Judge Cooley conducted the complainant's case. Rhett, or rather the *Picayune's* proprietors, were cast in damages to the amount of $18,000, the verdict, it is alleged, having been obtained by the most open perjury and the corruption of the jurors. However that may be, the editor's language would be strong as applied to most other courts than those of New Orleans, and alone might have justified a verdict. Hawkins was "a compound of perfidy and perjury"; he had been bribed; he was the bastard judge of a bastard court, which had been created by a bastard legislature. Cooley, for his part, was said to have made statements to the jury "maliciously and wilfully false," and to have travelled out of the record because he knew that no one would follow him to show up his mendacity. Letters between the editor and the lawyer then ensued, and at last a card, in which Cooley called Rhett "an artful dodger," "a thoroughpaced blackguard," "a deliberate and wilful falsifier," and so forth. Upon this came a challenge from Rhett, and soon afterwards the duel. The chivalric weapons were double-barrelled shot-guns, and with one of these grotesque substitutes for the arms employed in the duels of civilized communities Cooley was killed at the second fire. It is said that, after sending his challenge, he practised firing with his shot-gun to make his aim more sure—a proceeding held by some authorities to be indelicate. An indictment has been found against him for murder, and there is a bare possibility that, in the existing state of party feeling in Louisiana, the Kellogg government's one serviceable action may be the hanging of this gentleman. More likely he will live to do some more raving and to shoot some more men.

Not only was corruption of the jury alleged by the Rhett people, but also coercion by the Court; and of this accusation it may be enough to say that the presiding judge was a Mr. Lynch—not of the Hawkins & Lynch firm—and that the following is told as the story of how he got his place on the bench. Those who have always seen how perjury, revenge, and bloody murder may reasonably be expected to flow from our way of governing Arkansas, South Carolina, and Louisiana for the last few years, will find it an old rather than a tedious story. When the Returning Board was to begin work after the November election, there were two of its members who, having themselves been candidates for office, could not serve; there were left of the Board Warmoth, the reformer, Gen. Herron, and Mr. John Lynch, the two latter persons being straight Republicans, and Warmoth being therefore in the minority. To meet this difficulty, Warmoth removes Herron as being incapacitated by reason of charges preferred against him and impeachment pending, and puts in his place one Wharton, so that now it is not the Warmoth party that is in the minority; but Herron, declining to consider himself removed, and it being the well-settled opinion at the Custom-house that he is not removed, he and Mr. John Lynch, acting as a Board, elect three gentlemen to fill vacancies, of whom one is the libel-suit Hawkins. Warmoth's Board and the Hawkins Board then begin work on the returns—that is to say, Warmoth's Board begins to count such returns as are in its possession, and presumably some more, and Hawkins's begins to "estimate," and petitions the Judge of the Eighth District Court for an injunction to restrain Warmoth's; the judge grants this prayer; but meantime, Warmoth, finding that one Elmore has been elected Judge in that District (by nine thousand majority, the Senate Committee says), Elmore takes his predecessor's place—and here it is that Durell comes in; soon Kellogg's legislature abolishes the Eighth District Court, thus causing Elmore to disappear, and creates a Court called the Superior; to this Kellogg appoints Hawkins—for services rendered, says Rhett, in the Returning Board which made Kellogg governor.

"The Grand Union Celebration Picnic and Temperance Jubilee" at Harmony Grove, in Framingham, Massachusetts, to which handbills invited "Sons of Temperance, Good Templars, Temples of Honor, State Temperance Alliance," and "all good folks generally," appears to have been an affair of less magnitude than the hand-bills promised, and apparently General Butler got not very much of a "send off" in his race for the governorship. Indeed, the "State Alliance," which we take to be the most important of the Massachusetts temperance organizations, refused the general an opportunity to inveigle it, and the Harmony Grove meeting was of a local character, except as excursion trains brought people from numerous towns, large and small, in easy communication with South Framingham. Mr. Wendell Phillips was announced to speak, but he did not put in an appearance, nor did a clergyman, a Mr. Mallalieu, also announced as a speaker, who declined at the last moment because he learned that there was to be dancing in the grove—a graduated view of various forms of sin which it is well to have. It reminds one of the Wahabee criminal calen-

dar, which has no place for assassination, adultery, highway robbery, abduction, lying in wait, mayhem, and the like, but ranks as the worst of crimes a belief in other gods than Allah, and for the second sets down the sin of smoking tobacco in a pipe. As the saying goes, one might esteem it a privilege to feel the bumps of a Christian clergyman who can go about speechifying to make B. F. Butler a Massachusetts governor, but will not stay in a forty-acre lot in any part of which some young people are going through, or are hereafter to go through, a cotillon.

Butler's delivery of his Fourth-of-July oration—which, by the way, had nothing in it about the celebration of the day—was preceded by a scene which we suppose may be described as a little wrangle between some real prohibitionists and some prohibitionists whose strong point is not the reform of the inebriate, but the more perfect laying of pipe. The sincere temperance men showed their appreciation of the real object of the afternoon's proceedings by denouncing Butler as a humbug, and demanding that he should pledge himself beforehand to enforce the prohibitory law, and to make it, if necessary, more strict. One of the speakers wished that he should be personally pledged to drink no wine or spirits, and this will suffice to show how practical were the sincere men. But the extremely active wing of the party everywhere is always a small set of very honest and very unpractical persons, and a small number of persons who would flood the five continents with alcohol if each of them might previously name the office to which the distillers should appoint him. The main body of the community is always between the distillers and the prohibitionists, and somewhat contemptuous of both, but willing to do a reasonable amount of good if it can.

Butler's speech was uncharacteristic in most of its parts. He bragged hardly at all; he was not impudent in his allusions to persons, though he was savagely bitter against Governor Washburn; he was not amusing, as he commonly is when out on the stump; and there was no great deal of salient or very dangerous demagogism in what he said. His talk about the railroads—and he had but two topics, the railroads and the enforcement of the prohibitory law—could have made no impression on a Massachusetts audience. He declined to enter into the details of his scheme, saying that to do so would be futile, so it will never be known where he would collect his supply of lunatics to be Superintendents of the roads on which "every man, however humble," could switch his passenger-car or freight-car or hand-car on to the track, and run it by his own motive power or the company's. It would be an office exactly suited to persons a little wrong in their intellects but whose physical energies were unimpaired. But the perfection of the plan would require that there should be, say, eleven Superintendents of this grade to every ten miles of track and siding, which would ensure a scene of activity that would delight a Patron of Husbandry. But no asylum could keep up the supply. It is the belief of some of Butler's observers that the dulness of the speech indicates a campaign quiet on the stump, but all the more energetic underground. Massachusetts journals which indignantly assert the contrary might first begin by accounting for the fact that the candidate is on the stump at all.

An unexpected revival of the case of Mr. Colfax occurred this week. Mr. John Drew, a Washington lawyer, has come forward to say that in 1868 he was standing near Mr. Oakes Ames in the room of the Sergeant-at-Arms at the Capitol, and that he observed that Mr. Ames had in his hand a check, which he held in such a way that Mr. Drew could see that it was made payable to "S. C. or bearer." Mr. Drew further saw Mr. Ames himself draw the money and saw him afterwards pay it away, Mr. Drew noticing at the time that the uppermost bill was one for five hundred dollars. Mr. Drew was at that time in the habit of keeping a diary, he says, and he finds that this transaction must have occurred "on June 20 or 22," but on which day he cannot precisely recollect. Add to this evidence in Mr. Colfax's favor that on the examination, before the investigating committee, of Mr. Dillon, the Clerk and Paying-teller of the Sergeant-at-Arms, he testified that he asked Mr. Ames during the investigation whether it might not be that it was to Mr. Ames himself that he paid the twelve hundred dollars in question, and that Ames said it might be so; he thought it quite likely.

In examining this new evidence, there are several things to be recollected. One is, that it comes some months after Mr. Ames is beyond reach; another, that it is unfortunate that Mr. Drew was not in the country when this very important investigation was going on; another, that a correspondent, for whom the *World* vouches as of unimpeachable credibility, asserts, in a letter to that journal, that Mr. Drew was not absent in Europe throughout that period, but that he must have been in this country for some, at least, of the time, inasmuch as the correspondent saw him; another, that the same writer says that, Washington lawyer or not, Mr. Drew is, to his knowledge, a disreputable lobbyist, towards which, as an accurate account of him, Mr. Drew himself darkly points by saying that in 1868, when he saw Ames holding the check, of which Drew took such notice, he was getting through the House two or three things, "in one of which he very much wished to interest the Massachusetts members." We may note, too, that as to the dates of Mr. Drew's memorandum-book, June 20 was the day on which the check was drawn, and June 22 that on which it was paid, and that Mr. Drew "did not recognize the gentleman" to whom Mr. Ames paid the bank-bills. This we may consider rather lucky for the gentleman, as if Mr. Drew had recognized him we should probably find that he is now a denizen of the cold and silent tomb, instead of being alive and well to this day, and capable of giving testimony. We think Mr. Colfax may rest assured that the public has its mind made up about this business, and the Nesbitt business also, and that he will do as well to leave both of them alone. His private standing among his friends would seem to be satisfactory enough—to him and them, at any rate; and, as we suspect, his public reputation and political future are ill worth the labor and pains he is bestowing upon them.

It would be difficult to find a better example of the typical legislative committee's report than that just furnished by the report of a committee of the Vermont Legislature, appointed to investigate the affairs of the Vermont Central Railroad, to which we referred some time since. This railroad, the Smith family, and the State of Vermont have for a long time been synonymous terms, and the frauds in connection with it have almost been superhuman in their character. It would probably be hard to get an intelligent man who knows anything about the securities of the road to listen with patience to a defence of the management. The labors of an investigating committee have resulted in a document which declares that on the one hand, "those who received legislative retainers" were not corrupt; that the "car-companies" were not fraudulent; that W. C. Smith's foundry contract "before he became a trustee" was proper; that the "prices of castings" may not have been too high; that the "secret service fund" may have been correctly used; and that the $25,000 paid to W. C. Brown "as a retainer" was not a bribe. On the other hand, that those who paid legislative retainers "did so chiefly to gain influence in creating and maintaining a public sentiment"; that the policy of such organizations as car-companies is "questioned"; that whether the foundry contract of W. C. Smith continued to be proper after he became trustee "they leave to the courts to determine"; that the prices of castings may perhaps have been too high; the secret service fund they "do not consider necessary," as it was "in some instances misapplied, and a large portion was unaccounted for, owing to Governor Smith's refusal to testify in regard to it." There is one thing as to which the committee have no doubts, and that is the general impolicy of "continuing a cause indefinitely in court" when "it involves important business operations." They are even more strenuous on the subject of "free passes," the use of which, they say, tends to establish caste. In this matter they have

the community and, we may add, "the Smiths" with them, and it is much to be desired that they will push it.

The constitution and laws of Illinois prescribe an oath for judicial officers, by which they pledge themselves to a faithful performance of their duties. The oath is very much like the oaths prescribed in similar cases in other States. Mr. Alfred M. Craig, however, the judge newly elected to the Supreme Court of Illinois by the united suffrages of the farmers, the Chicago, Burlington, and Quincy Railroad, and "the people," is not a purist in the matter of judicial oaths; he has the enthusiasm of humanity strong upon him, and he has in taking office not only followed the form of oath required by law, but has further called Heaven to witness that he will

"administer justice without respect to persons, and do equal right to the poor and to the rich without sale or denial, promptly, without delay, conformably to the laws, without favor, objection, or partiality, to the best of his judgment and abilities."

This oath has attracted a good deal of attention in the West, and drawn down upon the unfortunate judge's head much derision, one journal suggesting that, while he was about it, he might as well have sworn never to sit on the bench except when sober, or never go into partnership with receivers, or knock down apple-women's stands and carry off their fruit for his private consumption under cover of judicial process. The judge seems to be in an unhappy position, for the platform on which he was elected declares that he *must* administer justice in some of the ways that his oath pledges him against. The *World*, by the way, is no doubt correct in the main in saying that the Republican party may be fairly held responsible for the degradation of the judiciary in these latter days, though the implied inference that the Democratic party ought to be held in grateful remembrance as having been meanwhile engaged in the noble work of elevating it, cannot safely be made.

The difficulty between Mayor Havemeyer and the aldermen as to the police-justices still continues. The chief objection to the Mayor's men is that they are not the aldermen's men, but the aldermen have a great advantage in being able to show substantial reasons why one or two of the nominees should not be confirmed. Still, no reasonable person doubts that, compared with the present incumbents, the list sent in is a good one—indeed, a very good one—the police-justices now in power being as abandoned a set of ruffians as ever held office. The importance of the matter cannot be questioned, either. These offices have been for years the key to the "politics" of this city—that is to say, in the hands of corrupt men, they afford a means of keeping a large body of political retainers of the lowest and most efficient class on the side of the judges' party; in the hands of honest and fearless men, this serious danger to the freedom of elections would be averted. The salaries are large and the terms of office long. It may seem a strong statement, but it is nevertheless true, that Mayor Havemeyer has, for the present difficulty, only himself to thank. If up to the present time all his appointments had been good, the aldermen would have been forced by public opinion to confirm his last as they were forced to confirm his first appointments. The appearance on the Reform stage of Charlick and Matsell has relieved the public of all apparent necessity of having any opinion on the subject, and degraded the contest for the police judgeships into a low political game. We do not by any means say that the public ought not to be on the side of the Mayor, but they take little interest in the struggle, which begins to look altogether too much like an old "ring-fight."

The insurance companies, who practically have the power of preventing conflagrations such as those of Boston and Chicago in their own hands, have at last waked up to the necessity of doing something. With them, the government of Boston has also waked up, and a hearing on the subject is being had before a special committee. What the insurers and other reformers want is an efficient fire commission, with some responsible head. At present the responsibility is divided between the mayor, a committee of the city government, a chief-engineer, and perhaps other officials. So difficult was it to discover who was to blame for the fire of last year, that the same gentleman who was chief-engineer then has been chief-engineer ever since, not through popular clamor for his retention in office, but by the usual operation of the political machine, and in spite of the opposition of every intelligent person outside of the rings which exist in Boston as in other places. The last fire, however, has changed all this; it was a small affair, to be sure—it only destroyed about a million worth of property, and a few years ago we should have thought nothing of it, but, coming just when it did, it had a powerful effect.

The hearing now going on is marked by an encouraging display of intelligence on the part of the petitioners. They do not say anything about the Fire-Fiend, the state of the atmosphere, or the electrical currents, nor describe the extraordinary feats of the flames in leaping half a mile in the air at a time, and moving of their own free will directly against the wind, nor, in fact, allude in any way to the miraculous phenomena which were witnessed by early observers of the Chicago fire and the first Boston fire. They say, on the contrary, that what is needed is good management; that there is a "general feeling in the community that there should be some change." Mr. Jonas Fitch, a well-known builder and former member of the city government, whose knowledge about the "inside" of Boston may be said to be only commensurate with his opportunities, is no doubt to be relied upon when he says that the "management by a committee of the Board of Aldermen is not the most efficient." To sum up in a few words, what is needed in such cities as Boston, according to the common consent of those who have studied the subject, is a responsible head of the fire service, removable for cause, with a large salary and a long term of office, and a rigidly executed building law preventing the erection of dangerous buildings. Everything else, the blocking of the streets, the water-supply, the horse difficulty, the lack of "steamers" and hand-engines, are mere matters of detail, which would be certain to attract the attention of and be provided against by an efficient and honest commission. Men like Mr. Damrell do not trouble their heads about them, because they have too much to do elsewhere. One curious result seems to have been developed by this hearing, that New York is better protected against fire at present than Boston, the mixed system of responsibility having been long since given up in this city. Still, we should not advise any one to trust too much to this superiority; it is but a relative superiority.

Secretary Richardson announces that the reserve of $44,000,000 legal tenders will be kept intact—if it is a possible thing to do so; that is, if the crops do not need moving very badly, and the market keeps easy. This may be considered by some persons as a concession to public opinion, but it is in reality a device for getting the credit of being a financial reformer and at the same time retaining the power over the currency which Mr. Boutwell found convenient. As we have often pointed out, it would really be better to issue the whole $44,000,000 at once than to keep them hanging over the country as they have been kept for the past year or two. If they were all issued, or were all absolutely withdrawn, people who use money as a means of exchange—and the class of people who do this is not a small one—would be able to calculate with some certainty upon the condition of the market, to make contracts with some confidence as to their value, and to calculate upon prices at least fixed from day to day. There are enough uncertainties in trade and commerce in the best times to make it inexpedient for any government to hold out a continual threat of interference with them. Indeed, what with speculation and other natural difficulties, traders and merchants are playing what is a game of chance as well as skill already. For the Government to legalize a national gambling-table, and then to keep continually threatening to cog the dice unless the pool is kept filled, may be well-meant but is not wise. Of course, the whole thing is illegal, but that is an old story.

THE WALWORTH MURDER.

THERE is not much if any fault to be found with the Walworth trial, even by the severest critic of judicial proceedings. Indeed, as compared with the majority of murder trials in this city, it was on the whole a very gratifying and encouraging affair. The jury was found with little or no difficulty, and the prisoner was defended by a lawyer who is really as well as technically a "learned gentleman." With its past experience in its memory, the public can hardly help being grateful to the prisoner's friends for not entrusting his defence to a roaring blackguard. The result was that all things were done decently and in order, and the proceeding had all the appearance of being, and was in truth, a judicial enquiry into facts and not a game in chicane.

The verdict was, perhaps, what most people expected. It is right to say, too, that it was the verdict that will be rendered in ninety-nine cases out of a hundred of homicide by violence. The new law calls for a conviction in only the second degree wherever it does not appear that the murder was planned beforehand, and of course makes it the easiest thing in the world for the would-be assassin to keep himself out of the category of those who deserve the gallows. Nothing is simpler than to give killing the appearance of being the result of an intention formed on the spot. You have only to get up a quarrel with your victim about any trifle that may present itself to clothe his subsequent slaughter with all the marks of the second degree, and secure for yourself the immeasurable hopes and consolations of imprisonment for life. A man's intentions, alas! are only to be learned from his acts, and one's acts can always be arranged beforehand, so as to point to any desired conclusion. This is especially worthy of attention in view of the fact that the offence of killing is no longer hedged round with any presumptions of law. There is no act of the criminal now from which a jury is legally bound to infer any other fact. The whole matter is left to their consciences. This leads us again to say that the new law is seriously defective in not making the possession of a pistol presumptive evidence of premeditation. There would have been no hardship in this. Nothing is easier for a young man when he goes out in the morning than to leave his pistol at home. It is an uncomfortable thing to carry, and no one carries it without harboring somewhere in the recesses of his mind, in some shape or other, the design of killing somebody. It may be sleeping, or may only be half formed, or may never have presented itself definitely to him, but it is there, and only needs the touch of passion to spring forth into crime. We therefore trust most sincerely that the next legislature will amend the act of this year by providing that all murders, whether "deliberate" or not, which are committed with weapons (not tools) carried on the person of the murderer, shall be murders in the first degree, as a matter of law, leaving the prisoner to upset this presumption by surrounding circumstances if he can. This would be simply declaring that a man who goes about armed is a would-be murderer, which in the majority of cases would be true in fact.

If this rule had been applied to young Walworth, he would have been convicted of murder in the first degree. He went armed to an interview with his father, solicited by himself, and that he knew the interview might result tragically was proved clearly enough by his letter to his uncle. That the shooting was brought on by himself his account of the interview would leave plenty of reason for believing, even if he had not done his slaying with his back to the door, or, in other words, with the means of escape within his reach. Indeed, few persons who read the evidence carefully can help believing that he sent for his father meaning to kill him; and yet there was doubt enough about it to justify the jury in saving him from the extreme penalty of the law. We may as well say here that the sentence passed on him does not, in our opinion, amount to much. Neither he nor any of his family, we venture to say, look on it as more than a temporary inconvenience. The defence which was offered to the jury, with only partial effect, foreshadows very clearly the arguments which will be used to get the Governor to pardon him, and they are arguments which governors are in the habit of regarding, and which will in the present case be urged with unusual force and backed up by unusual influence.

These arguments, too, have already more or less affected the public out-of-doors, and indeed one has only to read some of the comments on the trial, especially those which appeared in the *World*, to see the very process by which is generated the morbid condition of feeling and imagination out of which murders grow and through which murderers escape justice. There were certain letters read on the trial, addressed by the elder Walworth to his wife, with the view of furnishing palliation, if not justification, for the parricide. They apparently produced little effect on the jury, but they have unquestionably done a good deal to alter the complexion of the act in the popular eye. They were very wild and very brutal and very disgusting, and would have been very shocking if they had not been plainly the composition of a lunatic. Nobody who was not in some degree demented would ever have taken the trouble of writing them. They furnished abundant justification for Mrs. Walworth's refusal to live with him, and would have warranted any court in denying him access to his minor children. That they were the letters of a dangerous man, however, was not shown. He appears to have been more terrible on paper than anywhere else, as became a manufacturer of thrilling romances for the Sunday press. He had ill-treated his wife grossly, but neither she nor her children nor her property was any longer in his power. The position he occupied towards them was therefore that of a nuisance—a most painful and mortifying one it is true, but still only a nuisance, and this nuisance there were at least two ways of abating. If he was insane, they could have had him shut up in an asylum; the family is one of means and influence, and abounds in lawyers. If he was simply odious and depraved, they could have had him put under bonds to keep the peace, or, failing this, held in confinement. In short, there is ample legal provision for just such cases as his.

Moreover, such cases as his are by no means rare. Nothing can be more untrue or unjust or dangerous than the common practice of treating the provocation and the woes of respectable and well-connected criminals as unparalleled and irresistible, while meaner wretches are allowed to go to the gallows without a whisper of allowance or qualification. The Ketchums and Fosters and Stokeses, we are always told, act under some overwhelming necessity which destroys moral responsibility, while the Kings and the Reals and the Nixons steal and slay with open eyes and depraved natures. The fact is that such husbands and fathers as Walworth are by no means uncommon. There is not a street of this great city which does not contain several of the same class. If every wife had the means or courage or money to bring her griefs into court, Mrs. Walworth's sad story, down to her husband's death, would speedily wear the appearance of a slight misfortune. There is probably nothing, not even the sack of a stormed city, which brings out the devilish and animal parts of some men's nature as the unchecked control of another human being's person and feelings does. There are thousands of poor women in this city, without friends or hope in this world, who have to listen every night to the ravings, and bear the blows and tortures, of tyrannical beasts, compared to whom Walworth was harmless and decent and merciful; and yet the world knows nothing of their sorrows unless when, now and then, some unlucky blow terminates their misery and their life together; and thousands of others pass their lives in higher stages of the same hell. What is the remedy for this state of things, except the general elevation of human nature, it would be hard to say. Legal remedies few people will care to discuss who seriously consider the condition of a woman whose youth and health have been passed in bearing children, and who has to face life without heart or hope or training for any calling by which money may be made, and whose nearest friend has turned into one of those fiendish enemies by whom no male human being is ever pursued in civilized society.

Now, what have the happy and the well-to-do, the law-makers

and lawgivers, and the moralists and the commentators, to say to these unfortunates? Something they are always saying—whether in verdicts, or decisions, or sermons, or articles. Are they really prepared to say that the proper disposition to be made, even of a cowardly, tyrannical, cruel, filthy blackguard, is to have his children kill him on their own judgment? If this cannot and ought not to be said, why are we to sympathize with young Walworth? If we decide that his father's half-dozen dirty letters, preceded by his odious life, even palliated his murder, does anybody suppose that the thousands who are suffering from similar woes will take note as we do of the fact that the Walworths are a highly respectable family, in a good social position, and therefore less able to bear a ruffian than the obscure herd of unfortunates who have no family mansion to take refuge in and no kind relatives to draw on? Will the son of the poor washerwoman not feel that he is far more justified in ridding his mother of his drunken ruffian of a father, who steals her earnings every Saturday night and thrashes her with a pair of tongs, than the well-born youth whom a hundred friends surround, to whom a hundred kindly doors are open, and who, well educated and well connected, may soon be prepared to atone to her for his father's follies, by achieving all that his father one day promised and that she fondly hoped to see? Is there not something sulphurous in the sympathy which contemplates as possible under any circumstances a son's exemption from all responsibility for his father's faults to such a degree as not only to relieve him from the obligation of covering them, or making amends for them, but to qualify him in never so slight a degree to kill him in a hotel in a civilized city, and within a stone's-throw of the police court? What system of sociology, or morality, or religion is it which authorizes a son to look on his father as simply an odious citizen, of whom he may in a passion lawfully or even pardonably rid the state?

Though last, not least, it ought to be said that crimes like Walworth's, and especially the crimes of young men, are, we believe in a large majority of cases, the result of a habit of mind which consists in the frequent contemplation of homicide as a possible means of reaching certain ends. There are large numbers of men among us passing as very respectable who cultivate this habit, and it is stimulated by carrying weapons, and by the indulgence of public opinion for crimes of violence with a show of provocation behind them. Nobody who has ever examined the workings of his own mind needs any explanation of the facility with which the most terrible or odious acts may, by the steady contemplation of them, be made to seem just, tolerable, and lawful resorts. They are happy and pure, indeed, who have never had to fight against those frightful impulses, and nobody ever fights against them, not even the purest and best, without finding his resistance immensely strengthened by seeing outside his door the terrors of public indignation and of offended justice. The great use of public reprobation and of legal penalties is in fact not so much the punishment of those who have committed offences, as the strengthening of those who are wrestling with temptation. It is at the moment when a man is thinking whether he had not better pistol a troublesome enemy that the jail and the gallows serve him in best stead, and it is at that moment, too, that the sympathy bestowed on those who have considered the same problem he is considering, and have solved it the wrong way, often recurs to him with disastrous results.

"OUR BETTER POLITICIANS."

PERHAPS it may be taken as the rising of a very small star in the East that Mr. Hale's or Mr. Blaine's convention in Maine did not confine itself wholly to the works of the past and glories of the future, as is the well-established custom of political conventions, but did hint at one piece of work to be done in doing away with the reckless legislation to which we have grown accustomed in the last days of the session. These last days of the session have so long been regarded as the explanation and apology and justification of whatever is very bad in Congress, that doing away with them must certainly strike the average Congressional mind as a very startling and dangerous innovation. The necessity of reform within Congress never presents itself to the Congressional mind, and the common mind of the country has not yet caught the idea that legislative proceedings, like other agencies of government, can be restrained, and guided, and disciplined, and brought within the limits of system and order. If this resolution of the Maine Convention can be made to grow and multiply into numerous resolutions, each having a definite object and proposing some tangible piece of work to be done, the public will begin to be educated in the ways and means of securing good government, and will cease to be satisfied with the present immeasurable quantities of talk. Can it be that the American mind—the most practical mind in the world—is at this present time utterly without practical knowledge in matters of government? To illustrate: The Government has this year conferred upon us the very great convenience of postal-cards—twenty-two million issued, and twenty-two million more demanded and not yet ready to be supplied. But these postal-cards were not devised by the American Government. It has not of late years devised anything. They are but a plagiarism from Germany, and it is now three years since Germany showed their practical convenience to the whole world by their wonderful circulation in the army, and it is more than two years since England took them from Germany and gave them to the British public, while it has taken all this time for our legislators, who prate so much about American activity and vigor, to copy this one little product of European thought and give it to the American people. A loose and fanciful theory called protection has governed the country for some time, but even this theory has been committed to the guardianship of colluding "interests" and "influences." The tariff laws are mere pieces of patch-work, on which the largest "interest" and the most active "influence" has always succeeded in stitching the biggest patch. An absolute revision is needed, as the greater portion of all intelligent men know; and Mr. Wells has spread before the country a basis of action, in the way of data, such as has given him a reputation throughout the civilized world; yet the political talent of the country does not know what to do with his facts. A step towards practical work was taken by Governor Hoffman when he called Mr. Wells to the task of revising our State system of taxation; and considerable benefit has resulted therefrom to the people not of New York but of England, where several hundred thousand of Mr. Wells's reports have been circulated and studied; but the only use which our professional politicians would dream of making of the volumes would be to extract a few fine-sounding sentences to put in one of their platforms. "*Resolved*, That taxation should be pre-eminently just, so as practically to benefit the capitalist and the laborer, the rich and the poor: *Provided*, however, it is understood that it be required to take care of itself and shed its blessings spontaneously"—such is the substantial purport of the resolutions that our practical statesmen think sufficient to satisfy an intelligent people. Accustomed as we all are to their monotonous routine, we may indeed regard it as a ray of hope when a political convention comes down in its resolutions to one practical point, the abolishing of one legislative abuse.

As a general rule in the affairs of this world, people who do not bring their views to a practical test, but expend their entire time in talking about them, are held in some contempt; and to say that a man is a mere theorist will always be taken as a term of reproach. In our legislative world, the reverse of this is at the present time the fact; and any man who endeavors to bring down the principles of good government to practical application is really regarded as a fanciful gentleman, not at all adapted to the work of modern politics. If Mr. Jenckes had confined his efforts for civil-service reform to platitudes in Congress and platforms in politics, he would have been esteemed by General Logan and his fellow-talkers in Congress as a truly sensible statesman, and the more lofty the

tone of Mr. Jenckes's platitudes, and the more nearly his platforms demanded absolute perfection in the civil service, the more truly sagacious he would have been deemed by the Logans and their fellow-talkers. But the moment Mr. Jenckes passed from the realm of talk to that of work, and proposed doing instead of promising, he really shocked the political sensibilities of his best Congressional friends, and was set down as a "mere visionary" quite as emphatically as if he had introduced a bill to provide for the building of Mr. Edward Everett Hale's brick moon.

We may note in this connection one thing which many persons must have observed, and of which some have spoken as one of the anomalies of Congress. It would be extremely unwise to assume that every man in Congress is ignorant or unprincipled, or indolent or unpractical. On the contrary, almost every intelligent person knows, or knows of, some member whose life gives assurance that he is intelligent and high-principled and practical and has the good of his country thoroughly at heart; who, in short, *before he was elected* to Congress, seemed to be just the man who ought to be there. How repeatedly of late years have we all seen some such man, of whom great things were expected, sent to Congress or to the legislature at the cost of no little sacrifice on the part of himself and of unusual efforts on the part of his supporters, and then how useless he seemed when he got there, how little he accomplished, how utterly he failed to lead or to control. And next, how certainly one of two things happens: either that he fails to return there, or else that he drifts into the circle of "the better sort of our politicians," and lives a compromise kind of life, made up slightly of what was expected of him out of Congress, chiefly of what is expected of him by Congress. The phenomenon is how invariably such men, when they reach Congress, seem to be appalled and benumbed; how invariably they regard the walls of the Capitol as the boundaries of the country, and think that success in public life means getting upon a committee or carrying a bill, forgetting the greater and truer success of instructing the public mind and leading public sentiment. The explanation of this is not obvious, but is still not far from the surface. It is that men shrink from doing that which the majority around them deem ridiculous. Thus, in the House of Lords, where a youthful peer indulging in a little rhetorical flight about the momentous consequences of a measure will be hailed with jeering cries of hear! hear! and ironical applause, lofty rhetoric has no place; and the most ambitious youth, though boiling over with spread-eagle eloquence, enough for a dozen of our political platforms, has to come down to hard work and common sense, if he would be heard there at all.

Thus Mr. Jenckes, when he introduced his Civil-Service Bill in Congress, spoke neither with the zeal of a reformer striking his best blows at a corrupt abuse, nor as a practical statesman addressing practical statesmen, and commending to their intelligence a thoroughly feasible plan, sanctioned by the experience of other countries, for improving the administration of government, but, on the contrary, in a certain embarrassed, explanatory, apologetic tone, much like that of a cautious missionary addressing a band of self-satisfied savages who philosophically hold that abolishing man-eating will tend only to diminish the supply of food, and that refraining on moral grounds from their accustomed joints and chops is a ridiculous bit of sentiment altogether contrary to the party usages of their fathers. In such an assemblage, what could a well-meaning missionary say when a great redskin warrior like General Logan could rise and aver that man-eating is right and proper, good for the digestion, nutritious for the body, soothing to the mind, and not injurious to the party eaten, all Europeans and missionaries and squaws to the contrary notwithstanding; and when a half-civilized chief like timid Mr. Dawes could only be got to say that, after sixteen years of personal experience in cannibalism, he was really unable to suggest any plan for giving it up, and, until a proper plan should be devised and adopted, he should feel individually bound to keep on eating?

Of men in Congress from whom the country might expect effective aid in the way of practical reform, Mr. Blaine and Mr. Hale are examples. The one, powerful, courageous, and effective, as is shown sufficiently by his administration as Speaker, and his handling of Butler; the other a young man, intelligent, cultivated, patriotic, and with a fair share of determination and ambition. Fifty years ago, with their present experience, they would have risen to the rank of intelligent legislators; now, they have dropped into "the class of our better politicians." Both, unfortunately, have positions to maintain within Congress; the one is Speaker, the other chairman of an important committee, and neither is free to attack Congress, and use the power of public opinion toward forcing unpalatable work upon those procrastinating bodies. The result, too, of their experience is unfortunate, the result of their Congressional training being to set a man to solve the problem of what can be carried through Congress, and not the problem of general legislation for the future welfare of the country. Nevertheless, no one will be indisposed to hope that these gentlemen may now be endeavoring to turn public attention to one practical reform, and, without quarrelling with Congress, are attempting to bring a power to bear upon it that will be the entering wedge for a better legislative system.

RENAN'S 'ANTICHRIST.'

PARIS, June 21.

I.

M. RENAN'S 'Antichrist' has at last appeared. The author of 'The Life of Jesus' is as careful as an *impresario* about the conditions under which a new work of his appears before the public. The 'Antichrist' has been waiting a long time, but could not come to light so long as the political fermentation continued. Now that Marshal MacMahon rules instead of M. Thiers, Renan could almost say with Virgil, *Deus nobis hæc otia fecit.* The French character is so elastic that all the terrors which disturbed the country a month ago have completely vanished; our minds are pacified, and we can read books again. Renan had carefully watched his opportunity, and he feeds our hungry appetites with his new work on the origin of Christianity.

It is needless to say that the 'Life of Jesus' soon became popular; it has attained the exceptional number of thirteen editions. The two following volumes were much more severe in their character, less romantic, if I may say so, and more filled with the somewhat arid details of exegesis. The first editions of 'The Apostles' and of 'St. Paul' are not yet quite exhausted. But I should be surprised if the 'Antichrist' had not a popular success, though it will never equal that of the 'Life of Jesus.' There is something in the very name of the 'Antichrist' which strikes the poetical mind, and this new volume of Renan is only half filled with pure exegesis; the other half is given to history.

In his introduction, Renan enters into an elaborate discussion as to the authorship of the Apocalypse, which is generally attributed to St. John. He attempts to prove that it must be the work of a member of the Church of Jerusalem: the Apocalypse is not of the Pauline school—it breathes a constant hatred of the Gentiles. Its author does not belong to the broad church; he is a fanatic; he thinks of nothing but Rome and Jerusalem; Rome is to him the city of all abominations; he has seen its idolatrous pomps and its crimes; Jerusalem is the beloved city. The author of the great Apocalypse is very conversant with the numerous old apocalypses; he must have known not only the Greek, but the Hebrew language. All these traits can be well applied to St. John. M. Renan doubts, however, if St. John wrote the Apocalypse himself. "It is enough for my *thèse*," says he, "that he knew it, and he allowed it to circulate under his name." What is this *thèse* M. Renan speaks of? He considers the Apocalypse as a sort of mysterious manifesto, as a protest against the tyranny of Rome and the crimes of its emperors. St. John was not a literary man, one who could from memory, with fragments of the ancient Jewish book, compose a sort of mystical pamphlet of this sort. Either the synoptic Evangelists are wrong when they represent the Apostles as plain and rude men, and not as learned and scholastic, like the Scribes and Pharisees, or St. John was not likely to have composed the Apocalypse himself; but in a time when people did not care much about literary property, he may have accepted it, and allowed it to circulate under his name.

The book of M. Renan opens with the captivity of St. Paul in Rome. Nero is entering his twenty-fourth year. The cell of St. Paul becomes the focus of the new religion, which soon finds devotees in the very house of the emperor, among the Jews, among the slaves, the freedmen. Renan admits the tradition of the arrival of St. Peter at Rome; St. Peter

represents the passions of the school of Jerusalem, of the narrow church, and, though he was full of admiration for Paul, he follows him and acts as a prudent guide and counsellor. The general belief of the churches in the second century of our era was that Peter suffered martyrdom in Rome, but the Protestant professors made great efforts to prove that the journey of St. Peter to Rome had never taken place, in order to shake the very foundation of the Papacy. The question has not so much importance as was at first believed, as it is well ascertained that Jesus did not institute any primate among the apostles, that he was not the founder of the episcopate, and that he was not likely to choose out Rome, from all other places, as the permanent seat of the primate of the church. The vexed question of St. Peter's journey to Rome has become a mere historical problem. M. Renan solves it in the affirmative. He represents, in vivid colors, the followers of the new sect in the midst of Imperial Rome, the city of horrors and crimes, the new Babylon, sad, full of an undisguised antipathy for the Roman world, turning them away with horror from the old sanctuaries of the official religion, accused by the multitude of the most mysterious and heinous crimes.

In vain did St. Paul preach submission to the political authorities. Many of the early Christians had all the ardor of the zealots of Judea; they had the spirit of martyrs. And how could their sombre enthusiasm not be stirred by the sight of Rome? The world was given up to a madman: "When Cæsar lost his mind, when all the arteries of his feeble head, disturbed by an unheard-of power, broke at the same time, then madness began to rule. Under Nero, it was something atrocious and comical at the same time, grandiose and absurd. As the Cæsar was a good scholar, his folly was particularly literary. The dreams of all the centuries, all the poems, all the legends, Bacchus and Sardanapalus, Ninus and Priam, Troy and Babylon, Homer and the poems of his own time, were floating together in the brain of a mediocre artiste, full of conceit, to whom fate had given the power to realize all his chimeras. Let us imagine a man as sensible as the heroes of M. Victor Hugo, a personage of carnival, a mixture of the madman, the *jocrisse*, and the actor, with an absolute power, and charged with the mission of governing the world. He had not the black wickedness of Domitian, the love of evil for the sake of evil; he was not extravagant like Caligula; he was a conscientious *romantique*, an emperor of the opera, a *mélomane* who trembled before the parterre and who made it tremble before him, and would be nowadays a *bourgeois* whose common sense would have been perverted by the reading of the modern poets and who would think himself obliged to imitate Hans of Iceland or the Burgraves."

I must notice for the first time, in M. Renan, this introduction of modern names in old subjects; it is very frequent in this new volume. He once calls a friend of Nero, a quiet old senator, this "sceptical Mérimée." In the siege of Jerusalem there are constant allusions to the siege of Paris, to the Government of the National Defence, to the *Communards*. These allusions and comparisons seem to me beneath the dignity of history.

Nero was an artist in crime; his ideal of a great man was the man who would do anything, try anything, accumulate in the smallest time the greatest number of most sensational dramas. He even affected love and friendship, but merely as dramatic sentiments. He was handsome, clever, and fond of admiration. Suetonius has left us a very exact account of his court; it is enough perhaps to say that Petronius was the most virtuous of Cæsar's friends. Any idea with a man like Nero became a fixed idea. He was haunted with the memory of the fire of Troy. He had the unspeakable joy of playing the part of Priam during the fire of Rome. He was away when the fire began at Antium, but he returned and saw the imperial palaces of the Palatine, his own new palace which he called only "transitory," destroyed. It is difficult to recompose the truth out of the legend of the fire of Rome, but it is difficult not to believe that Nero saw in this misfortune only a prompt method of public expropriation, and an opportunity for making a new Rome finer than the old one. But the public conscience revolted against the Emperor. "An infernal idea came then to his mind," says Renan. "He looked for some unfortunate creatures, even more hated than himself, on whom he could throw the odium of the fire. He thought of the Christians." The Romans regretted their old temples, one built by Evander, another by Servius Tullius, the palace of Numa, and so many others. But who professed to hate these holy places? Who looked sad and scornful before the time-honored porticoes? The Christians. They had certainly not set fire to the city; it is not so certain that they did not enjoy the downfall of many monuments of idolatry. Nero hardly knew what the Christians were; but he was fond of the society of the Greeks, of the Orientals, and among the Jews who had access to the court were probably found the men who denounced the Christians to the Emperor.

The era of martyrdom began. The spectacle of human massacre had become one of the amusements of the people-king. The convicts of the whole world were sent to Rome for these festivities. "Rome," says Renan, "saw few more extraordinary days. The *ludus matutinus*, which was consecrated to the battles between animals, saw a strange procession. The condemned, covered with skins, were thrown in the arena and torn in pieces by dogs; others were crucified; others, with their tunics impregnated with oil or tar, were attached to pieces of wood and reserved as luminaries for a night spectacle. When the night came these living lamps were lighted. Nero offered for the spectacle the magnificent gardens which he possessed over the Tiber, and which occupied the actual site of the Borgo of the Church and the Place of St. Peter. . . . At the sight of these hideous torches, Nero, who has introduced the fashion of night races, showed himself in the arena, sometimes dressed as a jockey in the ranks of the people, sometimes conducting his chariot." Atrocious dramas were played, where Christians played their part in earnest: the Romans saw a Hercules obliged to tear a burning robe from his skin, an Orpheus torn in pieces, a Mutius Scævola burning off his hand, all the fables of antiquity, Dœdalus, Pasiphaë, the scene represented by the celebrated Farnese Bull now in the Museum of Naples. Nero, who was short-sighted, was present with an emerald at his eye, on the podium, above the Vestal Virgins.

The vestals of the new church were in the arena, the noble virgins, who were exposed to the eyes of the lascivious Romans before they were torn by wild animals. The sacrifice of Christ inspired the representatives of the new faith. Paul and Peter probably fell victims to the fury of the persecutors. A cruel death seemed the natural death of every Christian. M. Renan supposes that John escaped from Rome, where he had stayed but a little time, and found a refuge in Asia; he admits with many exegetists that he went to Ephesus, the church of which was joined by many refugees from Rome. John, after the death of all the companions of Christ, became the spiritual head of the church, and Ephesus for a while became the centre, the focus, of the new doctrine.

Correspondence.

PRESIDENT ELIOT AND OBERLIN COLLEGE.

To the Editor of the Nation:

Sir: In your issue of June 19, p. 417, giving some account of the correspondence between Mr. Magill and myself, you say that I deny the statement of President Eliot, in reference to his conversation with the Matron, on his direct authority.

Allow me to say that it was not in my thought to *deny* his statement, but merely to give the views of our lady Principals—of our present Principal and of the lady who occupied the place when President Eliot was here. There is no one connected with the school who is known here as "Matron." The term would be naturally understood as designating the "Principal." Doubtless President Eliot had a conversation with some lady who he supposed occupied that position—possibly with the stewardess of the Ladies' Hall, although she does not recall the conversation.

In justice to President Eliot and myself, it seems reasonable to make this explanation.—Yours truly, Jas. H. Fairchild.

Oberlin College, O., July 2, 1873.

THE ASSOCIATED PRESS AS A NEWS AGENT.

To the Editor of the Nation:

Sir: I have for some time past intended to draw your attention to the miserable way in which our daily press is served by its agents in Europe who make up the Cable despatches.

The public is treated to columns of news about races, the fighting Spaniards, the Shah of Persia, and the like, while it is left in the dark on questions of great importance to business and the country generally.

Here is a case in point. The financial world is on tiptoe to know how and when the millions hoarded by the German Government are to come out and relieve the European money market. We know that this question depended largely on the passage of bills pending before the German Reichstag referring to the new coinage and the regulation of the paper money. We also know by telegraph that the Reichstag adjourned on the 25th of June; but no public telegram has informed us of the passage of those bills, or of any decision on the important questions involved, and our gold market and exchanges are at the mercy of private parties who may possess that information.

Will not your pen try to stir up the managers of the Associated Press, and urge them to appoint intelligent agents in Europe, who will serve them better? By so doing, you will oblige, among many business men,

A Constant Reader.

New York, July 2, 1873.

Notes.

IN response to an invitation issued by Mr. Simon Sterne, a number of gentlemen held a meeting on the 30th of last month in this city, to organize a Memorial Committee in honor of John Stuart Mill, "either to co-operate with the one formed in England, or to take independent action." Rev. H. W. Bellows was called to the chair, and Mr. Sterne acted as Secretary. Many projects as to the form of a memorial were advanced and discussed, one meeting with special favor being that of a memorial edition of the works of Mr. Mill. Letters were read from Messrs. Beecher, Hewitt, Frothingham, Peckham, and many others, expressive of their sympathy with the object of the meeting and regretting their inability to be present. After the election of William Cullen Bryant as permanent President, and Mr. Sterne as permanent Secretary, of the American Mill Memorial Committee, the meeting adjourned, subject to be reconvened at the call of the officers and the chairman *pro tem.*, Mr. Bellows.

—Commemoration Day at Oxford was signalized in the traditional way by the speech of the Public Orator in honor of founders and benefactors, by the uproariousness of the undergraduates, and by the bestowal of honorary degrees. The recipients of the degrees this year were Mr. Munro, the well-known Latin scholar and editor; Professor Tyndall—*naturæ indagator strenuus*; and our distinguished countryman, James Russell Lowell. Mr. Lowell was presented to the Vice-Chancellor as one known to all as author of those "carmina quibus ficto Hoseæ Biglow nomine statum reipublicæ suæ priorem animo patriæ amantissimo perstrinxit." This was received with long-continued applause from every part of the Theatre, and so was a reference to Harvard, that "celeberrima atque nobis dilectissima academia." Great applause was also accorded Mr. Tyndall, whose degree, however, calls out some expressions of dissatisfaction from some gentlemen. Honor should not have been accorded, says one of these, to a man who has publicly written against belief in the efficacy of prayer. But other writers point out rather neatly, and perhaps more neatly than conclusively, that Mr. Tyndall's degree was given him for having written very well on science, and that his having written very feebly on the efficacy of prayer would be but a poor reason for withholding from him his reward. We are told that the name of Mr. Gladstone was welcomed by the undergraduates with a storm of groans and hisses, Dr. Liddon's was received coldly, while Dr. Stanley's called forth a great deal of cheering, as did that of Mr. Burgon, a clergyman of "advanced" views and with a talent for pamphleteering discussion marked by the kind of sharpness so much affected by sarcastic clergymen. The *Daily Telegraph*, says the *Times*, and its Khiva Correspondent divided attention with the *Church Herald*, the Shah, Archbishop Manning, and the "Claimant," whom some wag professed to have discovered in the audience. The usual attention was also paid to the ladies in every conceivable color and category—as the blue, the very blue, the pretty, the plain, the married, the single, and the old women in the arena, all of whom were duly cheered, but the turbulence is reported as having subsided on the entry of the magnates, and the proceedings of the convocation to have passed off with the most laudable peacefulness.

—Mr. Frederick Harrison, in the last number of the *Fortnightly Review*, has made a scathing reply to Mr. Fitzjames Stephen's 'Liberty, Equality, Fraternity,' in the shape of an article which he calls "The Religion of Inhumanity"—a religion which he refers to elsewhere as "Stephenism." "The religion of inhumanity," as Mr. Harrison depicts it, is no sweet creed of sympathy and love, but a religion from which all sympathy and love is banished. As for your filthy love, Mr. Stephen is represented as saying, "don't daub me with it; keep it to yourself. Hate is what we know how to make use of." The chief article in the creed of the Inhumanitarians, it seems, is the existence of Hell, as a place of punishment for the lowly, humble, and meek—Heaven, if there is one, being reserved for those who have always from time immemorial governed the earth—for brave, prudent, hardy men, who "know what they want and mean to have it." Of this Heaven, filled with successful lawyers, rich nabobs, powerful kings and emperors, enterprising Wall-Street brokers, active Indian civil-servants, and presided over by Bismarck, Mr. Harrison draws a pleasing picture. He accuses Mr. Stephen of having misinterpreted Comte (it is worth while observing that Mr. Stephen confesses that he has never read Comte through, and indeed, now that Mr. Mill and Miss Martineau have died, there is perhaps no one living except Mr. G. H. Lewes who can be decisively proved to have performed this feat), and says that Stephenism is "Calvinism *minus* Christianity," and is also the literary expression of that sort of muscular self-satisfaction which induces strong, active boys to be perpetually requesting their school-fellows to "feel their biceps." He accuses Mr. Stephen's style of "brawniness," and suggests that 'Liberty, Equality, Fraternity,' if we did not know its author, might be taken for the literary recreation of a "hanging judge." The article contains, besides this good Anglo-Saxon badinage, a valuable criticism of one part of Mr. Stephen's book—that in which he reduces to "force" all kinds of influence, from the mildest sort of persuasion to the rack and thumb-screw, and argues that "liberty" as used by modern writers is a meaningless term, because any influence is in so far an infringement of perfect liberty. Mr. Harrison replies to this, that though it is mathematically true it is practically false, because in practice people do not consider the right of persuasion an infringement of their freedom, while they do so consider the rack and thumb-screw. There is in such cases as this a difference in degree which amounts to a difference in kind, and Mr. Stephen's argument seems to be very much like an argument that people ought to consider a cat and an elephant the same animal, and use them for the same purposes—the cat, for instance, as a beast of burden, and the elephant as a domestic pet—because they are both animals.

—In his twelfth paper on the "Study of Sociology" (*Popular Science Monthly* for July), Mr. Herbert Spencer discusses the question of what is to become of religion—whether it is going to disappear from the world altogether, or is going to remain under new forms. It is unnecessary to say that Mr. Spencer is neither a humanitarian nor an inhumanitarian nor an orthodox believer, nor yet a believer in "free religion"; but, though he does not profess adhesion to any creeds yet accepted or yet offered, he has by no means given up religion, which he says must continue to exist in the world as long as man remains in it. Religion, according to Mr. Spencer, rests fundamentally on the mystery of nature. The savage first shows it in the feeling excited by some display of power with which he is not familiar—some sagacity, for instance, in his chief, leading to a result he does not understand. To the savage, however, there is nothing mysterious or awful in the regular sequences, the constant relations, about him. There is nothing remarkable to him in the law of gravitation, because everything obeys it. "Only anomalies in that course of causation which he knows most intimately—namely, human will and power—excite his surprise and raise questions." As civilization goes on, the wonder excited by anomalies, whether in man or nature, is dissipated, and a new kind of wonder begins—that caused by the uniformities. As science transfers more and more things from the category of irregularities to that of uniformities, "the mystery that once attached to the superstitious explanations of them becomes a mystery that attaches to the scientific explanation of them. There is a merging of many special mysteries in one general mystery." Gravitation is far from explaining why an apple falls to the ground. Indeed, what is called gravitation is merely a general term for a force of which we know nothing. The astronomer, "though he helps himself to think of the sun's action on the earth by assuming an intervening medium, and finds he must do it if he thinks about it at all, yet the mystery reappears when he asks what is the constitution of this medium. Though compelled to use units of ether as symbols, he sees that they can be but symbols. Similarly with the physicist and the chemist. Though the hypothesis of atoms and molecules enables them to work out multitudinous interpretations that are verified by experiment, yet the ultimate unit of matter admits of no consistent conception. Instead of the particular mysteries presented by those actions of matter they have explained, there rises into prominence the mystery which matter universally presents, and which proves to be absolute." So that, between the savage and the civilized man, the only difference is that the first sees God wherever he sees anything he does not understand, while the latter, though he may just at present think that all he sees in clouds or hears in the wind are the laws of matter, may in the long run recognize "*behind* every act and appearance" a superhuman mystery. No one need expect, then, Mr. Spencer says, "that the religious consciousness will die away, or will change the lines of its evolution." Nor need any one expect, either, that the "religion of humanity" will be the religion of the future; for "however dominant may become the moral sentiment enlisted on behalf of humanity, it can never exclude the sentiment alone properly called religious, awakened by that which is behind humanity and behind all other things."

—The hostelry once kept by Henry Baily in Southwark, and in which five hundred years ago were gathered

> "Wel nine-and-twenty in a compagnie
> Of sundry folk . . . .
> That toward Canterbury wolden ride,"

is now offered to be sold by auction, and appeal is made to the English public to purchase it "to preserve such a landmark of old England from destruction." In any other country, says Lord Ronald Gower, "such a venerable and historical building would have long since been cared for by the state"—an assertion which looks doubtfully correct; for, as the *Daily News* observes, a distinction is to be admitted between the relics which belong to

romance and those which belong to history, the latter not improperly being often made the care of the state, but the former almost never in the history of people of our blood. Still we may conjecture that the state might often justify an expenditure for preserving such relics as Chaucer's famous tavern, for the same reason that would justify its keeping visible monuments of historical achievements; the pride of the citizen in such fellow-countrymen as Chaucer and Shakespeare is fully as conservative a sentiment as the pride in the career of Marlborough or Nelson or Wellington, and thus as worthy the fostering attention of the powers that be. So, or more generously, have reasoned other nations than the English and American. However, it will probably be left for the Chaucer Society to take this view of the subject, for the *News* can give Lord Ronald Gower no better encouragement than a hint that Mr. Ayrton's susceptible heart may melt into an appropriation because of Chaucer's having formerly been Clerk of the Works in Westminster—a suggestion which Mr. Ayrton has probably by this time read with a pleased but ironical smile, and a wish that Lord Ronald Gower would call on him with the proposed request. The *News* goes on to say that should this application be unsuccessful, there may be on our own side of the water "a cousin 'once removed' who will boldly bid for the Tabard as it stands and transship it bodily to Boston or New York." But the best of our communities show small disposition to keep among us such reminders, whether of historical or poetic greatness, and we fancy that Mr. Barnum and Mr. Jerry Thomas are too well aware of that fact to add the Tabard to the attractions of their unrivalled establishments.

—Mr. Joaquin Miller is announced in the London *Bookseller* as being engaged on a new work, chiefly autobiographical, which, if at all like a production of his in the last *Independent*, ought to be translated for the American department of the *Revue des Deux Mondes*. We take the liberty ourselves of reproducing it in a very condensed form: In Shasta County, California, some years ago, the scurvy suddenly came into a mining camp and prostrated six of the little company. They were very likely to die, for the camp was a lonely one, to which all food, medicines, and supplies of whatever kind had to be transported on the back of the miner, and along a rough path which led across a lofty snow-covered mountain ridge. But one of the miners who formerly had followed the sea recollected that he had heard of a means of cure not beyond their reach, and to make trial of this was at once resolved upon. Six deep pits, dug in the shadow of a huge pine, soon laid bare the warm alluvial soil; in these the patients, stripped to the skin, were placed, and then the fresh earth was carefully shovelled back, so that each man was securely buried up to his chin. In the fitful moonlight they appeared to their watching comrades like men rising in resurrection to meet the judgment. What, however, was the anti-scorbutic merit of this mode of treatment their companions did not discover. The sleep of the miner, when his day's toil is over, is not so much a sleep as a stupor, and soon after the last of the buried men had dozed off, their friends also found themselves drowsy; perhaps, too, they were a little frightened at the spectacle before them—the six pale heads, with their shocks of hair, the occasional flicker of the moon in the blackness of the night, whose stillness was broken only by the occasional howling of the wolf or the faint rustle of the trees. For whatever cause, they at all events sought their beds and fell into a sleep from which none woke till dawn. At that hour they went to visit their comrades, and found that the wolves had come down and eaten off every one of the heads level with the ground. Mr. Miller, in beginning his narrative, says that he shall put into it but one thing that is not true, so the reader has an opportunity to reject the scorbutic story if he likes; some of the other things he will find worth reading.

—An interesting contribution to the art of cataloguing is now making by the Library of the Boston Athenæum. Besides the catalogues of 1827 and 1840, and the librarian's catalogue kept on cards, the proprietors of the Athenæum have had for information as to accessions to the Library only the Bulletins, with brief titles, published to the number of twenty-two from 1862 through 1871. The catalogue now publishing differs from the former in mixing subjects with authors and titles, the subjects being cast partly in an alphabetical form, and partly arranged on scientific principles of division. The system of classification is similar to that of the Boston Public Library, though with obvious improvements, as one of which may be mentioned the giving of imprints under subject-headings with the authors and titles. A convenience of an alphabetical classed catalogue is seen in the title 'Atta Troll,' with the proper reference to Heine—a reference which illustrates as well the perplexities the cataloguer is driven into when he asks himself whether such a reference, being the mere title of a poem, shall be an exception or a rule. An extremely valuable feature of this catalogue is that "collections" and the "proceedings" of historical and scientific societies have not only their contents drawn out at length, but the different contributions entered separately, with analytical references to the volumes in which they occur. Of this work, a great part was done by the late attaché of the Library, Mr. Charles Lowell, and it has been executed for this catalogue with a fulness which we believe to be unique. Imprints do not appear to be given in a uniform manner, names of places of publication being sometimes given in full and again abbreviated. Perhaps this inconsistency, if it is made with an eye to economy of space, might be avoided if the analytical references were made in a somewhat more compact form. The general aspect of the catalogue, however, and the details of printing are very creditable to the taste and the judgment of the present librarian. We hope that the resources of the Athenæum allow Mr. Cutter so large and valuable a force of assistants that he has more leisure than most librarians to make contributions to the theory of classification and to literature. The public may ask that the author of the admirable account of the catalogue of the Library of Harvard College, which the *North American* lately published, shall not have his time engrossed with such details as might find accurate treatment at the hands of proper assistants. The printing had advanced, when we examined the sheets last, as far as an entry under Boccaccio—320 pages of double columns.

—Mr. Wm. H. Whitmore has reprinted in a single pamphlet, from the proceedings of the Massachusetts Historical Society, two essays of his: one, 'On the Origin of the Names of Towns in Massachusetts Settled prior to A.D. 1775'; the other, 'On the Name of the Town of Lexington,' to which the author, for special reasons, has given particular attention. He finds the town to have been named not in honor of Lord Lexington, as Mr. Hudson has surmised in his history, but probably after the town which gave that nobleman his title—Lexington, Laxington (Laxton), Notts, England. The naming of the Massachusetts towns Mr. Whitmore shows to have been quite naturally influenced by the period at which it took place. In the Colonial period, "the colonists gave to their towns names chiefly of English origin. Of the sixty towns named before 1690 in Massachusetts Colony, not one retained an Indian name; while Scituate and Monomoy are the only two examples in Plymouth Colony." Further, we have the curious fact that "although both colonies were Puritanic, Salem and Rehoboth were the only Scriptural names." The minister, however, frequently named or was the occasion of naming the town. Capt. John Smith, too, by his prophetic map of 1616, did much for the town nomenclature, giving us Boston, Plymouth, Sandwich, Barnstable, Dartmouth, Bristol, Falmouth, etc. In the Second Charter period (1694 to 1774), the greatest change was brought about by the practice, introduced in 1732, of incorporating towns by act or resolves *in blank*, leaving it to the Governor to fill in the name to his liking. After this date names began to be freely borrowed from the titles of royalty, the British peerage, and the prominent political leaders of the day. For the first century (1620–1732), Mr. Whitmore gives the following classification of Massachusetts names:

"One or two Scriptural and Indian names; certain descriptive words originating here, as Marblehead, Westfield, Deerfield, Westborough, etc.; the names of English or Welsh counties; one or two names of Colonial celebrities. Lastly, a large number of places of little importance in England were remembered here, and the strong presumption is that these names were given by emigrants from these parishes."

The field is an interesting one, and by no means yet closed for the investigation to which Mr. Whitmore has given so fair a start.

AMERICAN CHURCH MUSIC.*

I.—PSALMODY.

AMERICAN psalmody was born of poor but honest parents about a hundred years ago. Billings was sponsor, and Read, Edson, and Swan next of kin. But the tunes of that generation have fallen into oblivion for excellent reasons. They lack the two vital conditions of vocal music: namely, truth to the chosen text and suitability to the human throat. Besides these two deficiencies, there were the lapses of illiteracy. The harmonic faults are of the cheapest and vilest description. It is difficult to conceive how such strains could ever have been regarded as music. Early in the present century came Dr. Thomas Hastings, a gentleman of taste and musical feeling. He is the inventor of the American prayer-meeting tune, of which his well-known "Rock of Ages" is a good specimen. This kind of tune requires a melody which is easy to remember and to sing, and

* 'The Glory: a Collection of Music for Singing Classes and Choirs, etc.' By Geo. F. Root.' 1872.
'The Standard: a Collection of Sacred Music.' By L. O. Emerson and H. R. Palmer.' 1872.
'The Advance: a New Collection of Hymn Tunes, Anthems, and Chants. By H. S. Perkins.' 1872.
'The Coronation: a New Collection of Music for Choirs and Singing Schools. By Theo. F. Seward and Chester G. Allen; assisted by Dr. Lowell Mason.' 1872.

a bass such as the average bass-singer can find out for himself. Hence arise the chant-like rhythms, the preponderance of uninverted chords, and the frequent return to the tonic. Such music is essentially simple and natural, and, although unsatisfactory to an artistic instinct, serves a very important use in social meetings. Though somewhat wanting in bold and aggressive elements of character, Dr. Hastings exerted no small influence on his generation.

In 1822, Lowell Mason published the 'Handel and Haydn Society's Collection' of sacred music. Here were first introduced many arrangements from classic sources, together with a large supply of the author's own. The book had a great success, and was the opening of the "singing-book era" of American musical cultivation.

The psalm-tune is not the greatest of musical creations. It is either plain and simple, easy to sing without help of instruments and with few voices, and thus especially appropriate for the prayer-meeting, or strong and massive, suited to large bodies of people, and in harmonic structure sufficiently complex to require the help of instruments, and in this case suited to the great congregation; or it is delicate and expressive, and thus especially the prerogative of trained singers—and this is the choir-tune. These three types shade off into each other by imperceptible degrees. The distinctively American type is the prayer-meeting tune, a melody easy to catch and lively of rhythm. The choir-tune is based on German or English models; the congregational melody is out-and-out English.

The psalm-tune, however simple, should be characterized by refinement and elevation of sentiment in some degree commensurate with the text to which it is wed. For the Christian hymnody contains, along with much trash, a great deal of the purest and most elevated sentiment to be found in literature; and, in the more fortunate instances, this nobility of sentiment is expressed in a phraseology terse, picturesque, and in every way suitable. But the tunes that fill up the books before us are very far from conforming to an equally high ideal. In many cases, they are the work of poorly instructed writers, and in staleness of melody, poverty of harmony, and awkward leading of the voices, they betray the 'prentice-hand. The nobility which we so commonly find in Handel, the melodic grace of Mozart, the godlike tenderness of Beethoven, and the refinement of Mendelssohn might as well never have been; on these productions they have left no trace. Yet in church music these qualities find their highest use.

Lowell Mason began as a composer for choirs. He seems to have taken for his model the best specimens of the English tunes of the day, such as "St. Thomas" and "St. Martin's" (both of which were written by a trained musician), and to have cultivated his taste by a diligent study of the best oratorios accessible to him. With such influences acting upon him, it is not surprising that in 'Cantica Laudis,' published in 1850, he should have reached a high standard of refinement. This work is largely made up of selected passages from oratorios, symphonies, and chamber music. In point of tasteful execution we must be permitted to hold this book for the best of its class yet issued from the American press. In its preface, the authors (Mr. George James Webb was associated with Dr. Mason) make a number of good resolutions against multiplying meaningless tunes of their own, to the exclusion of better works from other sources.

But the people who pay their money and take their choice among music-books, as well as in every other kind of manufactured goods, did not make choice of 'Cantica Laudis,' and in their next work the authors turn decidedly toward simplicity, in the hope of reaching the masses of the people. The end of this road is reached in the 'Glory' before us. In the tune-books which form the successive stages of the course, we see beauty, grace, and sentiment gradually fading away, until, as just said, in the 'Glory' we meet with only the most meagre suggestions of musical inspiration. Nor is the reason of this want of fidelity hard to find. The life of any work of art is in its striving after the most complete expression of an artistic ideal. But in the course in question we find a turning away from the ideal towards the convenient, the easily-reached, the salable. Dr. Mason himself, in our opinion, went too far in this direction, though he never forgot to strive after a degree of elevation of sentiment and dignity consistent with the words and the occasion of their use.

There was indeed some excuse for the general simplicity of his later harmonic treatment in the frequent and even common use of the books by singers unassisted by instruments. The general character of the transition is from the choir and congregational type to the chant-like form of the prayer-meeting tune before described. At the same time, he put a real end to the popular demand for new books of psalm-tunes for purposes of worship by his advocacy of hymn and tune books, the use of which was of course inconsistent with frequent change. And this cause is now in operation far more than ever before. In actual church use, the tunes and hymns are being winnowed, and though the chaff still lies on the pages of the books, it is not allowed to fill the place of the wheat.

Between Dr. Mason and Mr. Root intervened the era of Bradbury and Woodbury. Bradbury has more fluency of melody than any other American writer. His tunes lie well for the throat, and have a pleasing turn of melody. In point of significance we must place them low in the scale—a verdict fully confirmed by the quick oblivion into which the Christian church has suffered them to fall. The case of Woodbury is even worse. Taken up by a powerful denomination on the strength of what politicians call the "pious dodge," it was sought to stereotype the psalmody of that church according to his notions. The attempt has gloriously failed. Woodbury's tunes have pretty but tasteless melodies, and very weak and insignificant harmonies. In the technical matters of "voice-leading" they fall far short of the good taste that characterized Dr. Mason's work.

Meantime, the choirs were being neglected. In New England the predominance of Puritanism on the one hand, and the reaction into the cultivated but unaggressive type of Unitarianism on the other, accompanied likewise by a gratifying growth of musical taste, all worked together to produce the fashion of the quartette choir. On musical and devotional grounds, the relegation of the church singing to a quartette, even though they be archangels in a high state of cultivation, is indefensible; but for all that it is in many places the fashion. And we all know that whatever place may be taken by the divine in the next world, fashion has decidedly the upper hand here. The prophet of the quartette dispensation is Mr. L. O. Emerson, who published his 'Harp of Judah' in 1863, and the book reached a very large sale. The distinguishing traits of the new departure were a closer approach to the sentiment of the words, a freer use of sentimental discords and the key of D flat—a key, as all quartettes religiously believe, remarkably tender, touching, and *recherché*. In point of melody, Emerson's tunes are easy to sing and graceful. At the same time, they lack that peculiar piquancy which renders them easy to catch and whistle, and consequently they are safe from the debasement of prayer-meeting use. In the construction of this kind of tunes there was room for a more complete return to a dignified and significant progression of the bass voice. Whoever compares a few of Handel's basses with any of the popular books of psalmody will be struck with the awful inaction that has befallen the present generation of bass singers. To them might be applied the remarks of good Dr. Watts:

"Look, how we grovel here below."

To be precise, the basses in these recent tunes have no melody. They take the tonic and sing it until it ceases to be applicable, and then change it for the dominant. But go back to "Stonefield," and we find grace and refinement fully equal to the best modern productions, and at the same time a manly independence in the bass progression, recognized by all good composers as the proper method for the bass voice.

In the matter of truth to the text, Dr. Mason sought only a general truth suitable to the hymn as a whole, and not especially to one particular verse. But the general course of modern musical development is to give vocal music the utmost dramatic truth to the words consistent with the lyric form. And so we find in the 'Harp of Judah' a frequency of suites of two or three tunes to different stanzas of the same hymn. These suites of tunes, whether two or three, are to be judged really as a single work—a point overlooked by the composer, as would appear from the formal solecism of all three tunes being in the same key. Such a suite of tunes is in effect a motet in which the various members are not structurally connected, and in this case with a monotonous and unsymmetrical modulatory structure. Like all music not constructed in accordance with well-ascertained principles of taste, their race will be a short one, though probably they will serve an important use in calling the attention of uncultivated singers to the need for some degree of correspondence between the sentiment of the words and the music to which they are uttered.

But little remains to be added concerning the particular books whose titles stand at the head of this notice. Of the 'Standard' it is enough to say that it shows no especial advance as compared with the 'Harp of Judah.' The author's vein of originality seems to be exhausted. The 'Advance' seems to follow mainly the model of Mr. Emerson's works. In the tune "Thebes," p. 150, we have an example of a senseless deviation from an established rhythm, where nothing in the words requires or justifies it. The second line is inconsistent with the first. It is a musical *non sequitur*. It is impossible to turn over these pages of tunes and believe they were ever originated by a real ecclesiastical feeling. They are choir studies: exactly this, and nothing more. The importance attached to the singing-class relation of the book is shown in the allotment of no less than one hundred and fifty pages of space to that department. The 'Coronation' is one of the best-bred books of this class we have seen. Many of the tunes are remarkably elegant, especially a number by Dr. Wm. Mason. At the same time, it is perfectly apparent that

nothing new remains to be said in the way of metrical tunes, at least by the present race of composers. 'Coronation' was doubtless intended chiefly for singing-class use, and for this it is well fitted. It is proper also to add that in the matter of voice-leading this book has been far more carefully supervised than usual. It is superior to any of its competitors.

The heart of the psalm-tune is broken. Under its influence America has become a singing nation. The composers have bridged over the chasm between the snuffling psalm of the Puritans and the secular part-song of musically cultured people. The very men who failed furthest in reaching the high ideal properly expected of church composers really did most for secular song. Dr. Mason gave us the singing-school, and systematic singing-teaching in the public schools, and congregational singing. Bradbury, Woodbury, and Root wrote music that all the common people sung. The appetite for song has grown. Taste and ability have become equal to higher demands. It is now time to affix secular words to glees in place of the sacred words hitherto prevalent. It is the dawn of a day of better musicianship in popular composers.

RECENT NOVELS.*

'PSYCHICAL analysis' is, we believe, the name that is given to the exceedingly distasteful quality which marks Mr. Julian Hawthorne's novel, 'Bressant,' and which is to be found in many French novels of various grades, as well as in the yellow-covered literature of other times and countries. It is called analytic because it discusses a problem, the problem being the way in which a man loves two women at the same time, one with a sort of brute-like ferocity, and the other with all the purity and tenderness of a lofty nature. This complex man is Bressant; the diverse objects of his devotion being two sisters, Cornelia and Sophie, the daughters of a slipshod recluse, Professor Valeyon. Bressant, we are given to understand, is "a child in the world of the affections"; he has received from his father a singular education; and when he finds himself an orphan at the age of twenty-three or four, he makes his way to Professor Valeyon, nominally to study theology—which, so carefully has he been taught, he thinks is a profession, very much as civil engineering is—but really to develop his remarkable talent for bigamy. One evening he walks in the garden with Cornelia, the beautiful but bad sister, and while there the following incident takes place. In a pause in the conversation she kills a mosquito that is biting his hand:

"Bressant felt the soft, warm fingers strike smartly, and then begin to remove, cautiously and slowly, because the mosquito was possibly not dead after all. What was the matter with the young man? His blood and senses seemed to quiver and tingle with a sensation at once delicious and confusing. In the same instant he had seized the soft, warm fingers in both hands and pressed them convulsively, almost fiercely. Cornelia very naturally cried out, and sprang to her feet. Bressant, it would seem not so naturally, did the same thing, and with the air of being to the full as much astonished and startled as she.

"'What do you mean, sir? How dare you?' she said, paling after her first deep flush.

"He looked at her, and then at his own hand, on which the accommodating mosquito was artistically flattened, and then at her again, with a slight, interrogative frown.

"'How did it happen? What was it? I didn't mean it!'"

The next appearance of this simple-minded student of divinity is at a village ball, and although his dancing had hitherto been as much neglected as his affections, he, "beautifully as she danced, was no whit her inferior. They moved in complete accord. Years of practice could not have made the harmony more perfect." On his way home with Cornelia, Bressant stops a horse which is running away with his prospective father-in-law, but thereby he breaks his collar-bone. He staggers on, groaning, to the front steps and then faints. Soon Cornelia is obliged to go away to see fashionable life, and Sophie's turn comes. She reads to him, and in a few days they are engaged. This is kept a secret from Cornelia, who returns and is somewhat dismayed at the turn things have taken. She has become a mass of worldliness in her absence, and the French novels she has read have found her an apt pupil in ways of guile. Not unjustly, she had considered Bressant as good as engaged to her when she went away, and she is soon successful in winning the inexperienced young man back to the adoration of her charms. Then, too, if he married Cornelia he would be rich; if he married Sophie he would be only a poor country clergyman. Cornelia wins the day, Sophie dies of a broken heart, complicated by typhoid pneumonia, and so the story ends. If this were all, if there were no other faults to be found with the book than that the plot is awkward, the study of character crude, the telling of the story unskilful, the novel might be dismissed with very few words. It would be simply a poor novel. But the truth is that it is a very bad thing. It is bad because it lacks decency. In the place of genuine study of human beings, it gives us a morbid fingering of unclean emotions. After an experience of many centuries, society has agreed that there are certain subjects which shall not be talked about by its members, and which are eschewed even by intimate friends, and hence one cannot help regarding with even greater dislike a book which is to have wide circulation among inexperienced readers, who get a very great part of their knowledge of the world—to call it knowledge—from what they read, and which will give such persons so inaccurate and misleading an idea of what they themselves and other people are.

We should feel inclined to call it the worst novel in our list this week if it were not that we have just been obliged, in the way of duty, to read Mr. Edgar Fawcett's 'Purple and Fine Linen,' which might more justly bear the title of 'Scarlet and Dirty Linen.' The story is told by a gushing young woman of this city, who keeps a diary, and it is this imaginary diary which is printed. She is the daughter of a worldly-minded mother, the money-making and somewhat vulgar father having died before the story begins. The family is somewhat tainted with "shoddy," as may be seen in the extraordinary misuse of the English tongue of which Mr. Fawcett often represents it as guilty. The heroine's mother marries her to a Mr. Fuller Dobell, a lordly but poverty-stricken aristocrat, whom Helen, the daughter, fondly loves. He, however, is a son of Belial, and is madly infatuated with a beautiful but improper woman. This high-minded hero, who sells himself for money, does very little to hide his misdeeds from his wife, whom he imagines to be a true daughter of her mother, and to have contented herself with securing a better position in society. She, however, feels a not unnatural jealousy, and strives to reclaim her husband. She had already been warned about the true state of affairs before she was married, but to little effect. The graceless scamp makes himself notorious; his wife tracks him to a masked ball where his mistress is to be; the two women meet, and clapperclaw each other; a friend of the wife, who is also in love with her, takes her away, insults the husband, and fights a duel with him; the husband is dangerously wounded, and is carried to the house of his mistress; the wife disguises herself, and nurses him; she shows him that the woman is false to him; and the book closes on a charming scene of pure family affection. Such is this bad imitation of the worst sort of French novels; it has to recommend it nothing but this—no wit, no truth, nothing but this unnatural vileness, to speak plainly, though less plainly than the book deserves. It has, by the bye, among its other merits, the merit of being a gross libel on American society.

'Hero Carthew' is favorably introduced by the statement that it is by the author of 'Dorothy Fox.' It is a very pleasant, readable novel, with an agreeable love-story, the scene of which is laid in a sea-coast village in England. The pleasantest thing about it is its gentle simplicity, its avoidance of any struggle after effect, so that if it is not the mightiest intellectual product of the time, it is certainly a very pleasing and readable one.

A novel of even greater simplicity and of more positive merit is 'Under the Greenwood Tree,' which, like 'Hero Carthew,' is one of the recent additions to Messrs. Holt & Williams's "Leisure Hour Series." It is a story of English rustic life, told with a delicious humor, and with a more careful study of character than is at first apparent. It describes the love of a young country lad for a pretty girl who has some of the qualities which adorn the minx. There are rivals to anger him, and there is coquettishness to baffle him, and the combination is cleverly managed, so as to keep the reader in a pleasing state of uncertainty as to the issue of the novel. It is such a charming little tale that those who are going off for the summer and who are casting about for light reading appropriate for the season, cannot do better than slip this volume into their trunks. We have not read anything more fresh and good since making the acquaintance of Björnson's 'Arne'; or, to make a comparison which shall hint at a peculiar quality of the book, since we read Barnes's poetry of rural life. We hope the other novels of this author which are announced may follow soon.

'A Vagabond Heroine' is the title of the last of Mrs. Edwards's rather rowdy novels. This writer, with all her faults, is never prosy, and she throws the charm of her brightness over the unnecessary vulgarity of the

story. Some of her novels which appeared a few years ago are less marred by this fault, but two or three, some of which were written earlier, are sadly marred by it. They are not absolutely coarse, but they come too near it to be pleasant reading for any one, or safe reading for young readers. 'A Vagabond Heroine' might do no harm, but it would certainly do no good. Mrs. Edwards is capable of doing much better work, as indeed she shows by flashes in this novel.

'Must it Be?' is the name of the translation of a novel by Carl Detlef, which is, we believe, the pseudonym of a German lady living in Russia who has some reputation as an imitator of Turgenef. In this novel there are few traces of slavish imitation. The scene is laid in Russia; the heroine is the charming daughter of evil-behaving, quarrelling parents; her lover is poor in worldly goods, but rich in all that makes heroes admirable. There is much more melodrama in the plot than is needed, but the novel will be found not absolutely unreadable by those who care to find out anything about the country which is described in it. There is nothing of Turgenef in it; in fact, it is no better than half the novels which are daily appearing, but neither is it any worse.

'Ready-Money Mortiboy' is a novel the interest of which depends on the vast number of its incidents taken from the life of the present day. One of the heroes is the victim of poverty, and so has a rich experience, with which those who have comfortable lodgings are but little familiar; and then there are very black villains, who are successful for a long time; and the artificial young women of such novels, who seem more like the heroines of the novels of forty or fifty years ago than living human beings. In its way, which is innocent enough if not the best of ways, the book is tolerable.

'Ruth Maxwell' will not be found slumber-destroying if taken up at one's usual hour of going to bed. It is a novel of social life, and with a vaster number of intricate complications of family relationship—like the occasional problems of that sort which travel through all the newspapers of the country—than the inexperienced mind cares to have the trouble of solving. If the story is not entrancing, it is certainly perfectly harmless. It contains hardly anything more than social vexations and joys, told with very little reserve; but its dulness is its only fault.

A most extraordinary novel is 'Why She Refused Him.' There is a great deal of most improving conversation in the book, of which the following may serve as an example:

"'Do you like Milton, Miss Travers?'

"'I admire his sublimity, originality, and genius; yet sometimes he makes failures. The first and second books are examples of the highest sublimity; the sixth also affords specimens, particularly relating to the appearance of the Messiah; but the witticisms of the devils have been justly censured. The latter part of the poem is not so well sustained. With the fall of our first parents the genius of the author seems to have declined; yet there are passages of a striking character—those which relate to the remorse and contrition of the guilty pair.'

"'In what particular do you think he has failed, Miss Travers?'

"'In several. For instance, when he describes the Almighty; when he relates dialogues between Father and Son; also in his delineation of Satan, who makes a striking figure, it is true, and is considered by many the best character in the book; yet Milton has not described him as an infernal spirit should have been described. He appears no worse than some bold, factious chief sometimes read of in history. The different characters of Beelzebub, Moloch, and Belial are exceedingly well painted; and among the good angels are the dignified Michael, the mild and affable Raphael, and the faithful Abdiel, all finely drawn characters.'"

And yet women complain that they are not educated!

'Meta Holdenis' is the last of M. Cherbuliez's novels. It has quite recently been appearing in the *Revue des Deux Mondes*, and is now published in book-form. The story is told in letters by a young man, a painter, to a lady, a friend of his, living on the Rhine, who has written to him that she has chosen for him the maiden he is to marry. This latter is a charming girl, sentimental as well as practical, and her eyes are of a heavenly blue; but about those heavenly blue eyes he has his own opinion, and the novel is the account of the manner in which his present opinion of them was formed. Several years before, when he was a young painter, he made the acquaintance of a German family living in Geneva, and more especially of a daughter of this family, Meta Holdenis, who charmed him by her tender romanticism, which, however, did not make her scorn her household cares. The girl's father wheedled him out of a good part of the little sum of money his father has given him to set out in the world with, and the girl, after listening to his suit, determined at the last moment to marry a richer and much older man. He flies to Dresden, feeling that now at length he knows the world, and forgets his sufferings in hard work. While there, he makes the acquaintance of the French Minister, and they soon become warm friends. This Frenchman, true to the habits of his countrymen in the pages of novels, runs away with another man's wife, and they are soon living together in France, Tony, the painter, with them. A governess is needed for the child of the Frenchman and his companion, and one is obtained. She is Meta Holdenis. Naturally, at an early opportunity, Tony and Meta seek an explanation, which has the usual result of explanations in complicating matters more than ever, bringing him again under the power of her fascination. She, however, seeks nobler game, and soon is making her way by dexterous flattery into the heart of M. de Manserre, the Frenchman, while, at the same time, like a cautious girl, she has two strings to her bow, and by no means spurns Tony. In the course of time, the offensive husband dies, and the crisis of the story comes. The intrigues of the girl are discovered, and she leaves the house. Afterwards she becomes a Protestant sister, and denounces the immorality of the French, taking an account of the conduct of Tony and M. de Manserre for her text. It is, as may be seen, the story of an intriguer, and, in our opinion, it makes a very interesting novel. It shows very well the curious combination of good and evil motives which dulls the conscience of such mischievous people, and makes them seem less guilty to themselves. Then, too, is to be noticed the way in which the narrator, Tony, half apologizes for and half conceals the extent to which he had admired the girl after he knew the dangers of her character, which is a very natural touch. The novel does not need translation, but it may be safely recommended to readers of French as a very interesting story.

LAZELLE'S 'ONE LAW IN NATURE.'*

WE cannot speak of Captain Lazelle's 'One Law in Nature' with much respect. Though it does not betray the dense ignorance which many pretentious theories of the universe do, we cannot say that it has any value as a contribution to natural philosophy. We may defend this judgment by two citations. On page 17 we read:

"Though tractive effort between masses of matter, without an intervening medium, cannot be understood, and though the mode of this invisible sympathy is as incomprehensible as is its nature, yet its existence is undeniable."

Now, in point of fact, there is nothing to determine whether gravitation acts through a medium or directly at a distance. All that we know is this: if it is propagated through a medium from one part to another adjacent to it, this process must, according to all analogy, occupy time. But, on the other hand, if there is no medium, the action cannot take time without violating the law of the conservation of energy—a law which, if it is not known positively to hold in such a case, may reasonably be supposed to do so. Now, Laplace has shown that, if the action is propagated through a medium, its velocity is, at least, many million times that of light, and that there is no reason for abandoning the simpler supposition that gravitation acts instantaneously. But Captain Lazelle's notion that any simple and obvious facts disprove the existence of a medium has no foundation.

The second citation shall be from page 19:

"Though this force (gravitation) may extend through space independently of matter, yet it cannot be said to do so instantaneously; as successive positions must be occupied in successive increments of time."

These two opinions, that gravitation acts without a medium, and yet that it takes time to act, do not harmonize. But observe the reasoning: Gravitation cannot act instantaneously because successive positions must be occupied in successive times! But what if these positions are not successive? Cannot there be attraction at different points at once? Physicists are perfectly ready to examine general theories of the forces of nature, notwithstanding the fact that there is not a single instance of such a theory (imagined, and not derived by induction) which has finally taken a place among established truths. For example, the undulatory theory of light is proved up to a certain point, namely, that light consists of some sort of vibration transverse to its direction of propagation. This is a result of induction. But no attempts to go further and imagine of what sort this vibration is, though the greatest mathematicians have made them, have met with such success as to be admitted to a place among established truths. Yet physicists always look upon such attempts to represent the mechanism of natural forces with favor; but they demand that they shall be developed with mathematical precision, and be shown to express known laws with mathematical accuracy. This Captain Lazelle has not done.

All physicists believe that everything in the outward world may be expressed in terms of mass, of space, and of time. The redness of a rose as it exists in the mind which sees it, is what it appears to be; but as it exists in the rose itself, it is only the fact that the particles vibrate in a

*'One Law in Nature: A New Corpuscular Theory, comprehending Unity of Force, Identity of Matter, and its Multiple Atom Constitution, applied to the Physical Affections or Modes of Energy. By Capt. H. M. Lazelle, U.S. Army.' New York: D. Van Nostrand.

certain time. This time may be expressed as a number. And in a similar way, no doubt, every property of any body might, if we only knew how to do it, be expressed numerically in terms of the pound, the yard, and the second. Of these physical constants (or numbers expressing properties) almost all are either peculiar to some particular thing (such as the dimensions of the earth) or to some kind of substance (such as the atomic weight of hydrogen). In the whole range of physics, we can expect to find no others and know of no others, except only two: first, the amount that one gramme attracts another gramme placed at a distance of a metre, which is 0.00000000000003 metre cubes per gram-(second)^2, and the velocity of light, which is 300000000 metres per second.

By choosing the appropriate relation between our units of mass, space, and time, we can give these constants any numerical values we please. For example, we might make them both unity. But if we had a third universal constant, we could not make all three unity, at least without determining the absolute value of our fundamental units. Now it may be considered reasonable to suppose that considerations relating to the general laws of nature should lead us to adopt a certain ratio between our units. We have an example of this in the measure of lengths in different directions. A length north and south, a length east and west, and a length up and down, are three quantities as incomparable with one another as a time and a weight. We may therefore take a mile north and south as our unit of length in that direction, and an inch east and west as our unit of length in that direction, and, since these units cannot be compared, they are unequal only in the sense in which a day and a pound are unequal. But now, it is a great law of nature (our familiarity with which must not be allowed to breed contempt) that bodies may be turned from one direction to another, and that when a body is so turned without being subjected to any strain, the numerical value of its length north and south bears a certain constant ratio to the numerical value of its length east and west. This ratio necessarily depends on the relative magnitude of the units of length in different directions, and this fact has naturally led us to assume these units, so as to reduce this ratio to unity. If there is only one law in nature, it is this law of the rotation of bodies, and if this is the only one there is, times and masses are in no way subject to law. A natural force is in fact nothing but a general relation connecting measures of different quantities. We must, therefore, suppose at least two forces to establish relations of mass and of time to space. These are the two forces whose constants are the absolute modules of gravitation and the velocity of light. But our whole conception of the universe, and therefore our whole experience, are opposed to there being another general relation, for such a one could only exist by establishing absolute values of our units. Now, it is not to be believed that general considerations in regard to the nature of things could ever lead us to assign a particular numerical value to the measure of any particular thing, such as our standard measure. We have, therefore, reason to believe that while we doubtless are ignorant of the precise form of the fundamental principles of nature, we at least are not mistaken as to their number.

Men of the Third Republic; or, The Present Leaders of France. Reprinted from the London *Daily News*. (Philadelphia: Porter & Coates. 1873.)—This entertaining little volume is so evidently the work of a journalist that we scarcely need to be told that its chapters were originally published as letters to the London *Daily News*. They are written from the stand-point of a sprightly republicanism—honest, effective even so far as it goes; but not altogether adequate to measure the present situation in France. To do this is needed not only sketches of the men who are in power, but a background against which they may be effectively grouped, and an analysis of their relations to the deepest elements of the situation. But such background is quite wanting, and the analysis, though attempted, is rather superficial. The author has jotted down the most noticeable traits of the personages selected as representatives of the Third Republic in the rapid fashion in which an amusing amateur sketches the company at a picnic. Hence, outside peculiarities of form are emphasized more than essential differences of organization; a crooked nose, a large ear, a bushy eyebrow, are seized upon because needed to identify the sketch, while more essential circumstances are passed over as unnecessary for that purpose. This may be more clearly seen by comparing the silhouettes of this volume with some of the portraits in our great historical galleries, with Gibbon's description of Athanasius, with Michelet's analysis of Louis XI., with Louis Blanc's fine picture of Chateaubriand.

The great importance of M. Thiers's position, especially at the time that this correspondence to the *Daily News* was written, and the extensive records of a long life, so active both in literature and politics, that were open for examination, would repay a much more careful study than that which the author has seen fit to bestow upon the first President of the Third Republic. He calls him, indeed, "a giant among his contemporaries," gives a slight but vivacious account of his youth, alludes to an act of "buffoonery" quite truly declared to be untranslatable into English, discloses a new view of the Conservative statesman by reviving the history of his guerilla warfare against Charles X., and styling him the "Rochefort of the Restoration," describes the tenacity of his opposition to the Empire and his bearing towards the Revolution of September, but carefully avoids all discussion of the real question at issue, namely, In what relation does M. Thiers stand, by antecedents or character or policy, to the Republic, or to the various interests conflicting within it? The chapter is too much imbued with the prevailing bourgeois formula, "M. Thiers is the salvation of the country"—formula of the "weak-kneed centrists," who have since overthrown M. Thiers for MacMahon. In like manner, the author's estimate of MacMahon is somewhat tinged, in spite of himself, with the "sturdy soldier" superstition, and a tendency to believe that a man who had been a "Legitimist fire-eater," an Orléanist general, a Bonapartist marshal; who had never "vouchsafed but a sulky allegiance to the Republic, and was never tired of clamoring after the least street riot, 'Ah! yes, this comes of liberty'"; who "would not abet the swindling of a penny at cards, yet could consent to aid in cheating the liberties of a whole nation"—that this man might possibly be induced to "step out at this moment and declare himself Republican." Subsequent events have not confirmed this hope, but rather demonstrated MacMahon's consistency to his old fondness for a "régime of order," which, the author remarks, "generally seems to mean a régime that has been tried before, and given a fitful order to the streets by introducing disorder into the public finances, into the public morals, and into the public ideas of international amity."

The most satisfactory chapters in the book are those on the men concerning whom little was to be said; for that is well said. The most unsatisfactory chapters are upon subjects that offered abundant material for the thoughtful analyst; for it is in them that the superficial method of the book is most disappointing. Where only one thing is to be determined—the relations of the subject-character to Bonapartism, or to a Republicanism comprehensible from an English point of view—everything is plain sailing and stated with justice and sufficient accuracy. As soon as the subject becomes more complicated, the author grows confused. Thus, the review of Louis Blanc seems written by a person who had never read a line penned by one of the most brilliant of contemporary French writers. The author seems to have talked with a great many French gentlemen and ladies about Louis Blanc, and to have accepted their estimate of him without criticism. There is a pretty sketch of Barthelemy St. Hilaire "quietly nursing the weak-kneed congregation who sit in the middle of the house and call themselves Centrists; that is, men who never have been able to make up their mind, nor are likely to." Father Hyacinthe's chances of success or rather failure in France are well estimated when it is said "that the French may be roughly divided into two parties—the bigots and those who do not believe anything, the latter again subdivided into the openly infidel and the deferential classes. The bigots ban the idea of church reform as blasphemy; the free-thinkers dismiss it as not worthy their attention: the *pococurante* majority do not want to hear ecclesiastical matters discussed at all." The portrait of Bishop Dupanloup is charming, but the nature of his present influence in France, and especially of his tenacious opposition to education, is not carefully considered, as it deserves to be. A man who believes in the value of the deathbed confession of Talleyrand, who opens a regular crusade against the instruction of women, insisting that they must be exclusively brought up "sur les genoux de l'eglise," may be an ascetic, a saint, an eloquent and even extremely interesting personage, but one whose relations to the present epoch in France must necessarily be both singular and perplexing. Into these relations the author discreetly avoids penetrating. Nor does he attempt to show the close connection that exists between the doctrines of that school of eclecticism of which M. Jules Simon is "one of the best pupils," and the pale philosophy expounded by him in his treatises on natural religion, on education, and on the working-classes; and, finally, between that philosophy and the curious mental and moral enervation that seems to pervade a certain section of French society, precisely in proportion to the influence of this school.

But it is perhaps ungracious to criticise a book for what it is not, when it only professes to be something so ephemeral as a collection of letters to a newspaper. Binding, however, gives an illusory air of solidity to such ephemera that is sometimes mistaken for depth and insight and research. In a discussion of the intestine dissensions of a South American Republic, such mistakes are comparatively harmless. But in France, the theatre of conflict for all the ideas of the modern world—those inherited from the past and those that belong less to the present than to a distant future—conflict of

knowledge and of densest ignorance, of headlong courage and of a "policy of fear,"—of the most tenacious prejudice and most impetuous radicalism—a conflict carried on in a country where ideas seem endowed with visible bodies, and words with a power that alone would account for the extraordinary sensitiveness in regard to them unknown to thicker-skinned Anglo-Saxons—in regard to such a country, such a struggle, such a wonderful situation, it is important to make no mistakes, especially not those that depend on an underestimate of the calibre of things or an overestimate of the relative calibre of persons. With this reserve, we recommend these sketches to that numerous class of readers who detest history but enjoy the *feuilleton*, whose intellectual curiosities are satisfied when they have cut the leaves and turned over the pages of men, or books, or things.

Political Portraits. By "A Prominent London Journalist." (Philadelphia: J. B. Lippincott & Co. 1873.)—Among small books for summer reading, a good place may be given to this volume of sketches by "A Prominent London Journalist." Whether or not he has been a Parliamentary reporter, he has been a frequenter of the two Houses, so that he has a sort, at least, of personal acquaintance with the men he describes; and he has evidently taken a strong interest in their characters and careers, and brought an acute observation to bear on the originals of his portraits. He paints them skilfully, too, making a sharp impression with his trained journalistic smartness of handling. This, by the way, is a quality not so very appropriate in summer reading; but it will perhaps oftener be found enlivening than fatiguing. The subjects of his sketches are twenty noted Englishmen of our day; indeed, they all are now living, except Lord Granville; and the list includes, besides the best-known of contemporary English politicians, several who are to be classed among the "prominent if not eminent." Among these lesser lights of Parliament are Lord Halifax (Charles Page Wood), Mr. Ayrton, Lord John Manners, Mr. Ward Hunt, and Mr. Henley, who follow in the enumeration after Mr. Gladstone, Mr. Disraeli, Mr. Bright, Mr. Lowe, and their compeers. The writer is evidently a Liberal of one of the more advanced shades, and though "not conscious of any bias for or against individuals," has seemed to us to have an especial fondness for giving a flick of the whip to such Liberals as have at any time got out of the traces or held back; as, for example, Mr. Lowe and Mr. Forster. Still, it must be confessed that he is pretty impartial with his sharpness, and that whether or not any one gets a trifle more than his due, all get at least some. It is not meant for a eulogistic performance, and, if Lord John Manners is soundly scored, the universally respected Lord Selborne is not precisely treated with that reverence which is due to the Creator alone. An extract from an analysis of Lord Selborne's character will illustrate this feature of the author's work; we may add that it may be taken as illustrative of the work at its best, and as accurately illustrative of almost the whole of it:

"Formerly ecclesiastics were not rare who possessed and displayed the characteristic virtues, and often the characteristic vices, of men of the world. There were bishops who led armies and cardinals who ruled states, priests who went on embassies and intrigued at courts, and who were churchmen in little more than costume. Albornoz and Wolsey, Richelieu and Alberoni, are names which at once present themselves. Within the last generation a phenomenon just the reverse of this has disclosed itself in English politics. A class of statesmen and lawyers has grown up who exhibit the peculiar virtues and foibles of ecclesiastics—men who seem to be laymen only in profession and in costume, but who are churchmen at heart. The succession of Lord Selborne to Lord Hatherley upon the Woolsack carries one back to the time when ecclesiastics were our Lord Chancellors. Although Lord Westbury has declared that he owes his success in life to a habit of Bible-reading and to the formation of his character upon the precepts of the New Testament, he does not strictly belong to this order of lawyers and politicians. There is a certain want of robustness and frankness about these churchmen out of holy orders. They are demure and self-conscious. The drooping glance which seems to shun the lust of the eye, and the bowed head which denotes an oppressive sense of humility, suit the cloister and the hood rather than St. Stephen's and the barrister's wig and gown. Their very gait expresses a sort of moral gliding through the world, so as to evade the evil of it; their hands are pensile and motionless, close to their sides, as if to keep their very skirts untouched and unspotted by the evil men and things about them. Their speech is a sort of mournful plaint, a melancholy sing-song, conveying, as it were, a hinted remonstrance against the hardness of heart of those to whom they appeal, an obtrusive patience of an unwillingness to be convinced, and a sort of lifting up of a disregarded testimony. This priest-like bearing has its moral equivalent. On ethical questions which decide themselves instantaneously to a plain judgment, politicians of the type we describe are given to a refined and ingenious casuistry, which sometimes enables a conscientious statesman to do from the very loftiest motives things which a public man, less given to strict self-examination, and therefore less liable, it may be, to that elaborate self-deception which often waits on self-scrutiny, would not venture even to debate within himself. It would be improper and unfair to say that this type of character, although its defects are often but the shadows of great virtues, is perfectly realized in any living statesman. There is, however, a certain degree of approximation to it in some of our public men; and, perhaps, its foibles are those against which Lord Selborne has some need to guard. It is a strange paradox that the man who could risk the sacrifice of a career to his convictions on the Irish Church Disestablishment question, should have been the equally disinterested apologist of the translation of Sir Robert Collier."

We make room for another extract, embodying one of "the small secrets of literature":

"A legend prevails that Mr. Ward Hunt was one of the reading-party in the Highlands whose sayings and doings are recorded in the late Mr. Clough's 'Bothie of Tober-na-Vuolich,' and that he figures in that poem under the not altogether dissimilar surname of Hobbes—'the great Hobbes, contemplative, corpulent, witty,' whose dancing exploits in a kilt are celebrated. . . .

"Mr. Ward Hunt's oratory is not of a particularly impressive character. It somewhat resembles informal talk from the bench at Quarter Sessions or at the magistrates' meeting, and is apt to be a little hurried and flurried. Mr. Ward Hunt does not so much plunge into the debate as flounder into it. Compared with Mr. Gladstone or Mr. Disraeli, or even Mr. Gathorne Hardy, he enters it as his supposed prototype, Hobbes, entered the bathing-pool at Tober-na-Vuolich:

> 'There Arthur, the glory of headers,
> Leapt from the ledges with Hope, he twenty feet, he thirty;
> There, over-bold, great Hobbes from a ten-foot height descended,
> Prone as a quadruped, prone, with hands and feet protending.'

In parliamentary discussions, Mr. Ward Hunt does not usually do even as much as this, but rather rolls over a half-foot height into the water, like the seal or sea-bear entering his pond in the Zoölogical Gardens. But he is a sufficiently good speaker for the purpose of clear statement, explanation, and argument."

Two or three hundred similar pages we might quote if fairness permitted. The publishers deserve a word of acknowledgment from the reading public for the typography and paper of this volume.

Annual Record of Science and Industry for 1872. Edited by Spencer F. Baird, with the assistance of eminent men of science. (New York: Harper & Bros. 1873.)—On the appearance of the first volume of this series last year, we gave it high praise for comprehensiveness of plan and intelligent editing, and the present volume merits the same commendation to public favor. It is still true that the arrangement of the articles is not quite systematic; for example, after tracing the progress of the Weyprecht and Payer expedition through pages 144–147, one must turn to p. 172 in order to obtain the latest intelligence concerning it. But the table of contents and the index reduce all this to order. The matter is a little fuller than last year, and the range of topics increased by "Pisciculture and the Fisheries."

A rival annual makes its début in Dr. John C. Draper's 'Year-book of Nature and Popular Science for 1872' (New York: Scribner, Armstrong & Co.) The classification is very different from Professor Baird's; there is no introductory survey of the year's progress, as in the 'Record'; and almost no particular information is given concerning the source or date of the discovery noted. "M. Bolson finds," "De Bary estimates," "Colonel Angus Croll thinks," etc., etc., is the usual formula of the articles, in which condensation has been carried to an injurious extent. Occasionally this may be proved by comparison of the same topic as treated in the 'Year-book' and in the 'Record,' the latter giving more details and offering greater aid to the student desirous to complete his knowledge by reference to the authorities. These coincidences, however, occur much less frequently than might be supposed. In meteorology there is but one topic common to both the annuals, in chemistry but two; and it must be said that the 'Record' covers the ground much more satisfactorily than the 'Year-book.' In fact, "Year-book" appears a misnomer when we find space given to a fantastic "Japanese Account of a Typhoon" (no date); to a general statement of the necessity of specialists in chemistry; and to articles like the following, which, however useful as stimulating invention, have certainly nothing to do with a summary of things achieved:

"140. *Application of Thallium.*—If thallium could be procured in sufficient quantity, it would be very valuable for the manufacture of colors, many of its compounds presenting beautiful yellow, red, and green tints."

And this is very trifling:

"184. *Purification of Water.*—Water containing lime compounds may be rendered fit for use for many purposes in the arts, by adding a little chloride of ammonium."

"187. *Improvement in Paper Stock.*—The addition of a little glycerine to paper-stock greatly increases the flexibility of the paper."

"179. *Value of Salt in some Countries.*—Salt is so scarce a substance in some countries that it is used as money. In others, it is so dear that only the rich can afford to use it; hence the expression, 'He eats salt,' signifies that the person in question is wealthy."

SCIENCE JOINS HANDS WITH RELIGION.

THE FALLACIES OF DARWINISM EXPOSED.

By Agassiz Himself.

TRIBUNE LECTURE EXTRA, No. 8.

THE METHOD OF CREATION: A series of twelve lectures delivered by Prof. Louis Agassiz before the Museum of Comparative Zoölogy at Cambridge, Mass., demonstrating the fallacies of the development theory as applied by Darwin, Huxley, and other naturalists to the creation of animal life, and setting forth the scientific evidence of Conscious Mind in the works of nature. These lectures contain the fruits of the most recent researches into the mysteries of existence, and are the most authoritative and conclusive refutation ever offered by science itself to the infidel theories of many modern scientists. They are profusely illustrated by drawings from specimens of rare animals in the museum, and are printed in a full *Tribune* sheet of eight pages containing in addition Vestiges of Antiquity, a Comparison of Prehistoric Remains, by Augustus Le Plongeon, M.D.; A Fossil Man, the Human Skeleton found at Mentone; The Art of Dyeing, a Cooper Union Lecture, by Prof. C. F. Chandler; The West in Ages Past; an interesting description of the remarkable Rocky Mountain Fossil discovered by Prof. O. C. Marsh.

Price, single copies by mail, 10 cents; two for 13 cts.; five for 25 cts. Address

A NOBLE LIFE PORTRAYED.

New and Enlarged Edition of

HORACE GREELEY'S AUTOBIOGRAPHY,

With Appendix containing Memoir of his later years and Death, and the best of his famous Campaign Speeches.

The last and best portrait of him ever published, representing him as he appeared in the summer of 1872.

The great call for Mr. Greeley's Autobiography, and also for some more permanent record of the wonderful intellectual display which he made during his Eastern and Western tours in the Presidential Campaign of 1872, have led to the issue of a new edition of the 'Autobiography,' with a very large Appendix continuing the story of his life to the end, reproducing the more striking and suggestive of his many admirable and brilliant Campaign speeches, and concluding with an exhaustive and admirable analysis of the campaign, originally prepared by the Hon. James S. Pike, ex-United States Minister to the Hague. There is, besides, a pretty complete collection of Mr. Greeley's Miscellaneous Writings, including among others his famous controversy with Robert Dale Owen on Marriage and Divorce.

Price, handsomely bound in cloth, with two Portraits, $3. Sent by mail on receipt of price. Address

THE TRIBUNE, New York.

PRICE $2.

"Our own minds have become so much sophisticated by commonplaces about liberty and toleration, and about the division between the temporal and the spiritual power, that we have almost ceased to think the attainment of truth in religion as desirable if it were possible. It appears to me that, if it were possible, the attainment of religious truth and its recognition by legislation would be of all conceivable blessings the greatest."—See LIBERTY, EQUALITY, FRATERNITY.

HOLT & WILLIAMS, 25 Bond Street, New York.

MR. ROE'S GARDEN, from which, as he tells us in his entertaining book, 'Play and Profit in My Garden,' $2,000 worth of fruit and vegetables were sold in one year beside a large home supply, promises equally well the present season. On the 31st of May, his sales amounted to $257. On the 6th of May, he had seven distinct varieties of vegetables in abundance at his command. The story of this successful garden is told at length in his book, PLAY AND PROFIT IN MY GARDEN, which DODD & MEAD publish.

MACMILLAN & CO.'S LIST.

Mr. Norman Lockyer's New Book—Nature Series.

THE SPECTROSCOPE and its Applications. By J. Norman Lockyer, F.R.S. With Colored Plate and Illustrations. 12mo, cloth, $1 50.

Is Rowing injurious?

UNIVERSITY OARS. Being a Critical Enquiry into the After-health of the Men who rowed in the Oxford and Cambridge Boat-Race 1829-69. By John Ed. Morgan, M.D. Crown 8vo, cloth, $3.

LITERATURE AND DOGMA. An Essay towards a Better Apprehension of the Bible. Third Author's English Edition. Crown 8vo, cloth, $2.

THE ROMANCE OF ASTRONOMY. By R. Kelley Miller, St. Peter's College, Cambridge. 12mo, cloth gilt, $1 25.

"Among the topics which the author selects from the field of enquiry are the planets, the moon, the sun, the comets, and the nebulæ, all of which he treats with a glowing eloquence that charms the imagination, while the intellect is fully satisfied with the thoroughness and accuracy of his exposition."—*N. Y. Tribune.*

"It should be read before the study of astronomy, to give a keener zest to that noblest of sciences, and it may be read by the lifelong student with infinite pleasure; both will find it as wonderful as their early impressions of the 'Arabian Nights.' It makes this little book all the more wonderful to know that it is true. Read it."—*The Churchman.*

THE CHILDHOOD OF THE World. A Simple Account of Man in Early Times. By Edward Clodd, F.R.A.S. 12mo, cloth gilt, $1.

"A very clear account is here given of the progress of man. Although primarily intended for the young, it is adapted to the wants of more mature readers who wish to be informed concerning the light which has been thrown by modern research on the primitive condition of man."—*N. Y. Tribune.*

"In a style so simple as to be intelligible to children, the work before us elucidates facts and history worthy of the maturest intellect, captivating by its very clearness. We have never seen the subject of primitive man better set forth."—*Boston Daily Globe.*

"The simplicity of style of the book will commend it to the young, for whose advantage it was written; and its well-narrated facts will prove interesting to adult readers."—*Journal of Applied Chemistry.*

THE WEEK IN TRADE AND FINANCE.

JULY 7, 1873.

WALL STREET last week took quite a rest. The Stock Exchange adjourned over from Thursday afternoon to Monday morning, and their example was followed by the Gold Exchange. The bulls and bears fled the city almost in a body, and on Saturday nobody came to Wall Street but those who were compelled to do so. The banks and private banking houses, of course, were kept open for business, the 5th not being a legal holiday; but dealers were few. The occurrence of a full holiday on Friday and a half-holiday on Saturday made business more active than it would otherwise have been during the early part of the week.

The money market was temporarily disturbed Monday from its summer dulness, and the rate advanced to 7 per cent.; but this rate was but momentary, and we should quote the market as ruling between 3 and 5 per cent. Commercial paper of the best class sold quite freely at 6 to 6½ per cent.

Foreign advices are favorable. The Bank of France gained 7,000,000 francs in specie. The Bank of England made a small gain in bullion, while the discount rate remained at 6 per cent. Money in the open market in London is reported at 5½ per cent.

The bank statement was again very favorable, showing a gain of $5,890,000 in specie, and a decrease of $951,000 in legal tenders, against an increase of $8,323,600 in deposits. The banks hold, according to the statement published below, $16,808,000 in legal tenders and specie above the amount required by law.

The following are the statements of the Clearing-house banks for the past two weeks:

	June 28.	July 5.	Differences.
Loans	$281,506,600	$286,905,800	Inc. $5,399,200
Specie	27,661,500	33,551,400	Inc. 5,889 900
Circulation	27,311 400	27,276,200	Dec. 35,200
Deposits	224,040,800	232,3 9,400	Inc. 8 328 600
Legal tenders	49,119,000	48,168,000	Dec. 951,000

The following shows the relation of reserve to liablities:

	June 28	July 5.	Differences.
Specie	$27,661,500	$33,551,400	Inc. $5,889,900
Legal tenders	49,119,000	48,168,000	Dec. 951,000
Total reserve	$76 780,500	$81.719,400	Inc. $4,938,900
Circulation	$27,311,400	$27,276,200	Dec. 35,200
Deposits	224,040,800	232.369,400	Inc. 8,328,600
Total liabilities	$251,352,200	$259.645,600	Inc. 8,293,400
25 per cent. reserve required	62,838,050	64,911,400	
Excess in reserve	13,942,450	16,808 000	Inc. 2,865,550

The stock market has been very strong considering the extreme dulness and want of general interest shown in it. The rumors respecting the election of Commodore Vanderbilt to the presidency of the Lake Shore Road turn out to have been well founded. The Commodore now holds possession of the road, and it will no doubt be brought into very close connection with the Central and Hudson. The probable election of Vanderbilt was sufficient to send the price up 3 per cent., and since his election the price has been well maintained. Central and Hudson was also strong, running up to 103⅛.

Pacific Mail, after having sold down to 34½, afterwards reacted to 38, but the latter price was not maintained. The immediate cause of the decline to 34½ was the announcement of a suit of Mr. A. B. Stockwell against the Company, claiming that the latter owes him $1,250,000. The stockholders of the Company have been laboring under the belief that Stockwell owed them $850,000, the balance of some $1,140,000 he borrowed, giving a mortgage on the Howe Machine Company's works as collateral security. Whether he claims the $1,250,000 as a kind of offset against his notes which the Company holds, or whether he repudiates the notes altogether, and claims the $1,250,000 besides, we have not fully been able to understand. The affairs of the Company continue to be represented in the worst possible light; but people are very suspicious, and many think that there is a good reason for these representations—*i.e.*, to work the stock out of the hands of present holders into those who know the real condition of the Company, at a very low price.

The Michigan Central Railroad Company passed its July dividend, as the *Nation* predicted it would do last week. The stock declined to 90½ upon the announcement being publicly made known, but has since rallied to 92.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending July 5:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales.
N. Y. C. & H. R.	101¼ 102¾	1 13/ 102	102¼ 103¼	102⅝ 102⅞			23,400

The principal interest in Governments was the announcement of the purchase by the German Government of $10,000,000 of bonds for the German Invalids' Fund. The purchase was divided as follows: $7,000,000 in new fives, and $3,000,000 in the five-twenties. The market for Governments has been firm on light dealings, owing to the scarcity of bonds and the difficulty which shippers continue to have in purchasing here at a price sufficiently low to enable them to send abroad. The Treasury programme for July includes a purchase of only $500,000 five-twenties.

The $2,000,000 seven per cent. bonds of the New York Central and Hudson River R. R. Company were taken at a fraction above 105. The bids were very large in amount, but the exact amount has not been made public.

The range of gold has been between 115 and 115¾, with the tone of the market heavy. The Treasury programme for July provides for sales of $5,500,000 gold.

TEN PER CENT. NEW ENGLAND INVESTMENT.

FIRST MORTGAGE SINKING FUND
GOLD BONDS
OF THE
LAMOILLE VALLEY, ST. JOHNSBURY AND ESSEX COUNTY RAILROADS,

One hundred and seventeen miles long, from the Connecticut River to Lake Champlain, and forming the Vermont Division of the Portland and Ogdensburg Railroad Trunk Line. Issued in denominations of $100. $500, and $1,000, and absolutely limited to $20.000 per mile.

WITH A BASIS OF A CASH CAPITAL STOCK OF $1,200,000 PAID IN AT PAR.

Principal due in 1891.

No security is greater than these first-class railroad bonds, based on a large property, as well as on a large and constantly increasing income.

The building and management of the road is conducted with such economy and integrity as to make the investment very profitable and perfectly safe.

Interest payable in Gold Coin in Boston or New York, November 1 and May 1. They yield, at present rates of Gold,

8¾ PER CENT.,

and held to maturity, 10 PER CENT. per annum interest.

A HARVARD GRADUATE wishes pupils this Summer in Nahant and Swampscott. References given if desired. G. L. S., 53 Green Street, Lynn.

A HARVARD GRADUATE of June, 1872, intending to study a year in Germany, desires a pupil. References exchanged. Address Box 28, *Nation* Office.

A HARVARD GRADUATE of June, 1872, of one year's experience in teaching, desires private pupils, or a position in a classical school. Refers to the Faculty of Harvard. Address Box 25, *Nation* office.

A YOUNG LADY, a Teacher, wishes to obtain a situation as companion for a lady. No objection to going into the country, and to have the charge of a little child. Reference given. Address F. C., Boonton, N. J.

PLACE open for one student in an Architect's office, with every facility in the study of perspective and free-hand drawing. Enquire of "Architect," office of the *Nation*.

CHOIRS SUPPLIED EVERY week with plain Hymn-Tunes. HENRY CLARK, Pawtucket, R. I.

SPECIAL NOTICES.

A FRENCH LADY, born and educated in Paris, competent and experienced teacher, wishes a re-engagement for the fall. New York or vicinity preferred. Address Box 617, Yonkers, N. Y.

THE "NEW PROCESS" FOR Winter Wheat. The "EDELWEISS" FLOUR is manufactured only at the Crescent Mills, Zanesville, Ohio. Samples sent free for inspection or analysis on application. DRONE & STULTZ, Proprietors.

FOR SALE OR TO LET.—An Estate of 5 acres (fronting the Bay), with a fine two-story wooden house, stable, carriage-house, storehouse, and woodshed, and a finely-built wharf (costing, a few years since, $8,000—the price at which the whole property is now offered), located in the village of Mattapoisett, Plymouth Co., Mass., on the Old Colony R. R., 50 miles from Boston. The house contains 18 rooms—parlor, sitting-room, dining-room and kitchen on the same floor, the kitchen furnished with good range, and with both hard and soft water; 10 sleeping-rooms; and a cellar the full length of the house, with cement floor; large elms along the whole water-front; a fine bathing beach; and the Bay offering the best facilities for boating, fishing, etc. Mattapoisett is a healthy town, has churches, schools, and good drives. The house is within eight minutes' walk of the steam-cars. For further information, apply to ROGERS L. BARSTOW, 36 School Street, Boston, Mass.

FOR SALE. An $800 Piano for $500. Entirely new and of first-class make. Address "Piano," Box 5, *Nation* Office.

The Nation.

NEW YORK, THURSDAY, JULY 17, 1873.

The Week.

REPORTS from Massachusetts assert that, if Butler succeeds in the State Convention, he will succeed against Governor Washburn, who has reluctantly consented to make the fight, although sincerely desirous of leaving office. In case of the success of Butler, Governor Washburn will be out of the canvass, but there will certainly be a bolt, and the bolters will expect to carry the election, the Democrats putting up some such gentleman as Col. Greene of the *Post*. Butler is at present busy, through his managers, in getting ready for the primaries and in spending money with some freedom, but his adversaries, who declare that they will not have a long hot-weather campaign, say that he will not be allowed to get as many delegates as he got two years ago, and that they are abundantly able to take care of him. It is generally admitted that both sides certainly mean business, and that there will be a smart engagement, with the chances already against Butler. Russell, the collector of the port, however, daily prophesies that Butler is the coming man, but even Dr. Loring took courage on the Fourth of July to come out against the member from Essex before the men of Marlboro, a part of his speech being held to be an attack on his former friend and enemy. But denunciations of corruption in office and of enriching one's self while in office at the expense of the country, though irresistibly suggestive of a certain gentleman, are not definite enough to pin the Doctor down as an antagonist of Butler's. Of the press it is said that, no matter what might be Butler's majority in the Convention, the vastly greater number of papers would still support a bolting candidate; only about half-a-dozen papers in the State now favor Butler, and of these the least obscure is the Boston *Traveller*.

General Schenck has got into trouble again by his interest in corporations. The Emma Mine has turned out a sad swindle, in spite of his endorsement of it—eight hundred and forty thousand pounds of the million paid for it by the wretched British stockholders being now lost, and the mine itself being reported a total failure. With this awful example before his eyes, however, he has ventured to arraign the Western Union Telegraph and the Anglo-American Telegraph Companies for "systematic imposition" on the American public, in an official letter to Secretary Fish, and the Western Union Company charge him with doing this at the "instigation of active and unscrupulous agents of an opposition cable scheme." They also tackle him in a savage manner on his "charges," and throw him cruelly on each, and make his letter certainly look very strange. He said the Western Union had an arrangement with the Cable Company, by which they charged cable rates on messages received by them from the Cable Company for delivery in the United States, and in return gave the Cable Company one-third of their receipts. The Western Union says it does nothing of the kind. It pays the Cable Company no share of its receipts, and receives a fixed rate per word for deliveries in any of the four telegraphic districts into which it has for cable purposes divided the country. This rate is, in many cases, much lower than is charged on domestic messages, because while the domestic rates are charged on a minimum of ten words, cable messages are charged by the word. Most cable messages are, however, less than ten words, so that, for instance, while the Western Union would get two dollars for any domestic message, however small, between New York and New Orleans, it has to transmit a cable message at fifteen cents a word, though it consists of only two words. Lastly, they deny that, as Mr. Schenck alleges, the Government is overcharged on its messages, and aver that they are, on the contrary, transmitted at half-rates; and they wind up by accusing him of libelling American citizens in his official correspondence, and accuse the Postmaster-General of connivance in publishing his letter.

The captain of the *City of Washington* is to be tried for losing his ship on the Nova Scotia coast, and there is little doubt that the cause of the wreck will be thoroughly investigated. It is hardly necessary, under these circumstances, to go into any elaborate criticism of the case, especially as the loss to the Inman line of ship and cargo was severe—severer, in fact, than if the non-merchantable passengers had all gone down. Still, there seem to be one or two things which, after this accident and the wreck of the *Atlantic*, all steamship companies ought to impress on their captains' minds. First, that a vessel sailing due west, or even on a course a little south of west, from the British Isles must, in the long run, go ashore unless, by skilful management and that peculiar tact for which all seafaring men are famous, she is somewhat carefully directed into a port. Second, the attention of sea-captains ought to be called to the use of the lead. There is hardly a more certain way of discovering the distance between a ship's keel and the bottom of the sea than by the employment of the simple device of throwing the lead over the ship's side. Of course, mistakes may be made, and the distance in question can only be ascertained with absolute accuracy through the means employed by Captain Williams and the captain of the *City of Washington*. On the other hand, in regard to the criticisms in the press of such disasters as these, we must observe that the loss of a vessel on the Atlantic coast cannot invariably be due to the inattention of the captain to the advice offered him by the passengers, even when the first-officer coincides with the opinion of the passengers. The opinions of passengers as to the proper navigation of a sea-going vessel have been observed to differ too widely from one another to make it possible in all cases to follow their advice.

How difficult it is for non-nautical men to come to an agreement on questions of navigation may be seen from the wide diversity of opinion on the subject of the loss of the *City of Washington* between the respective editors of the *World* and *Times* of this city. The editor of the *Times* having maintained that the captain was to blame for the disaster, saying, "It is believed that the captain of an ocean steamer, freighted with a priceless cargo of human life, should know at all times, in spite of fog and tempest, just where he is," the *World* replied that any one who believed such stuff as this was an "idiot," and that the only way for him to find out anything about the Nova Scotia coast would be by taking "command of a ship freighted, not with a priceless cargo of human life, but with a crew of cheap and congenial idiots, and required to know, in spite of fog and tempest, just where he was."

The charges with regard to the "Canadian Crédit Mobilier" are these: An Englishman by the name of Waddington, a resident of British Columbia, having conceived the idea of a "Canadian Pacific Railway," associated himself, for the purpose of obtaining funds, with some American capitalists, and afterwards died. The association however, survived, and was represented by Mr. McMullen, a Canadian, living in Chicago. The association put itself in communication with the Canadian Government, but difficulties being suggested on account of difference of nationality, it being feared that the line might be "sold out" to the Northern Pacific, a charter was granted to Sir Hugh Allan, a member of the Canadian Government, and other gentlemen, the terms of the act excluding all but British subjects from interest in the enterprise. In the same session, another charter was obtained by a rival association headed by Senator McPherson, and a struggle between the two began, which ended in the award of the contract for the road to

Sir Hugh Allan's "Ring." Sir Hugh Allan, who seems to have been really acting throughout, under cover of his official position, as the agent of the American organization, had won the battle by "fixing, for certain monetary considerations," several influential men. He spent, according to his own account, some three hundred and sixty thousand dollars "in the purchase of priests, lawyers, newspaper editors, and elections." The Parliamentary Committee ordered to investigate these transactions has decided to waive the enquiry, for the singular reason that they have not authority to examine witnesses under oath, and that this authority could only be exercised by a commission appointed by Sir John A. McDonald, whose official conduct is, in part, the subject of the proposed enquiry. The charges seem, however, to be substantially made good by the publication of damaging letters written by Sir Hugh Allan to his American correspondents.

This scandal has become a political question in Canada, the Government "organs" defending, and the Opposition denouncing every part of the proceedings; it may in one way have an indirect effect on English politics. The Treaty of Washington, it will be remembered, required, for certain articles, a ratification by the Canadian Parliament. The Canadian Government declined to ratify, or rather represented to the English Government that the Canadian Parliament would not ratify unless the British Parliament would guarantee the Canadian Pacific Railroad to the amount of £4,000,000. After some negotiation, a promise of a guarantee for £2,500,000 was given. Before this, however, the Government had entered into a guarantee—intended to be the last—of a loan to be spent on Canadian defences. At the time of the negotiations about the Pacific road, this loan had not been raised, and the Canadian Government suggested that instead of raising it the railway guarantee should be increased from £2,500,000 to £3,600,000. To this the English Ministers assented, and the bill authorizing the increase was read for the second time on the 24th of last month. At this time the Canadian scandal had not made its way to England.

We have commented elsewhere on the extraordinary proposition advanced as the latest solution of the transportation problem. The main difficulty with the farmers seems to be that they have failed to make any enquiry into the real nature of the railroad question. No one who knows anything about it doubts that there has been a vast amount of swindling in connection with the construction and operation of many of the principal lines in the country, but this swindling has in most cases been the work of a "ring"—in other words, half-a-dozen rich men—who have conducted their proceedings under forms of law, have increased the cost of the roads by doubtful contracts and other means, and studiously sacrificed the interests of the minority to their own private emolument. We have lately had, in the case of the Crédit Mobilier, at once an admirable illustration of railroad management and also of the crazing effect the cry of "railroad" seems to have upon the average mind. In that case, Oakes Ames, James Brooks, and half-a-dozen other men defrauded the Government of many millions of dollars by the fraudulent distribution throughout the community of bonds of the Union Pacific Railroad. This distribution brought the bonds into the hands of large numbers of innocent holders, who had no knowledge of the fraud—into the hands of widows and orphans, guardians and trustees, a very large portion of them being held abroad. A great clamor having been caused by the exposure of the fraud, the Government felt itself called upon to do something, and at once got out an injunction against the road, forbidding it to pay interest on its bonds, thus causing the bonds to fall in the market, the holders to accuse the Government (with whose guarantee the bonds were issued) of violating its promises, and at length the Government begins to find its own credit abroad threatened. In fact, the effects of this injunction are the same in kind as those produced by the original frauds of the Crédit Mobilier "ring."

It seems hardly likely that the difficulty between Lord Gordon Gordon and his bail will lead to serious complications between the Government of the United States and that of England. The facts seem to be these: Lord Gordon is a noble adventurer of humble origin, convivial habits, and very dishonest intentions, who came to the United States a year or two ago, and disported himself in various parts of the country in the finest clothes and jewellery, entertaining all he met with interesting reminiscences of high life in his native land, and revolving quietly in his own mind certain financial schemes the exact nature of which probably Jay Gould and himself alone know, but which, it is safe to say, were magnificent. He then gained a sort of notoriety in the newspapers, and, like many an impostor before him, was welcomed as a man and brother by the late Mr. Greeley. He was at length sued by Gould, and obliged to give bail in a large amount, and the names of Mr. Marshall O. Roberts and Horace F. Clark appeared as sureties on his bail-bond. Lord Gordon has since been leading a retired life "in the provinces," trying to avoid arrest by his sureties, the bail-bond having been forfeited. His bail, on the other hand, acting under some singular legal advice, have been endeavoring to exercise what they call their common-law right of capturing Lord Gordon wherever they can find him. On one occasion he really was arrested by a detective in Canada; but, according to the story, immediately drew a pistol from one pocket and a purse from the other, and offered his pursuer what would be called in political language the choice "between the wallet and the bullet." He afterwards went to the Red River country, north of Minnesota, and in the latter State a plot for his arrest was concocted. An enterprising party, comprising among its members a number of detectives and a Minnesota legislator, went up to Manitoba, where Gordon was lying *perdu*, and by pretended hospitality got him probably as near the condition of a lord as he had ever been in his life, and then proceeded to carry him home with them. They were pursued in turn, however, arrested, and are now on trial for the crime of kidnapping. If, as is said, they were really arrested after they had crossed the United States border, the international outrage is to be laid to the bloody score of England, not to ours.

The whole case would appear to be one calling for the exercise of "comity" by the courts. There is no doubt that at common law sureties are entitled to the right of pursuit and recapture; but we have never heard of a case in which it was actually decided that they might go into a foreign jurisdiction for such a purpose. On the other hand, both England and America have an interest, for the sake of repose, that Lord Gordon may not be allowed to roam over the world much longer; and whether he be sent to jail by an American or Manitoban court seems to make little practical difference, if he only gets, through some agency, to jail. The "comity" that we should suggest would be that Gordon be surrendered to his bail, and that the Minnesota legislator should be handed over to the Manitobans, to be dealt with according to the customs of the country. These are strange times; but it does seem a little too much that a member of the Minnesota Legislature should undertake to perform the duties of his office by going on a marauding expedition into a foreign country to recapture a runaway from the jurisdiction of the courts of New York.

It is an appropriate time of year which the State Park Commission has chosen in which to report on the Adirondack Park scheme, which they unreservedly approve. There is, indeed, universal approval of this plan, to which no one at all says no. The Commissioners argue that the great forest of the Adirondacks is in several ways necessary to the well-being of the State. It shelters an amount of snow which, were the mountains denuded, would each spring come down, suddenly melted, and, in the form of thirty-six billions of cubic feet of water, would sweep the river valleys with destruction. Then, again, the forest, sheltering countless lakes and streams, preserves not only the water-supply of the Hudson—an important service, although the Hudson, as a commercial river, is very largely an arm of the sea—but also feeds the rivers which give

water to the Erie and Champlain canals. In the third place, the climatic effect of the forest in equalizing temperature, by preserving moisture in summer, and warding off the north winds of winter, is of very great benefit. Finally, the making of the proposed park need cost little, although the State now owns only a small fraction —one nineteenth—of the whole region, the rest being owned by corporations and private individuals; the soil is good for nothing, or next to nothing, for farming purposes, and the park would be kept as nearly as possible in a state of nature, although a few roads must be made and others improved; and there is no doubt that some money might be made by leasing fishing and hunting privileges and the like to persons desirous of camping out and pursuing these sports. We dare say that wastefully as the timber has been cut off by private owners, the State might easily make money by appointing a trained forester at a good salary, with powers and duties like those of his German congener. More than thirteen hundred square miles, or 834,480 acres, are contained in the projected park, which occupies portions of five counties, and sends its streams to feed the St. Lawrence as well as the Hudson and the Delaware.

In England, the Shah has been occupying the public mind to the exclusion of almost everything else, and indeed to a degree that is difficult to understand. The recent events in Central Asia make the cordiality of the Government to him very comprehensible; but the public can hardly be supposed to be roused by considerations of policy; and yet they are roused as they were not by the Sultan, who too was a Mussulman, and had a harem and a vizier. The explanation probably is that the Shah is further off and less known, and has therefore more of an Oriental flavor about him, and has a more intimate connection with the Bendemeer, the Vale of Cashmere, and the bulbuls, and the guls. At all events, nothing has been left undone in the effort to show him honor. The Sultan's reception was, in comparison, a very shabby affair. The rage of the Russian press over the spectacle is very entertaining. The St. Petersburg *Mir* warns the Shah that the British are sorry and insatiable rogues, and are pulling the wool over his eyes, preparatory to his destruction; that they have already robbed him of Afghanistan, Beloochistan, Herat, and Cabul, which are essential to his independence; Russia, it is true, has taken from him Shirwan and Erivan, but then "this was through his own fault," and he can never hope to get them back. The contest between the two over the poor Shah is very curious, and, if he reads the European press and has a fine sense of humor, must amuse him, and yet sadly, for he must know that he only plays the part of the bone between two very ferocious dogs.

At a recent debate in the English House of Lords, Lord Ettrick brought up a subject such as rarely engages the attention of a legislative body in our day—the extraordinary destruction of life and property by wild beasts in India. It appears that the average loss of life by the attacks of tigers in the British Provinces alone is 4,138 annually; including the native states, it is supposed not to fall far short of 10,000. The value of the animals destroyed in the same manner is estimated at between $1,500,000 and $2,000,000. Of course these figures represent an amount of terror that is incalculable. The whole subject was treated fully in a paper read by Captain Rogers before the Social Science Association, the facts of which were drawn from official sources, and astounding facts they are. One tigress, in 1869, stopped the traffic on a public highway for several weeks, and was known to have killed 127 people. Another tiger killed 101 persons in three years, and, before it was killed, attacked large parties at a time. In fact, these beasts lie in wait on the roads like robbers, and lurk around villages, and strike down the peasantry in their fields like Indians. Before the days of British rule their ravages were terrible. Mr. Hunter tells of the approach to one famous shrine being well-nigh barred by the slaughter of the pilgrims by the tigers, and the wild elephants often trampled down whole villages. Down to the mutiny of 1857, the tigers were diminishing, but since that, owing to the disarming of the natives, and the inactivity of the shikarries, the hunter caste, brought about by the practice of offering large rewards for the destruction of notorious man-eaters, the wild beasts are again on the increase, and there is talk of raising a corps of tiger-killers. In the debate, Lord Laurence made the remarkable statement that he had heard, but could hardly believe it, that English officers discouraged tiger-killing by the natives, in order that they might have the sport for themselves.

The French Assembly, in the absence of important measures of legislation, are indulging in "scenes of great disorder" over indiscretions of one sort or another on the part of the ministry, which certainly seems to be very badly managed, and to be showing the cloven foot a good deal too early and too boldly. The latest mistake is a decree of M. Ducros, which forbids the interment, after six in the morning, of any deceased persons not belonging to the four forms of faith recognized by the state Catholic, Lutheran, Calvinist, and Jewish. This is aimed at the infidels or materialists, who make a parade of not believing in the immortality of the soul, and M. Ducros maintains that this belief is the only valid excuse for funeral rites; that it is only those who believe the body will rise again who ought to be permitted to indulge in ceremonial observances on the way to the grave—that if the body be not the seat of a soul, it takes rank as a carcase simply, and has to be dealt with as a nuisance from a strictly sanitary point of view, and got out of the way as quietly and as speedily as possible, as a repulsive and dangerous object. This sounds very funny, but a French politician has no sense of humor, and Ducros is awfully in earnest. He carried out his peculiar views of the post-mortem influence of dogmas by refusing the usual military honor to a freethinking member of the Assembly, M. Brousses, who died the other day. By law, a military detachment follows the bodies of members of the Assembly to the grave, but owing to M. Brousses' belief, the troops, after presenting arms to the coffin when it left the house, marched back to their quarters. The reason of this is, it appears, that you cannot have good soldiers unless they believe in a future life, and if you force them to do honor to a man who does not believe in it they will cease to believe in it themselves. However this may be, as M. Ducros and his government are still in the body, and belong, to all intents and purposes, to this world, their conduct seems wildly injudicious, as it is raising the cry that MacMahon's régime is the régime of the priests and of religious persecution, and is giving materialism, in the old style, an immense stimulus.

We gave some months ago a summing up of the reasons assigned by Prince Bismarck for wishing to divest himself of the Prussian premiership, which he resigned last December, retaining only the Ministry of Foreign Affairs and the Chancellorship of the Empire. He has now got into a quarrel with the other members of the Prussian Cabinet over the proposed new press laws and over the currency question. The press law is so obnoxious that, though Bismarck has defended it vigorously enough, he is not desirous of being thought the author of it, and neither is any other member of the Cabinet, and they have accordingly been bandying the responsibility of it to and fro. The plan of substituting imperial paper money for the paper money of the individual states, has met with opposition from Bavaria in the shape of a suggestion that the Prussian National Bank should also be converted into an Imperial National Bank, to which Bismarck was disposed to accede, but the Prussian Minister of Finance was not, and hence a new feud. Bismarck now proposes to give up foreign affairs also, and has asked the Emperor to allow the Under-Secretary, Herr Balan, to represent him at Cabinet meetings, an odd sort of arrangement which he was allowed to commence in December by having Herr Delbrück appear as his deputy at Cabinet meetings in everything relating to Prussian affairs. In the meantime, the bishops have begun to resist the ecclesiastical laws lately passed. One of them having refused to submit the curriculum of his theological seminary for the approval of the civil authorities, the result has been that his school has been formally declared unfit for the education of priests. Should he persist, it will doubtless be closed by the police, and the students be compelled to betake themselves to the universities.

THE LATEST DEVICE FOR FIXING RATES OF TRANSPORTATION.

WE have followed, and shall continue to follow, the "farmers' movement" with great interest, but it must be confessed that it seems at times a task of no little difficulty, owing to the very heterogeneous composition of the organizations which are carrying it on and the wide diversity of their character and avowed aims. When Judge Lawrence was turned out of office in Illinois by the "Grangers," and Judge Craig put in his place, we took it for granted that they were going to deliver themselves from the tyranny of the railroads by putting judges on the bench pledged to interpret the State constitution in a particular way, or in other words, as one of the local papers put it, by showing that "the people" were superior to both laws and judges. It has, however, since been stoutly denied that this interference with the bench was anything more than a local accident, and we have been assured that the farmers seek changes of a much more legitimate character, and resting on more solid moral foundations than the creation of a subservient judiciary. The recent platforms have certainly had a much wider sweep than the earlier ones, and, unless language has been strangely abused in making them, embrace grave modifications in fiscal as well as in railroad legislation. But the question how to reduce the railroads to the condition of public highways, controllable by and existing solely or mainly for the convenience of the community, is still apparently as far from solution as ever. It is by no means surprising that this should be the case, but that it *is* the case we are forced to conclude by the extraordinary character of the latest plan propounded by the reformers, which has had sufficient plausibility to command the approval of so sober-minded a paper as the Chicago *Tribune*.

The farmers have been accused, partly in consequence of their escapade about the judges in Illinois, of seeking to rob the railroad companies of their lawful earnings by forcing them to carry on their business at a loss, under the operation of cast-iron rules, drawn up without reference to its peculiar nature. This was a charge of which the farmers soon began to see the gravity, and they accordingly now announce that they have no scheme of spoliation or confiscation in their minds, but that they have at last hit upon a mode of ascertaining what are "reasonable rates," which consists in discovering what was the amount of capital "actually invested in constructing and operating the roads," and treating a fair percentage on this as a proper return to the stockholders, and all charges which bring in more than this as "unreasonable," and therefore open to prohibition by the courts and State legislatures. Under this theory of railroad property, all stock which does not represent money actually invested is treated as "fictitious," and all attempts to earn dividends on such stock as attempts at extortion. For instance—to put a case of frequent occurrence—a corporation obtains a charter for a road which it will cost two million dollars to build. It accordingly borrows the two millions on mortgage bonds, and constructs the road, while the members divide among themselves two millions of stock more, and they work the road so as to make it pay interest on the four millions. The farmers now say that no road shall be so worked as to pay interest on anything but the proceeds of the bonds, or, in other words, the actual cost of construction and equipment. This, stripped of details, is the new plan, as gravely propounded in the Chicago *Tribune*.

Now, if anybody will get up and propose a general railroad act of this nature applicable to all roads hereafter to be built, we think we can promise that he will have the hearty support of everybody who has seriously reflected on the railroad problem. Forbid the construction of any road except with the proceeds of paid-up stock, and forbid any higher dividends than a certain fixed percentage on this amount, and we shall have a rule of which nobody can complain. We do not believe that a single mile of railroad would ever be constructed under such rule in a new and thinly settled country like the West or South. Safe investments are not so scarce as to induce people to go into one of the most unsafe of investments, and one promising in most cases no return at all for several years, for the mere chance of seven or even ten per cent. at the outside. But we should, nevertheless, be heartily glad to see the plan tried, and believe it would, by stopping railroad construction for the present, bring the Western farmers to a healthier comprehension of their relation to the roads, and railroad companies to a healthier comprehension of their relations to the community, and might tend to a solution of the railroad problem which would be both permanent and satisfactory.

But the application of any such rule now to roads already in operation would be spoliation pure and simple—spoliation as flagrant as any ever proposed by Karl Marx or Ben Butler; if an attempt were made to carry it out, it would produce perhaps the greatest financial crash ever witnessed. It has in the first place that leading characteristic of Ben Butler's greenback scheme, that it would not only violate a tacit pledge made by the State to individuals, but it would deprive men of rewards already earned by running great risks. When a railroad constructed for two million dollars is made to earn interest on four millions, the case is precisely similar to that of a government which in a time of great danger and perplexity sells seven per cent. bonds at fifty; and the present proposal of the farmers resembles Butler's plan of paying the bondholders in 1870 what they gave for their bonds in 1862. In fact, it is the old-fashioned game on a great scale of "heads I win, tails you lose." The West has during the past thirty years wanted railroads, which there was a very small chance of making profitable for a long time. It encouraged Eastern men and foreigners to make them in any way they pleased, running whatever risk there was, and pocketing whatever gain there might be, and they were made. The investment then was one of great danger and difficulty; to treat it now as one of no danger and no difficulty would be simple swindling. The word is hard, but the times demand plain speech. This was perhaps a bad mode of securing lines of communication, but the laws allowed it and encouraged it, and the people applauded it, and it is now a contract as binding in morals as in law. It is open with us to turn over a new leaf, and permit no more roads to be made in that way, but it is not open to us to treat those who lent us their money as dupes. As there has been enough of this sharp practice already, more of it would seriously shake the very foundation of social order.

In the second place, as regards the older roads, it is not possible for "the people" or anybody else to ascertain what is the exact amount on which, in abstract justice, the earnings ought to pay interest. The stock, whether "fictitious" or not, has in most cases passed out of the hands of the original holders. It has been sold and resold, in open market, under the most solemn guarantees known to civilized society, with the understanding that it represented the *bona-fide* ownership of the roads, with all their earnings, possible as well as actual. The laws, the courts, and public opinion assured to it this character, without reservation or qualification. In this character, it has passed into the hands of widows, orphans, and helpless people generally, of charitable corporations, of colleges, banks, and institutions of all kinds by which the affairs of the community are administered. To throw any doubt on its value now would be to cause an amount of misery and alarm which no thinking man could contemplate without a shudder. If the State wants to make the railroads common highways, it has the right to take them, but at their market value, paying the owners what other people would pay them, and not enquiring curiously and knavishly into the original cost. Between honest parties to a bargain, that, to use a homely phrase, is "neither here nor there." The people ought, undoubtedly, to have looked forward a little when they first began to grant charters; but not having done so, they ought not now to throw on others the whole damage done by their own laches.

Though last, not least, much of the outcry over the high rates charged by railroads is due to an immense but deeply seated popular delusion as to the value of railroad property. When one puts his newspaper aside, and sits down calmly to examine the receipts

which the farmers are so anxious to have cut down, the proposal we are discussing assumes a somewhat ludicrous aspect. We have before us the last issue of Poor's 'Railroad Manual,' which certainly ought to be carefully studied before the minds of the public are filled with wild and revolutionary notions about railroad property. There were in operation last year in the United States 57,323 miles of railroad, the net earnings of which bore to the *cost* of the roads the relation of 5.20 per cent., and to the capital stock of 3.91. This means simply that the work of transportation in the United States is, on the average, already done at a loss to the owners of the lines, or, in other words, vastly more cheaply to the public than there is the least likelihood of its being done in any other way—an assertion which anybody may verify by examining the accounts of the New York State canals. Now, fancy anybody's seriously proposing to capitalists to construct railroads, as most of the Western railroads were constructed, through a howling wilderness, for *the chance* of five and a half per cent., whenever the earnings allowed it; and fancy what subjects for spoliation are presented by the bloated owners of railroad property who pocket on the average less than four per cent. on the face value of their stock. Let us add, finally, that no corporation should be restricted by law to a certain rate of earnings, unless it contracts freely to do the work on those terms or has a minimum guaranteed to it by the state. In short, the railroad question, we would remind the Chicago *Tribune*, is not simply a question of dollars and cents. It is a question of morality in its highest and most important phases, and one the settlement of which must touch the security of all property, and affect the value of constitutions as safeguards of individual rights.

We have gone on for thirty years treating railroads as private property and permitting and encouraging their construction by private enterprise. Out of this numerous abuses have grown up which ought to be remedied. The corporations have grown too powerful; their influence in politics is corrupting; the power of directors in the management is too great. For the reform of all this, careful legislation *preceded by careful enquiry* is necessary. The prohibition of special legislation would do much to abate the corruption. Some means ought also to be devised for protecting the minority of the stockholders against the despotic power, which in some cases amounts to virtual confiscation, of those holding a bare majority of the stock, or, in other words, of giving stockholders the means of actually superintending the management of their own property and defending themselves against "rings" and "raids." Moreover, the power of directors to do anything but work the road ought to be diminished. Their discretion as regards extensions, combinations, consolidations, leases, and purchases ought to be greatly reduced, if not destroyed. This involves two things not easily supplied. One is wise legislation, and the other honest government inspection. How far we are from both is best shown by the Illinois attempt at reform, which consists at present in taking the working of the roads out of the hands of the exceedingly able body of trained business men who now have charge of it, and compelling them to use a crazy table of "rates" drawn up by a mob of excited and ignorant politicians. If we are not prepared for this, the alternative, and the only one, is the purchase of the railroads by the state, and their management by our Murphys and Caseys. We shall not argue against this at present, for obvious reasons. But this, whatever difficulties it may present, is the only honorable way of escaping the necessity of such reforms in the present system as we have indicated above. Whatever the evils of our railroad system, they are not to be met or removed by fraud or plunder.

THE PROFESSION OF "JOURNALISM."

THE interviews, whether real or imaginary, between newspaper correspondents and the most distinguished persons of modern times, on both continents, recently reported at considerable length by several of our daily contemporaries, are sufficiently farcical in their character to warrant the belief that "interviewing," as a means of attracting attention, is rapidly becoming as inefficacious as the revelations of spiritual mediums. As soon as people found out, which they did very rapidly, that the greatest men of ancient and mediæval times talked in their interviews with mediums as foolishly and pointlessly as silly school-girls, communications from the other world lost all their interest, even for those who believed in them. The devoutest Spiritualist cannot now deny that a half-hour with Plato, or Marcus Aurelius, or Descartes, is one of the dullest and most unprofitable experiences a man can have, and that nobody can pass through it without wondering that a sage can be such an ass. The newspaper correspondents, we regret to say, are slowly driving the public into a similar state of mind with regard to the great men of our own day. Either, it begins to say, interviewers are false knaves, or the King of Sweden, the Shah of Persia, M. Lesseps, M. Thiers, Marshal MacMahon, and Don Carlos are all but born naturals. The alternative is not as a general rule faced with resolution or definiteness. Most people content themselves by lowering their opinion both of the "interviewer" and of the "distinguished personage," without making up their minds fully as to the merits of either, but the general result is a greatly increased indifference as to what the newspapers say, whether by way of news or comment. Indeed, the conductors of some of the great newspapers already begin to recognize the fact that the sensational vein has been, in the matter of news-getting, nearly worked out, and they begin to turn their attention in other directions. The success of one of them in hunting up a lost explorer has set another to paying a man for making excavations in aid of antiquarian research, and still another to paying a man for making a hazardous ascent in a balloon. This field once entered on, we may fairly expect to see a prodigious amount of competition between rival journals in the prosecution of startling enterprises having no special or necessary connection whatever with journalism, properly so called. It has hitherto been considered the proper function of the newspapers to see or hear and report; but competition is now driving them into producing the facts which they record—a process not unlike that witnessed in many other lines of business, in some of which, for instance, it is by no means uncommon for the successful jobber or commission merchant to supply capital to the manufacturer in whose goods he deals. The position of a journalist who makes his own news, in the honest sense of the phrase, is of course the proudest imaginable; it is like being chief and bard, Agamemnon and Homer, sword and lyre, all in one, and there is no limit that we can well see to the prosecution of this peculiar species of undertaking. If a journal hires an explorer or aeronaut or excavator, there is no reason why it should not eventually come to employ its own warriors and statesmen. This sounds extravagant, but some of the recent talk of men ordinarily considered sensible certainly ought to do something towards making it sound probable. Mr. J. S. Mill, for instance, years ago compared the relation of the modern newspaper to society to that of the Hebrew prophets, and Mr. Froude has very lately compared it to that of the Church in the Middle Ages. Beyond this it would be hard to go. More than this newspapers can hardly do without taking charge of the government, if not of all babies from the birth.

It is not surprising that under these circumstances the talk about educating young men for "journalism" should become louder every year at the season when collegiate education is most under discussion. All the feebler colleges are eager about this time to produce "journalists," and many of them give notice that they are busily erecting machinery for that purpose which will shortly enable them to fill orders for Isaiahs, and Jeremiahs, and Abelards, and Thomas à Kempises to any required extent. The process seems difficult to the outside public, but we have the word of several distinguished educators for it that nothing is easier. You take a fluent, bright-minded man, and you steep him in history, political economy, jurisprudence, and metaphysics and logic, and there is your journalist all ready for his lofty and mysterious functions. Hardly anything could be simpler or more attractive. The youth who graduates in a law-school, and sits down to work his way at

the bar, may have every quality needed to command success, and may win it eventually, but it is sure to take years to win it, and the same thing may be said of the young doctor, or young architect, or young engineer, or young merchant. All of these are pretty certain, except in cases of exceptional advantage, to have to face years of obscurity and isolation as well as of poverty. Their prosperity has to be based on a solid foundation of experience and character, and has to be built up by results capable of accurate measurement. The journalist, on the other hand, may, and often does, find at the very outset of his career his staircase thronged with "war-horses," shrewd managers, Christian statesmen, teetotal giants, ripe scholars, profound thinkers, the sages of the caucus and the stump. He may find his opinion largely sought, and his approval eagerly courted, by men who, if he had not publicity at his command, would not give a cent for either, and in fact find himself carried into fame and power without any more honest toil or expenditure of brain-power than is needed for the conduct of a single difficult case at the bar. It is no wonder that the career looks attractive; only one thing prevents its becoming overwhelmingly attractive, and that is its unproductiveness as regards money. There is probably no industry of modern times in which the part played by labor is so large, and the share in the profits received by labor so small, and in which it is so difficult for the laborer to climb into the position of the capitalist; and it is this fact which prevents, and will always prevent, the career having anything about it that can be called brilliant, and will prevent its being a profession for which men will prepare regularly at school or college. If nobody could practise medicine or law unless he was employed at a salary by a corporation with two millions of capital, we should find the ranks of these callings very scantily filled, and yet this is the position which nearly every journalist has to face. Moreover, there is no modern industry in which the separation between capital and morals is so great, and the temptation on the part of capital to disregard morals so strong. There are half-a-dozen men in England and America whose power over the fortune and reputation of their fellow-citizens is very great within certain limits, and these limits are traced simply by liability to detection in downright falsehood. A newspaper proprietor who avoids being convicted of palpable untruths may for an indefinite period make the lives of his enemies wretched, or force thousands to fill his till or pander to his vanity, without check or hindrance, and may actually find that the more unscrupulous he is, inside this line, in the manufacture of his wares, the more money he makes. That this temptation should be resisted as stoutly as it is is a very creditable fact, but it is not resisted stoutly enough to make journalism a taking profession for men of sensitive moral natures. The loftiest young moralist who enters the editorial rooms of a great daily speedily finds his ardor quenched by cold blasts of worldly wisdom from the counting-room. The publisher is anxious in his way to improve the world, but he is desirous of doing it very slowly, and likes to take frequent recesses in the great work. The Hebrew prophets lived on wild honey, and wore camel's-hair girdles, and the mediæval theologians had Satan at their back to give force and point to their anathemas and exhortations; their modern equivalent is neither so simple in his tastes as the prophets, nor so terrible in the popular eye as the theologians. He has to have his comforts, and he knows he cannot have them if he makes himself disagreeable, so he adapts his wailings and warnings to the market.

Another difficulty in the way of making journalism a profession to be regularly prepared for is the fact that it affords no accurate tests of a man's powers or attainments, in any sense in which these words are used in colleges or in the intellectual world. A lawyer's learning or logical dexterity is every day weighed and measured with the greatest nicety by decisions; a doctor's skill and ability by cures, or by the confidence with which he inspires patients; a merchant's by the extent and result of his operations; an engineer's by the strength and suitability of his work. The one test of a journalist's ability is "sales," and, as his sales may be to idiots and ignoramuses, as well as to wise or learned men, they tell nothing whatever of the stuff he is made of. He may be a powerful preacher, persuading or instructing powerful minds; but he may be, for all that appears on the surface, a pedlar selling worthless "notions." As long as this uncertainty hangs over the calling, it cannot greatly tempt men of the highest kind of intellectual ambition to follow it, though it will always tempt a large number of those to whom influence is sweet, and to whom public affairs possess great interest, to use it as an instrument for the embodiment of their theories in practice. It is, too, worthy of note that the profession which most nearly resembles journalism, the ministry, has of late years come to resemble it more and more since the decline of theology as a system of intellectual philosophy. When every minister was bound to preach a set theory of the universe, extracted from the Bible by a well-settled process of interpretation, and dogmas were held to be essential to salvation, preaching was performed under conditions nearly as rigid as those of an argument in the Court of Appeals. Cases had to be cited, rules applied, and analogies worked out and reconciled, under the watchful eye of a host of judges, who were versed in the system from their childhood, and detected a flaw in doctrine or a slip in reasoning as unerringly as if they did it by instinct. In other words, the minister was the expounder of a system which, whatever one might think about its premises, exacted close logic in drawing the conclusions, and his mind was apt to be an acute, subtle, well-trained instrument of argumentation. The dropping-out of dogmas and the abandonment of Christianity as a complete explanation of creation, has made him almost in all respects a journalist, or, in other words, a man working under no tests or conditions, and whose feet may, it is true, be treading seed into productive soil, but may, too, for aught anybody can tell, be as idle as those of the wild elephant. He may draw a crowd, but whether a crowd of idlers in search of excitement, or a crowd of earnest men seeking light, he need not or does not care.

Correspondence.

ETRUSCAN AND PELASGIAN ART IN THE DI CESNOLA COLLECTION.

To the Editor of The Nation:

Sir: Your article of June 26 on the Di Cesnola Collection contains the following paragraph:

"A class of the vases, of later character, is in the most pronounced style of ordinary 'Etruscan,' with artistic heads and ornaments, offering the antiquarian a terrible problem to get these Italian potters into the centre of an Anatolian island, executing their vases in the fashions that taught the Greeks."

I wish to give a few quotations proving that the problem here propounded is very easily solved; not, however, so much to correct an error of minor importance as to clear the ground for an attempt to stifle a theory which, according to your Di Cesnola article of May 29, is

"skilfully maintained by our correspondent, Mr. Stillman, of the identity of the Etruscans with an ancient race of builders and sculptors who carried the tide of primitive art eastward through Greece, the other Mediterranean islands, and Asia Minor."

You will see that this latter idea, if erroneous, should be at once corrected, if you notice that Mr. Stillman's last letter, in the *Nation* of July 3, goes on to fix the relative dates of the Cyprus styles by it, and even drags the Phœnicians into his universal Pelasgian net.

I translate the following from Otto Jahn's 'Beschreibung der Vasensammlung in der Pinakotek zu München,' the best German authority on vases:

"In the beginning of the previous century, when the painted vases first attracted the notice of antiquarians, the opinion soon became fixed that they were of Etruscan origin. It was founded on a preconceived idea of the Etruscan style, on [Italian] patriotic disposition to refer as many works as possible to an Italian origin, and a resulting system of the most fabulous imaginings, which it would be useless to reconsider; although the name has become so rooted that the public still speak of 'Etruscan' vases. . . . Winckelmann pronounced decidedly in his 'Art History' that the inscriptions, style,

and subjects treated, on the painted vases, give the most unquestionable evidence of Greek origin—an opinion which Lanzi in 1806 still found it necessary to establish more clearly. . . . The fact that these productions of Greek art are found in such number in Italy [outside of Magna Grecia], and the respective difficulties of explanation on the hypotheses of importation or of manufacture on the spot [by Greek potters], have been treated in the investigations of Gerhard, R. Rochette, Millingen, O. Müller, Luynes, Welcker, Hirt, Bunsen, Campanari, Kramer, Thiersch, Abiken, Lenormant, De Witte, Osann, and Schultz."

To the same effect I might quote, if necessary, Schnaase, Jacob Burckhardt, Lübke, and Ottfried Müller. For the general dependence of Etruscan art on the Greek, the following quotations from Mommsen ('Roman History') may suffice:

"Greek art, when it acted on Etruria, was still, as its copy shows, at a very primitive stage, and the Etruscans probably learned from the Greeks the art of working in clay and metal at a period not much later than that at which they borrowed from them the alphabet. . . . There is not a single one of the aspects of Italian art which has not found its definite model in the arts of ancient Greece. . . . As scholars have long since desisted from the attempt to derive Greek art from that of the Etruscans, so they must, with whatever reluctance, make up their minds to transfer the Etruscan from the first to the lowest place in the history of Italian art" (pages 312, 315 of the translation, vol. i.)

It will now be evident that similarity between some works of art in Cyprus and in Etruria is exactly what we should expect from what we already know of the influence of Greek art on the Etruscan, from the archaic stage down. When, therefore, Mr. Stillman says:

"There are types of Egyptian *provenance;* others, purely archaic, of Assyrian; and others still, more distinctly marked, and probably the earliest of all, of Etruscan (Pelasgic?) kin,"

it is evident that he *may* be very much mistaken in supposing that similarity to Etruscan statues implies a date earlier than archaic Greek, which is the latest of the styles in Cyprus. We will now settle by reference to Max Duncker what a "Pelasgian" is, and by reference to Mommsen what a "Pelasgian" is not—having made it clear that the Di Cesnola Collection does not throw any light on his supposed identity with the Etruscan type. Says Duncker, p. 11, vol. iii., of the 'Geschichte des Alterthums':

"These different traditions and points of view show that the name Pelasgian in the Greek tradition was a general name embracing all Greek tribes, as later the name Achæan did, and, still later, the name Hellene. The name clearly denotes the oldest time, the most ancient men, the most ancient ancestors of the Greeks."

With regard to the hypothesis that the Pelasgians were the earliest settlers of Cyprus, it may be definitely denied that the Pelasgians and Etruscans are the same stock, and on this head Mommsen is decisive authority. Of the latter he says:

"Their manners and customs, as far as we are acquainted with them, point to the conclusion that this nation was originally quite distinct from the Greco-Italian [Pelasgian] stocks. . . . The conclusion which these facts suggest is confirmed by the most important and authoritative evidence of nationality—the evidence of language. . . . In opposition to this simple and natural view [that they moved into Italy from the Rhœtian Alps, where their language was still spoken in historical times] stands the story that the Etruscans were Lydians who had emigrated from Asia. The Italian Etruscans (Τυρρηνοί) nearly coincide in name with the Lydian Τορρηβοί, or perhaps also Τυρρηνοί, so named from the town Τύρρα. This manifestly accidental resemblance in name seems to be in reality the only foundation for this hypothesis—not rendered more reliable by its *great antiquity*—and for all the pile of crude historical speculation that has been reared upon it. By connecting the ancient maritime commerce of the Etruscans with the piracy of the Lydians, and then by confounding (Thucydides is the first who has demonstrably done so) the Torrhebian pirates, whether rightly or wrongly, with the buccaneering Pelasgians who roamed and plundered over every sea, there has been produced one of the most unhappy complications of historical tradition. The term Tyrrhenians denotes sometimes the Lydian Torrhebi, as is the case in the earliest sources, such as the Homeric hymns, sometimes under the form Tyrrheno-Pelasgian, or simply that of Tyrrhenians, the Pelasgian nation; sometimes, in fine, the Italian Etruscans, although *the latter never came into permanent contact with the Pelasgians or Torrhebians, nor were at all connected with them by common descent*" (pages 166, 170, vol. i. of the translation).

On the whole, is it surprising about these Etrusco-Pelasgian Cypriotes that "a curious difference exists in the permanence of their stock, as upon the mainland or insulated"; and that, although on Cyprus the islanders still resemble their forefathers, "no modern Pelasgic (Etrurian) faces are to be found in Italy" (*Nation* of May 29)?

Wm. H. Goodyear.

Westminster Hotel.

Notes.

DR. GEORGE M. BEARD of this city, who has paid some attention to vital statistics without perhaps in any case having achieved results proportionate to his industry, has recently been getting together a mass of figures in support of his assertion that the mental decay of old men accompanies, *pari passu*, their physical decay, and, to use the language of the *Medical and Surgical Reporter*, that increasing years beyond forty are but increasing senility in an intellectual sense. "The golden decade," says Dr. Beard, "is between thirty and forty, the silver is between forty and fifty, the brazen is between twenty and thirty, the iron between fifty and sixty, the tin between sixty and seventy, the wooden between seventy and eighty. Seventy per cent. of the world's work is done before forty-five, and eighty per cent. before fifty. The golden decade alone represents nearly one-third of the work of the world." Now, if all this means that when men become very old they are sure to get into their second childhood, and that very young men are not so mature and capable as older men, it is a truth requiring few columns of figures to prove it. But Dr. Beard means more. He says that he has noted the ages at which philosophers have found and announced their systems, at which divines and religious teachers have originated their creeds, at which statesmen, generals, painters, poets, musicians, architects, lawyers, actors, men of science, engineers, have respectively done their best, and that from the data thus collected he has derived the period, the decade, and year of maximum productiveness and the various grades. As illustrative of the way in which Dr. Beard handles his figures, and of his conception of the real nature of the enormous fabric which he was rearing, we quote, in substance, a brief passage from his critic in the *Reporter*. The dates in life of the greatest achievements of single lives in the various categories which we have given above Dr. Beard takes in, let us say, a thousand instances. Examining them, he finds that "the golden decade represents about twenty-five per cent. more than the silver." What, then, more certain than that it is the men between thirty and forty who have done more of "the world's work" than the men between forty and fifty? Accordingly, that they have done more of it, and have done more because they were abler to do work, is the conclusion which Dr. Beard reaches. Yet it would be as absurd to say "seventy-five per cent. of the dinners in the world are eaten by persons under fifty, and we are compelled to draw from this approximate fact grave conclusions as to the melancholy failure of the dinner-eating power after man has passed his silver-fork decade." The fact that most of the dinner-eating of the world has been done by persons under fifty years of age is a fact; but the inference is faulty, because the statistician left out of view the other fact that the number of persons above fifty years of age is much smaller than the number of persons who have not yet reached that age. So of the great achievements of persons on the "right side" of forty as against the achievements of those on the wrong side. The number of the latter is smaller than the number of the former, and so much smaller that Dr. Beard's own method overthrows completely the structure he had raised. Take a thousand persons born in France, a thousand born in England, and a thousand born in Belgium, and we find that the mean number of them living between the ages of twenty and forty is 539, while the mean number living between the ages of forty and sixty is only 341. Hence, if the amount of work done by each man past forty were exactly equal to that done by each man under forty, the younger men would still do sixty per cent. of the work. In the light of this compound proportion of work to age, and age to mortality, short work is made of the "twenty-five per cent." of Dr. Beard's simple proportion of work to age.

—"Progressive Myopia, and its Operative Cure," is the title of an interesting monograph by Dr. Richard H. Derby, a well-known ophthalmologist of this city, just published by D. Appleton & Co. Near sight seems from the statistics collected here and abroad to be one of the commonest afflictions of civilized communities, yet little is known about it by the mass even of those who suffer from it. For example, there is a widespread belief among near-sighted people that their eyes are stronger than those who can see far, and they congratulate themselves frequently on the probability that at a time of life when others need a convex glass for reading they will be able to work with ease without any glass. Dr. Derby says, however, that this prevalent belief is "utterly without foundation," though it seems from his next paragraph that this statement may be probably a little too strong; in what is known as "stationary" near-sight (the worst kind of myopia, which does not increase with age), "between the fortieth and fiftieth year" (in exceptional cases) "where the power of accommodation becomes less, there is an apparent diminution in the amount of myopia." This exceptional apparent diminution may account for the erroneous belief in the decrease of near-sight with age.

—On the other hand, "Progressive Myopia," as its name implies, is a positive disease—"a disease fraught with many dangers to the eye." There is here not merely a simple "error of refraction"; there is also a "distension of the eye and increased length of its visual axis, and this depends upon a pathological distension of its membranes. When this distension has reached a certain point, the membranes become attenuated, and their power of resistance somewhat diminished, so that the distension no longer remains stationary, especially as the intraocular pressure of the myopic eye is generally increased. The myopia increases with this progressive distension." With regard to the frequency of this affection,

"Dr. Cohn, of Breslau, published in 1867 the results of an examination of the eyes of 10,060 school-children. He found a constantly-increasing number of myopic pupils from the lowest to the highest schools. The following table gives the percentage of near-sighted pupils in the various schools:

Elementary school	6.7 per cent.
Intermediate school	10.3 "
High-school (Realschule)	19.7 "
Colleges (gymnasia)	26.2 "

"In the high-schools one-half of the first class were found to be myopic. In the colleges the statistics were more dreadful. Here in the sixth class 12.5 per cent. of the pupils are near-sighted, while in the first class there is the enormous percentage of 55.8 of myopic students. Lately, Erismann has published carefully-prepared statistics of the refraction of pupils in the schools of St. Petersburg. Four thousand three hundred and fifty-eight scholars were examined. Of these, 30.2 per cent. were myopic. Here, as in Cohn's tables, a comparison of the different classes shows a startling increase from year to year in the number of myopes. Among children of eight years of age, 10.2 per cent. were found to be myopic. Among the pupils of twenty years, myopia was found in 40 per cent. of all examined."

These statistics ought certainly, as Dr. Derby says, to attract the attention of the great near-sighted public, who will find in his pamphlet also a description of the simple surgical operation which he recommends as a "prophylactic measure in progressive near-sight."

—In the last Annual Report (for 1872) of the Commissioners of Emigration of the State of New York, we find a "Circular Letter addressed to the Governors of the several Southern States on the subject of Labor," which we heartily commend to the consideration of the "several governors," and sincerely hope that it will meet with a response commensurate with the desire of those who wish well to the South. That the future growth and prosperity of that section depend largely upon the direction thither of some portion of that tide of emigration now so steadily setting westward admits, we suppose, of little doubt. In no other way do we see so fair an opportunity of effecting a complete and lasting cure of existing evils as by an infusion of fresh blood in large quantities. It cannot be denied that at present there seems to be little disposition on the part of our newly arriving friends to pitch their tents in any of the late slaveholding States. This is a fact borne out by the table of "avowed destinations of emigrants" in the Castle Garden report of last year. Out of 294,581 "emigrant" passengers arriving in New York during the year, only 3,017 declared a preference for the "South"—the term, in this instance, including fourteen States, beginning with Maryland and ending with Texas, together with West Virginia, Arkansas, Tennessee, and Kentucky. If we subtract the number going to Maryland and Kentucky, we have only 1,172 to be absorbed into twelve States, and this in spite of all the efforts, well and ill devised, and more or less organized, which the South has officially made to allure immigrants. It is not easy to assign to half-heartedness, a mistaken land policy, a corrupt administration of public affairs, the lack of schools, the absence of a nucleus for foreign colonization, the part which each along with other causes has played in rendering these efforts fruitless. Due allowance made for them, some defect may still be imagined to have existed in the various Southern schemes of emigration, and we cannot do better than refer to the success of Michigan as an example worthy of study and probably of imitation.

—In 1869, the Michigan Legislature passed an act for the encouragement of emigration, and appropriated $7,500 per annum to be expended in this direction, giving the governor the power to appoint two persons—one to act as a Commissioner of Emigration, to reside in Germany, and the other to be a local agent, resident in New York. These agents have been at work nearly two years; and of the nature of this work some idea will be had from the following extract from the last message of the governor:

"During the past year," he says, "there has been issued at Hamburg a second and third edition of a pamphlet containing a map of Michigan, with a description (in German) of its climate, productions, and other advantages; the publication at the same place of a small monthly paper (in German) devoted to the same purposes, and furnishing general information useful to emigrants, has been continued by the commissioner. Both publications have been gratuitously circulated in large numbers in Germany, Austria and Denmark. . . . The local agent has devoted his time to receiving forwarding, and sometimes accompanying to the State persons arriving at the port of New York."

It may be worth adding that both these agents are native Germans, now residing in Michigan, and that the salary of the commissioner is $2,500, while that of the local agent is $1,500—these salaries, with every other expense, being met by the legislative appropriation. These efforts resulted last year in bringing 12,340 young and able-bodied men and women into the State, against 5,930 in 1870; and the ball having now been fairly set in motion, there is every promise of a rapid increase. Considerable facilities have been afforded the immigrants by the State in location and purchase of lands—new homes have been laid out for their especial benefit, and the terms of payment have been made as easy as possible. We cannot now enter further into the details of the subject, but enough has been stated to show that emigration can be and is controlled and directed by the use of a moderate sum of money in the hands of honest and efficient agents, and some such plan is well worthy adoption by the governors, legislatures, or peoples of the "several Southern States."

—The Philadelphia *Public Ledger* has long been noted among American newspapers for the large number of "deaths" which it contains. In a copy now before us there are, for example, sixty-odd of these notices, each accompanied by a notification as to the time and place of burial. A few, by the bye, are accompanied also by some verses of the order common in this kind of poetry, and some of which have for many years done duty in the same column. Having thus unusual facilities for mortuary research, the *Ledger* has recently turned its attention to the local longevity which it has chronicled, and its investigation has perhaps thrown a ray or two of light on the vexed centenarian problem. It begins with the statement that during the first six months of this year it has announced in its obituary department no less than 328 deaths of persons who had reached or surpassed the age of eighty years. This is against 359 for the corresponding figures of last year. The reader will now have a clearer idea than we were able to convey to him a moment since of the extraordinary number of entries regularly made in the *Ledger's* record of mortality. Of these 328 persons the men numbered only 122, leaving the women, as is usual in this matter, in a majority, they numbering 206. Further examination strengthened the evidence in favor of the excessive longevity of women, "as the women who lived beyond ninety are much more numerous than the men." Thus, of persons dying at the age of ninety there were ten women to four men; of persons dying at the age of ninety-one, four were women and one a man; of persons dying at ninety-two, seven were women, two were men; at ninety-three, the men got the better, and the count stood three men and two women; but at ninety-four there were no men and four women; at ninety-five, one man and four women; at ninety-six, one man and two women; at ninety-seven, one woman and no man; at ninety-nine, two women; at one hundred, one woman; at one hundred and one, also, there was one woman; at one hundred and two there was one; and at one hundred and three there was one. Of the whole forty-nine who surpassed the age of ninety, only thirteen were men; thirty-six were women. Of the centenarians and supra-centenarians in this list the writer gives but an extremely slight account, and sets them down with no apparent distrust of their claim and with no evidence of its truthfulness. It probably would not have prepossessed Sir George Cornewall Lewis in their favor to learn that the lady who reached the great age of a hundred and two began her career in County Antrim, Ireland, and that she who died in her hundredth year came to Philadelphia, as a widow of seventy years, from the County of Derry. Neither of these, we may suppose, had written evidence to support her pretensions. The woman who is said to have been one hundred and three years old appears to have been an American, and there may be competent testimony of her having attained the great age assigned her. She was an inmate of the Penn Widows' Asylum. On the other hand, in rebuttal of Sir George's theory that no man can live a full century, we observe in the English journals a statement that the Registrar of Airdrie, Scotland, reports that "among the deaths is that of a centenarian who, at the taking of the census, stated his age as 101, so that at his death he was aged 103 years. He was born near the port of Menteith, in 1770. At one period of his life he was extensively engaged as a railroad contractor. He was exceedingly intelligent and communicative. His widow is in her ninety-third year."

—The *Pall Mall Gazette* is fortunate enough to possess a Paris correspondent who has a thorough knowledge of the country from which he writes. Indeed, his knowledge of French politics, history, and manners is so minute that one might almost suspect him of being a Frenchman, were it not for the tone of his letters—a tone of thoroughly Anglo-Saxon contempt for all "Latin races." In one of his recent letters he discusses the influence of the institution known as the "tribune" in the French Assembly. He says that "any one who has frequented the debates in a French Assembly will understand that France is greatly indebted for the bad working of her parliamen-

tary institutions to that mischievous pulpit of claptrap oratory—the tribune." We may easily understand how this must be by reflecting what would be the result if in any English or American parliamentary body, whenever a member rose to make a plain, brief statement of fact, without oratorical flourishes, the other members, or a few of them, could, by mere dint of noisy shouts of "*à la tribune, à la tribune,*" drive him from his seat into a large rostrum occupying a commanding position, and compel him by this flank movement to make a tremendous stump-speech on a subject for which stump-speaking was out of place, or else cow him into silence. "The tribune is a terrible deterrent to members who have only a few practical remarks to offer, and a baneful encouragement to shallow bores who love to dribble words without any meaning in them." Generally, the shouts of the members bring the speech-maker to bay, and the more his opponents try to drown his speech, the more his own party applaud, while the deputy goes on gesticulating more and more violently, after the manner of his race, and becoming more and more inaudible as the noise increases. A practice has also arisen which the *Pall Mall* correspondent thinks highly objectionable, of "victualling the tribune before beginning operations. For some time this odious practice was confined to orators not merely long-winded but of the illustrious sort; and so long as this was so, no fault could be found. But it is a different matter to see a dreary ranter and a long-necked bottle mount the tribune in company, and to feel that before that ranter can be got rid of the long-necked bottle must be emptied to the dregs." The practice of victualling ought to commend the institution of the tribune to the attention of our politicians at Washington.

—Earl Stanhope and Lord Houghton have for some time been endeavoring to secure the official recognition by the English Government of English men of letters, art, and science, and late last month the matter was the subject of debate in the House of Lords. The proposal was that a new order of merit should be instituted, or that the Order of the Bath, originally military but afterwards extended so as to embrace civil servants of the state, should be still further extended. The arguments in favor of the project were such as have been often heard and often answered, the newest thing said being a somewhat mischievous remark of Lord Houghton's, that "Mr. Thomas Carlyle's writings had influenced not only the philosophy but the practical statesmanship of our time, and had even affected the structure of the English language." Could this last proposition be made good, Mr. Carlyle's chances of receiving the honors of the new order would hardly be improved. Lord Houghton cited two other writers as having been enormously influential—Mr. Mill having been powerful just after Mr. Carlyle's popularity reached its zenith, while just before Mr. Carlyle's rise the age was moulded in Lord Houghton's young days by "the moral and philosophical influence of Coleridge, under whose genius the literature of the time was almost transformed." Lord Granville, in replying to Lord Stanhope, urged the difficulties of selection, the jealousies which would arise, the likelihood that the prime minister would not know how to perform the task of pronouncing upon literary, artistic, and scientific claims; and, after similar reasoning from Earl Grey and the Earl of Harrowby, the matter dropped.

—To many thoughtless persons it will not be apparent why a musical composer or his publisher should be at the trouble of preferring one set of words to any other set. The music has always seemed to be their first and only care; and for their course in that particular they have usually had two or three excellent excuses. For one thing, the public has for years bought words irrespective of their having any sense or feeling. For another, the same public, when listening to singers, has always showed that, while it cared something for the music, as regards the words it was content to catch the meaning of one word out of forty. It is so rare for a singer to show the least respect for the meaning of the language used by the writer that it is only at intervals of ten or twelve years that any one of us actually understands so much as a verse or a line of a verse sung in his presence. Poets suffer more at the hands of singing artists—a tuneful but not the wisest or best educated of races—than dramatic authors suffer at the hands of actors. This is a strong statement; but, as everybody knows, it is warranted by the facts. An intelligent perception of what the poet means, a feeling apprehension of the sentiment of the song, an attempt to express this meaning and sentiment, are hardly ever found in our singers, male or female. Instead of these we get from them vocal gymnastics and personal display; and as the vast majority of us cannot judge of such matters as poetry, and as to most of us the feats of the vocalist also are very wonderful things and altogether beyond us, our singers have a double chance to evade without our reproof the endeavor at reaching the true excellence of their art. M. Charles Gounod and Mr. Littleton, his publisher, may or may not hold opinions like these; but they have just been having a severe quarrel over the merits of two rival sets of words which had been offered to accompany a song of M. Gounod's composing. Mr. Justice Denman would seem to have thought that one song was much the same thing as the other; for he remarked that in both there was "a deal of allusion to shades and flowers and breezes, and all that sort of thing"; but to M. Gounod one appears so much better than the other that in the heat of discussion he indulged in statements so careless that Mr. Littleton brought an action for libel, and had him fined forty shillings. M. Gounod writes to the *Times* a brief but significant note, the tone of which shows that two days after the trial of the action, one of them the Sabbath, he had not yet got into a condition of coolness. His cause has not been heard, he says; his principal witness was not examined; he is a stranger, and his incompetency as a speaker of English threw obscurity over the questions put to him and the incomplete answers which he could make; and finally, he declares that the forty shillings fine and the costs of suit he is determined that he will never pay. He has heard that no appeal lies in his case; but he appeals to the *Times* to print his letter and show the public how he has been treated, which the *Times* accordingly does.

MR. BUXTON'S THOUGHTS.*

MR. CHARLES BUXTON was an excellent man, a high-minded politician, and a warm friend. He possessed a certain literary talent, had published a work of thoughts about politics, and left behind him, prepared for publication, a book of thoughts upon things in general. His death deprived his country of one of a class of public men of whom there are at no time too many, and caused profound grief to a large number of attached acquaintances. His friends have naturally published a memoir commemorating Mr. Buxton's virtues, as well as the book to the composition of which he had devoted part of many years. With Mr. Buxton as a private man and a politician, we have at present no concern. If we said anything at all about him in these capacities, we should certainly say nothing except in his praise. He was the inheritor of a name famous in the annals of philanthropy, and throughout life did credit to the name he bore. Occasionally he took up tasks a little beyond his strength, as when he joined in prosecuting Governor Eyre, and yet scrupled at indicting him for murder. But he was the consistent advocate of enlightened humanity in an age when humanitarianism has fallen into discredit, and the ceaseless assailant of oppression among a generation more and more inclining to the belief that might is right. We are concerned with Mr. Buxton not as a man but as an author. We pay a tribute to his honest and manly character when we criticise his works as freely now he is dead as we should do if he were living. The nature of his 'Notes on Thought' is described by himself in the following lines, written in September, 1860: "My idea is to look steadily and thoroughly into the world around, and to write down what I observe in it in the briefest words." The six hundred and eighty-four notes constitute, therefore, Mr. Buxton's mature reflections on the world and on life. They are the reflections of an honest, educated English gentleman. You can see in every line the trace of what is termed "thoughtfulness," and indeed the most descriptive title for the book would be 'Thoughts of a Thoughtful Man.' Mr. Buxton, no doubt, was not, and never pretended to be, a man of originality or genius; but he was highly educated, he had seen a good deal of the world and of mankind, and from his youth up seems to have never missed an opportunity either of thinking a thought or, we must add, of at once putting it down on paper. The very fact that he was like, both in character and in position, to hundreds of educated gentlemen gives a certain value to his 'Thoughts,' and thus affords an opportunity of examining the theory that "thoughtfulness" is a virtue much to be cultivated, and of seeing what are the results to which educated thoughtfulness leads.

"It is a daily surprise to me," writes Mr. Buxton, "to see how shallow, poor, barren-minded men may still be, after the most prodigious amount of education—all the education that can be given, not by Eton and Oxford alone, but by Parliament, society, travel, reading, pictures, talk. But the truth is, there is one path to wisdom, and only one, the path of *thought*." This sentence gives the theory on which Mr. Buxton's work, and a hundred like it, are composed. Mr. Buxton, Mr. Helps, "A. K. H. B.," and a hundred other essayists of very varying calibre, write down their reflections, and publish them to the world under the assumption that the great object of life is to encourage thoughtfulness, and that if a man be but "thoughtful," he is certainly on the path of wisdom himself, and most probably is competent to guide the public along it. Now, the truth of this assumption is open to the gravest doubt the moment you examine what "thoughtfulness" really means. No one ever terms a man "thoughtful" about any topic which he has studied or of which he is a master. It would be ridiculous to talk of Mr. Grote's being a "thoughtful" writer on the history of Greece, to

* 'Notes on Thought. By the late C. Buxton, M.P.' London: John Murray.

praise Mr. Mill's "thoughtfulness" about logic, or to term Herbert Spencer a man who had thought much on sociology. When you praise a man's thoughtfulness, you really mean not that he is master of any subject, but that he is given to reflect upon matters which most people let pass without reflection. It should again be remarked that no one dreams of applying the term thoughtful to persons whose forte lies in the transaction of practical affairs and in dealing successfully with the difficulties of actual life. None, we presume, ever talked about the thoughtfulness of Lord Palmerston and the Duke of Wellington, yet nobody doubts that on many topics they must have thought, and thought hard, and that their ideas were as well worth having as that of the most thoughtful writer or politician to be found in England or America. Thoughtfulness, in fact, is generally merely a name for a tendency to reflect upon common things and form little theories about them. Now, is it true that this tendency to reflection is the "one path" to wisdom? It is very hard to see how it can be so. The study of science, of literature, of politics, any pursuit which forces a man to clear away his ignorance and to strengthen his mind by hard, consecutive mental labor, tends at least to make him wise in one department of speculation or life, since it certainly frees him from errors and often invigorates his whole mind. But thinking of itself, thinking which does not involve any increase of knowledge, theorizing, in short, about ordinary everyday events, would not seem to most rational per ons a very hopeful mode of finding out wisdom. The remarks on the minor matters of life which are best worth reading or best worth remembering are not the observations of men who have made these minor matters their concern, but are made by persons who have turned a mind trained in some regular pursuit to the occasional examination of lesser things. Bacon's 'Essays,' Johnson's 'Conversations,' Coleridge's 'Table-Talk,' contain a host of notes, thoughts, or observations bearing on all sorts of occurrences. But the thoughts of these eminent persons derive their value not from the fact that their authors had attained wisdom by the cultivation of thoughtfulness, but from the very different fact that they brought minds of rare power and severely trained to bear occasionally on the lesser problems of life. Take your shallow, poor, barren-minded man, provide him with a note-book, and bid him be thoughtful, and you will have started him in a path far more likely to lead to priggishness than to wisdom. You have very probably done him a considerable injury, because you have led him to think that the habit of reflection can produce fruits which are brought forth by study or by the experience gained in active life. Thinking is very good if you have something valuable to think about. But mere thoughtfulness about things in general may leave you at last uninstructed in anything in particular, and imbued with the fatal belief that thought can supply the place of knowledge, and little things become great, because you can expend upon them a great deal of reflection.

Though we possess but a very limited faith in the merits of thoughtfulness, we own to having hoped that Mr. Buxton's 'Thoughts' might have some merits of their own, for it seemed hardly possible that the reflections of a man of more than average ability, who had associated with all the leading statesmen of the day, had seen some of the best sides of English life, and had taken part in the discussion of important questions, should not be interesting and instructive. We confess that after reading the work from beginning to end we can find little interest in it other than that which is derived from perceiving how very commonplace are the speculations of highly educated men, and can gain from it no other instruction than the lesson that mere thoughtfulness avails nothing to any one who has not mastered some particular topic about which he can think with effect. There is nothing, indeed, more curious about the whole of the 'Notes' than the utter absence of any information by which any one's knowledge can possibly be increased. We doubt whether the most sedulous reader can honestly assert that Mr. Buxton has taught him a single fact which he did not know at the moment he opened the book. It perhaps may be said that Mr. Buxton has at least this merit, that if he does not teach any new truths, he does not propagate errors, and we are willing to admit that his education and training do, as a general rule, keep him from making specific assertions about questions which he has never studied, and induce him to confine himself for the most part to the enunciation of platitudes which no one can contradict, because for the most part they are truisms not worth contradicting. But occasionally he leaves the safe high-road of platitude and pursues the much more dangerous path of historical or political speculation; and whenever Mr. Buxton takes this hazardous step, he gives the most curious impression of the laxity of ideas prevailing amongst educated men. Thus, in note 165, he ventures to hazard an historical theory about feudalism, and enunciates amongst other things that "there is one stage through which every 'nation' will be found to have passed—the stage of feudalism, in which society is an agglomeration of clans or chiefs to whom it owed service, and who gave it protection. This stage has long since been left behind by most European nations, lingering latest, perhaps, in the Scotch Highlands." Now, it is funny enough that a gentleman who probably was in the habit of reading current works on history should confuse clanship, which depends essentially on a real or supposed connection of race, with the feudal relation, which depends on totally different principles; but the confusion becomes still more absurd when he adds that "clanship begins, like most human relations, with a bargain." If Mr. Buxton had reflected on the foundation of the not very uncommon relation of father and child, he would have come a good deal nearer understanding the basis of clanship than he gets by starting from the quite incongruous notion of a bargain. But once having lost his way among "Feudal Barons," "Zemindars of Oude," "Front de Bœuf," and "Cedric," "South Africa" and its "Head man with despotic power," he flounders on from blunder to blunder, and cannot recover his footing until he lights upon the familiar topic of a bargain over which he can moralize and tell us how "nature beautifies all her works." But it may be said that Mr. Buxton was not bound to understand the subject of feudalism, though he certainly would have done much better not to have written about what he did not understand. Let us take him on a topic on which he is more at home. He thus writes of the Evangelicals: "The Evangelicals have their faults, and great ones, but it is a plain matter of fact that they set going the philanthropic movement which abolished slavery and the slave-trade, mitigated the penal code, remodelled our jails, spread missionaries over the heathen world, and wrought by education and other means a great improvement of the working-class in England. It is right and good to abuse them, but still they have done such a work as the world never saw before." We do not wish for a moment to detract from the immense credit justly due to the religious party here eulogized by Mr. Buxton, or to deny that at one time they did untold services to the cause of humanity; but to attribute to their efforts the whole philanthropic movement which marked the latter part of the last and the beginning of the present century, is simply to exhibit the utmost laxity and confusion of thought. Bentham, Romilly, Brougham, Rousseau, Voltaire, and a host of other persons belonging to different societies and countries must, in common fairness, be credited with their share in a movement of far too wide a character to be described as the work of any one religious party.

Mr. Buxton's admirers may, however, urge that inaccurate views of history, or a lax mode of expression when carelessly reviewing movements which he had never very carefully analyzed, do not substantially detract from Mr. Buxton's reputation as a keen observer and judicious critic of men and manners. We have no disposition to grudge him whatever reputation is his due, and gladly set before our readers a few samples, as it seems to us fairly selected, of the sort of thoughts with which a book which must be taken as the mature fruit of Mr. Buxton's experience is crammed:

"A nation does wisely, if not well, in starving her men of genius; fatten them, and they are done for.

"A large family party is rather too much like a flight of tomtits—everlasting twitter, but no conversation; gregariousness without companionship.

"Proverbs are potted wisdom.

"Cursed be chatterboxes, they are the pest of society. Blessed be chatterboxes, they are the salt of dull lives.

"A successful career has been full of great blunders.

"One of the ill effects of cruelty is that it makes the bystanders cruel. How hard the English people grew in the time of Henry the Eighth and of Bloody Mary!

"Silence is the severest criticism."

We will not undertake to assert that these maxims and the like will be of no benefit to any human being. Every one who has attained mature years must have passed through a stage of life when maxims had a strange impressiveness, when Bulwer seemed a profound and original thinker, and Tupper was felt to be not devoid of wisdom. To young gentlemen and ladies in search for maxims to guide them through life, Mr. Buxton may, we hope, be able to perform the part of a well-educated and gentlemanlike Tupper. He will supply them with thoughts which, if they are never new, are generally true, which are expressed without vulgarity, and are not defaced by obtrusive egotism.

AMERICAN CHURCH MUSIC.*

II.—MOTETS.

As we have seen, the American psalm-tune of the present day is actually inferior to that of the previous half-century. A gradual falling-off in nobility and strength, and the steady employment of a set form of cadences

* 'The Coronation: a Collection of Church Music. By Theo. F. Seward and Chester G. Allen. New York.' 1872.
'The Standard. By L. O. Emerson and H. R. Palmer.'

'Millard's Collection of Popular Music. By Harrison Millard.'
'Baumbach's New Collection of Sacred Music. By A. Baumbach.' 1871.
'Buck's Second Motette Collection. By Dudley Buck.' 1871.

and familiar melodic phraseology have at length brought the psalm-tune into the low estate in which we now find it. It has been persistently written down to the capacity of the people until the people have ceased to regard it with any respect, and are seeking in other forms of music a higher inspiration. In fact, it could not be otherwise. The legitimate use of the tune for several stanzas of a hymn renders it impossible for the music to correspond to the dramatic demands of each separate stanza. It must suffice if the general emotional type of the whole hymn is reproduced in the music. And since all the hymns may be classified into a very few well-marked emotional types, such as bold, animated, tender, noble or grand, commonplace, etc. (see Prof. Bailey's preface to Hillard's Readers), and any hymn of a given class may be sung to any tune of the same class without violating the fundamental proprieties, it follows that a comparatively limited number of tunes is regarded by congregations generally as sufficient for their wants. It is true, indeed, that music is the especial language of the emotions, and that the seven characteristic types given by Prof. Bailey are multiplied by the composer to an almost infinite gradation of shades. Yet these delicate shades are unappreciated by the average musical amateur, and, in the matter of psalm-tunes, must always remain so. For the fact that no hymn has an emotional uniformity through all its stanzas leads the chorister to look indulgently on the discrepancy that must exist between some of them and the tune; besides, the average chorister has sung so much meaningless music, and gone through so carelessly whatever good music he may happen to have used, that his taste is of little value.

In the motet, on the other hand, the conditions are more favorable to an artistic result. No interchange of different sets of words to the same music is permitted or possible. The music conforms itself at once to the peculiarities of the text. Instead of reducing all texts to a few dead-levels of emotional type, the art of the composer is to seize on each slightest change of sentiment, and, by the cunning application of music, heighten and intensify the dramatic contrast. Moreover, the words being always uttered to the same musical phraseology, the singer enters by degrees more and more into sympathy with the composer's understanding of the text; and if the music is dramatically true to the words, we have in it the most effective commentary possible. This is admirably illustrated in Handel's "Hallelujah," "Lift up your heads," "Behold the Lamb of God," and in Mendelssohn's "Thanks be to God," "He watching over Israel," and, indeed, by every masterly chorus that has made its way among the people. But it is not true, as one writer has said, that "music is the appropriate drapery of truth." Music is the appropriate drapery of any truth which requires drapery —that is, which has an emotional atmosphere. A proposition of Euclid is true, but it has no feeling in it. Handel had a healthy instinct in this respect. Consider the pleasant hopefulness of "And the glory of the Lord shall be revealed," and the assured belief of "for the mouth of the Lord hath spoken it," and the deep sadness and pathos of "And the Lord hath laid on him the iniquity of us all." On the other hand, see what difficulties he had with "For as in Adam all die." It was not Handel's fault; it was the text's.

The imperative demand of a motet is for truth to the chosen text. This truth must also be expressed in phraseology suitable to religious worship. And so we come to speak of the ecclesiastical style. There is a sense in which a motet must be ecclesiastical; that is, it must not be intrinsically a march or quickstep, or a mere love-song. But as for mannerism in phraseology, they, like the peculiar turns of the pulpit and the minister's "holy tone," are properly enough dispensed with. When we have the music expressed in a contrapuntal spirit, which is essentially an intelligent and dignified spirit, and in rhythmic forms not provocative of dancing, we have enough of the ecclesiastical style. Whenever the composer has a mastery of the art of expression, and the depth of soul to penetrate to the very heart of the text, the style may be considered safe enough.

Dr. Lowell Mason was very successful in the composition of short motets or sentences suitable to the ability of choirs as they at that time existed. They are remarkably faithful to the general spirit of the words, and were, doubtless, as elaborate as the times permitted. Good specimens of his work are "And ye shall seek me," p. 379 'American Tune-Book,' and "O praise God in his holiness," p. 390 of the same work. It was not his theory to concede to the weakness of the flesh or the vanity of soprano singers; hence we find few or no solos. They were simply "sentences" which a well-disposed choir might introduce at the opening of public worship. In those days organs were not common; the sentence was the beginning of the artistic use of music in American churches. In some of his longer works he was less fortunate. His popular "Jerusalem, my glorious home" was too monotonous, and this, as we shall hereafter see, is the fault into which composers always fall when they confine themselves to metrical texts for motets. Only the picturesque and dramatic poetry of the Bible affords a composer the readiest inspiration.

In the 'Coronation' we find on p. 338 an anthem, "Rejoice in the God of Israel," which illustrates a prevalent American type of "sacred music." This piece is in effect a brass-band march. Its entire phraseology, rhythm, harmony, and melody are of the military band. It is not half as ecclesiastical as the secular part-songs of Mendelssohn. The real faults are a poverty of invention and want of skill and taste in expression; the composer has not penetrated to the spirit of the text. He has only seen deep enough to perceive the general air of hope and rejoicing that the text contains. Consequently, he has thrown himself into an elevated emotional state (probably such as he may have had in boyhood when on his way to "general training"), and has poured out his feelings in song.

In Mr. Emerson's motets we do not find this pronounced secular savor. The melodies are flowing and not unsuitable to the text. The writer impresses us as a man with a decided natural aptitude for music, but always hampered by an inadequate mastery of the means of expression—a deficiency which he has not sought to supply in the only possible way, namely, by extended studies under a competent teacher, but by repeated blind experiments—a feeling-around after a fortunate turn of expression. His "Guide me, O thou great Jehovah" is one of the most popular quartette anthems, and is really effective to a wonderful extent, considering its inartistic construction. It is too monotonous in key, and the phraseology of the accompaniment is awkward, and, if played on the organ literally as it stands, fatal to the artistic success of the solo. His other hymn-anthems nowhere reach so high a flight as this.

The next three books on our list are written to subserve a higher artistic use, and are therefore open to a higher criticism, although, be it observed, simplicity or the reverse is not an element of importance. A work may be simple exceedingly, and yet be noble and refined. In Mr. Millard's book we find an endless number of popular airs set to hymns for church use. One of the worst cases is Flotow's "Lost, proscribed," set to "Come, thou Fount of every blessing"—a melancholy and tender ditty employed as an invocation to the Holy Spirit. The associations of these pieces are enough to debar them from church use even if they were in sympathy with the text, which they are not. In Baumbach's collection we find a great deal of a better sort. A few pieces ought not to have been inserted, they are so trivial and secular. And in adapting the "Tannhäuser March" for use as a festival anthem, Mr. Baumbach has perpetrated some of the most peculiar accentuation of words we were ever fortunate enough to meet.

But in Mr. Dudley Buck's motets we have the first well-considered effort at providing American choirs with a repertory of suitable and enjoyable music. In point of style it is sufficiently ecclesiastical. It is throughout dignified, though not falling into the peculiar mannerism of the older English Church writers. In choice of texts Mr. Buck has been singularly happy, and they are treated with a great deal of individuality. The unaccustomed singer will be very likely to find some of the modulations abrupt, but in these cases there are such good reasons for their employment that the ear speedily becomes reconciled to them. As good examples of happy treatment, we may refer to "The God of Abraham praise," one of the best pieces for church use to be found anywhere. Another is the quartette piece, "Hark, hark, my soul," where we have a hymn-anthem embracing four stanzas, yet not monotonously treated. "Arise, shine!" is a notable example of a thoroughly effective and satisfactory church piece. The *obligato* organ accompaniment to the unison, "For behold darkness shall cover the face of the earth," is highly orchestral in its effect, yet never for a moment secular. The selected pieces are very fine; yet the life of the book is in Mr. Buck's own pieces, and taken together they form a valuable contribution to American church music. They show for the first time in books of this kind a comprehensive and plastic control of the resources of choir, solo-singers, and organ for the edifying illustration of Scriptural texts.

THE NORTH AMERICAN FOR JULY.

THE articles of most literary interest in the July *North American* are Mr. Gryzanovski's and Mr. Ellis's, the former treating of Schopenhauer's pessimism, and the latter not only reviewing Mr. Sibley's 'Graduates of Harvard University,' but also adding something from Mr. Ellis's own store to the accumulation of knowledge which we owe to Mr. Sibley's microscopical painstaking.

Schopenhauer's greatest merit, says Mr. Gryzanovski, consists in his having remained faithful to speculative philosophy at a time when the reign of philosophy had passed away. His ethics, though good, are based upon a rotten metaphysical foundation; his philosophy has fundamental errors; and his pessimism may be considered as flowing from his

natural disposition, from the way in which the elements were mixed in him, rather than from accurate perception and just reasoning; but he never hushed his metaphysical cravings; he never gave himself up to the frivolities of existence, nor allowed himself to be absorbed by the exigencies of a life of labor and ambition, and he always professed his allegiance to what is good and beautiful and true—an allegiance which, if it is unfelt and unpaid, human society would become impossible, and individual life would not be worth the having.

This, it will be seen, is metaphysics in the large view, and, as Mr. Gryzanovski appears very willing to admit, it is not metaphysics of this kind from which the scientific men and the positivists turn with aversion and with considerable outcry and not a little of what seems like blindness and arrogance. That there may be a failure on their part to feel intimately the connection between metaphysics in this aspect and metaphysics in the aspect which repels them, is their misfortune, and perhaps, in some degree, their fault; but it is a failure which is a condition of their proper success. Only, while conceding all this, Mr. Gryzanovski has not the least intention of conceding the extreme demands to which philosophy, art, poetry, and religion have of late years equally been compelled to give ear as the laboratories have challenged each:

"Science is not a building-ground, but a mere brick-yard. Its results are building-stones, not buildings; and even mathematics and formal logic are scaffoldings rather than houses. Who can build without stones or without scaffoldings and plumb-lines? But the bricklayers and the carpenters ought to know what they are before they aspire to be builders and masters, and ought to become conscious that they belong to the very lowest grade in that lodge of freemasonry whose masters are to build a temple greater than Solomon's. In the meantime, it may be highly desirable that the brick-yard should be left undisturbed by metaphysical intruders. Philosophy can afford to wait until science shows signs of fatigue or distress. Nay, more, science has the strongest claims on our gratitude and admiration. If it has led to nothing better than Agnosticism (which, after all, is an improvement on Atheism and Materialism); if it denies the existence and, *a fortiori*, the immortality of the soul; and if it has reduced morality to a mere system of social dynamics—we ought the more readily to acknowledge our obligation to co-operate with those fearless and sagacious workers who obtained these results, and whose greatest wrong does not lie in these results, but in the presumption of their finality. Many of those who profess these doctrines are men of warm hearts and open minds, men who would be metaphysical enough to die for their country, and to own allegiance to all that, according to their lights, is good and beautiful and true."

This language seems to us to embody well a necessary truth, and to have been written in a spirit of justice not at all obscured by the evident combativeness.

Mr. Ellis's article will of course be particularly liked by Harvard men, and it has attractiveness for all students of the early times of New England and of the nature of the men who founded the Massachusetts commonwealth. To think of the university of our day, and look back upon it in its day of small things, when one of its principal aims was to breed missionaries and "convert the wild Indians," is to turn a leaf in the lesson that man proposes and God disposes, and to be reminded how different often is the disposition from the intent. It is perhaps rather a melancholy sort of interest that attaches to old records like this, but to whoever knows the College yard in Cambridge it is genuinely interesting to know that what Gookin here says, writing it two hundred years ago come next year, refers to the first brick building erected under the authority of the College. Gookin had been commissioned by the General Court of the Colony to govern and oversee the Indians, and it is to Charles II. that he makes his report:

"One thing falls in here fitly to be spoken of, as a means intended for the good of the Indians, which was the erecting a house of brick at Cambridge, in New England, which passeth under the name of the Indian College. It is a structure strong and substantial, though not very capacious. It cost between three and four hundred pounds. It is large enough to receive and accommodate about twenty scholars, with convenient lodgings and studies; but not hitherto hath been much improved for the ends intended, by reason of the death and falling off of Indian scholars. It hath hitherto been principally improved for to accommodate English scholars, and for placing and using a printing-press belonging to the College. This house was built and finished [probably in 1655] at the charge and by the appointment of the Honorable Corporation for propagating the Gospel in New England."

Mr. Ellis devotes a paragraph to the history of the ante-collegiate school, presided over by Mr. Nathaniel Eaton, about whom he is what Mr. Eaton would have called "exercised" a good deal, but whom our readers may be better pleased to associate in memory with the famous examination of Mrs. Eaton touching and concerning her way of keeping a boarding-house for the unhappy sub-freshmen of those days. This has always seemed to us to atone for quite a number of Mr. and Mrs. Eaton's shortcomings, though we confess the humor of it, besides being unconscious, is rather suggestive of Dotheboys Hall, and sets in a strong light the exceeding unluckiness of the boarders and lodgers.

Besides these articles, there is an anonymous article entitled "The Session"; one by Mr. J. M. Bugbee—a clerk, we think, in one of the public offices—on the great fire and the old Fire Department; one by Dr. W. O. Johnson on "Modern Medicine"; and one by Mr. Gardiner G. Hubbard on "Proposed Changes in the Telegraphic System." Of these, Mr. Bugbee's and Mr. Hubbard's will probably receive most attention, and for a portion of Mr. Hubbard's we bespeak the attention of the press, both the dependent and the independent. It is an incident, generally intelligible, in the current volume of American history—the history of the power of monopolies:

"Mr. Orton has said that 'he would undertake to produce an American journal, printed one thousand miles from the Atlantic coast, that should contain more news from all parts of the world in a single issue than could be gleaned from the London *Times* in a week,' and that 'the press are perfectly satisfied with the situation.' A statement of the arrangement by which the press obtains these low rates will show that in one point of view the press pays very dearly for them. The Associated Press of New York, in connection with the Western Union Telegraph Company, collect the news from Europe, and from all parts of our own country, forward it to some convenient centre for collation, preparation, and distribution, and then transmit it to the various press associations in all portions of the country. These associations are therefore dependent upon this double-headed monopoly formed by the Telegraph Company and the Associated Press of New York. No new associates are admitted into any press association without the assent of every other member. The news is delivered under an expressed or implied engagement that the receivers shall neither encourage nor support any other telegraph corporation; that they will protect its interests, and will not criticise the telegraph news. Thus an offensive and defensive alliance is organized for the protection of the Telegraph Company on the one hand, and of the Associated Press on the other, by which, in effect, that press is subsidized. The Western Union Telegraph Company can afford to furnish news at low rates to have the support of the press in its extortions upon the whole people; and the associations pay for this by defending the power which sustains their exclusive privilege of furnishing news to the public. The arrangement which Mr. Orton boasts of is therefore simply a combination to victimize the public for the sake of which the Associated Press sacrifices its character and independence.

"From time to time members of the press have advocated a postal telegraph, or have criticised the telegraphic reports, but they have quickly felt the power of the Telegraph Company, and their fate has proved a sufficient warning to others not to offend in like manner. The most noted are the *Herald* and *Alta California*, both of San Francisco, and the *Petersburg Index*, of Virginia. The California papers, the one in 1868 and the other in 1872–73, offended by advocating a reform in the telegraph service. They were promptly punished—the *Herald* by having the rates raised from six to fifteen cents per word, and the *Alta* by the entire loss of the despatches. The Telegraph Company assign as the reason for cutting off the *Alta* that they had great difficulty in collecting their bills. The Petersburg paper criticised the reports, and for a time lost its despatches. The Telegraph Company can raise or reduce the rates; and though they make contracts with the various associations, they are generally terminable at thirty days' notice. Its control over the press is therefore absolute. It has the power of life and death, for the telegraphic news is the vital breath of the daily newspapers. Such a power cannot exist without its exerting a pernicious influence on public affairs, and every observant public man has long perceived the demoralizing influence of this powerful but subtle agency."

Mr. Hubbard argues strongly for Government control of the telegraphic system, but, whatever the value of his remedy, no one who knows anything of our telegraphs—of the fortunes made by them and the power wielded by their owners in Congress, in the press, in trade and speculation—will fail to be impressed by his facts and figures.

Bostonians should flee Mr. Bugbee's article, which gives but a sad account of the centre and umbilicus of the earth. The person who said that if Boston was the Modern Athens, it must be the Athens of Snug the joiner, Bottom the weaver, and Starveling the tailor, will get more comfort out of Mr. Bugbee than Dr. Holmes's old gentleman will get. A poor fire department, inefficiently commanded; a method of governing it which seemed to have been most ingeniously devised to multiply outlay and divide responsibility; a city for years in crying need of an ædile: this is a part of the picture before us. Mr. Bugbee's incidental sketches of the Mayor, the chief of the Department, and the powder-men are vivid and effective.

The writer of the political article seems to be a moderate and careful writer. His view of the Crédit Mobilier business would, a few months ago, have struck people as being too moderate by far; it will perhaps still seem so to people who, without having any specific evidence to support their belief, regard the Crédit Mobilier disclosures as making known not a tithe of the corruption existing in Washington and among our public men generally, but as rather pointing to it than unveiling it. That such is the general belief, we think there can be no doubt; that it is correct in the main, we for our part must think. Still, the writer in question seems to us to have reason on his side in the particular matter in hand.

Life, Journals, and Letters of Henry Alford, D.D. Edited by his Widow. (Philadelphia: J. B. Lippincott & Co. 1873.)—Dean Alford ac-

complished two things in life—an edition of the 'Greek Testament' and the foundation of the *Contemporary Review*. The latter we ascribe to him as the editor and master-spirit during the first years, when it was taking shape and gaining position. We should also consider this his more important work, although it was not so considered by him, and is not so considered by his biographer. We do not learn anything specific with regard to the plans he formed and the difficulties and vexations he had to endure in this work. They are only alluded to vaguely and generally, though we know from other sources that they were great. The plan of a magazine which should be in the hands of Church clergymen, but should shrink from no discussion whatever, was a bold one. It could count from the outset on the opposition of the vast majority of ill-informed and bigoted traditionalists in the Church, and this opposition or even animosity was not wanting. Dean Alford was not the originator of the project, but he carried it out faithfully in the position which he took. The influence of the magazine has been widespread on both sides of the water.

The task which the Dean early undertook was to labor for a more learned acquaintance with the Scriptures of the New Testament amongst the clergy, and a more correct popular knowledge of them amongst the people. To estimate justly the work which he did on the New Testament, whether critical or exegetical, it is necessary to bear in mind the state of Biblical learning in England when he took up this task. It is scarcely too much to say that it did not exist. It was much to Alford's credit that he recognized the importance of this branch of study and set out to work for it. His early writings show the man bred in Anglican traditions, and nothing more nor less than a good Anglican parson, with such scholarship as Cambridge esteemed and rewarded. From this standpoint he took in hand the work of editing the New Testament as classical text-books were and still are edited in England. He had, however, sufficient scholarly instinct to recognize his masters. He went to Bonn for German in order to use German authorities. As a natural and necessary consequence, his plan was greatly altered. It expanded and took new shape under his hands. He found out how far he was behind German scholars in the same department, and how inadequate his plan was to set before students of the New Testament the existing status of the science. He often refers disparagingly to the first edition of the first volume. He had undertaken the task without any conception of what it involved. He limited himself afterwards to collecting and digesting for English readers the fruits of German scholarship—doing in text-criticism and exegesis just what Stanley has done in history.

Here we have the exact measure of his work. It is of some value as a compendium of German learning. When it is original, it is very weak. It is not a contribution to Biblical science as that science stands before the world to-day, but it has been an incentive to Biblical study in this country and in England, and it has brought the results of German scholarship to many who would not otherwise have become acquainted with them. As Biblical learning progresses, students of it will desire to go directly to the highest authorities, and the form of the encyclopædia must give way to special treatises. The works of the text-critic, the exegete, and the dogmatician or systematizer must be separated, and each will require undivided attention.

Alford never threw himself into popular movements like Stanley or Maurice, nor emancipated himself from his education like Davidson. The trammels of his education and his dogmatic prepossessions were the element of weakness in his work where it was original. Thus, in a letter to Bishop Colenso he says (p. 356): "It seems to me that there are two ways of approaching this subject, first, from the *unbelieving* point of view, proceeding thus to argue from the improbability or discrepancy of details to the unhistorical character of the whole. . . . Secondly, from the *believing* point of view, proceeding thus to argue from the acknowledged historical character of the whole to the existence of a key to difficulties of detail, provided we could thoroughly understand all circumstances regarding them." Evidently the first is the method without a *petitio principii*, and the second is the method with one. It shows how difficult it is for a man, even though he be honest, industrious, and zealous, to become scientific, if he starts with a dogmatic or scholastic bias.

It has been asserted that the ideal of family life is more fully realized amongst the English clergy than amongst any other class of men. The book before us might be cited as another piece of testimony to the truth of that statement; and we may add that the affectionate regard of the widow for her husband has done not a little to swell her book far beyond its just proportions, and that the matter in surplus is very frequently of no interest whatever to the reader. It is, however, to some extent a book meant for a coterie, as books about clergymen are apt to be, as well as a book meant for a certain religious following and for the larger public.

A Harmony of the Four Gospels in English, according to the Authorized Version, corrected by the best critical editions of the original. By F. Gardiner, D.D. (Andover: Warren F. Draper.)—Dr. Gardiner is professor in a Baptist Divinity School. It is seldom that even compiled matter proceeding from a representative of an exclusive sect is treated with candor enough to seem worthy of examination if the subject is remotely related to the grounds of exclusion; and the book here spoken of is unnecessarily unfortunate in avoiding even the appearance of fairness upon several controverted topics. Thus, the author mentions twenty-one names of "authorities" who think that "Judas went out before the Institution of the Lord's Supper," but does not mention any names for the contrary opinion. Also, he rehearses a list of authorities for the hypothesis that the "public" life of Jesus lasted three years, but gives no list of those who hold to a shorter period; and yet among the last is one (Tischendorf) whose text of the original New Testament Prof. Gardiner appears to have adopted as the basis of his work (it is not stated what text is actually followed; possibly one is extemporized), and whose harmony he almost copies.

If Tischendorf's harmony had been wholly copied, such a translation would at once have commanded a place among standard exegetical books. But an eclectic mixture of Tischendorf, Robinson, and Thomson must run the gauntlet of stern examination, if indeed it be worth examining at all, while a lack of candor is *prima facie* evidence that it is not.

It may be worth adding, that the argument for the shortest period, the "Bipaschal Hypothesis," has recently been restated by Mr. Edmund A. Sears in his 'Fourth Gospel the Heart of Christ' with a consistency which commands respect.

A Critical Greek and English Concordance of the New Testament. Prepared by Chas. F. Hudson, under the direction of Horace L. Hastings, Editor of the *Christian;* revised and completed by Ezra Abbot, LL.D., Assistant Librarian of Harvard University. (Philadelphia: J. B. Lippincott & Co.)—This book is a condensed pocket edition of the 'Englishman's Greek Concordance,' omitting and adding matters of great value. Both these works are of rare accuracy, surpassing Cruden's in this respect as much as they do in practical usefulness. The 'Englishman's Greek Concordance' is a book adapted to render the study of Greek unnecessary in New Testament investigation, because it exhibits all the texts where each Greek word occurs, giving at each reference one line of context according to the common version, and italicizing the word or words translating the Greek word under exhibition. For example, suppose one finds that the passage, "The kingdom of God is *within* you," is rendered by Noyes "in the midst of you," and by Folsom "among you"; he looks up in his 'Greek Concordance' the Greek word here differed about, and he finds one other occurrence of it in the Gospels: "Cleanse first *that which is within* the cup and platter"; the words italicized are the ones used in translating the Greek term *entos*. The inference is obvious, and is drawn so much more clearly than historical and philological arguments can be that anybody but a pedant would prefer this method in the large majority of questions. For corroboration, the words "among" and "midst" could then be looked out in the English portion of the 'Concordance,' when it would be found that a different Greek term, *mesos*, regularly corresponds to them. It is worth noting that the words under discussion were addressed to a Pharisee. As the same Greek word has often been very variously rendered in the English Bible, one has only to glance down the column of quotations, and imbibe the idea common to all the various English words used in the different circumstances, and a more trustworthy impression of the sense will be received than from a lexicon.

Mr. Hastings's condensation omits from under each Greek word the quotations of the texts wherein it occurs, leaving only the bare references, thus obliging the reader to look up all these references for himself, and making the book look Greek instead of English. The compensation is that the references can be looked at in any version one chooses, and that the book is very small. The loss is much greater than if all the quotations were struck out of Cruden's Concordance, because the latter has no lexical use, as the same word occurs in each of the quotations grouped. The lexical value of Mr. Hastings's book is crippled in that the collation of contexts is rendered very slow, whereas it is instantaneous in the 'Englishman's Greek Concordance.' In exchange for this loss, much valuable critical matter is very compactly furnished, such as the testimony of the oldest MSS. to the genuineness of the Greek words in the references, and a supplement giving those readings of Tischendorf's present (eighth) edition which differ from those of his previous edition. All owners of his seventh edition who do not wish to pay over $20 for the eighth, can thus possess themselves of its amendments by buying this 'Concordance.' In the introduction, a description of the most important editions of the New Testament text is given in an uncommonly brief and available form.

Regesta Pontificum Romanorum inde ab A. post Christum natum MCXCVIII. ad A. MCCCIV. Edidit Augustus Potthast Huxariensis Westfalus. Part I. (Berlin. New York: L. W. Schmidt.)—This important work was briefly announced in No. 355 of the *Nation* (April 18, 1872), but its publication has been delayed nearly a year, partly by the press of state documents at the royal printing-office, and partly through the desire of the author to impart to it the highest finish in accuracy and in completeness. Not content with the conscientious labor of ten years, nor with the approval of the Berlin Academy, which awarded to his manuscript the prize of two hundred ducats, and gave a further *honorarium* toward its publication, he has gone over again the microscopic work of verifying dates and references, in order that no error of transcription should escape his eye. As "custos" of the Royal Library of Berlin, he has had its vast resources at command, and has also enjoyed exceptional privileges for drawing upon other libraries. It was at the instance of Dr. Pertz, the Royal Librarian, that Dr. Potthast undertook the immense task of analyzing all the authentic utterances of the Popes of the Middle Ages—from Innocent III. (1198) to Benedict XI. (1304)—and preparing a digest of these in chronological order; but what was at first designed only for the convenience of scholars, now proves to be most opportune for controversialists who would track the Papacy through all the assumption, the arrogance, the weakness, and the contradiction which have paved the way to infallibility. It is curious, as one turns these pages, to see with what manifold topics and interests the Popes of the Middle Ages were occupied, and with what lofty assumption they meddled with all matters and persons, great and small.

The work is handsomely printed in quarto. At the top of each page is a heavy ruled line, above which is the running title of the Pope and his period, and directly under it the year or years of the documents upon the page, thus: Innocentius III., 1198–1216, and beneath, 1199, 1202, or whatever the year may be. The left-hand margin is ruled in two columns, and here is found the date and place of each document, and opposite to these a digest of the document, with a reference to its sources, and the opening phrase by which such documents are wont to be quoted. The documents are also numbered consecutively. There will be twenty parts of one hundred and sixty pages each.

The Origin of all Religious Worship. Translated from the French of Dupuis, Member of the Academy of Inscriptions and of the National Institute of France during the first French Republic. Containing also a description of the Zodiac of Denderah. (Boston: J. P. Mendum. 1872. 8vo, pp. 433.)—The translation in the year 1873 of a French work published nearly a century ago, and which has not before found a translator, is certainly a bold undertaking; and one cannot help wondering whether it is that Mr. Müller has actually discovered a hidden treasure, or that former translators showed better judgment in letting it alone. In either case, this edition of Dupuis's 'Origine de tous les Cultes' deserves notice, if only as a curiosity, and that in two points of view—as presenting a theory of mythology which in many respects anticipated that established by subsequent enquirers, and as reflecting with great truthfulness the tone of thought of a generation which had a mighty influence upon human history. Scientific value as a treatise on mythology it of course has very little, in spite of its unquestionable learning and many excellences of detail. In its day it did good service in preparing the way for the scientific investigations of the present school; but one who should have recourse now to books of this class for information on the subject of which they treat would be, like Mr. Casaubon, "living in a lumber-room, and furbishing up broken-legged theories about Chus and Mizraim." We have said that M. Dupuis's views coincide in many features with the now established views. They agree, that is to say, in their interpretation of the myths, but differ world-wide as to their genesis of the myths. Nor is this so slight a difference as might appear—it is, in fact, a fundamental and essential one. The difference is just that between the poet and the astronomer in looking at the sky. Mythological science derives the phenomena of mythology from the pictures and legends excited by the view of the heavens in the minds of a simple and imaginative community. M. Dupuis, being himself a learned astronomer, derives them from the facts of astronomical science. In his view, mythology was not developed, but created; his authorities are not the unsophisticated legends, but the later poets and logographs.

The second aspect in which this book is interesting is as an outgrowth of the temper of mind of the French revolutionary epoch. While reducing Hercules and Perseus to sun-myths, just as Max Müller does, the main object, after all, is to apply the same theory to Christ; the twelve apostles, like the twelve labors of Hercules, are the twelve signs of the zodiac. Further, the book ends with a general protest against religion, as the mere creation of fear and superstition. Now, it would be too much to say that this aspect of religion is wholly obsolete in a generation which has witnessed the career of the International Society; but it is not too much to say that the scientific study of religion of the most radical type has completely moved away from this ground. Prof. De Gubernatis, as coolly as M. Dupuis, identifies the Virgin Mary, in some of her aspects, with the moon, and declares frankly that "when we shall be able to bring into Semitic studies the same liberty of scientific criticism which is conceded to Aryan studies, we shall have a Semitic mythology." Prof. Tiele, of Leyden, considers Abraham to have been a sun-myth. Thus the modern science of mythology is not afraid of the views here presented, but its very foundation and starting-point is the doctrine which is here utterly denied—the necessity and universality of religion. In this point of view, too, therefore, the book has no interest for the present generation, except that of curiosity. In the controversies of the present day it would be of about as much service as a firelock of the seventeenth century at Sadowa.

A Dictionary of Synonyms of the English Language. (New York: G. P. Putnam & Sons. 1873.)—This little work, as we infer from several indications, was prepared in Glasgow. Its Scottish origin might be suspected, indeed, from its occasional introduction of words now peculiar to that dialect, as, for instance, the verb *busk* in the sense of "dress." It is a fair enough and useful enough volume, so far as it goes, though it cannot pretend to anything like the completeness or value of the work of Soule (Little, Brown & Co., Boston) on the same subject. The author, indeed, has made the common but most unfortunate mistake of attempting to do two or three things besides the particular thing in hand. A book of synonyms ought to be that, and nothing more; for no one who consulted it at all would consult it for any other purpose. But in this the roots, definition, and pronunciation of each word—matters entirely foreign to the subject—have been lugged in, and take up about half the amount of space in the volume, which in itself is none too large for its legitimate object. These have necessarily swelled its size without at all increasing its value; for nothing satisfactory, in the way either of derivation or definition, could well be packed in so small a compass, not to say anything of the fact that neither has any business there whatever. For illustration, to a man seeking for a synonym for *busy*, it will be of no special advantage to learn, as he will here, that it is derived from the Icelandic *bisa*, to work, more especially as it comes directly from the Anglo-Saxon *bysig;* nor will it benefit him perceptibly in the immediate object in view to find that the primitive meaning of the Latin word from which *candid* comes is "white," however curious or interesting such a fact might be to one studying words with a different purpose. All the additional information thus imparted has necessarily led to the sacrifice of the usefulness of the work for the special object for which it was made, and this is the more unfortunate in this particular case, as the book is one of a series of small educational manuals which are valuable only so far as they confine themselves to their legitimate objects.

Miscellanea Genealogica et Heraldica. Edited by Joseph Jackson Howard, LL.D., F.S.A. (Monthly Series. Parts XXVIII. and XXIX., April and May, 1873; pp. 345 to 372.)—In July, 1866, Dr. Howard issued the first quarterly part of this magazine, devoted "exclusively to transcripts from original and inedited documents relating principally to genealogy and heraldry." In this form he published nine parts, making one complete volume of 363 pages, with its index. Parts x.–xiii., 260 pages, carried this quarterly issue to March, 1870, when it was discontinued and a new monthly publication was substituted. In its present form, as above noted, twenty-nine parts have appeared. The 'Miscellanea' differs from Mr. Nichols's admirable 'Herald and Genealogist,' mainly in the fact that it is composed of transcripts of documents with but the briefest of notes. It contains numerous grants of arms, extracts from wills and parish records, and similar documents; sources of information unaccompanied by any attempt to construct pedigrees therefrom. There are indeed numerous pedigrees in the book, but these are all formal documents, authenticated by some herald, past or present. Much of its contents can have but slight interest or value for the great body of American genealogists, and yet it is to be commended as a contribution to that English history in which we have a share. Occasionally the reader here will find some bit of information of local interest. Thus, in the last part there is the will of Rebecca Draper of Lewes, 1696, who gives £10 to her sister Frances Crippins of Boston, New England. Again, some curious searcher has copied from the registers at Waltham Abbey and Nazing, in Essex, a number of dates relating to the Eliots. Among them, as was well known, are the immediate relatives of our Rev. John Eliot, the apostle to the Indians, though he was born in another parish. From time to time, other interesting notes and queries have appeared, and the magazine may well become a channel of intercommunication between genealogists on both sides of the Atlantic.

Have just published:

I.

FOODS. By Edward Smith, M.D., LL.B., F.R.S. 1 vol. 12mo, cloth, price $1 75.

This work forms the third volume of the "International Scientific Series," which is intended to embrace a series of popular small works in the most interesting departments of advancing science.

The volumes already issued are:

I. *FORMS OF WATER*, in Clouds, Rain, Rivers, Ice, and Glaciers. By Prof. John Tyndall, LL.D., F.R.S. 1 vol. 12mo, price $1 50.

II. *PHYSICS AND POLITICS.* By Walter Bagehot. 1 vol. 12mo, cloth, price $1 50.

II.

CRITIQUES AND ADDRESSES. By Thomas Henry Huxley, LL.D. 1 vol. 12mo, cloth, price $1 50.

"The 'Critiques and Addresses' gathered together in this volume, like the 'Lay Sermons and Addresses and Reviews' published three years ago, deal chiefly with educational, scientific, and philosophical subjects, and, in fact, indicate the high-water mark of the various tides of occupation by which I have been carried along since the beginning of the year 1870."—*Extract from Preface.*

III.

THE ARGUMENT AT GENEVA. A Complete Collection of the Forensic Discussions on the part of the United States and of Great Britain before the Tribunal of Arbitration under the Treaty of Washington, as published by authority of Government. 1 vol. 8vo, cloth, 653 pages, price $3 50.

"Messrs. D. Appleton & Co.:

"The volume which you published entitled 'The Argument at Geneva' contains the entire series of forensic discussions which took place at Geneva before the Tribunal of Arbitration, under the Treaty of Washington, whether on the part of the United States or of Great Britain.

"C. CUSHING,
WM. M. EVARTS,
M. R. WAITE."

IV

NARRATIVE OF THE MISSION to Russia, in 1866, of the Hon. Gustavus Vasa Fox, Assistant Secretary of the Navy. From the Journals and Notes of J. F. Loubat. Edited by John D. Champlain, Jr. 1 vol. 8vo. With Illustrations. Price $5.

"It is a valuable and interesting monograph, giving an unpretending and evidently accurate narrative of a very remarkable incident in the history of both countries. It is doubtful if any act of international courtesy was ever accompanied by an expression of friendly feeling more earnest and sincere."—*N. Y. Tribune.*

Either of the above, when not to be had in Bookstores, sent post-paid by mail to any part of the United States on receipt of the price.

LIBERTY, EQUALITY, FRATERNITY.—"One of the most thorough overhaulings of the moral, religious, and political bases of society which they have recently received. . . . Everybody who wants to see all the recent attempts to set things right analyzed by a master-hand, and in English which stirs the blood, will have a great treat in reading him."—*The Nation.*

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

NEW BOOKS.

THE LIBERAL EDUCATION OF Women. The Demand and the Method. 296 pp. 12mo, full cloth, $1 50.

A series of papers by eminent thinkers on this subject. Collected and edited by Prof. James Orton, Vassar College, N. Y.

EDUCATION ABROAD. (In Press.) An able discussion of "Should Americans be Educated Abroad?" A question that deeply affects the School system and youth of our country. By Hon. B. G. Northrop, Superintendent of Schools, Conn.

TRUE SUCCESS IN LIFE. 12mo, full cloth, $1 25.

For young people. By Ray Palmer.

REMEMBER ME. 16mo, full cloth, $1 25.

A Gift Book for new Communicants. By Ray Palmer.

THE MOUTH OF GOLD. 16mo, full cloth, gilt edges, $1.

A series of Dramatic Sketches of the Life and Times of Chrysostom. Wonderfully clever in conception and diction. By Edwin Johnson.

RESPONSIVE WORSHIP. 16mo, full cloth, 60 cts.; paper, 40 cts.; with Psalter, 16mo, full cloth, 90 cts.

A Discourse, with Notes, by W. I. Budington, D.D., and letters from distinguished clergymen.

SUNNY HOURS OF CHILDHOOD. Stories. 12mo. full cloth, 75 cents.

BRIEF HISTORY OF TEXAS. 12mo, half roan, $1 25.

Intended for schools and general reading. Illustrated. It brings the history of Texas down to date, and is full of most valuable information regarding that wonderful State. By D. W. C. Baker.

LATIN PRONUNCIATION. 12mo, full cloth, 140 pages, $1.

An enquiry into the proper sounds of the Latin language during the Classical period. By Walter Blair, A.M., Professor of Latin in Hampden-Sidney College, Va.

FRENCH PRONUNCIATION. 12mo, full cloth, 30 cents.

Designed to accompany the first study of the Grammar. By Edwd. S. Joynes, Professor of Modern Languages in Washington and Lee University, Va.

DANA'S SCIENTIFIC ENQUIRIES in Physiology, Ethics, and Ethnology. 308 pages. 12mo, full cloth, $1 25.

THE WEEK IN TRADE AND FINANCE.

JULY 14, 1873.

THE week has developed nothing of importance outside of the gold speculation, which made considerable headway. The money market remained quiet, with the daily rate ranging between 3 and 5 per cent. The demand for commercial paper continues good; first-class names, having from thirty days to four months to run, pass readily at 6 to 6½ per cent.

Foreign advices are favorable. The Bank of England rate of discount was reduced to 5 per cent. on Thursday from 6 per cent., at which it had been standing the last few weeks. The Bank gained £38,000 in specie last week, while the French indemnity payment to Germany on the 5th inst. caused a loss of 43,000,000 francs in specie to the Bank of France.

The weekly statement of the city banks was slightly unfavorable on Saturday as compared to that of the week previous. The increase of $6,563,100 in liabilities was not quite offset by a corresponding gain in legal tenders and specie, which was $1,268,500, and, as shown by the figures given below, is equal to a net loss of $372,275 in reserve.

The following is a comparison of the averages for the past two weeks:

	July 5.	July 12.	Differences.
Loans	$286,905,800	$288,174,500	Inc. $1,268,700
Specie	33,551,400	34,658,000	Inc. 1,106,600
Circulation	27,276,200	27,291,800	Inc. 15,600
Deposits	232,369,400	238,916,900	Inc. 6 547,500
Legal tenders	48,168,000	48,329,900	Inc. 161,900

The following shows the relation between the total reserve and the total liabilities:

	July 5.	July 12.	Differences.
Specie	$33,551,400	$34.658,000	Inc. $1,106,600
Legal tenders	48,168,000	48,329,900	Inc. 161,900
Total reserve	$81,719,400	$82,987,900	Inc. $1,268,500
Circulation	27.276,200	27,291,800	Inc. 15,600
Deposits	232,369,400	238,916,900	Inc. 6,547,500
Total liabilities	$259,645,600	$266,208,700	Inc. 6,563,100
25 per cent. reserve	64,911,400	66,552,175	
Excess over legal reserve	16,808,000	16,435,728	Dec. 372,275

The operations in the stock market seem to be mostly confined to the brokers themselves, who, in the absence of outside orders, feel that they must do something to "turn an honest penny." The tone of the market has been steady and the amount of business fair for this time of year. The large operators are generally absent from town, and we see no reason to anticipate much activity until the hot weather is over and they have returned. The dealings in Chicago and Northwestern are notably larger than for some time past. It will be remembered that this stock was successfully "cornered" last fall, when the price was run up to 230. Since then the stock has all lain in the hands of Gould and his friends, who engineered the "corner," and outsiders of course were indisposed to buy while the stock was so situated. Lately there have been indications that parties were willing to take hold of the stock below 70, and the result is that transactions have taken place during the past week amounting to some 43,000 shares.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending July 12:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales.
N. Y. C. & H. R.	102¾ 103⅜	103⅜ 104⅛	103⅜ 104⅜	103⅜ 104	103¼ 103¾	103⅜ 103⅝	59,000

The reduction of the bank rate of discount in London had a favorable effect upon the price of United States bonds, and the higher price of gold as well as the investment demand here have brought about an advance of one per cent. in this market. The investment demand is reflected in the increased enquiry for registered bonds of the different issues.

The interest due previous to July 1 upon the bonds of the State of Louisiana are now being paid at the office of Messrs. Winslow, Lanier & Co. Transactions in State bonds have been limited in amount, and prices remain pretty much unchanged.

The demand for railroad bonds continues good, especially for those of the old roads in good standing. All the Union Pacific bonds are stronger; the scare caused by the injunction against the payment of interest to certain Crédit Mobilier holders of the first mortgage bonds having apparently passed away.

The following questions were asked of every person presenting coupons for payment:

"1. Do the coupons which you now present belong to either of the persons named in lists Nos. 1 and 2?

"2. Are they the coupons of bonds which were distributed as dividends or allotments of profits to shareholders of this Company directly, or by the seven trustees under the Oakes Ames contract, or the Davis contract, or through or by the Crédit Mobilier of America; and if so, to whom do they belong?"

Lists Nos. 1 and 2 referred to included the names of parties who received the bonds as dividends on Crédit Mobilier stock.

The recent specie shipments have aided materially the bull speculation in gold. The clique have succeeded in carrying up the price to 116⅛. The range of price has been between 115⅛ Monday and 116⅛ Friday. The total amount of gold shipped during the week ending July 12 was, in round figures, $4,000,000.

BANKING AND FINANCIAL.

BANKING-HOUSE OF FISK & HATCH,
No. 5 Nassau Street, New York, July 14, 1873.

We recommend to our friends and customers for investment of surplus capital, or in exchange for Government bonds,

THE CHESAPEAKE AND OHIO SEVEN PER CENT. GOLD BONDS; Principal and interest payable in Gold Coin in New York City; interest payable Jan. 1 and July 1; coupon and registered. Price 90 and accrued interest.

THE CHESAPEAKE AND OHIO RAILROAD IS A GREAT EAST AND WEST TRUNK LINE, 420 miles in length, extending from Atlantic tidewater at Richmond to Huntington, the most favorable point of railroad connection with the Ohio River, and developing the richest IRON, COAL, and TIMBER REGIONS in the United States.

It is completed, and doing a large, profitable, and rapidly increasing business.

Its FREIGHT TRAFFIC, PASSENGER TRAVEL, and EARNINGS during the current year will be much larger than has heretofore been anticipated, and they are developing with a rapidity which shows the Chesapeake and Ohio to be one of the most valuable and successful railroads in the country.

These facts, together with the substantial and enduring character of the Road itself, its advantges for economical and profitable operation, and the unquestionable security of the Bonds of the Company, enable us to recommend them with the utmost confidence.

Pamphlets, containing full information concerning the Road and the country it traverses, will be furnished upon application.

We continue to deal in Government Securities, CENTRAL PACIFIC, WESTERN PACIFIC, AND CHESAPEAKE AND OHIO SIX PER CENT. BONDS, buy and sell Stocks and Bonds at the Stock Exchange on commission for cash, make Collections, receive Deposits, on which we allow interest at the rate of four per cent., and do a general banking business.

FISK & HATCH.

THE HOME OF COOPER AND HAUNTS OF LEATHERSTOCKING. By Barry Gray. 8vo, cloth, fine, 4 full-page illustrations, viz., Portrait of Cooper; View of Cooperstown and Otsego Lake, on steel; Photographs of Cooper Monument and Leatherstocking Statuette. Price $2.

The same work, with 2 Steel Plates and Wood Engravings only; paper covers, $1 75.

Either style mailed, prepaid, for above price, by

HURD & HOUGHTON,
13 Astor Place, New York,
or W. H. RUGGLES,
Cooperstown, New York.

The London *Spectator*, at the close of a review criticising severely 'LIBERTY, EQUALITY, FRATERNITY,' calls it—

"One of the strongest books by one of the strongest men of our day."

TEN PER CENT. NEW ENGLAND INVESTMENT.

FIRST MORTGAGE SINKING FUND
GOLD BONDS
OF THE
LAMOILLE VALLEY, ST. JOHNSBURY AND ESSEX COUNTY RAILROADS,

One hundred and seventeen miles long, from the Connecticut River to Lake Champlain, and forming the Vermont Division of the Portland and Ogdensburg Railroad Trunk Line. Issued in denominations of $100, $500, and $1,000, and absolutely limited to $20,000 per mile,

WITH A BASIS OF A CASH CAPITAL STOCK OF $1,200,000 PAID IN AT PAR.

Principal due in 1891.

No security is greater than these first-class railroad bonds, based on a large property, as well as on a large and constantly increasing income.

The building and management of the road is conducted with such economy and integrity as to make the investment very profitable and perfectly safe.

Interest payable in Gold Coin in Boston or New York, November 1 and May 1. They yield, at present rates of Gold,

8¾ PER CENT.,

and held to maturity, 10 PER CENT. per annum interest.

E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.;
FAIRBANKS & CO.,
311 Broadway, New York;
FAIRBANKS, BROWN & CO.,
2 Milk Street, Boston,
Financial Agents.

☞ For sale by Bankers and Brokers generally.

The Nation.

NEW YORK, THURSDAY, JULY 24, 1873.

The Week.

IT may not be generally known that there is in existence a Senatorial Transportation Committee, appointed in the last session of Congress, whose duty it is to report at some time upon the transportation question for the benefit of Congress and the public. Where this Committee is or what it is doing we do not know, though it is now stated that it proposes to have a conference with the farmers to find out what their grievances are. This would be a highly sensible thing for the Committee to do, considering the suspicions which in certain quarters are entertained about their labors, and considering also the present proportions of the farmers' movement. There are, it is said, between four and five thousand Granges already established, with a membership counted by hundreds of thousands—all probably voters. The farmers really hold the balance of power in the great agricultural States between the Republicans and the Democrats, and it is, to say the least, important to know what they want. A *Tribune* correspondent, writing from Chicago, says that in Illinois the Granges are not political bodies at all; that the management of the campaign against Judge Craig was conducted by a totally different organization, known as the State Farmers' Association. The object of the Granges is "the promotion of the intellectual and material interests" of the members; the State Farmers' Association, on the other hand, is a "local party formed expressly for the purpose of electing men to office who shall represent the agricultural interests of the State, and to secure the passage of such laws as they consider necessary to protect them from extortion." This distinction rather loses its force, however, when we are told that perhaps a majority of the State Farmers are also Grangers.

The new Illinois railroad law seems to be an admitted failure. Nobody pretends to know what its remote effects may be, but at present it threatens to divert trade from Chicago. The railroads have found a way of avoiding its operation with regard to "through freight," by making the tariff on the merchandise while it is within the borders of Illinois conform to the law, and charging nothing for carrying it the rest of the distance. The confusion that will be caused when five or six different States get their legislative machinery in motion may be imagined. There is some talk now of bringing the matter before the Supreme Court of Washington, in the hope that the action of the Illinois Legislature may be declared unconstitutional, though on what precise ground does not appear. Even if it were, the trouble would not be over, for the causes of the farmers' movement are very deep—so deep, indeed, that the farmers do not themselves more than half understand them. Another *Tribune* correspondent has interviewed a "prominent railroad man" in Chicago, who says very truly that though the farmers have some cause to complain of the roads, the sweeping charges of extortion now made are unfair. What this gentleman says about the freight tax is worth careful attention: "The amount that ought to be paid for transportation is fixed in New York and not here. The price of corn and wheat in Chicago, except when the operators get up a 'corner,' is governed by the price in New York. Sometimes it is high enough to enable the farmers to pay us a good price for freight, and then we make a profit. At other times it is so low that if we were to charge a fair price for transportation, the farmers could not send their grain to market at all." It seems that there are in Illinois only four railroads paying regular dividends, and only one as much as seven per cent.

What with the little tempest up in Manitoba and the new disclosures about the Canadian railroad transactions, the affairs of the Dominion have this week been rather more prominent than our own. The Manitoba trouble has continued to show its ludicrous as well as its serious side, the latter aspect being for the most part turned upon the unfortunates who have got themselves into the keeping of the British lion, who in certain matters and in certain places is not the menagerie animal that in other places he has of late years been reputed. Our consul in that region, a Mr. Taylor, appears to be the natural successor as a publicist of the late Miles O'Reilly, the same who discovered the rule of international law that establishes "the right of hot pursuit"—that is, your right when your enemy is fleeing before you, and you are, as the Irish jurists say, "hot foot" after him, to cross any and all boundaries of countries contiguous to that in which the pursuit began, and to deal with him exactly as you would if you had collared him in your own land. Based on a similar great principle is Mr. Taylor's theory that, under a common-law rule giving you the right to seize and hold fast any absconding man whose surety you are, you have the right to invade for that purpose the soil of any and all sovereign states, especially of such states as also know the blessings of the common law. Mr. Taylor, for loudly expressing this opinion, and his opinion that the Manitoban authorities did not know what they were doing and were all wrong, has been made the subject of a fierce attack by the prosecuting officer of the Crown, and, so far as known, has been near seeing the inside of the same jail in which the so-called kidnappers are confined. The Governor of Minnesota, meantime, has exerted himself by letter to secure mild treatment for the prisoners, and there is good hope that all will be arranged, and that this little lesson in international law may do our northern frontier residents some good. They ought not to need it so soon after the war; but they talk as if they had not been committing a really grave offence. Perhaps they might point, as one or two of our own journals are pointing, at the way in which our State Department and War Department have suffered Colonel McKenzie, unrebuked, to invade by force of arms the friendly soil of our Southern neighbor.

It is repeating what is not much better than gossip, but, apropos of this Mexican business, there are rumors of a manifest-destiny policy, favored at Washington by the Secretary of War, who is reported to feel, on this subject, something of the imperfectly-enlightened General Rawlins's fervor. It will be recollected that the other day General Belknap, in presence of the West Point cadets, made a speech looking in the manifest-destiny direction, and that General Sherman in a few moments made another, in which he said very bluntly that we wanted no more of Mexican territory, nor indeed did we want what we have got, and he would like to hire Mexico to take it all back. It is now hinted that, if nobody else knew why General Sherman made this remark, Secretary Belknap, for one, did.

The principal exposure of the week has been that of the Brooklyn Trust Company, following immediately upon the death of the president, Mr. E. S. Mills. This Trust Company was a rich concern, had the confidence of the community, and was a legal depositary for funds the title to which might be in dispute. The management of the Company seems to have been of a bad though common enough character, Mr. Mills having been allowed to overdraw his account to the amount of $146,000, and the trust funds being largely invested in worthless Georgia "Bullock" bonds, and in bonds of a railroad of very low standing, of which Mr. Mills was one of the directors, and part of which he had a contract to build. The deposits amounted to about $2,200,000, and on the death of Mr. Mills the company suspended payment. One of the trustees, City Judge Alexander McCue, at once secured the appointment of a receiver, it is said, without due notice, and indeed without any authority, the case not being one in which a receivership is allowed by law. The trustees at once resorted to the

usual tactics to stimulate the confidence of the public, by assuring every one that the Georgia bonds had been, and that the railroad bonds would be—if the public only would keep still and not talk about the affairs of the bank at all—perfectly good. This has not done much to restore public confidence. Mr. Mills's death, which occurred while bathing, was at first supposed to be a suicide, but seems not to have been.

The sudden death of Chief-Justice Chapman, of the Massachusetts Supreme Court, leaves an important office vacant in that State, and no doubt, by making possible all sorts of promises to all sorts of people, will be likely to render the approaching Butler campaign even more exciting than it would otherwise have been. The enemies of Mr. Dawes, by way of a reason for his silence on the question of the day, circulate the story that it was intimated to him some time ago that in case of a vacancy on the Supreme Bench—the chances of Judge Chapman's death being already a matter of speculation—it might be found that no one was so well qualified by character, intelligence, and profound learning to fill the post as himself. Probably their enemies are also circulating the same story about a number of different gentlemen. No office-holding politician of note has as yet come out in opposition to the General, and the influence of the Custom-house is undoubtedly on his side. It is useless at this early day to attempt to predict the result. In this city the struggle is watched, we are sorry to say, with a malicious sort of enjoyment, the average New Yorker having received so much abuse from the press of Boston for the shameful mismanagement of his domestic affairs under the reign of Tweed and Fisk, that he finds it a relief to know, and to be able to publish it to the world, that even in Massachusetts, among the children of the Puritans, there may be sin and error too.

In this era of journalistic enterprise, it seems strange that no newspaper has yet thought it worth while to send a commissioner to report upon the journey of Mr. Schofield to the Sandwich Islands, to discover what he is doing there, who he is seeing, what promises he is making the poor deluded Lunalilo on the part of the Government of the United States, and so on. We learn from a gentleman living at Honolulu, and likely to be well informed, that "negotiations for the cession of Pearl Harbor" to the United States and for reciprocity "are still impending," and that Hawaiians fear this as a step towards annexation. Our correspondent does not think this a necessary consequence. He says that "the planters and business men have wanted the islands annexed any day, but it makes no difference whether they are enriched by removal of sugar duties or not, for, rich or poor, they don't 'carry' the nation. The Hawaiians themselves will not be starved, intrigued, or bought into laying aside their national independence, and American diplomacy may as well act on that theory. They may still more republicanize their form of government, but in forming any foreign relations they would cling to 'state rights.'" The native population, however, is declining, and the islands are now and have for a long time been actually governed by Americans and Englishmen. They are sure to fall a prey sooner or later to England or to this country, but the method and time of acquisition are a matter of considerable importance to all of us.

Things look so badly for Sir John A. Macdonald, the late Sir George Cartier, and other members of the Canadian ministry, that the Governor-General, Lord Dufferin, is reported as more fully than ever intending to dissolve the Dominion Parliament on the ground of palpable bribery in the last general election. If we are to take for true some additional disclosures made by Mr. G. W. McMullen, who acts much the same part in this Canadian scandal that Colonel McComb acted in our Crédit Mobilier scandal, there is every reason why Lord Dufferin should take this step. This will not greatly surprise any one who knows the nature of Provincial politicians, who have very little left to learn of ours; but before we take too much of this rather forlorn comfort, we should remind ourselves that while we had the Crédit Mobilier all to ourselves, it is our side of the line which furnishes two of the parties to this new game of corruption; though, to be sure, it is our compatriots who were choused. Of these, one is Mr. McMullen above-mentioned, and the substance of his addition to his former charge against the Ministry and Sir Hugh Allen, who threw McMullen and his friends overboard after buying up the Canadian officials with the Americans' money, may be tolerably well judged by this taste of it: Sir Francis Hincks, being approached by the projectors of the new line of railroad, was asked what he thought would be a fair sum in payment of his services, influence, and so forth. He replied that he did not care at his time of life to take bonds, and that he thought about $50,000 in cash would be about fair. He wished also a two-thousand-dollar clerkship for his youngest son. All of this it is fair to Sir Francis to say that he positively denies under his signature; but he admits the correctness of many of McMullen's statements, though he puts a different construction on some of them.

So long ago as July, 1871, McMullen was communicating with Allen and the Canadian Premier in reference to the proposed road. The Premier favored it; but another member of the Cabinet, Sir George Cartier, opposed it in the interest of the Grand Trunk road. Sir George's position was, however, flanked by Allen, who showed Cartier that the French party, in which lay Cartier's political strength, had been sufficiently purchased by Allen to make it necessary for Cartier to yield, which he did, and in return he took a good deal of money from the railroad people, with which he paid his election expenses. At about this time, also, Sir John A. Macdonald had money, and so had Hincks—"an indefinite loan of $10,000"—and others; Mr. Langevin, for example, was promised $25,000 for his influence in carrying the elections, and Mr. Ouimet, Attorney-General of the Province of Quebec, got $6,000 for "services at Ottawa." Copies of telegrams and letters from Macdonald, Cartier, and the Ministerial Election Committee, give definite proof that these men had a great deal of the railroad's money; and if Sir Hugh Allen is to be believed, he paid out first and last, as he told his American associates, nearly $400,000. But meantime, it had become necessary, or was thought or pretended to have become necessary, to throw a sop to the patriotic feelings of the Canadians by excluding the Americans from all participation in the enterprise, and so they were informed. Much negotiation took place, and at first they were to be kept out ostensibly, but kept in really, and the accusation is that to this device the Ministry was privy and consenting. At last, however, they definitely discovered that they had lost all hold of the Company, and, as now appears, they are endeavoring to inflict four hundred thousand dollars' worth of political and other ruin on the Canadian officials and on the great Canadian railroad and steamship magnate, who has hitherto seemed to show himself a great deal too sharp for them.

The English Ministry have been driven in their new Judicature Bill into abolishing one of the most venerable features of the British Constitution—the appellate jurisdiction of the House of Lords. The House, as our readers know, was the court of last resort for all cases not colonial or ecclesiastical, and one of the most curious scenes in London was the hearing of appeals by the two or three old "law lords" who in this dry business represented the whole body of the peers—the lay members usually abstaining, by honorable usage as well as from laziness, from meddling in what they did not understand. The scandal of having work of such importance imposed on aged volunteers has, however, been long apparent; now at last the bill reforming the judiciary and establishing a real Court of Appeals made up of lawyers has passed. At first it was only intended that this court should hear English appeals, Mr. Gladstone fearing the feelings of the Scotch and Irish would be hurt if they had to come into an English court; but the bar of both countries have protested against their exclusion, and insist on being relieved from dependence on the peers. So the whole of this curious mediæval mixture of legislative and judicial power goes by the board, and the Scotch

and Irish bars obtain at least two fresh judicial appointments, each of considerable dignity and emolument.

The only other event of importance in the English news is the presentation of a petition to the Archbishops by 482 clergymen, asking for the establishment of auricular confession. The answer of the Archbishops appears to have been of a mild, deprecatory, and soothing sort, and has accordingly aroused intense indignation in the Evangelical section of the Church. The Archbishops have actually taken the matter into consideration, in order to see what the Rubric says about it. So at a great meeting held in Exeter Hall, and presided over by Lord Shaftesbury, he proposed, amid tremendous cheering, to "let the Rubric go to the winds," whatever that may mean, and, growing more excited, proposed, if the Church of England wavered in her principles, to "let her go" too. He asked one question, as a sort of touchstone, on which we should like to see an article in a woman's-suffrage organ, and that is, whether the friends of the confessional were willing to appoint "female confessors"? This was met by great applause from the audience, who are evidently in the gall of bitterness on the question of the equality of the sexes.

Apropos of the sex question, there comes the news that the Scotch Court of Session, composed of, we need not say, twelve old males, have decided that ladies are not entitled to matriculate or attend classes in the University of Edinburgh. The plaintiffs were medical students, and have shown themselves in every way worthy of the privileges they claimed; but the judges, far from taking that enlarged view of the common law by which Mr. Wendell Phillips interprets the duty of college managers, decided that the University was for men only. The Russian Government has been acting in a similarly illiberal spirit with regard to the Russian lady students at the University of Zurich. It has denounced them in a circular, which appears to be calumnious, charging them with bringing seeds of demoralization back to their homes, and orders them to return on pain of certain disabilities.

Lord Westbury, honorable as were his parliamentary services in reforming legal administration in England, and brilliant as was his success at the bar and in office as Mr. Bethell, Sir Richard Bethell, the Solicitor-General, and the Attorney-General, will perhaps best be known as the man in whose person the English Lord Chancellorship was more scandalized than by any man who had held it since Lord Macclesfield's day, now one hundred and fifty years ago. Not that intervening chancellors were impeccable; numerous deep topers, profane swearers, and loose livers of various kinds have sat in the seat of Bacon, Jeffreys, Macclesfield, Thurlow, Eldon, Wedderburn, and the other keepers of the royal conscience. But of all those none has been accused of corruption in office till in 1865 Lord Westbury was censured by the House of Commons for a nepotism that wore something of the look of rapacity, and was removed from office in Lord Palmerston's last ministry. Yet it is generally admitted that his punishment was disproportioned to his offence, and that indeed he might never have been censured at all, but that there was an opportunity, which very many were naturally and justly anxious to seize upon, of punishing the arrogance of the man and making old scores even. He was probably one of the most truly and genuinely arrogant-minded men that have lived in late years, and the well-known remark upon a domineering manner as revealing a domineering disposition—that it would have been indecorous and insolent as between the Almighty and a black beetle, characterizes very well his general demeanor towards his fellowmen. Add to this that he had the art of saying severe things in a gentle manner which was suggestive of a sincere pleasure in seeing the blood follow the knife, and the possibility that the vote of censure may have referred to other things than the Leeds registrarship becomes a near possibility rather than a remote one. Innumerable stories are told of his sarcastic bitterness. Lord Westbury's downfall had no breaking effect upon him, and, indeed, a weaker man might have borne up under it; it was recognized that he was to some extent sacrificed to the exigencies of a party about to go before the country in a general election, and which hesitated to weight itself with the defence of a man whom the Opposition were attacking at such a moment and with so popular a cry of onset. At the beginning of a session, after a success at the hustings, his fate might well have been different. He was, altogether, no unworthy member of the company of able men whose names adorn the rolls of the English bar and bench.

Affairs in Spain go from bad to worse, but the Carlists have, within the last two weeks, been gaining ground rapidly. General Cabrinetty, who was one of the best officers at the disposal of the Government, was surprised, defeated, and killed, and his artillery captured, about the 9th or 10th inst. Since then, they have been following up their success steadily, and are apparently receiving recruits very largely both from the army and the peasantry. There can be little doubt that by this time the officers of artillery have gone over to them, and if so, there is every reason for believing that short work will be made of the mutinous battalions of the Republic, and that Don Carlos will be in Madrid before the close of the summer. He is receiving strong support in arms and money from the Legitimist and Clerical party all over Europe, and, as a proof of his confidence in his own fortunes, crossed the frontier on Tuesday, the 15th, and took personal command of his forces. It augurs badly for the Republican cause that the news came on the following Friday that a severe action took place before the town of Igualada, at the close of which the Carlists entered and "sacked" the place. It only needed these small successes, in the present demoralized condition of the people, to give Don Carlos the character of the coming man, and draw to his standard not only all Conservatives, but all lovers of a quiet life.

In the meantime, the "Republicans" seem to be doing everything that can be done by mingled folly and imbecility to help him. We gave a fortnight ago a list of the ministries Pi y Margall tried to form. He kept on trying, and with steady failure, until the 20th, when he, like Figueras and Castelar, was thrown overboard, and a new man, Salmeron, set to work. He on that day formed a Cabinet, and made a speech breathing out the usual threats against Carlists and other disturbers; but while he was talking some patriot exploded an Orsini bomb at the door of the Chamber, we presume by way of enlivening the proceedings. The Cortes then went to work to debate the new constitution, the resemblance of which to Nero's fiddling while Rome burned will be apparent when we say that Barcelona, Carthagena, Malaga, and Alcay have been the scene of insurrections of a more or less sanguinary character; that the army only exists in small mutinous detachments; that the most experienced generals left refuse to command in the north; and that the crews of five ironclads have revolted and run off with the ships. For whom they will declare of course nobody knows; but in the meantime the Government has proclaimed them "pirates." As everybody is doing what he pleases, four provinces, Andalusia, Murcia, Valencia, and Catalonia, have declared themselves independent cantons, not choosing to wait for the new federal constitution which the Madrid sages are draughting so laboriously, and which will probably furnish wadding for the Carlist guns. No such spectacle of moral and political disorder has, we think, been witnessed since the fall of the Roman Empire. Amid all the anarchy of the various French Revolutions the army has remained faithful and obedient, and has finally worked order out of chaos; but in Spain nothing seems to remain to remind one that there is such a thing as a national will and a public force. Under such circumstances Don Carlos, wretched a creature as he is, ought to win, because his victory will be the triumph of human intelligence and co-operation over brute confusion and blindness.

"CONSTRUCTIVE PUBLICATION."

THE press throughout the country has been engaged for some time past in discussing the prosecution of Mr. Dana, editor of the *Sun*, for an alleged libel on Mr. A. Shepherd, one of the members of the new government of the District of Columbia. The libel published in the *Sun* was, in brief, a charge of perjury and corruption in office, and the object of the prosecution, which was managed by the United States District Attorney, Mr. George Bliss, was to have Mr. Dana transported to Washington, to be tried there before a police court, which has, by a recent act of Congress, jurisdiction of the offence. Bringing to their aid the old rule of the English law that the offence of libel is committed not merely in the place of publication, but in every place where the libel is circulated, and copies of the *Sun* having of course been circulated in the District, one A. B. Williams went before the Police Court of the District of Columbia, made a complaint under oath charging Mr. Dana with the publication of the libel in the District, and with his oath an "information" was filed. Certified copies of the papers were sent on to New York, where they were laid by the United States District Attorney before United States Commissioner Davenport. It is hardly necessary, perhaps, to mention this fact, because any one who is at all familiar with the politics of New York knows that when Mr. Bliss lays papers of this sort before any one, he lays them before Mr. Davenport, both of these gentlemen being prominent members of the same political organization, called by its enemies the "Custom-house Ring," and by its friends the "Republican party." Before Mr. Davenport Mr. Bliss had it all his own way. The Commissioner, though still young, is quite a Rhadamanthus, and he had no sooner seen the defendant than he evinced the greatest disgust and scorn, broadly hinted that if he did not admit himself to be the editor of the *Sun*, he would send him off to jail at once, and seemed to be strongly inclined to send his counsel with him. In fact, throughout the hearing, he appeared impressed with the belief that a United States Commissioner is a judge of last resort, with a general criminal jurisdiction of the kind usually exercised by drum-head courts-martial. However, he finally relented sufficiently to allow the law to take its usual course, and the case was then brought before Judge Blatchford in the United States District Court.

Into the details of Mr. Bliss's argument before Judge Blatchford it is unnecessary to go. It was in brief this: The libel having been (constructively) published in the District of Columbia was an offence against the United States. The Police Court, by the Act of Congress of 1870, had jurisdiction of this offence, and therefore, under the Judiciary Act of 1789, it was the duty of Judge Blatchford to order the removal of the defendant to Washington for trial. We must pause for an instant, however, to notice how different was the reception of Mr. Bliss's argument by Judge Blatchford's Court from that accorded it by Mr. Davenport. The Attorney of the United States in a United States court is usually listened to with attention and respect, and this was probably what Mr. Bliss expected to receive. For some reason or other, however, Mr. Bliss was treated throughout this case by all concerned with unmitigated contempt. In the course of his opening argument, he made an attempt to anticipate the line of reasoning likely to be followed by the defence, saying that it "was assumed to be extraordinary" that a person charged with libel "should be asked to prove" the truth of his charges "in the community where the evidence is to be obtained," and declared derisively that "you hear them tell that it is something 'unprecedented,' a 'grasp of despotism,' and all that," when Mr. W. O. Bartlett, of counsel for the defence, at once denied that he had used any such argument, and Mr. Bliss, on attempting to reply, was sharply reproved by Judge Blatchford, who asked him whether "it would not be well to wait until he heard the ground of the other side before he attempted to say what it was." To this Mr. Bliss answered that he had been requested by the leading counsel on the other side to state in opening what his ground was—a reply which seems to have been considered palpably irrelevant, and the game was begun again by Mr. W. O. Bartlett, who warmly enquired of Mr. Bliss whether the insertion of the phrase in the information, "against the form of the statute," was "a mere blunder of theirs in pleading" or not. To this searching question Mr. Bliss was able to make no reply, and Mr. Bartlett proceeded to deliver an argument which it is unnecessary to examine at length; it was rhetorically of the "American Bastille" order, and began with this fine exordium:

> "If your Honor please, this is an application for the performance of one of the most grave and serious functions which it ever falls to the duty of a judge to discharge. You are asked to commit a citizen of the State of New York to the hands of an officer of the Government of the United States, to be transferred to the District of Columbia, and consigned to a dungeon there, and his liberty staked upon the opinion of a police court of that District. It so happens in this case that the man whom you are asked to deprive of his liberty is one of the most distinguished citizens of this great State—a gentleman who, in the extent of his learning and the variety of his attainments, has few, very few peers upon the American continent—a gentleman the purity of whose private character the most malignant enmity has never assailed. Yet, sir, if he were the most obscure, unimportant, unlearned, and illiterate citizen of New York, the question would be equally grave, because, in the possession of civil rights, all men here are his peers and the peers of every man, even of the President of the United States."

Mr. Bartlett having finished his speech, and having suggested that his learned assistant, Judge Shipman, who is a sound lawyer of much experience, gained as a United States Judge, "would present more at length the questions on which he (Mr. Bartlett) had lightly touched," adding that he had merely "skimmed the mountain-tops," but that Judge Shipman would "descend into the depths of the valleys, and bring up some further truths," his learned associate, Judge Shipman, declined to do anything of the kind, and sat still, upon which the fun with the District Attorney began again. Judge Blatchford, having first sternly asked Mr. Bliss whether he had anything further to say, decided the case out of hand in the simplest way imaginable, on the ground that the Constitution of the United States expressly provides that the trial of all crimes shall be by jury, and the Washington Police Court not having any jury, the defendant could no more be taken before it than he could be taken out of the country. The District Attorney then rose to make a suggestion to the Court, but the Court would not hear him, and intimated pretty strongly that the nature of his opening argument had convinced it that no argument of his could have any effect on a properly trained judicial mind. Mr. Bliss made two or three more attempts to address the Court, which were listened to with that sort of impatience with which a judge might be supposed to listen to suggestions of points of law from the prisoner in the dock, and at last had the pleasure of being informed by Judge Blatchford that he had thought it unnecessary to make any further examination or write any opinion, as the propositions of Mr. W. O. Bartlett seemed so plain that no consideration or study could bring him to another conclusion.

The first reflection that this decision suggests is that, if the powers that be wish to have a censorship of the press established at Washington, as no doubt they would be very glad to have, all that need be done is to have an act passed providing the usual machinery for criminal trials—a jury, and then, as every paper published in the country goes to Washington, to have the editors or publishers indicted and brought on to Washington for trial whenever it seems advisable. Mature reflection, however, will, we fancy, convince most people that the danger of any such monstrous attempt at an invasion of the liberty of the press as this is unlikely, for the very good reason that it is impracticable. There are published in the United States five or six thousand newspapers and periodical publications of all sorts; of these, the most powerful and the richest are almost all hostile in a greater or less degree to the existing Administration. They have been accustomed for two generations to the most unbridled license in political discussion, and they are just as much an integral part of the American system as the judiciary or the Executive itself. Under these circumstances, in case of any serious conflict between the man, or rather the party, "on horseback" and the press, we cannot but believe that the latter would soon assert its independence. Mr. Bliss has managed to

make the whole affair so ridiculous that it will probably be some time before another editor is attacked.

Still, though we do not regard the proceedings taken by the unfortunate District Attorney as likely to lead to a regular censorship of the press under authorization of an Act of Congress, it cannot be denied that the attempt may, on the eve of an election, be considered worth making by the Administration, and may give individual newspapers and editors a great deal of trouble. In the present disorganized condition of public opinion, such an attempt might or might not be publicly denounced. Whether it were or not would depend greatly on the popularity of the newspaper attacked. The Ring in New York very nearly succeeded, without any public remonstrance, in getting an act passed by the New York Legislature practically giving them power to incarcerate for an unlimited time and fine for an unlimited amount any editor or publisher opposed to them. If we consider for a moment what would be the effect of Judge Blatchford's implied opinion that, had the Washington Police Court been provided with a jury, Mr. Bliss might have carried off Mr. Dana to Washington for trial, we see the importance of the matter. There are in this country thirty-seven States and ten Territories, and in these forty-seven there are some fifty or sixty United States judicial districts. Every leading newspaper in the country circulates in most of these jurisdictions, so that if a libel published in New York is also published constructively by circulating it in Washington, it is not less published in Boston, San Francisco, New Orleans, and Philadelphia. That is to say, in each of these cities and in a thousand other places, the crime of libel is committed. More than this, it seems to be clear that with each copy of the paper circulated an additional crime is committed. At any rate, it is obvious that, in this state of the law, every time a New York editor "exposes a fraud," he commits an act which it only needs a properly drawn Act of Congress to make a crime in fifty different jurisdictions, and to subject him to fifty different indictments, fifty different arrests, fifty different involuntary journeys from Maine to Georgia, from Alaska to Texas, and fifty different sentences in as many different courts. That this should be law in any civilized country we cannot believe; but if it is, we sincerely trust that some case may come before the courts before long in which it will be authoritatively laid down. Libel is certainly a grave public offence, and every fair means ought to be open to slandered persons to vindicate their reputations in court; but to suppose that in this day and generation Government is to be allowed to hunt editors and publishers through the country on the ground of "constructive" publication, to drag them away from their homes, and deliver them into the hands of distant and perhaps venal courts (there was no reason in the world why Mr. Dana should not have been prosecuted in New Orleans instead of Washington, for his paper has been quite as libellous about affairs in that State as about affairs in the District of Columbia)—to suppose all this is to make a supposition so monstrous that we should have hardly thought it likely to be entertained even by Messrs. Bliss and Davenport.

THE BROOKLYN DEFALCATION.

THE failure of the Brooklyn Trust Co. has called forth a good deal of moralizing, and yet it has not all been by any means, as it seems to us, what the occasion either suggests or demands. The two things in the affair on which the press has fastened most eagerly are the overdrawing of his account by the President to the extent of over one hundred thousand dollars, and the lending of large sums of money on Georgia State bonds and bonds of the New Haven, Middletown, and Willimantic Railroad, which some of our contemporaries characterize as "crimes." Indeed, the *Evening Post* speaks of Mr. Mills's speculating in real estate as if it were one of the worst acts of which a man could be guilty. We are certainly not going to defend Mr. Mills's conduct; the consequences of his sudden death settled the moral judgment we must pass on it. No manager of a financial institution should so manage it that his death must force it into bankruptcy, whether his acts be honest or not. It is an offence against morality, and one of a very serious kind, for anybody, if he can possibly avoid it, to carry on business of a fiduciary sort in such fashion that his death may ruin people. But then, when we come to condemn Mr. Mills, or anybody similarly situated, we ought to be a little careful both in selecting our points for reprobation and in selecting our language, if we wish our opinion to have any weight or to furnish anything in the nature of a contribution to morality. In the first place, there was nothing improper in Mr. Mills's speculating in real estate. Nearly everybody in New York has done it, more or less; nearly all the rich men in New York and nearly every other city in the Union have done it largely. Indeed, some of the greatest fortunes in the country and in the world have been built up by speculation in real estate, and we know of no reason, and have heard of none, for considering this an illegitimate mode of making a fortune. If it be, some of the most respected persons in New York are really disreputable persons.

But then, it may be said, he ought not to have speculated with other people's money without their knowledge and consent. This is perfectly true; and it is here that we touch on the sore spot in his unhappy case. No judgment on him, however, on this point is just which does not take into consideration the usages of the society in which he lived. He did not in the ordinary sense of the term use other people's money. He did what we fear a great many financiers do every day—overdrew his account at a bank in which he had a heavy interest. This has resulted most disastrously, but the atmosphere in which he lived was not such as to lead him to regard it, when he began it, as a breach of trust; and we fear this must be said, in spite of the positive prohibition of the charter. This was foolish and reckless and, in the president of a trust company, very reprehensible, but it is useless to call it a "crime," or to compare it to ordinary theft. It was, we have no doubt, though of course we speak without knowledge, what many managers of financial institutions in this city do nearly every day on a smaller scale. They overdraw their accounts more or less, and as long as their credit is good, and they feel that they can return the money on demand, they have no qualms of conscience whatever about it, and look upon it as nothing but what is called "a loan on call," such as men in Wall Street are making every day. This is a loose way of doing business, doubtless, but it is a way of doing business by no means uncommon. One hundred thousand dollars very likely seemed not at all a formidable sum to Mr. Mills. With his large possessions and his great financial backing, we suppose there was no particular reason why it should; but then death converts many trifles into hideous ruin. The loans on the bonds were simply, as far as appears, errors of judgment, and, as regards the Georgia bonds, were approved by a finance committee.

Now, the reason why this loose mode of doing business exists, and why so many upright men fall into it, and incur the risks to which Mr. Mills has become a victim, is obvious, and it reveals the real nature of the evil of which the Mills tragedy is an illustration. Great banks and insurance companies and trust companies, and other institutions whose business it is to handle vast sums of money, are *nominally* managed, and ought to be *really* managed, by boards of directors; but in practice their management is left wholly, or all but wholly, to one officer—sometimes the president, and sometimes the cashier. The responsibility thrown on him is consequently heavier than should be imposed on any one man, and the temptation to which he is exposed is greater than average human virtue can bear. Indeed, we do not think we exaggerate when we say that no human virtue can stand it unshaken for many years through all the vicissitudes and trials of American life in commercial circles. Men's characters change as years roll by, and their circumstances change greatly, so that seductions which at one time have no power, a few years later may have a great deal. Nor is it misfortune always that breeds temptation. Success, with its attendant audacity and hopefulness, breeds it just as often. Now, why is it that directors do not do their duty, and share in the management of the institutions which they father in the eyes of the public? The

answer is very simple. They have not the time. If you start a bank or an insurance company or trust company, and put on the board of directors unknown men or poor men, you may take it for granted that you will get no business. People will not entrust funds to their keeping, no matter what certificates of character you may produce for them. Nothing but the possession of money is in the commercial world a guarantee either of honesty or sound judgment, and this conclusion of the commercial world is no brutal and baseless prejudice, but a fair and lawful induction from ages of experience. That those who have made large sums of money for themselves are the fittest persons to take care of large sums of money for other people, is an impregnable maxim of sound finance. But the number of rich and well-known men is in every community but small in proportion to the population and the volume of affairs. Moreover, in a community like ours, they are sure to be busy, and terribly busy, and to be tolerably advanced in life. They have large masses of property of their own to look after, and most of them keep up the habit of "operating" and taking ventures down to the day of their death, and many are even such villains as to speculate in real estate. With all this burden on them, at a period of life when the nervous force begins to fail, they are incessantly solicited to allow the use of their names in boards of directors, and their relations to each other and to the community are such that they cannot refuse. So that there is hardly one of them who is not on a dozen boards and committees, and is not nominally responsible for vast transactions of which it is physically impossible for him to have more than the slightest knowledge. Consequently, whenever a bank or trust company fails, the chances are ten to one that we find the directors as much astounded as anybody else to find that some one of its officers has walked off with the greater portion of its capital. The newspapers expend their regulation column of morality on "the defaulter"; his friends prepare a petition for his pardon; and one or two of the directors are interviewed by a reporter, and declare that they are deeply mortified by what has occurred, and that they trusted the delinquent as they would have trusted their own father, and the whole affair is forgotten in a few days.

Now, what is the remedy? Of course there is the old remedy, on which we have to rely for the extirpation of so many abuses and the righting of so many wrongs—the growth of mankind in grace. But then, as the warmest optimist must confess, this is slow in its operation. Few of us have time to wait for man to become as good as he ought to be. Those who have property to preserve are, therefore, forced to resort to artificial means of supplying any lack of integrity he may still exhibit, and there is doubtless a certain lack of integrity in pretending to take charge of people's affairs for them and not doing it. How shall we awaken the consciences of our busy and useful rich men into a sensibility to this fact? It is difficult to see any way to this but in a stringent increase of pecuniary responsibility on the part of everybody who pledges his reputation for the soundness of any institution or enterprise. This might help in some degree to mend matters, but yet we doubt whether it would do much. The spirit of trust in friends and associates is too strong to be chilled much by anything short of penal legislation. If every director of the Brooklyn Trust Company had known that he would lose all his property if Mr. Mills overdrew his account, we doubt much if he would have looked after Mr. Mills's account a whit more carefully; but we dare say that if he knew he would go to jail if Mr. Mills did anything wrong, he would insist on knowing what he was about. But then, could we get financial institutions managed at all if board meetings were attended by policemen ready to carry off the members if the accounts were not straight?

THE COLLEGE RACES.

SPRINGFIELD, MASS., July 19, 1873.

Of all the spectacles offered the visitor to Springfield this week, the first to occur that was at all exciting was the foot-race on Thursday morning. As for Tuesday's rowing match between Mr. John Biglin and Mr. Ellis Ward, it came to an end almost before it had well begun, Ward's sudden sickness disabling him entirely. And, indeed, had both the men pulled through and crossed the score, the vast majority of us congregated in the city would have cared very little for this exhibition of professional skill. Beyond knowing that a boating man must lie about in the sun without any shirt on, so as to sunburn his neck and back till the newspaper correspondents report him to be browner than any of his competitors, most of us were unlearned in the art of pulling a shell outrigger; we were not able, then, to get much pleasure from watching for a minute or so the diverse methods of two oarsmen working at their trade for money—and oarsmen who were persons in most respects nowise interesting or admirable. Residents of New York might perhaps have contemplated one of them with some degree of interest. Of the five hundred dollars which he was to win he, we learned, was to have one hundred dollars for his share, while his backer, a relative of his, was to have four hundred; and the latter remarked to a member of the press, to whom he imparted this information and other information relative to other pecuniary transactions, that he did not wish the facts imparted to be made known, as, though formerly a "sport," he was "now in the political arena," to use his own expression—as indeed he is, having last autumn been elected upon the reform ticket. In general, the movements of these gentlemen gave little concern to anybody except a very ill-looking importation from this city of gentry of reforming proclivities similar to those above indicated; and everybody will hear with satisfaction that the Rowing Association has voted that professional trainers shall no longer be employed by the colleges.

The single-scull race on Wednesday between Mr. Swift of Yale and Mr. Dutton of Cornell University, was also an affair that attracted little attention, and occasioned little excitement except among the personal friends of Mr. Swift, who have good reason to be pleased with him. The spectators were few, the persons who had authority to appoint the day and hour for the race having ingeniously contrived to go wrong in this instance, as in nearly every other matter, from first to last, that required some organizing ability. They named the same time set down for the base-ball match between the Philadelphia "Athletics" and the equally distinguished "Boston" nine; they laid out the course at an unreasonable distance from the city, while the base ball men were within five minutes' walk of the Massasoit House; and they failed to provide a referee, or even to get together a majority of their own members at the starting-point. The upshot of their management was that the race was delayed for an hour, and the few who went down to see it waited impatiently in the heat, and developed a temper ill-suited for enjoyment. I must say here that the intentions of these committee-men were of the best, and that their courtesy throughout was unfailing, and in striking contrast with the behavior of most managers of most affairs similar to this; but in such matters nothing supplies the place of experience and administrative talent, and unless in future there is the same pains taken to secure a good central executive officer that is taken to secure a good referee—and the referee is, on the whole, the much less important personage—intercollegiate regattas will be vastly less pleasant and popular than they ought to be. And in further mitigation of the confessed incapacity of the collegiate committees, I may say that it was fully equalled, so far as I could observe, by the other authorities and managers, all and sundry, who were put to the test of the regatta week. Perhaps I should make an exception in favor of the State Constabulary force, which astonished the city police by making upon the gamblers and other sinners one of those familiar descents which have so great an effect in diminishing wickedness, and also in enhancing the repute of the invincible and incorruptible State Constabulary. But the exception can easily be made by any one who considers it required. None, I think, will be made in favor of the local committees, the hotel-keepers, and others upon whom the visitor was in a great measure dependent for information and comfort. The breaking down of the hotels under the unwonted pressure was a sight to see. One's worst enemy, if of an irascible temperament, might have been punished for the hostility of a lifetime by being set down at a Massasoit House table on Thursday to get his breakfast and dinner and tea. The national ability to keep a hotel I never saw so sadly discredited. The art of colonizing guests; the perhaps more difficult art of declining to take a man's money for a dinner when you have no dinner to give him or only a dinner at the end of half an hour and at the hands of a distracted though double-feed waiter—these arts the principal hotel-keepers of Springfield seem never to have learned. If I perhaps seem to make too much of these things, I need only ask the reader to remind himself for a moment of the final outcome of this general inefficiency. Half a dozen crews of fine young fellows, who for months have been practising vigorous self-denial; who have been working hard in honorable emulation; who at last have very gallantly rowed a beautiful race, are told at the end of it that nobody know

where they were at the finish; that some say one of them was ahead, some say another, some say another, some say another; that really the place of the three leading crews only and that of the last crew of all can be fixed. Worse still, if there be a worse in the case of so great a hardship, the men who are declared to have won the race are told that, had the surveyors of the course known their business, it is certain that another crew and not the declared winners would have taken the prize, and that, though they may take the flags, they were in reality beaten. For management such as this there may be forgiveness, but there is no excuse.

To return to the single-scull race. The few spectators of it saw something which very scantily repaid them for their ride down the Agawam road. The dust there was heavier than I ever anywhere else saw it. The square in Old Cambridge in time of drought was nothing at all to it—or rather was a place of streams and water-brooks in comparison. It was literally as difficult at times, and at times of frequent recurrence, to see the carriage that might be in front of you as to see distinctly before you in a driving snow-storm at dusk. The enveloping cloud filled mouth, nostrils, eyes, hair, and lungs, and incorporated itself with the texture of one's garments. I speak of this road to advise every one, pleasant as is the view of river and valley and cultivated New England which it commands, to keep far away from it on any similar occasion, unless it has been wetted down by a two days' rain after the dryness of the Massachusetts June, or unless the city of Springfield shall have done something to make it endurable. Going down this atrocious thoroughfare to a point from which the finish of the two-mile course was distant a long half-mile, we could see at about six o'clock two single-scull boats coming down the beautiful river, which was as smooth between its green banks as a strip of blue steel. One of the two, so far in advance that at first we hardly believed it to be racing, we soon made out to be manned by an oarsman who, sure enough, wore the regular Yale blue. This was Mr. Swift, a Senior of the academic year just gone, who passed us pulling a long, rather slow stroke, and evidently rowing well within his capacity. Laboring some quarter of a mile behind Swift, and also rowing a slow stroke, came the red and white Cornell colors. As Dutton rowed past, occasionally pausing or half pausing, looking over his shoulder at his antagonist, and then settling down again to his hopeless task, I recognized in him a Cornell man whom in the morning, at the meeting of the captains at the Cornell headquarters, I had contrasted with the youthful representatives of several of the other crews. His apparent age and maturity, in which he did not greatly exceed others of his fellows in the Cornell crew, suggested the thought that a contest between men like him and oarsmen of twenty and nineteen was a contest between men and youths, between bone and gristle, and that the chances in such a struggle must be heavily against the crews sent up by Harvard, for instance, or Trinity, or Columbia. But I knew that a better instructed eye might probably judge otherwise; and the testimony of the single-scull race I found myself accepting readily as corroborative of such a judgment. Mr. Dutton rowed the two miles in about a minute (59 sec.) more than Mr. Swift's time, which was 14 m. 54 sec., and which is said to be the shortest time in which a course of that length was ever rowed over by any unprofessional oarsman in America.

The institution of a prize for collegiate pedestrianism is understood to have been a device of Mr. William Blaikie's; that it is under the patronage of the proprietor of the *Herald* is more generally known, that journal having some time since made the fact known to the several continents and islands. Mr. Blaikie has recently been led to the conclusion that Americans are defective in legs and in lungs, and at this writing he energetically holds the belief that not boat-racing itself, though boat-racing has come to be so much an affair of the calves and thighs, is half so likely as pedestrianism to deliver our countrymen from their bondage to the horse-car and sedentary complaints. He has therefore bestirred himself and has been mainly instrumental in adding to the aquatic contest this terrestrial feature, and he entertains the hope and expectation that in years to come the runners will be very numerous. Still more reasonable than it is would this expectation be were the conditions imposed upon the contestants less onerous in one or two particulars. The rule which requires a winner of the cup to enter himself at the end of the year and win it a second time before he can hold it as his own, will assuredly repel some men who would compete were the first decision final, and who, by the way, would as soon compete for a cup of one-half or one-fifth the value as for the cup now given, of which the value is five hundred dollars. There should also be more than one prize.

Thursday was a damp day, not too warm, but warm enough in its dampness to be close, and not damp enough to keep the dust of the ill-kept race-course at Hampden Park from rising beneath the wheels of the trotting sulkies. It was a trying atmosphere for the runners, of whom three appeared before the judges' stand at the ringing of the bell. Five had entered, representing respectively Amherst, Cornell, the McGill University in Canada, Dartmouth, and Harvard; but the two last-mentioned had withdrawn, for reasons not positively known to me, but I believe the Dartmouth man was taken sick. Other alleged reasons that may or may not have had weight perhaps deserve a word here. It is said that objections were made to the entry of Mr. Bowie, the Canadian, on two grounds. One was that the terms of the invitation included only colleges in the United States, "in America," not meaning in Canada. The second was that Mr. Bowie is a professional runner, or at least "had run for money." The decision seems to have been that, in the first place, although "America," as used by our provincial friends and their English fellow-subjects, is a term into which they have imported some little ambiguity, Canadians may nevertheless compete. In the second place, Mr. Bowie, as I am assured by his friends, is so far from being a professional runner, that he is a gentleman of some fortune, who has this year taken second honors in law in his university. He has at different times run in races, and whenever he has won he has taken the offered prize—purse or medal.

The race was quite a pretty sight. The men came to the score in very light undress, and all were bareheaded except the Canadian, who at first wore an ordinary straw hat, which, however, he soon threw aside. He had a very businesslike look, although he was by no means so great a favorite with the audience as he was with myself—I, to tell the truth, having overnight been informed of his achievements in Canada on foot and on snow-shoes, and strongly advised by my informant to "make a dollar" by betting against the popular favorite. The favorite was such mainly, I think, because the reporters had got hold of him earlier and more frequently than of the others, and had given full descriptions of his being every day blanketed, sweated, and rubbed down, like a race-horse, and of his every day losing a certain amount in weight, although, after having been rinsed off with alcohol, he ate very large quantities of meat and, if I recollect right, potatoes. But he was still too heavy-looking when he came to the line; of his gait and carriage a description will not be needed by the reader who has observed the gait and carriage of a certain eminent pianist, of Russian origin, who has recently been among us. It was not a movement suggestive of swiftness. Very different in appearance was the man next him, the Canadian. He was of a very trim figure, slight but well-proportioned; his limbs were light and clean, and his rosy, provincial complexion showed that his spareness was not the result of sudden training down, but that he was of a naturally lean habit. The third runner had a promising look, but in comparison with the light compactness of the Canadian's figure his appeared rather loose-jointed. Each held in his hand a little roll of grass or paper upon which to clench the fingers easily, and at the word "go" they started, the pace seeming rather slow. It took them round the first half-mile, however, and in front of the judges' stand again, in two minutes and forty-nine seconds, the Amherst man leading, as he did almost all the time, though the Canadian and the Cornell man each were at one time and another in advance. They all kept pretty well together, the Canadian jogging along contentedly, Mr. Phillips of Cornell working more with his hands and shoulders, and Mr. Benton moving with a long step and with more of what the horse-fanciers would call action. So they went round the course three times, the crowd becoming more and more interested, and pressing forward on the track regardless of the warning of the judges and unheeded by any policemen. As the last half-mile is two-thirds done, Bowie, who is ahead of Phillips, suddenly passes Benton, and all three run hard. Only for a moment, however; for Benton, seeing his lead gone, and perhaps distressed, turns from the course and is out of the race, and Phillips and Bowie come up at a great rate, Phillips running in a manner to call out admiration for his courage and his speed. At a few rods' distance from the line I saw Bowie turn his head to see what had become of Benton, and as his eye fell on Phillips close behind him, he turned his face to the goal again; his hands, which had been on a level with his heart, he dropped straight and stiff by his side, and in a flash he was across the line. Phillips came in but a second and a half behind him, the winning time being 11 minutes and 18½ seconds. Bowie has made the same distance in the recorded time of 10 minutes and 40 seconds; and if every one did not run faster when alone than when somebody is running against him, I might give some very remarkable figures as to the practice time of the other runners. Those who witnessed this race will agree with me that with proper care as to track, entries, and prizes, it can be made a very welcome addition to the sports and spectacles of the regatta week.

Rowing down the river on Wednesday morning, and riding along the bank in the afternoon, it was possible to see more of the crews, both individually and as "teams," and it was more interesting to see them, than when they flashed along over the course in the struggle of the following day. In the old-time regattas this was not so. At Worcester, in the days of turning races, we could stand at the distance of a rod or two and see the beginning;

the eye could follow the boats all the way up to the place of turning; we could watch them as they came down along the mile and a half home; as they passed the stand going up or down, the very faces of the men and each motion could be distinctly seen, and the finish, like the start, was in full view. In the straight-away race little of all this can be done. Along the Springfield course there are half a dozen points where one may take a position on the high bank, and, looking down on the floor of the river, can follow for several minutes the course of the fleet of boats, and, for half a minute or so, can see the individual actors in the struggle. A thing long to be remembered I can easily imagine this sight to have been, and probably those spectators who contented themselves with this were wiser than the vast majority, who instinctively insisted on witnessing the last of the struggle, or trying to witness it. Really to do so was not easy, and the spectator reminiscent of the Beacon course along the Boston mill-dam, or of the course on Lake Quinsigamond, must have wished much for the one or the other of them as he looked from either the east or the west bank across some half a mile of water, and tried in the cloudy dusk to distinguish purple and white caps from lavender, or light-green and white from light-blue and white, or tried to make out whether Harvard, just under his feet, was ahead of Yale, away over towards the western shore, or was behind.

Nothing in the race itself, so far as I could see it, made so fine a picture as some of the practising which I saw on Wednesday, when several of the crews could be seen, each by itself, trying their boats in starts and in spurts, as I saw the Harvard Freshmen crew, and afterwards the University crew, under the momentary tuition of Mr. Blaikie. The performance of the latter crew was, to my uninstructed eye, perfection; it certainly was a beautiful thing to look at as the boat, under the impulse of the six oars moving like clockwork, went through the water at a rate that would have astonished the oarsmen of a dozen years ago, when sliding seats had not been thought of, nor hardly shells themselves; when college crews were not above rowing half their races in lapstreaks, and when twenty and twenty-one minutes was no very bad time over a three-mile course.

Before coming upon this crew we had been to one and another of the quarters, and also seen several of the crews on the water or embarking. First, we found the winners of two years ago, the Massachusetts Agricultural College men, standing under the tall trees at the foot of the steep bank of the river, watching one of the Ward brothers, a blue-shirted gentleman, looking something like an unlettered Connecticut deacon, who was oiling the grooves of the sliding seats, and otherwise caring for the boat. Like most of the other unprofessional boating men whom I saw at Springfield, these young fellows, with one or two exceptions, had the somewhat gaunt and anxious look which compels one to think that, full of spirit and determination and strength as they all are, they have not yet learned their business in the matter of eating and drinking and otherwise training themselves for a race. The lack-lustre eye and thin cheeks of at least one of the crew were ominous of the fate that was in store for them on Thursday, and seemed, to my mind, to justify the prediction of a skilled observer that the Aggies, as they are called—or the "Amherst Agricultural" as distinguished from the "Amherst Intellectual"—could not reach the score among the first three boats, and that with very little encouragement a man might reasonably bet that they could not be among the first five. One of their men, however, was probably the most accomplished boatman on the river. "If I had five more like him," says their trainer, with whom we have fraternized and are smoking a cigar, "we could take care of this race." A sort of a Yankee Bunsby this Mentor and Palinurus was, with a dry sageness, obvious and sound and unpretending, like the weather-wisdom of elderly farmers, whom he much resembles. One thing he could tell us, he said; if we had not been at Saratoga Lake when he and his brothers beat the Tyne crew and the Taylor-Winship crew, we had never seen a race. The first men in the world were there—by which he seemed to mean the Taylor-Winship crew, the Tyne crew, and his own, but perhaps not the Biglins. Only one thing was wanting to that race, he said—the Nova Scotians were not there; and upon this head he spoke with brevity, indeed, but with a sobriety and an earnestness which irresistibly suggested that it was sincerely a grief to him that the Nova Scotians were absent, and that perhaps it was as well for them that they were not present on that occasion. There never was anything like it, he said; at the end of the five miles all the crews were right together. As for to-morrow's race, the Harvard boys would win it. They had advantages over his crew as regards opportunity for practice, and, what was more, for becoming accustomed to boats.

This interview had been preceded by the embarkation of the crew. Dressed in their oldest clothes, this solemn little company carefully lifted their boat down the bank and into the water, and placed it cautiously broadside on beside the float. The captain, taking off his shoes, dips them into the river to wash off the sand and mud, and after the water has drained out of them through a dozen holes, he places them inside the straps of his stretcher and gives the word, "Two and four," upon which two men take their places in the boat, a bystander or two holding her in place by the blades of the oars, which are lying in the rowlocks. Next "three and five" seat themselves, then bow and stroke, and then cautiously sidling out, in a second or two the almost invisible craft is going at racing speed down the river, and by-and-by we are driving down its bank and watching them and their competitors on the water. Or we are taking a look at some of the men on land, for some of them are not now at work, and do not intend to be till to-morrow. "Are your men going to be on the water to-day?" we ask one of the trainers. "No," he says, "they're goin' to church;" and his tone—which smacks of the Bowery, and suggests that he is not a nice companion for the young—indicates that he considers that "no kind of conduct."

Of the races themselves I cannot say very much. We saw the Yale freshmen most handsomely beat the crews from Amherst and Harvard, the latter faring very much as the Cornell man fared at the hands of Mr. Swift the day before, and Amherst faring somewhat better but not well; and we saw the finish of the University race, though most of us could make out but little of it with distinctness, so long had the race been delayed, so dark was it getting, and so imperfect were the means of distinguishing one crew from another. This latter is a thing that very badly needs correcting. But that Yale was pulling most excellently we could distinguish; that Harvard had crossed the line first we thought we saw; but that there was an oddity about the finish flags was certain, especially to those who had examined the course the day before, as the captains and judges ought to have examined it; that every boat that started was in at the end could be seen by those who stayed to count them all. Instead of that our party counted half a dozen of them, and then made for our carriages "across lots," so as to drive off early and keep out of the throng that blocked the road to Springfield and cumbered the ramshackle ferry-boat and bridge. A race splendidly rowed by the contestants and shamefully bungled by the managers, is what every one who saw it will pronounce it to have been.

THE NEW RÉGIME IN FRANCE.

PARIS, July 4.

THE elasticity of the French mind is truly wonderful. A few weeks ago it seemed as if everything was lost. One of my friends, who is perhaps now the first bibliophile of Paris, sent all his precious books to England, so that they should not fall into the hands of the Commune. "We are drifting into the legal Commune" was a sentence in everybody's mouth. M. Thiers appeared to all the Conservatives like the image of Death on the walls of Basle, conducting priests, girls, old men to the same fate. Now the nightmare of radicalism and Communism is almost forgotten. French society is again in an easy, happy mood, and everything is rose-colored. Radicalism and even republicanism have always had a somewhat factitious importance; if it had not been for the complicity of M. Thiers, the former chief of the constitutional party, the Republican cause would long ago have been abandoned by all except zealots and by the working-men, for whom the Republic is the synonym of the destruction of the present social order.

The new Government of France is hardly conscious of its overwhelming force. It represents the end of the revolutionary period, and it is considered by the French nation as the preface of a constitutional monarchy. It is even now, under the name of republic, a real monarchy. MacMahon is the king; he reigns, and does not govern. He is a soldier, and is contented with receiving foreign potentates. He will show to the Shah of Persia all the splendors of Paris and of Versailles. He goes to reviews and holds a court. The political work is confided to the Duke de Broglie and to his colleagues; and the majority in the Chamber is no more a shifting majority, as it was in the days of M. Thiers; it is a solid, compact, invincible majority, which draws every day more Republican waverers to its side. Gambetta is nowhere, obliged to recite banal phrases on the anniversary of General Hoche, as an actor repeats a familiar song. M. Grévy has vanished. The man who so long presided over the stormy debates of the Assembly can now be seen in his shirt-sleeves at the Café de la Régence, playing cheerfully at his favorite game of billiards. M. Thiers keeps still a few ends of the broken strings which he had in his hands, but his glory is gone, and everybody will tell you that he is "played out," to use an American phrase.

The present Government is somewhat in the position of a man who does not know how to use his strength. It can make mistakes—it has made mistakes; some Ministers have not shown themselves equal to the situation. M. Beulé, who made himself a reputation as a scholar, has not so far proved that a good Hellenist can become a good home-minister; but with all this there never was such a strong government. Prince Bismarck has tried to discourage Marshal MacMahon; he has written to him with his own hand a

very overbearing letter on the subject of the Alsace and Lorraine banners which are displayed by some pilgrims (for with the fine season the fashion of pilgrimages has set in again); but the ill-will of a minister who has every reason to regret M. Thiers has only given more prestige to the general of Woerth and Sedan. The Duke de Broglie is not very popular with the diplomatists; but the *hauteur* which belongs to his race does him good service in the Chamber, and he was covered yesterday with almost deafening applause when he said to Gambetta, who had advocated again a dissolution of the Chamber: "I don't wonder that M. Gambetta wishes this Chamber to die; he would not have allowed it to come to life; but as it was born without his permission, it can live also without his permission." What the French people admire in their rulers above everything is authority. M. Guizot had this authority, this *hauteur*, and it helped him during ten years. The Emperor Napoleon III. had it; there was power even in his silence. M. Thiers never had the true attitude of a statesman; he talks too much, he is too elastic, too malleable, too fond of intrigue; and it will, I suppose, always be a wonder how he destroyed, in the course of two years, his own power and the confidence which a distracted country had placed in him at a most critical time in her history.

The Duke de Broglie and Marshal MacMahon appear to me to be both endowed with this consciousness of power which is so necessary to the rulers of this nation; and if they can keep united, the new administration will promptly destroy every vestige of the revolutionary work of its predecessors, and prepare France for definitive institutions. One of my friends in the Chamber said to me yesterday: I am almost afraid to see the temper of the Assembly; our extreme legitimists, our *chevau-légers*, as we call them, are almost moderate now in comparison with the numerous deputies of the Centre, of the neutral political zone, who have so long been influenced by M. Thiers. They feel that there was no necessity for all the faults they have committed in order to please him, no necessity for temporizing and conciliating the radicals, for denouncing the treaties of commerce with England and Italy; they see that France is left alone in the world, and has no real alliance; that the radical doctrines had been spread with the permission and connivance of the Government in every town and every village; that the home policy and the foreign policy have both been weak, illogical, and powerless. Their anger against M. Thiers is equal to the confidence they once had in him. They can hardly bear with patience his occasional return to the Chamber. More than four hundred deputies vote now together on every question, and public opinion, influenced by this tremendous show of power, is forcibly drawn back towards a thoroughly Conservative policy.

Every government, however, has a germ of decay; this germ, under M. Thiers, was radicalism; in the new administration, we may call it clericalism. Most of the new Ministers are men with strong religious opinions; but religion and clericalism need not go together. The Duke de Broglie, who is the leader of the Liberal Catholics, and who has often been attacked by M. Veuillot, the leader of the Ultramontanes, is conscious that his real weakness lies in the fact that many minds do not make the distinction I have just suggested. He has been very anxious not to appear clerical; he has maintained several Ministers abroad who are noted for their irreligious opinions, and I may name M. Fournier, a notorious partisan of the abolition of the temporal power, who nevertheless remains in Rome.

The Liberals cannot but see that there is a religious revival in France, and they can hardly object to it, as it springs from some of the noblest sentiments. I have spoken to you, on various occasions, of the numerous pilgrimages, of the perpetual flow of travellers to holy shrines which had long been deserted. There is no doubt that this religious phenomenon is a sort of protestation of the national sentiment; when everything has failed on earth, men's eyes turn naturally to heaven. The mystic light which guides many a humble heart to Lourdes, to Notre Dame de Fourvières, to Peray le Monial, and such places is the same which once guided Joan of Arc to Blois and to Orléans. We may find also in this religious revival a protest against the crimes of the Commune. How was it that the fury of the Communists was chiefly directed against old and disarmed priests? It is a strange mystery; but is there anybody, whatever be his philosophical or religious opinions, who can meet a priest in the streets of Paris without seeing in his *soutane* the livery of martyrdom, and without feeling a sort of involuntary pity?

For all these reasons, the tide of religionism, if I may use the word, has been constantly rising since the war and the Commune; but any interference, any help of the state, instead of favoring this spontaneous revolution, would be more likely to stop it; it would interrupt the work of grace. The Government and the Assembly were unfortunately called upon, a few days ago, to give an opinion on a singular decree of the Préfet of Lyons concerning the civil interments which take place in that town. Lyons is divided between Catholics and unbelievers, equally fanatical. There are as many as sixty or seventy civil interments every month; that is, interments which take place without the assistance of any priest. Walter Scott tells that even in his youth it was not uncommon to dispense with a minister at the funerals, such was the horror among the Calvinistic Scotchmen of the Catholic theory of prayer for the dead. The sentiments of the Lyonnese Radicals is not the same; they are not afraid of insulting by their prayers the power of God; they believe in no God, they do not believe in the immortality of the soul; they are pure materialists. Their funerals had become a public scandal, as they were made occasions for political manifestations in the most populous quarters of the town. The "Society of Free-Thinkers" undertook all the expenses, collected money to cover these expenses at the gates of the cemeteries, and positively hunted for corpses in the hospitals and in the poor families of the towns. The new Préfet, a very energetic man, one M. Ducros, put a stop to these scandals; but he somewhat overstepped the limits of the law, as he obliged every "declaration" of a death before the registrar to be accompanied by a declaration of the religion in which the deceased had died and would be interred. He decided that all the civil interments should take place at six o'clock in the morning in summer, and at seven o'clock in winter, and marked the routes of the processions to the cemetery. This he had a perfect right to do as charged with the police of the town and the cemeteries; he can make the strictest rules for all interments, but the Code Civil does not allow him to make any distinction between interments of one kind and interments of another kind. The law which instituted the French registry makes no mention of the religious faith either at the birth, or at the marriage, or at the death; and there is no doubt that if one of the interested parties refused to make this declaration, and if the whole matter were brought before the Council of State, the decree of the Préfet of Lyons would be annulled.

Political bodies do not act in the same spirit as judges; the law-makers are not the best interpreters of law, and the Chamber endorsed th e decree of M. Ducros by a large majority. The Government felt that it was on dangerous ground. The Ministers did not represent the measure as applicable to the whole country; they pleaded the exceptional character of Lyons, still under a state of siege, and the political character of the civil interments in that town, the scandalous conduct of the "Society of the Free-Thinkers," and so on. The Chamber made a decisive reservation for the liberty of conscience and of religious worship; but it is not the less true that if to-morrow a respectable man of the Littré stamp died in Lyons, and ordered his friends to bury him without the assistance of a priest, as he had dispensed with this assistance all his life, he would be taken to his grave at an exceptional hour —at the hour, as a Catholic paper said, when all the refuse of the town is carted away.

The Lyons incident is not so important in its actual results as in the fact that it has impressed on the Government a clerical stamp. It is in the nature of the clericals, as it has been of the Radicals, to be more and more exacting. They will ask a heavy price for their support, and it will require much courage in the Duke de Broglie to keep them within bounds. It is long since I foresaw that the religious question would play as important a part in French politics as it does in the politics of the happy little kingdom of Belgium. There are two parties in Brussels, the Catholics and the Liberals, and the King acts between them as a sort of arbiter. But a long use of liberty has accustomed the Liberals in power to be tolerant to the church, and the Catholics in power to be tolerant to the heretics of all shades. We are not so advanced in France; and if the Belgians gain from us by copying our fashions and our manners, and robbing us of our books and dramatic pieces, we shall gain much by copying their constitutional habits.

RENAN'S ANTICHRIST.

II.

PARIS, June 21.

AFTER the persecution of the Christians under Nero, the church of Ephesus became for a time the centre of the new religion. The refugees from Rome fled to Asia, and the atrocities of Nero, mixed up with the traditions of the anti-Pauline and Jewish Christians of Asia, became, so to speak, the ground from which sprang the Apocalypse. At this very time, the Jews in Judea had been seized with a sort of moral fever, which M. Renan can only compare to the malady of the French mind during the Revolution.

"The causes of the crisis were ancient, and the crisis was inevitable. The Mosaic law was the work of exalted utopians possessed with a powerful socialistic ideal, and the least political of men; like Islam, it excluded the notion of a civil society parallel to the religious society." He says, a little after-

wards: "A nation which devotes itself to religious and social problems is politically lost." Judea, as a part of the Achemenid Empire, had been rather quiet; it remained so under the Ptolemies; but the revolts began under the Seleucides, when Antiochus Epiphanes attempted an Hellenic propaganda, and insisted on having statues of Jupiter everywhere. The Jews cared little for their political independence, but no race was ever so attached to its religious institutions. The Jews never formed a true nation, they always were internationals; the synagogue, the temple, the congregation, was and is their only centre of attraction; their true king is the doctor of the divine law—the prophet. Between the Romans and the Jews there was a complete, an incurable antipathy, as Rome represented a purely civil society, without any admixture of theocracy, a rational and secular government; the Jews had their own divine law, which was irreconcilable with the Roman law.

Renan describes in vivid colors the state of Jerusalem: 1. "The Roman party, composed of epicureans and voluptuaries in possession of the highest dignities of the church;" 2. "The Pharisaic middle classes, of the Josephus type;" 3. "The zealots, fanatics, mendicants, who fed their imagination's with prophecies, in a state of abnormal exaltation;" 4. "Brigands, robbers, ready for plunder;" 5. "Dreamers who were quietly praying, holy and devout personages."

The zealots, the low churchmen, formed the only active party; amidst the corruption of the high churchmen and the cowardice of the Pharisees, they were sure to become, in a crisis, the masters of the city. The popular mind was full of Messianic prophecies; the zealots did not conceal their contempt for their Roman rulers. Florus abandoned the town, and retired to Cesarea. "It was a very culpable act; an armed power owes it to the city which it occupies, and where there breaks out a popular revolt, not to abandon it to its own fury before having exhausted all the means of resistance." Florus once gone, it became evident that the Roman troops could only re-enter Jerusalem through fire and blood. M. Renan throws here some indirect blame on those who quitted Paris on the 18th of March, and in many a passage the zealots and the Pharisees remind him of the Communists of Paris and of the Conservatives who remained the inert spectators of the horrors of the Commune.

In five months the insurgents had become masters not only of Jerusalem but of Judea and Galilee; the Greeks and Syrians of the East resented the triumphs of the Jews as a personal insult. They were loyal to Rome and intensely hostile to a church who threatened all the old temples with destruction. Horrible massacres began at Cesarea, all over Syria, at Alexandria, at Cyr; the Roman legate, Cestius Gallus, soon arrived with an army, and laid siege to Jerusalem. He was defeated, and this victory exalted the zealots almost to frenzy. The Jews began really to believe that the work of Augustus would soon be destroyed, that the last days of Rome had come, that the Messiah would soon appear.

Vespasian, meanwhile, was preparing his campaign against Judea. He first invaded Galilee, slaughtered the whole population, and then arrived in Judea. In this intense fever, which augmented every day, the position of the moderate party was no longer tenable. Bands of plunderers, after desolating the country, had fallen back on the capital. Those who fled before the Roman arms came in their turn and brought famine with them. There was no effective authority; the zealots ruled; all those who were suspected of "moderatism" were massacred without pity. So far, war and its excesses had respected the barriers of the temple. Now zealots and brigands lived in the holy shrine; all the rules of legal purity were forgotten; the floor was soiled with blood. In the eyes of the priests, there was no greater crime. For many devout people, this was the "abomination" predicted by Daniel which should come in the holy temple on the eve of the last days.

All this history of the siege of Jerusalem, the details of which have been left to us by Josephus, reads like a nightmare. Everybody has heard of the *physiological* moment predicted by Prince Bismarck, when famine, anarchy, fear, fury, would drive Paris mad. The Commune was the climax, the true physiological moment. It only came after the great catastrophe. In Jerusalem it came before. The old sacerdotal families were killed. Jerusalem was in the hands of demons; during its long siege, Vespasian heard the news of the death of Nero. The conscience of mankind had at last revolted against the imperial murderer. The East had not rebelled; it was more occupied with the siege of Jerusalem than with anything else; but Spain and Gaul gave the signal of revolt. The legions one after the other made their *pronunciamiento*. They proclaimed Galba as Emperor. Nero saw at once that he was lost, and his only care seems to have been to prolong as much as possible the drama, the issue of which he knew beforehand, and to save his head and his body from the outrages of the executioners. When he had received the fatal wound from the hands of a friend who consented to kill him, as he had not the courage to strike himself the blow, the centurion arrived, and Nero, dying, told him, "You come too late"; he added, "This is where fidelity is come to." Fidelity! how could he pronounce the word who had consciously been unfaithful to the most radical instincts of human nature, who had killed his mother, his wife, his tutor, his friends, who had outraged all the laws of Rome?

The Apocalypse, which seems at first the work of a wild phantasy, is better understood when you place its origin in the interregnum between Nero and Vespasian, when the whole world seemed convulsed, when not only the Roman Empire seemed tottering, but all sorts of meteors, earthquakes, volcanic eruptions, astonished and frightened the nations. A false Nero had appeared. The true Nero had died too easily to satisfy the hatred of the Asiatic churches. Why could not the enemy of God appear again and die a sublime death in the eyes of God and the angels? This desire was father to the Appocalyse. The author addresses himself to the seven churches of Asia. He writes in Patmos, which was a naval station between Rome and Ephesus. The sombre enthusiast, thrown on its shores, has no eye for the calm majesty and peace of the Archipelago, for its azure sky; his eye is filled with awful visions.

Renan's interpretation of the long dream of John must be read in his book, and I cannot follow all its details. The four-and-twenty elders represent humanity. The lamb slain is Jesus, the paschal victim; the four beasts, full of eyes, represent, as in Ezekiel, divine attributes, wisdom, power, omniscience, creative force. The Lamb opens the book with the seven seals; the prophetic drama begins. As the first seal opens, we see the triumph of the Roman Empire, its apotheosis under the form of a white horse, with a crowned cavalier armed with a bow. The red horse means war, the revolt of Vindex, the revolt of Judea. The black horse with a rider who holds a balance means the famine under Claudius in the year 68 of our era. On the opening of the fourth seal comes the pale horse, Death. Then come the martyrs, who were slain for the testimony of God, when the Lamb had opened the fifth seal, and the signal for the earthquakes and meteors is given by the opening of the sixth seal.

All seems ready now for the consummation; but the fundamental idea of the Revelation is the constant adjournment of the final judgment. An angel imprints his seal on the forty-four thousand persons who belong to the tribes of Israel. The prophet shows us also the innumerable multitude of all men of all races who have been persecuted. The seventh seal is opened, but the consummation does not take place. There is a long silence; a new act of the drama begins. The seven archangels come forward with their trumpets. Every blast of the trumpet is a signal for some new phenomenon; earthquakes, shooting-stars, the invasion of the Parthians, which was thought imminent. We expect the end with the blowing of the seventh trumpet; but at that very moment begins a new drama. John looks on Jerusalem, and shows us only the temple preserved after long struggles. Two prophets will appear. At the sound of the seventh trumpet, the doors of the celestial temple open, and a new series of visions begins at once.

The church of Israel appears as a woman; before her is a red dragon; its seven crowned heads mean Cæsar, Augustus, Tiberius, Caligula, Claudius, Nero, Galba; the woman is delivered of a child, which is the Messianic faith, which the Lamb places next to God. All the following details apply to the dispersion of the first churches and to the persecutions. The first beast is the Roman Empire, which has conquered Israel for a while, but will be conquered in its turn. The second beast is Nero himself. By adding the letters of Nero's name in Hebrew, according to their numerical value, one finds the apocalyptic number of 666 (Neron Kaisar).

The scarlet woman, the new Babylon, is clearly Rome, which has corrupted the whole world, and persecuted the saints. The world, delivered from her, is ready for the Messiah. Nero, who has come to life again as the Antichrist, fights the last battles of idolatry. Satan, the old dragon, is seized and bound for a thousand years. The millennium begins.

Notes.

"OUR Country's New Era" is the title of an address delivered before the Society of the Alumni of Wittenberg College (Springfield, Ohio) at the college commencement, June 25, A.D. 1873, by Hon. Jacob D. Cox. That the United States have entered upon a new era is universally admitted at home and abroad, though as to what sort of an era it will be there seems the widest diversity of opinion. Between the philanthropists, who think it is going to be an era of peace and love; and the prohibitionists, who think that it can be easily made an era of temperance and all the virtues which flow from temperance; the capitalists, who look forward to an era of material development; the journalists, who anticipate a period of truth and justice; and the corruptionists, who look forward to an era of unlimited plunder, it is not

to be wondered at if, as Mr. Cox says, many a young man just graduated should say to himself, "True, we *are* at the beginning of a new era," or that he should have a vague idea that it is a glorious thing, and that we are somehow in a more imposing and noble attitude among the nations; or that he should "not stop to enquire what the new era means, nor whether it implies any new relations or larger responsibilities for himself." Nevertheless, as Mr. Cox says, he ought to ask the question; for his first business in life will be to do his part towards impressing upon the future of the country the answer which seems to him to be the true one. If from laziness or selfishness he finds none, that negative attitude will also be of weight. The answer which Mr. Cox would himself give we have no space here to state in detail; but that it contains valuable advice no one who has reflected at all on the present condition of the country would be likely to deny. Mr. Cox's name is well known as that of a consistent and earnest reformer, who made, though unsuccessfully, a long and manly fight against party rule at Washington, and who afterwards showed, by his refusal to "accept the results" of the Cincinnati Convention of last year, that his enthusiasm for reform was not maintained at the expense of his common sense.

—On one point, the extension of the national territory by acquisition of that belonging to the outlying "Latin races," Mr. Cox's advice strikes us as putting the matter in the true light, in fewer and more pointed words than we have anywhere else seen it put:

"When we talk, then, of annexing a foreign country, we must mean one of two things: either that we propose to treat the population practically as we have treated the Indians—drive them out and destroy them by one process or another—or that we mean to hand over to them a proportionate part of the power to rule the whole country, ourselves included. If we mean the former, we are only making a conquest, whether we do it by force of arms or by deluding the people of the country into the belief that they may find profit in it. I have already indicated my belief that our race is unequal to the task of peopling the tropic zone, and that it will there find in that regard a competition with nature that it cannot endure. If we mean, then, what I think would be the real outcome of annexation in that direction, simply to unite with ourselves old communities whose race-characteristics would not be materially modified, and on whom we should therefore exert no more modifying influence than we now do, the result would be that for every representation of such a state in the Senate, we should have given away a large fraction of the total legislative power of the whole country; and in the representation in the House, we should introduce a strong reinforcement of passion instead of reason, of restless desire of change instead of patient faith in constitutional progress, of disposition to appeal constantly to revolution—in short, of all the tumultuous, corruptible, and corrupting elements which have made the so-called Spanish republics a burlesque on self-government. And this we should call national glory!"

—Mr. Herbert Spencer has undertaken the preparation of a work on "descriptive sociology," consisting mostly of tables accumulated for his 'Principles of Sociology,' of which specimens received from Mr. Christern, of this city, are now before us. Some idea of the magnitude of the work may be gathered from the fact that in the case of each human society, Mr. Spencer's tables, with the accompanying quotations and extracts, exhibit a tabulated statement of its morphology, its physiology, and (if a society having a known history) its development. The collected extracts, on the other hand, are to be classified primarily according to the kinds of phenomena to which they refer, and secondarily according to the societies exhibiting these phenomena; so that each kind of phenomenon, as it is displayed in all societies, may be separately studied. Societies are to be divided into three groups. 1. Uncivilized societies; 2. Civilized societies—extinct or decayed; 3. Civilized societies—recent or still flourishing. Table IX. of Division I ("uncivilized races"), for instance, relates to the Sandwich Islanders. First comes their inorganic environment (climate, etc.); then their organic environment (vegetable, animal); then their sociological environment (adjacent tribes), physical, emotional, and intellectual characters. Then follow the tables, divided into structural and functional, each of which is subdivided into operative and regulative. The "structural regulative" is subdivided into political (*civil* [domestic (marital, filial) *public*] *military*), ecclesiastical, and ceremonial (*mutilations, funeral rites, laws of intercourse, habits, and customs*). Under functional, the regulative is subdivided into sentiments (*æsthetic, moral*), ideas (*superstitions, knowledge*), and language; the operative into processes (*distribution, exchange, production, arts, rearing*), etc., and products (*land-works, habitations*, etc.; *food, clothing, implements, weapons, æsthetic products*).

—A genius that was hardly "cradled into poetry by wrong" passed from the world when Hiram Powers died the other day. Few penniless youths have received earlier or heartier encouragement. First noticed as a watchmaker's lad in Cincinnati, he became among other things a repairer of wax-works in the same city, and then a maker of busts among the Congressmen at Washington, where he got a good deal of work and made some money. With the savings of this short but successful career in portraiture, and with some aid from Mr. Nicholas Longworth, his earliest patron, he went to Italy. Mr. Powers did not use the assistance of his patron to put himself at a good school, but quickly emerged as an independent producer in the lands of classic art, where Mr. Lister and Mr. Hawthorne show him intent to teach the Greeks rather than to learn from them. Virtually, Powers never lived in Europe; he is not known to have submitted himself to the estimates of Continental culture, or competed in Continental salons, or effaced natural self-esteem before Continental professors; he simply lived in that part of America which falls as a current upon the great travel-route in Southern Europe. It was easier in 1838 than it is now to be a Yankee prodigy, but the début of Powers with a statue of Eve showed real promise, and Thorwaldsen's generous approval was not misplaced. The next achievement, "The Greek Slave," designed to order for Captain Grant of the British Army, became a curiosity of popular and mercantile success. The original is at Raby Castle, having been bought by the Duke of Cleveland; a copy was next made by the Duke's permission for Mr. Corcoran, of Washington, and has been transferred with his gallery to the American nation; a third fac-simile was cut for Mr. A. T. Stewart, a fourth for the Earl of Dudley, a fifth for Prince Demidoff, and a sixth for E. W. Stoughton, of this city. The Slave was beyond doubt an historical achievement; in literature, it was taken up by Mrs. Browning, who was good-natured enough to go into a good deal of agony on the subject; in commerce, if we make a standard of the last sale of it (that with the Demidoff Collection, at 53,000 francs), Mr. Powers enriched the world with this single conception by about $63,600. His production subsequent to this masterpiece has never lacked popular success, whether in ideal subjects or portraits. In the tourist circles of Florence he has long had the advantageous position of the lion. In attempting the beautiful, Mr. Powers reached a repose which bears at first sight a resemblance to style; but what really distinguishes such of his subjects is their platitude of surface, imperfect vitalization, and want of charm. With his death, the moment comes when his fame must pass from rewards to work—a travail for very existence. In the mechanics of his art he was supreme; admirably adapted to take the head of a great marble establishment, he trained his carvers to perfection, while he almost took them off their feet with the spectacle of labor-saving American inventions continually applied to European laboriousness; no negligent work left his atelier. We are not apprised whether his discovery in modelling with soft plaster, and his ingenious forms of tools, go to the benefit of art at large. His inventiveness and mechanical faculty were very great, and are in themselves a fair claim to renown. His death, on the 27th ultimo, was at the age of very nearly sixty-eight; his birth, which occurred near Woodstock, in Vermont, having been on July 29, 1805.

—Among English books newly published or announced as soon to appear we find not many that are of great importance. Of religious books, the list as usual is rather longer than that of works ranged under any other head, even fiction yielding to theology and religion. Longmans announce 'The Chronology of the Bible and Historical Synchronisms,' by that able writer if not always safe theorist, M. Ernest de Bunsen; Macmillan & Co. will publish an octavo volume of 'Sermons Preached in Country Churches,' by the late F. D. Maurice; Mr. Stopford Brooke's 'Sermons Preached in St. James's Chapel' have reached a fifth edition; Bishop Colenso has published (Longmans) 'Lectures on the Pentateuch and the Moabite Stone,' with appendices on the following-named subjects: The Elohistic Narrative, the Original Story of the Exodus, and the Universality and Meaning of the Pre-Christian Cross; Mr. Mowbray, of Oxford, publishes a new edition of a clever and successful little anti-Evangelical squib called 'The Deformation and the Reformation,' which, besides some fun for the worldly, has in it not a few grains of profitable instruction and reproof for various sorts of Churchmen; what 'Common-Sense Theology' may be we do not know, except that it describes itself in its second title as 'Natural Truths in Rough-Shod Rhyme'; we mention it because of its going to England from Lewiston, Maine; 'The Eastern Church' is a popular essay on the history, documents, liturgies, and vestments of the Greek Church, has reached a second edition, and has a preface by Dr. Littledale; a revised edition of 'The Voice of the Last Prophet,' is the Rev. Edward Huntingford's 'Practical Interpretation of the Revelation of St. John the Divine'; translated from the German of Dr. Theodore Reim we have the first volume of 'The History of Jesus of Nazareth, considered in its connection with the National Life of Israel'; also from the German, the translator being Mathilde Blind, we have an authorized English rendering of the sixth edition of D. F. Strauss's 'Old Faith and the New: A Confession'; Mr. Max Müller has collected into a four-hundred page post octavo four essays entitled 'An Introduction to the Science of Religion,' and two essays entitled 'False Analogies and the Philosophy of Mythology.'

—Of books related on one side to religion, and on the other side to something else, we may mention two. One the *Bookseller* places under the general heading "Charlatanism." It seems to be something in the nature of "a friendly controversy between Moses Hull, Spiritualist, and W. F. Parker, Christian," in which Mr. Hull apparently conceives himself to have got rather the better of Mr. Parker, as it is he who publishes the account of the discussion. The volume bears the title, 'W hic: Spiritualism or Christianity?' and is a small duodecimo of 178 pages. This work, also, like the theology in roughshod rhyme, hails from this country, and is set down as coming from Boston and New York. The other book to which we have alluded as related to religious works is Mr. William Longman's interesting 'History of the Three Cathedrals dedicated to St. Paul in London.' We copy the rest of the title-page: "With reference chiefly to their Structure and Architecture, and the Sources whence the Necessary Funds were derived. With six engravings on steel, and nearly fifty woodcut illustrations." We have said that this 'History' is of interest to the religious reader, but to how many other and widely different classes of readers it makes appeal is readily seen when we bethink ourselves that no collection of play-books, no poetical collection including our dramatists, no library of prose fiction, no history of bourses and exchanges, no collection of our English essayists, can fairly be called complete unless it contains this description of the Old Saint Paul's that went down in the great fire of 1666, after standing, complete and incomplete, nearly six hundred years—from the time of the Conqueror to the time of Newton. Here is what Bishop Earle, writing in the middle of the seventeenth century, says of the middle aisle of the cathedral, "Paule's Walk," at the period when the strange desecration of it was at its height:

"It is the land's epitome, or you may call it the lesser isle of Great Britain. It is more than this, the whole world's map, which you may here discern in its perfectest motion justling and turning. It is a heap of stones, and men with a vast confusion of languages; and were the steeple not sanctified, nothing liker Babel. The noise in it like that of bees, a strange humming or buzz of walking tongues and feet: it is a kind of still roar or loud whisper. It is the great exchange of all discourse, and no business whatever but is here stirring and a-foot. It is the synod of all pates politic, jointed and laid together in most serious posture, and they are not half so busy at the Parliament. It is the antic of tails to tails, and backs to backs, and for vizards you need go no further than faces. It is the market of young lecturers, whom you may cheapen here at all rates and sizes. It is the general mint of all famous lies, which are here, like the legends of Popery, first coined and stamped in the Church. All inventions are emptied here, and not a few pockets. The best sign of a temple in it is, that it is the thieves' sanctuary, which rob more safely in a crowd than a wilderness, whilst every searcher is a bush to hide them. It is the other expense of the day after plays, tavern, and a bawdy house; and men have still some oaths left to swear here. It is the ears' brothel, and satisfies their lust and itch. The visitants are all men, without exception, but the principal inhabitants and possessors are stall knights and captains out of service; men of long rapiers and breeches, which, after all, turn merchants here and traffic for news."

PROFESSOR CAIRNES'S ESSAYS IN POLITICAL ECONOMY.*

PROFESSOR CAIRNES is well known in the United States as the Englishman whose masterly exposition of the origin of the late civil war did more than any other agency—though we admit that no agency did much—to enlighten public opinion in England with regard to the real nature and probable issue of the conflict. He is less widely known on this side of the water as an economist; but he has borne a very prominent part in all the momentous sociological discussions by which England has been agitated during the last fifteen years; and this in spite of a struggle with ill-health which compelled him to resign his professorship in Queen's College, Galway, and more recently a similar position in University College, London. The volume before us consists of a number of essays which have appeared in various English periodicals during the above period; some of them, as those on the gold question and on the land question in Ireland, being applications of political economy to problems of contemporary politics; and others, such as that on the *laissez-faire* doctrine, and the reply to M. Comte on the claims of political economy to be considered a science, are theoretical discussions, though of great interest. The articles on the gold question are pieces of work which exhibit political economy in its very best aspect. They are attempts, made soon after the discovery of the gold-fields in California and Australia, to forecast the probable effects of the enormous additions then impending to the circulating medium of the world on production and distribution; and the fact that Mr. Cairnes produces them fourteen years after their publication, and challenges an examination of his predictions "in the light of subsequent events," is as good an illustration as we could offer of the care and perspicacity which he has brought to the performance of his task. In fact, we could hardly put into the hands of a student a better specimen than these papers afford of the way in which an economist of the best class performs one of the most difficult of his functions—"the thinking out" of the probable course of a given set of phenomena. A considerable number of modifications might, we think, be made in his conclusions as to the effect on wages and profits of the increase in the volume of gold as regards this country, though we doubt if American experience affords any excuse for doubting his findings with regard to general tendencies. Some of his remarks on the curious inclination to protection wrought in the Australian mind by the gold discoveries, throw valuable light on the secret of the success of protective ideas in new countries. There is one point on which Mr. Cairnes has not touched, and on which he was perhaps not bound to touch, in estimating the cost of gold, and that is the proportion borne of late years by the results of gold-mining to the capital invested in it. This is a matter in which California has had some very valuable experience, which, so far as we know, no economist has yet turned to account. We believe the most careful observers in that region are firmly convinced that for the last fifteen years at least the Californian contribution to the annual product has been made at a positive loss, or, in other words, that the thoroughly aleatory character of the pursuit and the traditional influence exercised on the imagination by the precious metals has drawn into the search for them a far larger amount of capital and labor than it can remunerate at the average rate of profit and wages, or, in other words, that the average returns of this species of industry have fallen below those of every other in the State. This is a curious phenomenon which will repay more investigation than it has ever received.

The most important of Mr. Cairnes's essays are, however, three in which he seeks to define the position of political economy, both in the field of morals and in that of science—"Political Economy and Land," "Political Economy and *Laissez Faire*," and "M. Comte and Political Economy," in reply to the attacks of two classes of depreciators. The first is composed in about equal parts of humanitarians and labor reformers, and the second of scientific men of the Comte school; and for dealing with both, Mr. Cairnes has the prime essential of perfect candor. He extenuates nothing, and shirks nothing; but he shows some signs, as it seems to us, of a weakness which more than one economist of our day has displayed—in seeking to soften down the harsher features of the science, in deference to the popular demand for fuller play of the principle of love in the regulation of the social relations. He confesses that political economy has of late years fallen considerably into disrepute with progressive people, owing to the implacable opposition which many of its leading professors have offered to all attempts at legislative interference with free competition, and to their reckless preaching of what he considers the worn-out doctrine of "*laissez-faire*." *Laissez faire* he holds to be a rule of art, or a temporary expedient, and not a principle of science, and to have been a good enough rule in the days when it first began to be preached, when the world was suffering from overregulation and interference. But in these days of all but complete liberty, he holds that further reliance on it is positively mischievous, as either turning people's attention away from the benefits which may be conferred on society by government considered as the organized co-operation of the entire community, or as inspiring with hatred or distrust of economical science those who still have faith in the power of the community to better itself by active exertion. That he considers the rule wholly unsuited to our present exigencies he does not deny, and he points to the failure of free trade to fulfil the extravagant predictions of its early advocates in regard to pauperism, as an illustration of the folly as well as danger of too great reliance on it.

Political economy, he points out in an admirable passage, is not interested in and not connected with any particular form of government or mode of production or distribution. It, like all other sciences, is occupied with discovering and explaining the laws of the phenomena of wealth. It has nothing to say to the expediency of any system of legislation. What astronomy does for the phenomena of the heavenly bodies, what dynamics do for the phenomena of motion, etc., etc., that political economy does for the phenomena of wealth; that is to say, it expounds the facts of production, exchange, price, profits, rents, interest, and so on, but it does not say in what way it is best to produce or exchange any more than astronomy prescribes the hours at which we ought to go to bed or how to take care of our eyesight. Science as such has no practical end in view. All this is a much-needed discourse, and is addressed in particular to that large number of persons who fancy that political economy teaches that everybody ought to make as much money as he can, and that the shortest road to national riches is to let everybody make money in his own way without let or hindrance. But then, when Professor Cairnes rebukes political economists for ever abandoning a perfectly neutral attitude, or saying that political economy "sanctions" this or "condemns"

* 'Essays in Political Economy, Theoretical and Applied. By J. E. Cairnes, A.M., Emeritus Professor of Political Economy in University College, London.'

or "approves" that social arrangement, he makes too great an effort, as it seems to us, for the conciliation of unbelievers. It may be quite true the dicta of political economists on many points lead the working-men, for instance, to dislike and deride political economy and refuse to be governed by its teachings; but this seems to be a poor reason for pretending that certain social arrangements are not condemned by political economy, or that political economy has no lessons for the legislator. Undoubtedly it has, and if so, why not say so? There are social arrangements the results of which political economy enables us to predict will be evil. If it does so, we say political economy condemns them; if any class is so foolish as to abuse political economy on this account, it does not furnish us with an excuse for altering our phraseology. It is true we do not say that chemistry or physiology "condemns" the eating of bad food or the abuse of alcohol, but it is nevertheless true that it does so, and true in the same sense in which we say that political economy declares any man to be unwise who tries to keep down the premium on gold by prohibiting speculation in it. We cannot predict consequences of human conduct, even in economical matters, without borrowing the terminology of moral science; and unless political economy enables us to predict at least tendencies, whether bad or good, of what value is it? If a man were to hate astronomy because he disliked eclipses, we should let him rail; but we should not give up calculations, or cease to announce their results.

The Isles of Shoals: An Historical Sketch. By John Scribner Jenness. (New York: Hurd & Houghton.)—The author of this little work has judged rightly that the vicissitudes from which none of the settlements of man are exempt, are in the case of this barren cluster of islands as interesting if also as melancholy as they are generally apt to be. In the long interval between the height of their importance as a fishing entrepot and their present growing importance and almost exclusive value as a watering-place, the Shoals have seen their population shift from one island to another, decline with the fisheries, and, within a few years, after having for half a century been an object of missionary solicitude, afford no longer the shadow of a parish to even the most zealous saver of souls. Champlain first described these islands in print; Capt. John Smith named them after himself, and wanted to appropriate them, but did not succeed. They were loyal to the King against Parliament and the Protector, to the Church of England against the Puritans of Massachusetts Bay, to the mother country against the rebellious colonists. They have been under the jurisdiction of three different States, and though situated beyond easy reach of the sheriff and the tax-gatherer, generally left to their own devices of indifference and non-resistance to the authority of the main, worthless for agriculture, and of no value now for fish, they still owe a divided allegiance to Maine and to New Hampshire. The two men who, in settling a difficulty by a square stand-up fight, "agreed to heave the law one side," fairly represented the independent manners of the Shoals. Very early in their history women were excluded by statute from these islands, but they were brought there, honestly or dishonestly, as if no such law existed; and, after the Revolution, such was the moral decay that had set in, that the marital relation was often entered into without the sacrament of marriage, and annulled at the whim of the parties, without the sanction of a divorce. A missionary to the islanders, some time after the beginning of the present century, "found it impossible to make a record of their ages, as all memory on that subject had been lost; according to tradition, their very language had so degenerated as to be understood with difficulty by the people of the mainland." A meeting-house that had stood for seventy years was wantonly burned down by a gang of fishermen in 1790, so that, when another was to replace it in 1800, the Rev. Jedediah Morse recommended that the walls should be built of stone, as having "two great advantages over wood: the inhabitants *cannot burn it for fuel*, and it will be imperishable." The walls of this structure are still standing. It was used during week-days as a school-house; served at all times as a useful landmark; and occasionally was "turned to good account in the drying and storing of codfish." The Rev. Mr. Moody, pastor to the Shoals in 1822, reckoned that 31 male inhabitants and 16 hired men consumed six hundred gallons of rum in less than three months. In 1840 the cause of temperance was "slowly advancing. About forty belong to the Temperance Society, which excludes all intoxicating liquors."

This entertaining narrative is illustrated with a number of cuts and two folded maps—one of the Shoals, and the other "an exact copy" of the chart which accompanied Captain John Smith's 'Description of New England,' published "shortly after his arrival in England" from his explorations of 1614. Here the author is not quite exact, as his fac-simile map speaks on its face of Prince Charles "nowe king"—*i.e. post* 1620, and indeed, as the name Salem shows, *post* 1629. The fact is that Smith first issued his chart in 1616 (the date of his 'Description'), and altered it for succeeding editions so that it is found in *nine* different conditions. When Mr. Veazie, of Boston, reprinted Smith's 'Advertisements' of 1631, he grafted upon the original the latest form (date unknown to us), and it is this which Mr. Jenness has reproduced.

New England: A Hand-book for Travellers. A guide to the chief cities and popular resorts of New England, and to its scenery and historic attractions; with the western and northern borders from New York to Quebec. With six maps and eleven plans. (Boston: James R. Osgood & Co. 1873.)—A traveller's hand-book is nothing if not accurate, and the editor of this one very wisely requests "bona fide corrections or suggestions" from either travellers or residents. We shall endeavor to point out several mistakes he has made, premising, however, that we say nothing as to the possibility by revision and correction of making the book perfect. The mistakes we have noticed come thickly, and some of them are glaring. Until then it may be useful in indicating unfamiliar routes, and giving the traveller local information of a sort not generally accessible; still it is possible that by a total revision the errors may be weeded out, and the general plan of the book, which is certainly a good one, made perfect.

In the descriptions of the college buildings at Cambridge (p. 31), the Lawrence Scientific School is spoken of as "back of" Holworthy Hall; on the next page it is "opposite" the same hall; both these statements are, strictly speaking, true, but they are confusing, because it is difficult to understand how one building can be opposite and at the same time back of another. In fact, a street runs between the two. Again, on p. 31, Thayer Hall is spoken of as ornate—a ridiculous epithet, for the building is one of the simplest in the yard. Matthews's Hall, which is no more like Thayer than the two names are, is also called "ornate" on the same page; the epithet is correctly applied here. On the same page, Weld Hall is spoken of as "modern Mansard-roofed." It is, in reality, so far as it has any architectural character, Elizabethan, and there is not a brick in the building which could suggest to any one who had ever seen it the notion of Mansard architecture. On the same page we find "University Hall is the seat of the University Government, which consists of the President and six Fellows, with a second branch (Board of Overseers) elected by the Alumni"—a statement utterly misleading, for the only branch of the College government which has its seat in University Hall is the College Faculty; the Corporation (President and Fellows), as well as the Overseers, usually, and we think always, meet in Boston. We have never heard of their meeting anywhere else. On page 32, there is a description of Memorial Hall, which is said to be a "stately edifice now building, whose simple and massive architecture contrasts strongly with the Renaissance style of the other new buildings." It would be difficult to convey an impression of the extraordinary character of this comparison to a reader who has not been on the ground; it is very much as if a writer were to say that the simple architecture of the Town Hall at Newport affords a pleasant contrast with the Moorish arches of the old stone mill. These mistakes seem almost enough, but we must notice in addition the omission of any allusion to the college holidays. For a traveller who is making the tour of New England, it is quite as important to know on what day of the month Class day and Commencement fall as to be told that Margaret Fuller was "a fine linguist and conversationalist," and "became an enthusiastic transcendentalist," *but* was finally "wrecked and lost on the New Jersey coast."

In the account of Marblehead, the editor says: "At this town is laid the scene of Whittier's poem, 'Skipper Ireson's Ride.' 'Many years ago, Captain Ireson refused to take off some of his townsmen from a drifting wreck, because of the expense of feeding them all the way home. On his return, the citizens tarred and feathered him, and rode him, in one of his own boats, to Salem and back, he remaining silent and unresisting. Whence the refrain:

> 'Old Floyd Ireson, for his hard heart,
> Tarred and fea hered and carried in a cart
> By the women of Marblehead.'"

This, however, is not the refrain at all; the poem is written in the Marblehead "dialect," and there seems to be no reason why it should not be left as Whittier wrote it. Under the title "Marblehead Neck," it is said that "Massachusetts Bay was stocked with cunners (black-fish) by some Bostonians, and these delicious fish have propagated rapidly." It is hardly necessary to say that the cunner is no more like the black-fish than it is like the cod. The Marbleheaders have not a reputation for a very Christian or philanthropic spirit, and it is possible that some of the natives may have practised an imposition on strangers by persuading them that they were feasting royally on black-fish, when in reality they were eating cunners; how else the confusion can have arisen we cannot imagine.

We have no space to examine this 'Hand-book' at length. The mistakes we have mentioned were discovered casually in merely turning over the leaves. We have found several inaccuracies and omissions besides those we have mentioned.

Hap Hazard. By Kate Field. (Boston: J. R. Osgood & Co. 1873.)—Miss Field half disarms criticism by giving to her book its unpretentious title. But not all of its contents are unpretentious. Miss Field fearlessly undertakes to pass judgment on French morals, on the English system of government, on the character of the American man, on the rights of woman, on profuse expectoration, on the Tory party, and on a dozen or two other things concerning all of which she has a very decided opinion. This opinion, which is as likely to be right as wrong, Miss Field smartly rattles off in a manner not suggestive of the profoundest reflection, and the result of her utterances thus delivered is a peculiar book of a kind much in favor in some quarters. As for French morals, to speak of one or two of the matters to which Miss Field has turned her attention, they are bad, very bad. French dishonesty is "enough to spoil Anglo-Saxon tempers." French shopkeepers flatter and "lie" with unbounded effrontery. Every Frenchman looks on every woman he sees as a "probable or possible *fille de joie*." "As for Frenchmen, the less said the better," in regard to their professed respect for women. "The breeding of the Latin races is, as a rule, skin deep." Germans, on the contrary, can be sentimental over women; but try to imagine a German looking on a woman as an intellectual being! The attempt, we are given to understand, would be entirely vain; "woman in Germany is an inferior animal." As for the English system of government, Miss Field does not approve of it. She was present at the opening of Parliament a year or two ago, and when she came away, a woman said to her in the street, "For the love of God, good lady, sweet lady, help a poor woman who is starving. Buy a few flowers; do, dear lady." "This," says Miss Field, "is the cry that meets me as I leave the Houses of Parliament. I think of the men in gold-lace paid to do nothing; I think of the House of Lords; I think of the Seven Dials," and she is at once of opinion that the British government should be republican in form. In considering this class of questions, she evidently has been much impressed by Sir Charles Dilke and Mr. Auberon Herbert, both of whom she mentions in terms of warm praise.

Upon indiscriminate expectoration Miss Field is diffuse, and, as we might have been sure beforehand, she justly and severely condemns it; but for particulars, we must refer the reader to her chapter entitled "Ruminating Animals," which is entirely devoted to this subject. It may serve to show foreign commentators on American manners that we have a home-born party whose members disapprove of this habit as unreservedly as any foreigner can, and who, in the face of popular clamor, dare to be outspoken against it. Equally severe is Miss Field upon those Americans who, though they may not use tobacco, are deficient in other points of breeding, and, when travelling in Europe, give a bad and false impression of the rest of their countrymen and women. True culture and refinement Miss Field does not expect from every American; but at least Americans abroad need not be silly snobs and worshippers of rank, which Miss Field finds so many of them to be that she has been compelled to think now and again that we empty our "idiot asylums" into Europe. She has often been mortified very much by what she has seen and heard of the vulgarity of such Americans.

The manner of Miss Field's book is of a lively order, and may be described specifically as being that which the newspaper reader knows as "spicy" or "brilliant." Miss Field sees Mr. Cross, M.P., rise to ask Mr. Gladstone some questions, and Mr. Gladstone is said to be "Cross-questioned"; Mr. Brand has newly been elected Speaker, and he is "the Brand-new Speaker"; a great deal of expectoration is "the rain of terror"; poor wine "by any other name would be more sour"; the Empress Augusta is "Mrs. Kaiser"; when French shopkeepers flatter you, you feel like putting a pistol to their heads, and saying, "Dead silence, or your dead bodies"; when Mr. Disraeli's hair is to be described, it is

> "With each particular hair smooth to th' end,
> Like flax upon the yielding sticking-wax."

When the Fourth of July was celebrated by certain Americans in Paris,

> "Not a drum was heard, not a cannon roared,
> No horses ran away;
> But we did our 'level best' abroad
> To celebrate the day."

This is a way of writing which the reader usually finds best exemplified in the letters of lady correspondents at the watering-places in the hottest weather; but Miss Field is an adept in it, and perhaps the most eminent proficient.

Good Morals and Gentle Manners. For School and Families. Alex. M. Gow, A.M. (Cincinnati and New York: Wilson, Hinkle & Co.)—This little manual is intended as a "systematic text-book on moral and social law." Mr. Gow has endeavored to cover the whole ground, and if in the limits of 246 pages he has failed at all to accomplish his object, it is not on account of lack of earnestness or comprehension of the importance of his task. Mr. Gow is essentially an earnest writer, and in this hand-book he has prepared for the public a compendium of what he thinks the most authoritative opinions on a variety of subjects which have been treated of at different periods of the world's history by writers of considerable reputation, as, for instance, Moses, Confucius, Marcus Aurelius, Dickens, Franklin, Solon, Neal Dow, Washington, and Solomon, and on some others to which they gave but little attention. Besides the rules of conduct, Mr. Gow has given illustrations and applications of the moral and social law by means of anecdotes of all kinds; as, for example, in that part of his treatise which discusses the violation of good morals and gentle manners involved in the practice of whittling, he tells the story, or, as he might prefer to have it called, the parable, of the habitual whittler who on one occasion, when engaged in whittling away at a valuable shop-counter, was sharply reproved by a clerk, who, observing the outrage, quietly "walked around where he was sitting, and, before the whittler was aware of his intention, cut off one of his coat-tails with his scissors." This matter is very properly treated of under the head of "Rights of Property." Under the "Social Law" Mr. Gow has collected a number of rules, which are all the more welcome from the fact that we have never before seen them in print. We give a few of them: *Behavior at the Table—Undress.*—"Politeness requires that gentlemen should not come to the table without their coats, especially if covered with perspiration. The propriety of this rule is very obvious." Under the sub-title, *Coughing and Spitting at Table,* Mr. Gow says: "Some persons have so little regard for the proprieties of the table as to clear the throat and cough and spit upon the floor before commencing to eat. Such thoughtlessness is deserving of the severest censure." A very sensible rule is given under the sub-title, *The Butter-knife and Spoons,* which may be cited as a satisfactory solution of one of the darkest points in the art of good-breeding—what is to be done when there is no butter-knife? "If no butter-knife is provided, each guest should be careful to clean his knife carefully upon a slice of bread, that no stain be left upon the butter." Other directions are, never to use the fork for the purpose of picking the teeth at table, nor, when any lady or gentleman has finished eating, to tip the chair back on two legs; never, except at the request of the entertainer, to "take apples, nuts, or sweetmeats away from the table, as it might be supposed that you are not accustomed to such delicacies, and thought it necessary to lay by a supply for future use." Mr. Gow's book cannot fail, it seems to us, to have a wholesome effect in the amelioration of manners, and we trust it may have a wide circulation.

"To any one who wants a book that will prove both entertaining and profitable, as good literature always is, and does not know precisely what to ask for, we say select one of

THE LEISURE HOUR SERIES."

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

MR. ROE'S GARDEN, from which, as he tells us in his entertaining book, 'Play and Profit in My Garden,' $2,000 worth of fruit and vegetables were sold in one year besides a large home supply, promises equally well the present season. On the 31st of May, his sales amounted to $257. On the 6th of May, he had seven distinct varieties of vegetables in abundance at his command. The story of this successful garden is told at length in his book, PLAY AND PROFIT IN MY GARDEN, which DODD & MEAD publish.

"Our own minds have become so much sophisticated by commonplaces about liberty and toleration, and about the division between the temporal and the spiritual power, that we have almost ceased to think the attainment of truth in religion as desirable if it were possible. It appears to me that, if it were possible, the attainment of religious truth and its recognition by legislation would be of all conceivable blessings the greatest."

THE WEEK IN TRADE AND FINANCE.

JULY 21, 1873.

THE week in Wall Street has been quite active, especially in the Stock Exchange, where the recent change in the management of the Lake Shore road has imparted fresh activity to that stock, and led to enlarged dealings in Central and Hudson. The week wound up on Saturday with a lively turn in Erie, which will be more fully spoken of later.

The money market has remained quiet, with the rate three to four per cent. Commercial paper is in good demand and at low rates. Prime names having a short time to run have been negotiated as low as 5½ per cent. Paper having over three months to run passes less freely and at higher rates, according to the standing of the makers, varying from 6 to 7 per cent.

A further reduction of ½ per cent. was made Thursday in the Bank of England rate of discount, which makes it now stand at 4½ per cent. The Bank gained £37,000 in bullion last week.

The weekly statement of the Clearing-House banks on Saturday was unfavorable, and the loss of $2,384,400 in specie reflects the outflow to Europe. The statement shows that the total liabilities have been increased $1,279,200, and the total reserve has decreased $1,841,800, making a loss of $2,161,600 in the net reserve as compared to that of last week.

The following are the statements for the past two weeks:

	July 12.	July 19.	Differences.
Loans	$288,174,500	$289,878,100	Inc. $1,703,600
Specie	34,658,000	32,263,600	Dec. 2,384,400
Circulation	27,291,800	27,281,500	Dec. 10,300
Deposits	238,916,900	240,206,400	Inc. 1,289,500
Legal tenders	48,329,900	48,872,500	Inc. 542,600

The following table shows the relation between the total reserve and the total liabilities:

	July 12.	July 19.	Differences.
Specie	$34,658,000	$32,273,600	Dec. $2,384,400
Legal tenders	48,329,900	48,872,800	Inc. 542,600
Total reserve	$82,987,900	$81,146,100	Dec. $1,841,800
Circulation	27,291,800	27,281,500	Dec. 10,300
Deposits	238,916,900	240,206,400	Inc. 1,289,500
Total liabilities	$266,208,700	$267,487,900	Inc. 1,279,200
25 per cent. reserve	66,552,175	66,871,975	Inc. 319,800
Excess over legal reserve	16,435,728	14,274,125	Dec. 2,161,600

The stock market was active during most of the week, with a large share of the transactions confined to the "Vanderbilt stocks"—Central and Hudson, Lake Shore, and Western Union Telegraph. Pacific Mail, Erie, Union Pacific, and Milwaukee and St. Paul were also very active. In looking at the published list of prices given below, it will be seen that a general advance has taken place in nearly everything. The chief interest, however, centred in Erie, which advanced from 58⅝ to 65½ Saturday, in consequence of a "squeeze" in the cash stock. Certain foreign bankers had bought Erie in London, the price being relatively lower there than in this market, and had sold the stock here; meantime, they borrowed the cash stock to make their deliveries. This was all very well as long as the owners of the stock here were willing to loan it; but on Saturday they demanded its return, when it was discovered that there were no means of complying with the demand, and the aforesaid foreign bankers were obliged to go into the market and buy it, which put the price up very rapidly to 65½; meantime, as high as ¾ per cent. bonus was paid for the use of the stock till Monday, but even at this rate a sufficient amount could not be obtained. The London stock is on its way to this country, but its probable arrival is some days off, and in the interim nobody can say how badly the unfortunate Germans may be "squeezed." Delaware, Lackawanna, and Western is stronger, having rallied up to 102¼ early in the week from 99⅞, the price Monday. Michigan Central is a little stronger; the recent low quotations have tempted people to buy it, and the result has been that the price rallied up to 93½, at which it closed Saturday. Chicago, Burlington, and Quincy has also improved, and there are quite a number of orders in the market from investors. The stock is unquestionably low, and we can ascertain no reason why it should have declined below par.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending July 19, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales.
N. Y. C. & H. R.	103½ 103⅝	103⅜ 103½	103½ 104⅝	104¼ 104½	104¼ 104⅜	103½ 104½	31,100
Lake Shore	91⅜ 92¼	92⅜ 92⅝	92½ 93½	93¼ 94¼	93¾ 94½	93⅜ 94	90,800
Erie	60 60½	60½ 61	59⅜ 60⅛	58⅜ 59¼	58 59¼	58⅜ 65½	114,700

Pacific Mail	37½ 38⅝	38⅛ 39⅜	37⅛ 38⅜	38⅛ 39½	37⅝ 38⅝	37⅝ 38⅝	80,700

The German Government has purchased $2,000,000 more United States new 5 per cent. bonds. This is in addition to the previous purchase of $10,000,000 reported. The market here for Government bonds has been very dull, and rendered so by their scarcity. The investment demand has been good, and has led to a larger business than usual in the registered issues.

The interest on certain Georgia State bonds issued under Gov. Bullock's administration, which were recently in default, is now being paid by the Fourth National Bank of this city. Business in State bonds at the Board has been dull, chiefly confined to Tennessees and Virginias, with market firm on Missouris and Virginias.

The gold market has been tolerably active. The "bulls" have the heavy recent exports of specie to help them in advancing the price, while the "bears" count upon the influence of the Treasury in trying to keep the price down as a sufficient reason for lower gold. The price has ranged between 115¾ and 116⅛. The total shipments of specie during the week amounted to $3,944,533, of which $2,938,121 was in American gold coin.

BANKING AND FINANCIAL.

BANKING-HOUSE OF FISK & HATCH,
No. 5 Nassau Street, New York, July 21, 1873.

We recommend to our friends and customers for investment of surplus capital, or in exchange for Government bonds,

THE CHESAPEAKE AND OHIO SEVEN PER CENT. GOLD BONDS; Principal and interest payable in Gold Coin in New York City; interest payable Jan. 1 and July 1; coupon and registered. Price 90 and accrued interest.

THE CHESAPEAKE AND OHIO RAILROAD IS A GREAT EAST AND WEST TRUNK LINE, 420 miles in length, extending from Atlantic tidewater at Richmond to Huntington, the most favorable point of railroad connection with the Ohio River, and developing the richest IRON, COAL, and TIMBER REGIONS in the United States.

It is completed, and doing a large, profitable, and rapidly increasing business.

Its FREIGHT TRAFFIC, PASSENGER TRAVEL, and EARNINGS during the current year will be much larger than has heretofore been anticipated, and they are developing with a rapidity which shows the Chesapeake and Ohio to be one of the most valuable and successful railroads in the country.

These facts, together with the substantial and enduring character of the Road itself, its advantges for economical and profitable operation, and the unquestionable security of the Bonds of the Company, enable us to recommend them with the utmost confidence.

Pamphlets, containing full information concerning the Road and the country it traverses, will be furnished upon application.

We continue to deal in Government Securities, CENTRAL PACIFIC, WESTERN PACIFIC, AND CHESAPEAKE AND OHIO SIX PER CENT. BONDS, buy and sell Stocks and Bonds at the Stock Exchange on commission for cash, make Collections, receive Deposits, on which we allow interest at the rate of four per cent., and do a general banking business.

Catalogues and Estimates Furnished and Orders promptly filled.

The Trustees and Officers of Public Libraries may rely upon the most careful attention to their Commissions.

TEN PER CENT. NEW ENGLAND INVESTMENT.

FIRST MORTGAGE SINKING FUND
GOLD BONDS
OF THE
LAMOILLE VALLEY, ST. JOHNSBURY AND ESSEX COUNTY RAILROADS.

One hundred and seventeen miles long, from the Connecticut River to Lake Champlain, and forming the Vermont Division of the Portland and Ogdensburg Railroad Trunk Line. Issued in denominations of $100. $500, and $1,000, and absolutely limited to $20 000 per mile,

WITH A BASIS OF A CASH CAPITAL STOCK OF $1,200,000 PAID IN AT PAR.

Principal due in 1891.

No security is greater than these first-class railroad bonds, based on a large property, as well as on a large and constantly increasing income.

The building and management of the road is conducted with such economy and integrity as to make the investment very profitable and perfectly safe.

Interest payable in Gold Coin in Boston or New York, November 1 and May 1. They yield, at present rates of Gold,

8¾ PER CENT.,

and held to maturity, 10 PER CENT. per annum interest.

E. & T. FAIRBANKS & CO.,
St. Johnsbury, Vt.;
FAIRBANKS & CO.,
311 Broadway, New York;
FAIRBANKS, BROWN & CO,
2 Milk Street, Boston,
Financial Agents.

☞ For sale by Bankers and Brokers generally.

The Nation.

NEW YORK, THURSDAY, JULY 31, 1873.

The Week.

THE "Liberal Republicans" are again hard at work in Ohio, and we have before us a circular of the State Committee, dated July 17, and signed by General Brinkerhoff, the chairman, calling on all "workers" of the party to present themselves in Columbus on the 30th inst., to join the Democrats in a mass convention, which is to take into consideration the fact "that corruption in appalling proportions pervades all the political avenues of the country." This is, no doubt, a very dreadful fact, but we question whether a consultation of Democrats and "Liberal Republicans" will do anything to better it. Corruption cannot be cured by reformers without principle, and the class of reformers who figure just now as Liberal Republicans belong, in our opinion, to that category. General Brinkerhoff, in particular, is one of the high-minded sages and free-traders who got up the Cincinnati Convention, and then fell to bellowing for the election to the Presidency of the greatest protectionist in the world, and one of the most active political "engineers" in the country. Anybody who, after this, pays any attention to General Brinkerhoff's "calls" must, it seems to us, be either a very simple person or a person greatly pressed for some occupation. Nobody who goes into a convention with politicians of this stamp can tell how it will end. They may open with prayer, and conclude, like the witches of old times, by worshipping Satan in the guise of a black goat. If we might offer advice to General Brinkerhoff, and General Cochrane, and the other managers who ran the unfortunate Mr. Greeley for the Presidency, it would be to retire for a year or two into strictly private life. They did enormous mischief last summer, the effects of which are still apparent; and there is, therefore, still something ludicrous in their anxiety about the "appalling proportions" of corruption, and the condition of our "political avenues."

The Chicago *Tribune* replies to the charge of immorality, or, to speak plainly, of fraud, which we brought against its new plan of ascertaining what are "reasonable rates of transportation," by quoting from a lawyer's brief a number of familiar legal propositions showing that corporations are the creatures of the state, and that if they do anything that the charter does not authorize, the state may eat them up. To which we reply that, in the first place, we do not believe that one railroad corporation in fifty has violated the law in its issues of stock; and that, moreover, from the moral point of view the position of "the people" would be no better if they had all violated it. In fact, if the law be against the corporations, the position of "the people" more closely resembles Ben Butler's in 1870 than we thought it did. Ben said, and Senator Morton said, that the United States were not legally bound by the declarations made in the House of Representatives, and by the Secretary of the Treasury, when the bonds were issued, to pay them in coin, and that they might be paid in paper all the same; which was quite true. But all concerned in paying them in paper would none the less have been knaves, because they had all stood by silent while the bonds were being sold, thus acquiescing in the construction put at the time of the loan on the terms of the contract. So also "the people" have stood by these thirty years while the railroads were issuing "fictitious stock," and while the holders were selling it in open market, without uttering one word of protest or warning against the illegality of the transaction, without ever mentioning Marshall or Story or any other great light of jurisprudence. Therefore to come forward now, after this stock has passed into the hands of innocent holders, and declare that it must be confiscated, in order to enable Western farmers to get their crops to market more cheaply, and thus relieve them from the consequences of their own neglect or indiscretion is—well, we hardly know what to call it. It strikingly resembles that mode of raising money known as the "panel game." We advise both "the people" and the *Tribune* to begin the study of the question, not by examining lawyers' briefs, but by reading their Bible, or some plain, sensible book on morals—say Paley.

There is not much news of importance with regard to the farmers. Ever since the election of Judge Craig they have been making strenuous efforts to show that the election is not to be taken as indicating any desire to strike at the independence of the judiciary. One method of proving this is by asserting that Judge Lawrence, the opposing candidate, defeated his own re-election by writing a letter criticising in a contemptuous manner the people's convention. A correspondent of the *Tribune* writes that, on reading this letter, the people went against Judge Lawrence to a man without regard to party. Another method of proof is by asking for the production of the pledges which Judge Craig has given. It is not common, however, for candidates for judgeships to sign written contracts in blood, selling their souls to the party which elects them at so much per term, and it ought to be remembered, too, that Judge Craig is said by some persons to be pledged to the railroads. Pledges of this sort are usually involved in the acceptance of the nomination. The activity among the politicians meantime is said to be agonizing. They are preparing themselves to go before the people in advocacy of farmers' rights in all sorts of ways. One prominent politician, General Samuel F. Cary, is said, by his enemies, to be practising sleeping on a hay-mow; another is vigorously at work with a reaping-machine; and a third, Mr. Ignatius Donnelly, is said to be tramping up and down his State in homespun "hickory" trowsers and without stockings. The political changes now going on will evidently in time give us a little of that picturesqueness the absence of which from American society we have all of us so often deplored.

The Boston meeting of the opponents of General Butler will at least call the attention of the respectable citizens of Massachusetts to the danger in which they now are, and to do that well would perhaps be an assurance of one more failure and break-down for Butler. Judge Hoar, in the course of his speech, related an incident which perfectly sets forth Butler in one of his many odorous characters, that of a criminal lawyer of a certain kind. It seems that a fortnight ago an informal meeting was held at Judge Hoar's office, for the purpose of considering how Butler was to be prevented from making prize of the primary caucuses. It was a secret conference, no reporters were present, and yet in the afternoon the *Traveller* contained what professed to be a true account of the meeting. It was observed at the time, said Judge Hoar, that while the conference was in progress three persons were observed coming from "the office of a person who has attempted to become the Governor of this State," and afterwards returning to the same room, one of them in the meantime, under pretext of finding a man with whom he had business, opening the door and looking in to see who were present. Judge Hoar's christening of Butler as "the Tichborne Claimant" will not, after this tale, seem too far out of order. But, indeed, fraud and eavesdropping are no new accomplishments of his. The conference of last Friday appointed a sort of rallying committee "to preserve the integrity of the Republican party," integrity probably being used in a double sense; and also a committee to prepare an address to the people. About half the members of the State Central Committee are understood to have fallen a prey to Butler; hence the need of these outside labors; for their success a vast majority of the people of this country, inside Massachusetts and outside, may rightly pray.

Before the committee have prepared their address we have one from a prohibitionist of the better sort, which will very well supplement the other document. It is the work of a clergyman of Mendon, the same man who, on the 4th of July, received from Butler the impudent and imprudent evasive answer to the question whether he was in favor of a prohibitory law. It is worth noting that in this contest with Butler, as in that of two years ago, it is a clergyman who does some of the most useful writing against him, Rev. Mr. Twining, of Cambridge, having hit him as hard before as Mr. Clark now. These are some of the objections which Mr. Clark urges, and doubtless to the true prohibitionist they will seem quite as forcible as to others: First and in general, we have the one objection to the new candidacy which the new candidate probably finds the most utterly unintelligible of all. On this occasion it takes the form "God is not dead;" He still is a lover of righteousness and decency, and it is well to remember that fact in political as in other actions. After this follow the specific points: In the first place, the Governor alone cannot enforce the liquor law, and Massachusetts neither wants nor needs the one-man military power. To execute the law properly, there must be the co-operative effort with an honest executive of the judges, municipal officers of all grades, prosecuting officers and jurors, and this, although Mr. Clark does not say so, it will be a long day before we anywhere see. In the courts themselves, he says, the law finds very great obstacles, and in the perfidy of officials. And were this otherwise, how can a single hundred constables, scattered among a million four hundred thousand people, and in the face of local opposition in many places, enforce a law so difficult of enforcement as the prohibitory law? Governor Washburn has gone further to make the law effective than any other governor; he came out in favor of it in his first inaugural address, a thing which any one who likes may try to imagine the "man of pluck" doing. Mr. Clark cannot. And had Mr. Washburn's suggestion been heeded, and apothecaries put on the same footing with other dealers in spirits, many places of sale now open would have been closed; but the Chairman of the Liquor Committee in the House got on stilts, and nothing came of the Governor's suggestion. Finally, Governor Washburn is a sober man, while Butler, the prohibitionist candidate *in posse*, drinks liquors himself, invites others to do the same, and, by purchasing them, tempts dealers to violate a statute which he will not say whether he favors or not. This is the nineteenth century after the beginning of the Christian era, and yet it is necessary, and in Massachusetts, to write letters and appoint rallying committees against a gentleman of this kidney.

The opinion of Judge Blatchford in the case of Carl Vogt, deciding that he must be surrendered to Prussia to be tried for the crimes of murder, arson, and robbery, committed in Belgium, has been overruled by the Attorney-General. Vogt is a Prussian, but the crimes with the commission of which he is charged were committed in Belgium. The United States has no extradition treaty with Belgium, but it has with Prussia a treaty made in 1852, which covers certain crimes (including those with which Vogt is charged) "committed within the jurisdiction of either party." The German Government set up the theory in the Vogt case, that though the crimes were committed in Belgium, nevertheless Prussia—inasmuch as it has a sort of constructive personal jurisdiction over its citizens wherever they may be, and is accustomed for this reason to try them for offences committed even on foreign soil, when the criminals can be caught—was entitled to his extradition, on the ground that the crimes were committed "within the jurisdiction" of Prussia, according to the terms of the treaty. Judge Blatchford, on this ground, held that Vogt must be surrendered; but the Attorney-General decides the other way, saying that no one ever before heard of such a construction of the term "within the jurisdiction," that the practical result of such a construction would be that the jurisdiction of Prussia is coterminous with that of the entire earth, and that the jurisdiction of a country is really coextensive with the territorial area which it practically controls. The decision seems perfectly sound, though it will naturally puzzle the German Government to know why such a case, finally to be decided by the Attorney-General, first went through Judge Blatchford's court.

The Crispins have had a convention in Boston, at which a rather dismal account was given of the condition of the organization. At Lynn, its cradle and headquarters, there were two years ago 2,500 names on the roll; now there are only 1,500. There were not enough delegates at the convention to form a quorum. Worse than all, the officers have largely embezzled the funds, and the body has been torn by internal dissensions. Indeed, it is on its last legs. The causes of the decline assigned by the delegates are, as usual, the abuse of power. The organization attempted interference with individual liberty—a thing which human nature in that latitude would not tolerate; in other words, it became unbearably tyrannical. The only large trades-union which has maintained itself successfully for years is the Amalgamated Engineers in England, and it owes its success to the extraordinary care with which it has abstained from over-interference. There is no doubt that such organizations might, if properly conducted, do great good, but either the resources open to the working-man in America are too numerous to allow of the necessary cohesiveness, or the supply of administrative talent among the working-men is not sufficiently great. The Crispins certainly revealed little or none.

We were wrong, it seems, in treating as of little importance the Lord Gordon affair. Though it is true that there is no great likelihood of the matter's furnishing a *casus belli* between England and this country, it is still of deep interest from its bearing on international law and the development it has given to the "right of hot pursuit." Most writers who have treated this subject have assumed that the right in question was like the right of "stoppage *in transitu*," a right which, when once exercised, was completely at an end. But it seems, from the latest news from Manitoba, that this is not the correct view. Mr. Bradley, the Custom-House officer who was not only present at the capture of the American kidnappers, but aided in arresting them, has made a positive statement to a correspondent of the Minneapolis *Tribune*, to the effect that this recapture was made about 110 yards south of the 49th parallel, the boundary line, on American soil. It would seem from this that the hot pursuit is a reciprocal and "transitory" right, and that on the passage of the pursuing party over the border, the right vests in the party pursued, the duty of being retaken now imposing itself on the original pursuers. This seems at any rate to be the opinion of Judge McKenzie, of the local Court of Queen's Bench; he has just sent four of the American party to a British dungeon, and admitted one, about whose guilt he says he has some doubt, to bail.

That part of Baltimore which was destroyed by fire last Thursday was chiefly occupied by small stores and factories and "common-class" houses. The fire broke out in the engine-room of a four-story brick steam planing-mill. As usual, the building was enveloped in flames before the steamers arrived, and there being a stiff breeze from the southwest, and the roofs of many of the houses being shingled, the fire had plenty of draught and plenty of fuel. By great exertion it was put out, with a loss of from half a million to a million. Owing to the sensational despatches sent over the telegraph wires, people in New York supposed for some time that Baltimore was likely to be entirely destroyed; but fortunately the news came in the afternoon, and afternoon despatches have not in all cases that weight with the public which is the reward of the virtues of accuracy and good judgment. It is unnecessary to say that carelessness in building was the primary cause of this as of all the other recent large fires.

The position of referee in a boat race bids fair to become an extremely warm one. The latest charge that we have seen brought against Mr. J. C. Babcock, who acted in that capacity at Springfield, is that had the race "been finished at high noon, he was in no condition to be referred to for a decision on any point." As this implies drunkenness on duty, and might incite to a libel suit, it has since been

retracted, but the retraction is of a kind well known to journalists, and in it some of the other accusations are revived. They are very numerous, for after the general bungling of the Regatta Committee —youths of small knowledge of boating and little judgment—of the Springfield Club, and of others in authority, it is so difficult to apportion the blame to individuals that the one person visible and prominent is made the scapegoat. And we may remark that a scapegoat is likely to have a heavy load laid on him when in his ignorance of the feuds and heart-burnings that devastate our profession of journalism, he is innocent enough to give so important a letter as Mr. Babcock's of Saturday, not to the Associated Press, as it would have been shrewd to do, but to one alone of our contemporaries. Mr. Babcock appears not to have known that for one little moment a letter from him was of more importance to the newspaper man than many columns about the Shah, and it was naturally exasperating to the rest of us to find his letter in the *Herald* alone, and not everywhere else. But in the interests of justice, several things in regard to a referee's duty and the history of this muddle should be borne in mind. Some of these are, that Mr. Babcock could hardly have been hostile to Yale, he having been Yale's choice for umpire and her nominee; that the Yale men consulted the common interest in nominating Mr. Babcock, he being President of the Harlem Rowing Association, a committee-man on rules in the National Association, an experienced oar, and having already been referee in college regattas and in the race between the Atalantas and Harvards. Another is, that it is no part of a referee's duty to provide a steam craft fast enough to carry him over the course close behind the crews, where he ought to be. Nor to provide a piece of ordnance. Nor to row about to eleven boat-houses, as Mr. Babcock had to do, and tell the crews it was time to go to the score. These things are somebody's duty, but not the referee's. Two other things are, that he is not, *ex-officio*, the custodian of the flags, and that, as a matter of fact, he was not in this case the custodian of them, although they were aboard his boat in the charge of a member of the Regatta Committee. Another is, that never in the history of the world till now was any finish-line of a race stretched otherwise than at right angles with the line of the course. Let a race be rowed along a letter S three miles long, or up and down a letter U, and still the finish-line would instinctively be placed at a right angle with the bank of a course so shaped. But the management of the race throughout was entirely bungled, and we now learn that, so conflicting is the evidence of the judges, it will not be possible to place any of the boats that have not yet been placed.

The news from England does not seem favorable to the hopes of those who are mainly interested in the contract between the Shah of Persia and Baron Reuter—that is, the Shah and the Baron themselves. The contract, which practically gives Reuter the right to collect the revenues of Persia for a long term of years, and to build railroads and canals and other internal improvements, seems rather startling to British capitalists, who are now asked to invest their money in the enterprise. Of course, Baron Reuter's plan is to get up a company, or a syndicate, or a combination, and begin floating all sorts of Persian scrip, but the capitalists' objection is the extreme remoteness of their remedy in case the contract is violated in any way. It all rests on the good faith of the Shah, a barbarous despot, about whose moral character little is known—for the chance of any European country's going to war for the sake of enforcing Reuter's contract is very remote. Mr. Whalley, one of the parliamentary friends of "the Claimant," is coming over to the United States to raise money for that gentleman; perhaps Baron Reuter will make a trip here for the purpose of floating Oriental loans on the New York market. The rivalry between a Tichborne syndicate and a syndicate engaged in placing on the market Persian 6's or Teheran and Bassorah air-line 7-30 convertible gold bonds, would probably be something unequalled in the annals of American finance.

Señor Salmeron, the President of the Spanish Republic, held a council of generals last week, in order to see what had better be done, and they advised him to call out "90,000 men of the reserves." This seems to give the finishing touch to the revolutionary puzzle, because the great want at present is not men, but discipline, and unless this can be supplied there is, in the first place, no likelihood that "the 90,000 men of the reserves" will obey the call; and, in the second place, no likelihood that, if they do, they will, when enrolled, be anything better than a band of mutinous and dangerous ruffians. The disorganization of the army, which is bringing not the Republic only but Spanish society to the verge of dissolution, began under the late King, when the Radical Ministry insisted on putting a man of low character, who had once headed a revolt, in a high command, in spite of the protests of the King and the best officers. It was continued by the execution of Castelar's grand idea of abolishing the conscription, a reform which he ought to have confined to his magazine articles until he got his republic established. The way things were going, and the condition of opinion on military matters in the Cortes, were well illustrated three weeks ago, when one Estavenez appeared in one of Pi y Margall's cabinets as Minister of War. He was incontinently denounced as an inferior officer of the line, who had deserted in Cuba. He calmly rose in his place and acknowledged, with the kind of bravado with which Butler has made us familiar in this country, that he had deserted, but that he had done so because he had no taste for the service, and thought it would be better without him. Far from resigning his place in the Cabinet, however, he held it until the next general change. With facts such as these before us, the demoralization of the private soldiers is not surprising.

The Germans appear to have been got into a scrape by one of their frigates seizing on one of the revolted Spanish gunboats. The insurgents now threaten to seize on all the German shipping in the harbor of Carthagena. Some efforts appear to be in progress to reduce some of the insurgent cities, but there is no force to restore order generally, and nothing but the actual presence of troops seems sufficient to maintain it anywhere. The Carlists continue apparently to gather strength. The *World* of this city, while acknowledging the dreadful condition of Spanish affairs, tries to excuse the leaders of the Revolution, by saying that they did not foresee the construction the peasantry and artisans would put on their preaching. But then they ought to have foreseen it. It is the business of politicians above all things to foresee, and to know the character of their audience before they begin preaching. Half the stuff which philosophical radicals talk to the people in Europe to-day would be harmless at a meeting of a scientific association, but delivered in the street, it fills the heads of ignorant men with the wildest and most dangerous delusions. The only good sign in Spanish politics is the report of a meeting of liberal emigrés at Biarritz, in France, presided over by Marshal Serrano, offering, through Admiral Topete, their support to Salmeron in his effort to restore order. This is the first indication that has come for a long time from any respectable quarter that there are Spaniards who think more of their country than of their own aggrandizement.

A German correspondent calls our attention to the fact that Prince Bismarck's resignation of the Prussian Ministry of Foreign Affairs is an event of no particular significance so long as he retains the Chancellorship of the Empire, inasmuch as Prussian "foreign affairs" are now simply the relations of Prussia with the other German States. As Chancellor of the Empire, on the other hand, he has charge of the foreign affairs of the Empire, or, in other words, is the real Foreign Minister of the Confederation. The same correspondent also informs us, in correction of a statement in our issue of July 17, that the refusal of the Catholic bishops to obey the law with regard to the ecclesiastical seminaries will entail simply the exclusion of the graduates of these seminaries from the exercise of sacerdotal functions, and not the closing of the seminaries by the police.

ANOTHER ASPECT OF THE FARMERS' MOVEMENT.

WE pointed out a fortnight ago the baselessness of the popular notion that the railroads were making enormous profits at the expense of the community. A very few railroads in the more densely peopled regions make fair dividends for a few years at a time; but no general legislation for the regulation of railroads can be based on the history or condition of a few. The railroads of the country taken together are an unprofitable enterprise, and do not pay the owners the ordinary rate of interest on the cost of constructing them. In other words, the community at large gets the work of transporting goods and passengers over the vast area occupied by population in the United States, done for it at a loss by a small body of venturesome individuals. This loss on the part of the owners is doubtless not wholly due to the lowness of the charges or the scarcity of traffic. It is in part the result of want of economy in management, as is shown by the number of poor, non-paying roads which become paying when they pass into the hands of able and skilful men. But even with the best management obtainable, there are only a very few roads in the country which would yield the ordinary average rate of profit which is yielded by capital in other kinds of business. It is evident, then, that any attempt to cut down rates by law, or, what is the same thing, seriously impede the conduct of the enterprise in the manner the owners think most conducive to their interest, must lead to the abandonment of the roads, or, in other words, their virtual confiscation. If the state worked them so as to make them pay interest on their cost, there would be the same complaints as to the charges which there are now, and others of a more serious kind as to other things. If it did not work them so as to make them pay such interest, they would become a charge on the whole body of taxpayers, which might or might not be a desirable consummation, but is certainly not one for which the public is yet prepared. We believe, on the other hand, that if there be anything of which the country is thoroughly sick, it is of legislative or general governmental interference with the making and working of railroads. It has proved thus far, and even on the small scale on which it has been tried, a fountain of corruption.

We have more than once pointed out what we conceive to be the real abuses of railroad management. If we are now asked whether we mean to say that there is nothing in the Western farmers' complaint that a third of their crop is consumed in getting it to market, we answer that there is something in it, but apparently not what they imagine. If we are asked, farther, whether it is not a horrible thing that corn should be used as fuel in Iowa when so many millions of people all over the world are short of food, we reply also that we do not see anything particularly horrible about it. Distance is one of the facts of nature to be accepted and dealt with like other facts of nature—rationally. If a man chooses to go out into the wilderness without roads, wagons, or any other means of reaching a market, and plant ten times as much corn as he and his family can consume, and then, in the fall, begins to wail and lament because he cannot find a purchaser for it, nobody pays any attention to him, or people content themselves with telling him that he ought to have bethought himself of the market before he built his house or put in his crop. If he begins to weep and ask whether he must use it for fuel, they tell him unhesitatingly that it is his duty and privilege to do so, if he cannot turn it to any better account ; that he is no more bound to trouble himself about the starving poor in England, and India, and China, than about the houseless poor in New York, when he is surrounded by leagues of trees. If he were still to refuse to be comforted, and were to maintain that large numbers of industrious people in the East and in England ought to club their savings and cut a wagon-road to his house, load up his corn, and cart it off as far East as may be necessary to secure him a fair price for it, we should simply laugh and walk off.

And yet the foregoing would be, with a few trifling changes, a fair statement of the case of the Western farmers against the railroads in the matter of charges. At the bottom of the grievance lies the great fact that agriculture at the West has been overdone, just as, before the gold discoveries, sheep-farming was overdone in Australia. The invention of railroads, and the encouragement given to their construction since 1836, have enabled large bodies of settlers to push out into the wilderness, where they form one of the sparsest populations in the world, on one of the richest soils. The application of machinery to the cultivation of the soil has, however, released them from the restraints in their operations which the scarcity of labor would otherwise have imposed. The consequence has been that they have gone into corn and cattle raising in the most reckless way, and apparently on the theory that, as all mankind need bread and meat, there could not be in any place a redundancy of food. They got on pretty well under the low tariff and taxation of the period before the war. They got on even better during the rising markets, the inflation of the currency, and the prodigious waste of food and clothing wrought by the war, and during the last ten years the pouring of population into agricultural pursuits in the West has been greater than ever, while the markets are farther off than they were in 1860. The result is that they at last begin to find the situation unendurable. They have more corn and bacon and wheat than they can dispose of, and looking about to see what is the matter, they find that if they could get these commodities to New York or Liverpool without paying for transportation, they could sell them at a profit; so they insist that somebody shall do this work of transportation for them, cost what it may. Of course they are ready to impose the job on the railroads, as the railroads are in their power. The Australian wool-growers would have made ship-owners take their wool to Liverpool for next to nothing if they had had similar control over them. The desire in both cases is the old one—to make other people somehow protect you against the consequences of your own mistakes. It does not present itself to the farmer's mind in this shape, we admit, and it is disguised from him somewhat by the fact that the railroads are the only great highways he has, and his reasoning is naturally influenced by the common-law doctrines and traditions about public roads. He forgets that the state supplied nothing of the old highways but the track; that each individual who used it provided his own rolling-stock and kept it in repair, acted as his own superintendent, brakeman, conductor, and driver, and bore all the loss of collisions, floods, and fires. That may have been a better state of things than the present one, but we cannot go back to it.

We have said that the markets have been during the last ten years farther from the Western farmer than ever. This is literally true, though we see as yet but little or no adequate recognition of the fact in the agitation now going on. While the agriculturists have been pushing out further and further into the West, the high-tariff men have been pushing New York and Liverpool—or, in other words, the places where he must sell his grain—further and further into the East. Distance, it must be remembered, is, from the commercial stand-point, not a question of time, but of money. The only reason why a man objects to having his goods a long while on their way to the market is that he loses interest on their value while they are in transit, and he has to pay more for their carriage. Therefore, any addition to the cost of carriage is the equivalent of an addition to the distance. If it costs a dollar to send a bushel of corn from Chicago to New York, and the price be raised to two dollars, it is the same thing commercially as if the distance were increased from 900 miles to 1,800.

Now, this is exactly what the tariff legislation of the last ten years has been doing. The enormous increase it has wrought in the cost of the machinery of transportation has, *pro tanto*, added to the distance which separates the consuming East from the producing West, or, in other words, has pushed the farmer farther out into the wilderness. The same result has been accomplished in a slightly different way by the obstacles offered to the sale of foreign goods to the farmer. The more difficult it is made for the foreigner to sell his products here, of course the more difficult it is for him to buy ours, which is the equivalent of putting him farther away. Every ten per cent. added to our tariff puts the Englishman and Frenchman

who longs for our beef and wheat so many miles farther off from them. He has to buy with what he makes, and the harder it is for him to get to us with what he makes, the less he can afford to purchase when he reaches us, or, in other words, the farther he has to travel, less money he has at the end of his journey.

There is another important element in this transportation problem to which we have more than once made allusion in discussing the conditions of agricultural life in the United States. The early frontiersmen of the ante-railroad period were, like the European peasantry, a hardy, simple-minded, rough breed of men, with very rude tastes and very few wants. When they went out into the wilderness they did it well knowing that they left civilization behind, and neither desiring nor expecting a market for their products. They dressed in leather or homespun, and ate what they raised or killed. If they had more corn than they needed, they burnt it or threw it away without qualms or regrets, or considering what it would bring in New York. They were, too, tolerably ignorant of book-learning, and cared nothing about music, except that of the dancing-fiddle. Their lives, if coarse and laborious and full of hardships, were, on the whole, tolerably contented. They swore, and drank, and fought, but they were not troubled with problems of political economy. Our modern frontiersman, who clings to the railroads out along the prairies, is a very different person. He insists on being followed up by all the modern conveniences. Not only must he have a church and school, but he must have the newspapers and magazines, and his wife and daughters must have a piano and silk dresses, and the new novels, and their minds, instead of being intent on the homely joys of the forest and the prairie, are vexed by the social and religious discussions of the far East. They want to hear Froude lecture, wonder what Plymouth Church is going to do with Bowen, would like a chance of listening to Lucca, are eager to try the newest thing in stoves, and wonder what the Emperor of Austria will think of the Illinois school-house at the Vienna Exhibition. Now, no railroad that pays interest on its cost will ever satisfy a population of this sort by its rates, as long as this population is dependent on agricultural products, raised two thousand miles from the Atlantic seaboard, for the gratification of its multifarious and growing wants. Either the West must go back to simpler ways, or it must bring itself into closer relations with the densely peopled countries of the East, by removing artificial obstacles. In short, we must elect whether our tariff legislation shall encourage agriculture or manufactures, or let both alone. If we decide for manufactures as at present, why, farmers must grin and bear it.

PAID AND UNPAID LEGISLATORS.

THE speech of Senator Carpenter to the people of Wisconsin in defence of his course in the salary business certainly abounds in candor, and in the matter of Washington expenses and the general niggardliness of United States salaries, contains some very healthy facts for the consideration of a Western or rather of a country audience. It must have been an almost incredible statement to the rural population of the West and to the well-to-do mechanics of Western towns that the leading lawyer of Wisconsin does not own the house he lives in, neither in Washington nor in Milwaukee; that he owns nothing in the world except a library of 15,000 volumes and an insurance policy upon his life of $50,000. It must also astonish them to be told by a politician, not that all public men should live with the economy and simplicity of "hard-fisted" farmers, and that the salaries now paid are much greater than the incomes of the agricultural constituencies, but that as much as $6,500 is actually expended by their Senator for house-rent, office-rent, and insurance; or, as Mr. Carpenter rather cleverly puts it:

"These items give $6,550 of indispensable expense. There is not a meal of victuals in that sum, no clothing for my family, not a shirt for myself, no school-books for my babies, no carriage hire, no doctor's bills, no contributions for the preaching of the Gospel, no charities to the poor, no contribution to pay the expenses of Wisconsin office-seekers who have failed in their application and have to be sent home at the expense of the delegation."

From such personal considerations as these, the Senator proceeds to argue that the American system of government forbids the gratuitous services of legislators, "senators and representatives shall receive a compensation for their services" being the language of the Constitution; and that the earlier Congresses which fixed the amount of their own pay, or provided for its increase without the disapproval of the country, did just what the last Congress did, neither more nor less. While this speech contains much that is true so far as relates to the expenses of city life and of public men, and the general inadequacy of salaries, the deductions which Mr. Carpenter draws from his premises are utterly false. And as this ingenious and plausible speech has been industriously reprinted and widely circulated, and cannot but produce some effect, we will here point out the fallacy of its conclusion.

There are three distinctions between the last increase of the Congressional pay and those of which the country has not disapproved, and it is these differences which stamp the last as wrong, and cross the public sense of what is proper and right. First, the former Congresses provided for the pay of officers of the Government before they touched their own, and they then fixed or increased their pay in due proportion to what they allowed other official persons. This Congress shamefully neglected the executive and judicial departments, dishonestly selecting a few officers from each as scapegoats for their own delinquency, and pushing their own rate of compensation out of all proportion. As we have before shown, the pay of the Congressmen at first was designed to be only about one-fourth of the salary of the Chief-Justice of the United States; but at the ratio of advancement which has prevailed during the last eight years, the next increase will carry the pay of three hundred members higher than that of the nine judges of the Supreme Court. In the second place, the former increases of salary were not wholly and absolutely retroactive. To a certain extent they were retroactive, as they necessarily were passed during the session, and not at the beginning. To a certain extent they were wrong; for no increase should be in the slightest degree retroactive, and no Congress should increase its own compensation. Hereafter, let us hope, public sentiment will require an increase to be absolutely prospective—so prospective that a Congressional election shall intervene before the change shall take effect. Undoubtedly, many who vote for such a prospective increase will be the gainers from it, either as Senators whose terms extend over, or as re-elected members; but the power of men to vote themselves unlimited sums, which no legal remedy can recover, and no constitutional power can check, will be practically brought under public control. It was the unconscionable exercise of this unlimited power by the last Congress, at a time when the services of the members had ended, and when the Presidential and Congressional elections were over, that not only incensed, but also alarmed the public mind. In the third place (and this is the worst part of the "salary-grab"), the former increases of salary—that is, those which were not censured by the country—were fairly brought before Congress by a bill for that purpose, standing on their own merits so far as they had merits, and leaving members free to vote against them, and allowing other members no evasion of responsibility if they voted for them. The "salary-grab," on the contrary, was an extraordinary tissue of legislative trickery, designed to coerce one man, bribe another, and give loopholes of escape to all. It was fastened, in the last days of the session, to an important appropriation bill; whereby such men as General Garfield, who had expended months of labor on the bill, were coerced into the mistake of voting for it, rather than see the product of their winter's work destroyed. The proposition was improperly coupled with an increase of a few other salaries, having nothing to do with that of Congress, the intention being not a general comprehensive increase of all salaries, including the legislative, but an increase of all legislative salaries, say three hundred in number, with a shallow pretence of fairness in adding less than a dozen from the executive and judicial departments. The constitutional right of the country to the veto of the executive was tampered with by offering the President a bribe in the bill of $100,000

The time at which these nefarious legislative practices were suddenly sprung upon the country—after the deliberative work of the session was over and when the life of that Congress was expiring, and a re-elected President about to begin his last term—completed the extraordinary combination and coincidences of what was reprehensible and inexcusable in this piece of legislative work.

But a question of much more general importance is suggested by this speech. Should legislators be paid? and if so, should their compensation equal that of the higher executive and judicial officers of the Government? Mr. Carpenter cites the attempt that was made in the convention to have the Senate an unpaid body, representing the wealth of the country, and the fact that the present millionaires of the Senate all voted against an increase of pay. According to Mr. Carpenter, these gentlemen would now prefer to do away with all pay, so as to secure for colleagues men of wealth and respectability. But an unpaid legislature, Mr. Carpenter thinks, would be absolutely antagonistic to the principle of the Constitution, which designed the American Government to be a poor man's government, and to that end provided means for having the poor man take part in both making and administering law. As an illustration, this is most unfortunate. Congress, instead of being a poor man's legislature, is the legislature of "large interests" and of "great corporations." While the unpaid members of Parliament were forcing the English railways to run cheap trains for poor men, which the popular gratitude has termed "Parliamentary trains," Congress has been giving away the public lands to railway corporations. While the rich men of the House of Commons were keeping Hampstead Heath open for the poor of London against the encroachments of a rich nobleman, Congress was presenting Mr. Thomas Scott with $300,000 worth of property in one of the parks of Washington. During the past year the Supreme Court has affirmed the validity of what are known as the Twenty Per Cent. cases, in which something like twenty-one hundred laboring men were interested. Yet Congress, while the test-cases were pending, took away from the Treasury the power to audit and pay them after a decision should be reached, and it has actually compelled each of these twenty-one hundred laboring men to bring his individual suit in the Court of Claims to recover on an average about $125, where the Attorney-General was compelled to admit that the Government had no defence—and this at the very time that Mr. Carpenter and his associates were voting themselves a gratuity of $5,000 apiece, and raising their prospective compensation fifty per cent. per annum. With such facts before the country, it is both untruthful and foolish for Mr. Carpenter to set up his paid legislature as the representative body of poor men. The experience of mankind shows pretty conclusively that when a poor man has brains or energy enough to push his way into a legislative body, he is much more apt to be intent on getting rich himself, than on looking after the interests of his fellows in poverty. The welfare of the poor depends, as it always has depended, upon the cultivated intelligence and conscientious sympathy of the legislator, and these qualities, all the world over, are least found in men who are engaged in the struggle of getting their heads higher than their neighbors'.

The truth is that, in the first days of the Republic, the compensation of members was simply an absolute necessity. Undoubtedly there were then rich men in the country, but not in such numbers nor so distributed as to secure a gratuitous representation. Washington was so embarrassed in his circumstances that he was compelled to ask the Treasury to advance him a quarter's salary. Jefferson and Madison were likewise so involved that it was with difficulty that they could be induced to remain in public life. Hamilton and a dozen others had their fortunes still to win, or rather still had to work for independence in life. The seat of Government was undetermined, and there was no metropolitan city to attract like London or Paris. To ask men to travel from Georgia or New Hampshire, or the backwoods of Kentucky, on horseback, or in coaches, or by sailing vessels, and spend a year in gratuitous labor for the country, while their estates were lying idle, and their families embarrassed by the general destitution, was to ask an impossibility. Men were quite as patriotic as the present millionaires of the Senate, and quite as desirous of securing respectable, intelligent gentlemen for associates, but they knew perfectly well that the burden was greater than could be borne, and therefore it was that, without any thought of securing the services of those poor men who are best known to us in these times as professional politicians, they provided a compensation for members of Congress.

The peculiarity of the legislative service is that it does not assign to a man a daily routine of hard work, and does not (except in the cases of a few of the leaders) require of him the sacrifice of his entire time. Hence, if he is in tolerably independent circumstances, he can serve in a legislative body gratuitously or for the sake of gaining some distinction. In every moral community there are also a fair proportion of men who are willing to give a good portion of their time to the public for the mere reward of accomplishing some good. Such men we see in our school boards and public charities working zealously, accomplishing much, receiving nothing. The finest talents in America have always been ready to give to the country all it would take of unpaid, well-performed service. But the policy has been to pay for ignorance and blatherskite. Our wide extent of territory, the great distance to be travelled over to the national capital, the unequal dissemination of wealth, unquestionably still operate to require Congressional compensation. But it is still a question whether we should pay our legislators at the same rate that we pay men who have official drudgery and direct personal responsibility, a daily task to be performed without power of adjournment and with but little in the way of distinction or promotion, and who are obliged to sink their own business in the business of the Government. Mr. Carpenter unconsciously furnishes a demonstration against himself when he shows us that while he was receiving $5,000 a year as a Senator he was also making $10,000 a year as counsel in the Supreme Court. The Judges of the United States, on the other hand, are expressly prohibited by law from practising in any court; and the executive officers of the Government are practically cut off from the advantages of private business; it is only members of Congress, who at best give their divided time to the country, and who, in many instances (like that of Mr. John Morrissey), can do nothing whatever for their pay, who are able without fear of dismissal, or even official censure, to make money by doing outside business. The great number of our legislators forbids, from the economic point of view, the payment of an excessive salary, though the causes which we have indicated require a reasonable allowance toward a member's expenses. But experience proves that with every increase of pay there is a diminution in the quality of our representatives, and that remunerative legislative salaries are breeding a class of professionals whose trade is politics, and whose only livelihood is what they can make out of their seat. The nearer we have approached to gratuitous service, the more pure and honorable that service has been; and while poor men may have been debarred from taking to Congress for a living, an intelligent and upright legislature has secured the greatest good of the greatest number.

RECENT EXPERIENCE OF HARVARD COLLEGE IN ELECTIVE STUDIES.

THERE was a vague but very general impression a few years ago that if the elective system were introduced into the older American colleges, the practical sciences, as they are called, especially physics, chemistry, and natural history, would crowd out the study of the ancient languages. There was also a feeling that the obvious utility of the modern languages, and particularly of French and of German, would help to throw the "dead languages" into the background. A great many enthusiasts fancied that the *beatissimi sæculi ortus*, the good time a-coming, was at hand, when books would be thrown aside, and all intellectual activity would be narrowed down to the study of physical nature; and so much noise has been made about the natural sciences that a great many people undoubtedly think this is the principal if not the only subject taught where an elective system prevails. The Harvard University Catalogue for 1872-73 groups the elective

studies of the three upper classes under nine heads, and gives the number of students electing every individual study. This convenient arrangement enables us to ascertain the exact numbers in the nine departments enumerated in the catalogue; in other words, to ascertain what it is that the masses of students feel the need of most, and flock to most, when the choice is left entirely to themselves. We have taken pains to add the numbers together, and think the following summary, in which the order of the catalogue is followed, will be interesting.

To prevent misunderstanding, it may be well to say that the numbers do not represent *students*, but *elections*. A student may elect French, German, Spanish, and English, in which case he would count *four* in modern languages; or, if he chooses physics, chemistry, mathematics, and natural history, he will count *one* in each of those departments.

I. Ancient Languages,	541	VI. Mathematics,	114
II. Modern Languages,	436	VII. Physics (including Chemistry),	199
III. Philosophy,	79	VIII. Natural History,	154
IV. History,	193	IX. Music,	9
V. Political Science,	65		

The absolute number of elections in ancient languages (under which the catalogue includes 14 students of elements of Roman law, 13 students of Hebrew, and one of Sanskrit) is 541; exceeding the numbers in modern languages (under which the catalogue includes 3 in Anglo-Saxon, 10 in the history and grammar of the English language, and 30 in English composition and English literature) by 105; exceeding the number in physics (including chemistry) by 342; exceeding the number in natural history by 387; exceeding the combined numbers of physics and chemistry and natural history by 188.

The following table, in which the departments are arranged in the order of numbers, shows the percentage or relative number of students in each department, for every hundred students in ancient languages:

Ancient Languages,	100	Natural History,	28
Modern Languages,	80	Mathematics,	21
Physics and Chemistry,	37	Philosophy,	15
History,	35	Political Science,	12

The above percentages may be compared or grouped in different ways. Taking the fashionable division into "literary" and "scientific" courses, we may arrange them thus:

Ancient Languages,	100	Physics and Chemistry,	37
Modern Languages,	80	Natural History,	28
History,	35	Mathematics,	21
Philosophy,	15		
Political Science,	12		
	242		86

The above combination gives 242 : 86, or something short of 36 students in the "scientific" course to 100 in the "literary" course.

Perhaps some objection may be taken to the classification made above. The modern languages may be regarded from two points of view. In one sense they may be called "literary," in another, regarded merely as a means to an end; to aid the student in scientific or professional work, they may be called "practical." So, too, with mathematics; as a preparatory study it is practical, as a disciplinary study it may fairly be put with the classical, historical, and philosophical studies which make the ground-work of the old-fashioned college. If, therefore, we choose to make another division, perhaps equally fashionable, into "disciplinary" and "practical," we find by reversing the positions of modern languages and mathematics:

Ancient Languages,	100	Modern Languages,	80
History,	37	Physics and Chemistry,	37
Mathematics,	21	Natural History,	28
Philosophy,	15		
Political Science,	12		
	185		145

By this arrangement the disciplinary studies preponderate over the practical in the ratio of 185 : 145 or 100 : 78.

The figures show conclusively that, in spite of the crusade which has been carried on against the ancient languages, they still are full of vitality, still a power, still a popular study, and, in fact, the greatest interest in the little college world. As our enquiry is purely numerical and statistical, we do not ask why the students make the selections they do. Doubtless the reasons are not very obvious; still one fact is plain, that they are not guided wholly by utilitarian views.

Correspondence.

JUDGE CRAIG AND THE CHICAGO, BURLINGTON, AND QUINCY RAILROAD.

To the Editor of the Nation:

Sir: In several of your articles concerning the war upon railroads in this State, especially those in which you consider the election of Mr. Alfred M. Craig to the Supreme Bench, I notice that you have fallen into the error of supposing that his election was due mainly to the support given him by the Chicago, Burlington, and Quincy R.R. Company. I write this wishing and hoping that I may correct this false impression which you have, and trusting that the articles which you hereafter publish upon this subject may be fairer and more likely to place this Company in a better position before the people of this and other States.

My connection with this Company has been such that I can truthfully assert that its officers in no word, act, or deed during the late canvass attempted to affect the election of any candidate for the Supreme Bench Indeed, the policy of this Company has always been not to mingle in politics at all.

As a reader of and subscriber to your paper, I think its arguments and conclusions on this "Farmers' Movement" generally sound.

Respectfully, L. O. Goddard.

Chicago, July 24, 1873.

[After looking carefully over our references to the Chicago, Burlington, and Quincy Railroad, we are unable to find that we ever said that the election of Judge Craig was "mainly" due to the efforts of that road. We have said, on the authority of statements in the Chicago *Tribune*—statements uncontradicted, so far as our observation goes—that Judge Craig had acted as attorney of this road, and that the road helped to secure his election. If these statements can be disproved, we shall certainly be very glad of it.—Ed. Nation.]

Notes.

Lieut. Steevens, U.S.A., commander of the expedition sent into the territory east of the Jordan by the American Palestine Exploring Society, reports progress in his own department of the expedition, which is remarkable, considering that this is the first season in which the party has been in that difficult field. A base line of five miles has been accurately measured, and four hundred square miles triangulated, and the details nearly filled in. The suspicions of the natives are very embarrassing, and it is difficult to keep cairns up long enough to take observations. Meanwhile, Professor Paine, who has charge of the department of archæology, has had the satisfaction of making some identifications of extreme importance. Mount Pisgah, from whose top Moses viewed the Promised Land, is satisfactorily identified for the first time, and Mount Nebo is for the first time accurately described. Tristram's descriptions were found to be exceedingly inaccurate, as is also Van de Velde's map of this part of Palestine. After spending some time in Medeba, from which Mr. Shapira professes to have obtained a large portion of his so-called Moabite inscriptions on pottery, they are inclined to discredit all of them.

—The fifth annual convention of the American Philological Association was this year held at Easton, Pa., and began on the 22d instant, the session lasting through that day and the two following. It was not a large gathering, nor were the proceedings of so much importance as in some previous years. It cannot be expected, in so vast a territory as ours, that every philologist should be able to attend every meeting, especially in a place like Easton, quite out of the centre of scholarly activity. Still there was a fair attendance, especially of the younger philologists, and the temper of the assembly was very good. It is beginning to be understood that the Association is organized for the advancement of genuine philological enquiry, and not for the display of shallow theories, nor, primarily, for educational ends. It was wisely decided, however, a year ago, to organize a special pedagogical section, which might hold separate meetings; the present year the amount of matter presented was so small that the pedagogical meeting took the place of the regular meeting on Wednesday evening. On Thursday evening, a reception was held by the citizens of Easton in the opera-house, and on Friday, the members of the Convention were invited to an excursion to Mauch Chunk and the "Switch-back." Of the regular proceedings of the Association, the most noticeable and valuable was on the afternoon of the first day, and consisted in some remarks by Mr. J. Hammond Trumbull, of Hartford, on presenting a vocabulary of a native dialect of the Isthmus of Darien, by Commander Lull. This vocabulary, just made, when compared with a very meagre one of the same dialect, made nearly two hundred years ago, was found, so far as the latter extended, essentially to coincide with it; this fact, Mr. Trumbull observed, is of importance in view of a remark made by him in the published volume of 'Transactions,' as to the constancy of Indian dialects, and will serve to refute Max Müller's view of the exceeding changeableness of the language of savages. This led to an interesting discussion, in which

others took the same ground with Mr. Trumbull. In the afternoon of the second day an animated debate was excited by a paper of Prof. Goodwin's, on the classification of conditional sentences. The lamented death of Prof. Hadley, and the absence of Prof. Whitney, who have been the two most active and influential members of the Society, were evidently much felt by those present. On the other hand, a very noticeable feature of this meeting was the number of young professors, recently from Germany, who took no very active part, but whose presence and influence promise well for the future. Another interesting feature was the wide extent of territory, and the number of institutions represented. The fifty-two members present were from seventeen States of the Union, several of them from the South, and the District of Columbia was also represented. The new President is Prof. March, of Easton, and the next meeting is to be at Hartford, on the 14th of July, 1874.

—Some of our readers will thank us for directing their attention to two articles in the June and July *Practitioner*, the subject of both being the affection known as "writer's cramp." The essayist bases his articles in part on his observation of ten cases which he has personally treated within the past year, and of which he gives many interesting details. There has been of late years an increase, he says, in the number of sufferers from this rather obscure disease, and this increase he attributes to the increased use of metal pens. In regard to the popular explanation of this effect of using metallic pens he has nothing to say; that explanation ascribes the complaint to an electric current generated in some way not minutely described, and conducted by the metal to the muscles and nerves of the fingers and arm. On the contrary, he attributes the ill effects of the use of these pens, as distinguished from quills, to the fact that one must bear on harder in driving the former over the paper than in writing with the latter; and it is fatigue that he thinks the primary cause of the complaint. In the ten cases which he has had in hand this year, he has noticed that a very efficient secondary cause of the cramp was the mental condition of excitement induced by the discovery that the disease existed, and this condition he observed to be aggravated when the sufferer was ignorant that any such disease was laid down in the books and known to the faculty. The patient at first attributed his lack of power to "foolishness," against which he must struggle with the determination "not to be beaten." In this struggle of course he fails; the hand continues to lag behind the will; and perhaps there is added to this very sufficient cause of mental distress the further cause that the obstinate right hand may be the sole source of income, and the sufferer finds not only his will disobeyed, but that every attempt to earn his living is balked by an unknown and non-apparent agency. "One of my patients," says the doctor, "was, in fact, upon the verge of suicide"; and another had, in a moment of desperation, driven a knife into the offending member at the wrist. Of course worry and anxiety set in, and, reacting on the nervous system whose disorder has occasioned them, the general health of the victim becomes seriously impaired and the progress of the disease rapid. The great cause of the chronic fatigue which is the primary cause of the complaint, is a too prolonged stimulation of the muscles of pen-prehension, and this stimulation may be either artificial or the natural stimulation of the will. Thus, Schumann, the composer, who began learning to play the piano late in life, found, as other pianists find, that the ring finger of the right hand is the most troublesome of all. In order to strengthen it, he suspended from the ceiling an elastic cord with a loop at the end, and, passing his finger through the loop, he exercised himself in depressing it. This exercise he practised to such excess that by and by he had so fatigued the muscles involved that the finger was worse than useless. And this case may also serve to show not only that too prolonged stimulation may be the cause of disease, but also that too frequent stimulation is to be avoided Our essayist is of opinion that the cramp which occurs in dairymen while engaged in milking, and the occasional cramps of pianists, are due to the frequency of the successive stimulations, and not to the prolongation of the stimulation. One interesting phenomenon connected with writer's cramp, a phenomenon which we have all noticed, and which most of us have probably noticed in our own personal cases, the writer cannot explain, and that is the associated movements which often accompany the act of writing. When, for instance, Mr. Sam Weller wrote his valentine to Miss Mary, his behavior was such as to lead directly up to the supposition that he deceived his father as to the real reason of the abrupt termination of that letter. His father remarking that it seemed to come to a close very suddenly, his son rejoined that therein lay the true art of writing love-letters; you must always break off so soon that the party addressed shall wish there were more, which, however, the party addressed would be safe to do were the letter as long as the great Tartar epic poem—seventeen English miles. But philosophy apart, Mr. Weller, when he began to put his composition on paper, found it necessary "to recline his head on his left arm, so as to place his eyes as nearly as possible on a level with the paper, and while glancing sideways at the letters, to form with his tongue imaginary characters to correspond"—a mode of writing very conducive to brevity and an abrupt closing of the epistolary effort. Directions for the treatment of writer's cramp are deferred, and that topic will be the subject of an article in the *Practitioner* for August. Meanwhile, quill-pens would seem to be indicated.

—Mr. Sabin informs readers of the *Bibliopolist* that Mr. Karl Hillebrand, writing to him from Florence, says that, having had the privilege of looking through the collection of papers left by the Countess Guiccioli, he found some valuable remains of Byron. Among these, besides the manuscript of a work by the Countess, entitled 'Byron's Stay in Italy,' which is full of contemporary notices and unpublished letters, are autograph manuscripts of many of Byron's writings, and, what is a good deal more important, an extensive correspondence, dating from 1820 to 1823, "which, however, is hardly adapted for publication." The countess had possession of the original manuscripts of several cantos of 'Don Juan,' and the whole of 'Marino Faliero' and 'Dante's Prophecy.'

—We have received from the Bureau of Education its first circular, which contains historical and current statistical information in regard to public instruction in Spain, Bolivia, Uruguay, and Portugal. None of it is to be called original in the sense of coming at first hand from American sources, unless we are to give that name to a report on primary education in Portugal, which is the work of Mr. J. C. Rodrigues, the editor of our New York illustrated journal *O Novo Mundo*. For the reports on secondary education in Portugal, Commissioner Eaton is indebted to the official report of the Brazilian Minister in Lisbon, and to an article in Schmid's 'Educational Cyclopædia.' This latter source has been found fertile, as we have from it the historical summary of instruction in Spain as well as in Portugal, while in the case of Uruguay and Bolivia the reports have come through the Brazilian Minister at Washington from the Brazilian envoys at Montevideo and La Paz. Schmid's historical survey of the Spanish system of education is done with characteristic minuteness, and has a word to say about the Iberian peninsula while it was still in the possession of the Iberes, and before the invasion of the Phenician, the Greek, the Roman, the Visigoth, and the Moor. Indeed, it has a word to say about the prehistoric Celts. It first begins to be minute, however, after Sertorius had established himself in Spain in 83 B.C., and in the exercise of his far-seeing sagacity had gathered together at Osca (Huesca, in Aragon) a large school of young men who were at once students and hostages. We are told of "the Spanish nobles Trajan and Hadrian," of Porcius Latro, of Marcus Annæus Seneca and Lucius Annæus, of Quintilian, Columella, Pomponius Mela, Silius Italicus, Florus, and the other distinguished Spaniards who "had a share in the literary *renaissance* which characterizes the period between the reign of Vespasian and the time of the Antonines." With equal thoroughness the Gothic schools, such as they were, are handled, and the institutions of the Jewish doctors and the Moors. This will be found a useful synopsis.

—Of the present condition of education in Spain there are no later statistics than those of 1867, although, as may be supposed, there has been no lack of decrees of a later date than that year. There were then 1,425,339 children in all the public and private schools, or 338,761 more than there were eight years before, in 1859. Comparing the census of the two years the percentage of increase in the number of children attending school would be found nominal, if indeed there were any at all. One person out of every thirteen in the kingdom would appear to be at school. In Massachusetts, in 1860, the proportion of school-goers to citizens of all ages was as one to four and a fraction, and the whole country over it was about one to six, though we believe this holds good of the whites only. In Portugal things are, if anything, worse than in Spain. In the one as in the other there is a good enough system on paper, but the schools are bad, the teachers sadly underpaid—the salaries ranging from $175 a year to $100—state supervision good for little, and attendance very poor indeed. So, too, of Bolivia, while Uruguay might perhaps have been in somewhat better case "but for the constant political disturbances which have prevented the proper carrying out of many provisions of the educational law, and have kept especially the rural population in a state of deplorable ignorance," and which among their other results have prevented our Bureau of Education from procuring any very trustworthy or otherwise valuable reports of the state of education in Uruguay and others of the countries figuring in this "Circular of Information."

—That Keble borrowed the title of 'The Christian Year' seems probable. On the authority of Mr. Parker, the son of the eminent Oxford publisher, the *Churchman's Shilling Monthly*, as quoted by Mr. J. Sabin, makes the following statement: One morning Mr. Keble, entering Mr. Parker's shop, saw at the top of a staircase leading to a gallery of book-shelves a work in twelve volumes,

entitled 'L'Année Chrétienne'; he at once asked leave to examine it, and a short time afterwards 'The Christian Year' appeared. And yet we may say that the scheme of Mr. Keble's work almost necessitated the title which he chose. At all events, the matter is of no consequence, except as mildly interesting to the readers of the most widely-read book of our day. We have seen it stated that within five weeks after the copyright expired, a little time ago, no less than ten editions of this marvellously and worthily popular work were put on the market. It is now forty-six years and more since the first edition appeared on the 22d of June, 1827. In December of that year came the second edition; in March and August of the following year there were two more; in 1829 there were two more; but after that year the sale slackened until 1845. Then the book took a fresh start, and the sales have gone on actively ever since, till there have been we do not know how many editions of it.

—The third number of *Brownson's Quarterly Review* ought to please alike the most zealous sort of Roman Catholic and the most zealous sort of Protestant. How it may be looked on by Protestants and Roman Catholics not so zealous is another matter. Nothing could exceed it in its uncompromising presentment of Roman Catholic views. The article entitled "The Church above the State," for instance, and those respectively entitled "Whose is the Child?" and "Papal Infallibility," assert, in language of the plainest, that Roman Catholic parents cannot send their children to the common schools without a violation of their consciences; that rulers govern in their states subject to Papal interference whenever they infringe the law of God, of which law the Pope is the only authorized expounder, and that Catholicism was never rendered a greater service than when Papal infallibility in matters of faith and morals was decreed as *de fide*. This latter article on infallibility is addressed to the so-called Inopportunists, or Roman Catholics who, while believers in the dogma, thought that the fit time for promulgating it had not come. Very different has long been Dr. Brownson's opinion. The Council was especially wise and prudent, he maintains, in doing just what it did at just the time when it did—perhaps might better have done it sooner; the necessities of the times demanded it; it was necessary both for its influence on the faithful and its influence on "the world"; Catholics were suffering greatly from the want of it; when the Syllabus came out, in 1864, had not nearly every one of the condemned propositions in it been defended by professedly Catholic writers — by professors, journalists, statesmen, politicians, and jurists; by Döllinger, Gratry, Montalembert, Cavour—and this although the Pope had previously condemned nearly all these errors in encyclical allocutions or special bulls? Was there not, then, the most pressing need for declaring them utterly erroneous? Did not many Catholics, so-called, go so far as privately to express regret that the Syllabus had been put forth? Had not good Catholics been for generations compelled to admit that possibly Gallicanism also might be sound Catholicism? And as for the world's people, it is useless for Catholics to try to live without giving offence to Cæsar and his Protestant and infidel allies. Nay, it is worse than useless; it is pernicious to the interests of Catholicism; for Mr. Brownson has observed in his intercourse with heretics that it is wisest in the long run to give them undiluted Catholicism, the pure milk of the word. After all, you cannot alter the law that the world hates God; and Protestants know that if the true faith is truly stated it must make them feel their "enmity towards God." "They distrust our sincerity, honesty, and perfect frankness in declaring our doctrines more than they do our doctrines themselves," and believe any Catholic to be equivocating whose doctrinal treatises look to them fairly acceptable—which is saying a great deal, but which, nevertheless, points to a truth; Protestantism was not born and does not exist because Roman Catholic writers wrote evasive or incomplete treatises; nevertheless, Protestants know something of Catholicism made easy, and do distrust the class of treatises which come under Dr. Brownson's condemnation. The other articles which we have mentioned are equally outspoken, lucid, and vigorous; and so, for that matter, are all their companions—the essay on "True and False Science" (which deals with Mr. Parke Godwin's letter to the *Popular Science Monthly*); "Science, Philosophy, and Religion" (a hard-hitting review of Professor John Bascom's Lowell lectures); "Darwin's Descent of Man"; "Sisters of Mercy," and the literary notices and criticisms. The entire hundred and forty-two pages may be read with a high degree of satisfaction; and, of course, in one way of looking at the matter, with a far higher degree of dissatisfaction. People who read for a vicious entertainment will be pleased with some of the language of our author: a long extract is taken from Professor Bascom's book, to show the "philosophical ineptness" of the professor, who is "a mere psychologist and no philosopher"; Dr. Brownson was "brought up among ignorant and bigoted New England Puritans"; Lubbock, Taine, Büchner, Huxley, Herbert Spencer, and others of the same genus "richly deserve that public opinion should brand them with infamy as the enemies of God and man"; "General Grant, without a spark of religion, is ruled chiefly by the Methodists, the most unprincipled, unscrupulous, and bitterly anti-Catholic sect to which Protestantism has ever given birth"; probably the devil has "never performed a more masterly feat than that of persuading modern nations, while he is carrying them away in his train, that he has no existence—is a mere *ens rationis*"; "the bastard daughter of Henry the Eighth" Dr. Brownson has from his boyhood always "held in utter detestation"; "Catharine the Second of Russia was a saint in comparison to the Virgin Queen of England," and so forth, and so forth.

RECENT NOVELS.*

MISS ALCOTT'S latest novel, 'Work,' is rather a more serious book than her 'Little Men' and 'Little Women,' which, as far as bookselling was concerned, were very successful volumes. That this is a simple novel of amusement can hardly be pretended, or, if it is affirmed, it can be reasonably denied; it is rather a contribution to the literature of the "labor question" and the "woman question," as they are called, which questions are the latest that it has become the fashion to treat under a veil of fiction. In general, however, it may be said that, unless the writer on these topics has better command of his art than is the case with most people who have practical ideas to advocate, he seldom does more than devise a combination of circumstances which fits just the particular case in point and no other; he is about as far from settling the general question as would be a man who should propose building a large separate asylum for every foundling orphan in a great city. It is never an easy task to convey amusement and instruction in the same breath; the best amusement is generally found in company with instruction in very general principles. A novel that is written to teach the young women of New England who become domestic servants cheerfully to blacken their master's boots and to sit down to dinner with the colored cook, will probably be found to lack some of those qualities which arouse other feelings than a feeling of curiosity as to what may be said about a question which is generally discussed. A novel which is so totally devoid of imagination as 'Work' is nothing as a work of art; as a guide for poor girls, it is useless; for the invention of incidents is made so much more prominent than the treatment of character—character as modified and affected by external circumstances, which is what those concerned are most interested in—that it conveys no information that can be of any use in one case in a hundred. The following is a meagre outline of the story: The heroine, a young girl of twenty-one, makes her first attempt at supporting herself by entering the house of some vulgar people as a maid-of-all-work, although she is of a far higher nature than her master and mistress, as she shows, among other ways, by her lack of prejudice against color. She is devoted to literature, and sets the house on fire by reading in bed, for which she is most unjustly dismissed. Then she becomes an actress, afterwards a governess in a household where the flippant belles sneer at her, and a jaded man of fashion, the brother of the lady who employs her, a giddy worldling, falls in love with her and offers her his hand and much gold; she refuses him, however, and becomes the companion of a genteel maniac, who in time commits suicide by cutting his throat. Nor should we forget that she is also employed as a sewing-girl and leaves that occupation because she stands up for the girl who has had a misfortune. In due course of time, she meets her fate, one David; they are married; he goes off to the late war of the Rebellion as an officer, and she goes as a nurse. He falls on the field of battle, leaving her to a lonely life. A posthumous daughter partly consoles her, and the rest of her days she devotes to good works. It is a book that was evidently inspired by excellent motives.

Miss Preston's 'Love in the Nineteenth Century' is better than its title, which does not give an accurate impression of what the book contains. It is called a 'Fragment,' and so it is, inasmuch as all the love is omitted, and instead we have an account of a rather interesting friendship between a young man who is decidedly inclined to be impertinent and a young woman who is a great deal too good for him. He is a journalist, and she a well-educated girl; their story is told in the form of letters which they write to one another after they have agreed to keep the question of marriage in abeyance until they have fuller knowledge of their own minds, or rather until they really fall in love with one another. These letters are very naturally written. They show a good deal of crude thinking; but on her part at least there is seen

*'Work. By Louisa M. Alcott. With Illustrations.' Boston: Roberts Brothers. 1873.
'Love in the Nineteenth Century: A Fragment. By Harriet W. Preston, Author of 'Aspendale.'' Boston: Roberts Brothers. 1873.
'A Slip in the Fens. A Novel. With Illustrations.' New York: Holt & Williams. 1873.
'Dimitri Roudine. A Novel. By Ivan Turgénieff. Translated from the French and German Versions. (Reprinted from *Every Saturday*.)' New York: Holt & Williams. 1873.

a very amiable desire to make the best she can out of the world. They exchange their views about "culture," for they worship all the brand-new idols; she defends the French, he the Germans, for it all took place only three years ago, during the last war; he argues in defence of wealth, she praises graceful poverty, and by-and-by they are married and dwell in much comfort just off Beacon Street in Boston. On the whole, the book gives a favorable impression of rather nice people, and especially of their bookishness, and will by no means do away with the impression so general in other parts of the country that Boston is the home of pure intellect, where the emotions are kept hatched down and under the most rigid control. The story is well written, and it should not be passed by without attention's being called to the prettiness of its external appearance and the beauty of the print, which make it one of the handsomest books of the year.

One of the dullest books of the year, as dull as a Long Island beach, is 'A Slip in the Fens,' a raw production of a writer who wisely keeps his or her name concealed. There is a girl who lives in the fens in the neighborhood of Cambridge, England, and who is lovely and attractive in the eyes of man. There are undergraduates, some serious, some frivolous, who wander across the fens. One falls in love with the girl, but he falls out again, and marries some one else in his own station, and nothing comes of anything; people are introduced, but they disappear without any bearing on the story, which stops after filling the requisite number of pages.

A more valuable addition to the Leisure Hour Series, which, in general, is well selected, is Turgenef's 'Dimitri Roudine.' Like almost every one of his novels, it is one of his best. Mention has been made in these pages already of the qualities which are most prominent in his other tales. In this one he has made an interesting study of character in the course of the story, but in such a way that the reader does not feel as if he were called to give his attention to a skilful use of the dissecting knife, or to an artfully contrived series of incidents which should call forth certain traits in the hero, but he rather is shown a person who, besides being endowed with certain qualities, is a real character, a genuine human being. The story is so well told that the reader never knows until the end, and if he is wise he is not overcertain then, what is the real nature of the man a few chapters in whose life compose the book. Judging fairly another human being is always so hard a task that one is generally too ready to catch some prominent trait and to use it in explanation of any obscurity or in blame of any error in the conduct of the person concerned. And if this is the rule in life, and only great insight or long and careful experience can wean one from this habit, it is certainly true of novel writers. See, for a glaring instance, Miss Edgeworth's novels, which illustrate moral traits as her contemporary Joanna Bailey's plays each illustrate a single passion. Take her 'Helen,' for example—a novel, by the way, which might much better be read than half the novels of the day; in that work Cecilia, like the genteel lady in the game who is always genteel, is always lying. On the other hand, there are hosts of modern novels in which the writer turns advocate, and seeks to whitewash vice by claiming pity on account of the force of the temptation. In the case of the novel before us, Turgenef tells the story of the life of a man whose aim was always better than his deed; but we are not taught to execrate him as Mr. Fitzjames Stephen execrates the idle, nor to pity him as a being superior to those whose nature keeps them in the right path, but rather to understand him, to see the complexities of character in a fellow-creature whom it would be easy to denounce, but whom also it is our duty—and our duty from a sense of fairness, not from anxiety to do the generous thing—to condemn with gentleness in our heart.

The scene of the novel is laid in Russia. A family named Lassounski, consisting of a mother, a faded beauty who has a high opinion of her own abilities, and her daughter, Natalie, a charming young girl such as Turgenef draws so well, is spending a summer in the country. With them is a sort of half-friend, half-secretary; his name is Pandalewski. Besides, there is an old friend of the family named Pigasoff, a sharp-tongued, crabbed man. In the neighborhood is another family, consisting of Alexandra Paulovna Lipina, a young widow, and her brother, Sergius, a rather ordinary man, very quiet and reserved. Another character is Michael Michaëlovitch Leschnieff, a man of twenty-eight or thirty, who has the reputation of being eccentric. There are slight indications of some tender interest in Natalie on the part of Sergius. Almost by chance Roudine is introduced. He spends the evening with them, taking the lead in the conversation, completely vanquishing Pigasoff, who throws himself in his way. Daria, the lady of the house, is attracted by his eloquence, and invites him to become her guest for some time—a proposal which he readily accepts. Natalie is interested, almost fascinated; for he is a clever man, and he talks well—fervently about external things, and pensively about himself. In the course of a few weeks, he brings himself nearer the young girl, who pities him sincerely, and who sympathizes with his eager yearnings for success in life. It is needless to say that under the circumstances none of the men lavish much affection on him. In time he declares his love to Natalie; but the mother, who had regarded her daughter as a mere chit, had got wind of the affair, and Roudine, finding the ground unfavorable, and having more than half assumed a passion which he did not feel, leaves the place. Natalie suffers, but her youth and strength bring her through her misery. He does not render her whole life unhappy. Meanwhile, there are other lights thrown on Roudine's character. Michael had known him when they were both young men at the university. Roudine is now thirty-five, and in speaking of him to Alexandra, Michael acknowledges his fascination, but looks on him with considerable asperity. Later on, when he is married, he inclines to more lenient views, and in the last chapter of the book there is an account of a meeting between the two old friends, which is as pathetic as anything the story contains. By this time Roudine has become prematurely old and worn; one delusion after another has left him; he has learned the hollowness of his hopes from bitter experience. He gives his friend an account of all he has done since they were last together. They part and never meet again. We last hear of Roudine's throwing his life away on a revolutionary barricade in 1848 in Paris.

If nowhere in this novel are we led to an injudicious admiration of the hero, we are nowhere led to a clumsy or brutal condemnation of him; he is put before us as men are in life, with a mixture of good and evil which it is by no means easy to unravel, though in certain parts of the story we can have no other feeling than strong disapproval.

THE MAGAZINES FOR AUGUST.

READERS of the August *Atlantic* who know the writings of Mr. Henry James, Senior, will be likely to turn first to that gentleman's review of a book entitled 'Modern Diabolism,' written by a Mr. Williamson. "A grim book," the reviewer calls it—and certainly it has some grim enough things in it, though most people will judge these to be very thoroughly whelmed in its extreme silliness. What is in the book, however, is of less interest than what is in the review of it. The modern diabolism of which Mr. Williamson treats is "commonly called Modern Spiritualism," he says, and the narration of his experience which he lays before his readers is much the same as that of dozens of "mediums." Mr. Williamson began his profitable industry by accustoming himself to sit at a table with a pen in his hand and wait till a person from "the other world" should come and make the pen write, his object being communications such as are written to spiritualists. He desired to ascertain whether we continue to exist after the death of the body, and whether the alleged facts of spiritualism are caused by beings of another world. Naturally, it was not long before he was visited by a spirit—a Miss Ellen Macauley. She had, while yet among us, led a very depraved life, she said; she was still pursuing the same career in the spirit land, and she had no desire or intention of reforming. This young woman's communications seem to have set Mr. Williamson's mind at rest as to our existence after the death of the present body, and to have convinced him also that the facts of spiritualism so-called are caused by beings of another world; but he was not left dependent upon her communications alone. Several other spirits, some male and some female, began to converse with him, and to these the spirit of Miss Macauley objected strongly. So strongly, indeed, did she object, that one night Mr. Williamson was awakened by feeling that some one was grasping his throat and trying to choke him, and, on enquiry, he learned that it was Ellen, who said that she intended to choke him to death. Twice or thrice she made the same attempt, but Mr. Williamson had from the first perceived that the spirit had no power to affect his breathing, and, aside from the annoyance of its preventing sound sleep, he cared little about it. But a short time after these assaults, he awoke one night with a violent palpitation of the heart, and with limbs partly paralyzed. It was Ellen again, who informed him that she had been operating on the action of his heart, and that if she had been allowed one hour more she would have stopped its beating for ever. This frightened Mr. Williamson seriously, and his concern was not diminished by what Ellen said to him on the succeeding night as he was getting into bed—that she should "renew operations again as soon as he got to sleep." But if Ellen objected to Mr. Williamson's relations with other spirits than herself, the others were equally opposed to his intimacy with her, and one of them, a Mrs. Arnold, who knew of Ellen's proceedings, told him one evening that if he would sit up awhile she would bring the spirits of his father and another male friend, and if Ellen did not then go away, these gentlemen would "kill her." The male spirits were brought according to agreement, and sure enough Ellen's communications suddenly came to a close, but whether on account of her second decease, or because she was prevailed upon to stop by milder conciliations, Mr. Williamson does not know. He knows that after that, to his great relief, no more was heard of her by him.

What Mr. James does with this mass of valuable matter is to assume its truth, and proceed to account for Ellen. The doctrine of the philosopher Swedenborg, so far as it relates to the unhandsome facts with which Mr. Williamson chiefly deals, may be thus stated: Even as the air of our atmospheric world, the world of unrest, the home of the cloud, the mist, and the tempest, separates the earth and the sun, tempering the light and heat to our necessities, so an analogous moral atmosphere surrounds our humanity, tempering the rays of the creative love and wisdom, and housing for a period that vast body of crude, unannealed existence, too good to ban, too bad to bless, which nature sloughs off, but which is far too crude for spirits to assimilate. This is Swedenborg's "world of spirits," as distinguished from his "spiritual world," which latter is his heaven and hell, and is the residence of souls finally sifted. His "world of spirits" he represents as answering in spiritual physiology to the stomach in natural, and after a while reducing the hardest moral material to the softest and most fluid chyle, here fit to be taken up into the spiritual circulation, there to be cast out into the waste places. Now, in cases like Ellen's it is to an altogether morbid and preternatural condition of this "world of spirits" that we are to look for the philosophy of the infestations of which we have for some years been hearing so much; and precisely this morbid condition we find now existing. The cosmical stomach is equally liable with the natural stomach to grow dyspeptic, to reject its food undigested; and dyspeptic is just what it is at present: is not Christianity undergoing a moral and rational purgation quite revolutionary? are not institutions once venerable now distrusted and menaced? have not our intellectual skies grown dark above our heads, and is not our once solid moral earth quaking beneath our feet? It may easily be seen, then, what augmented hordes of human beings are daily sent into the "world of spirits" devoid of hereditary faith and hope, nay indifferent to all religious faith and hope whatever, devotees, perhaps, of sheer naturalism. Of such was Ellen. Thus by putting Swedenborg and Williamson together do we find that they mutually elucidate each other, and that any little difficulties which may have discovered themselves in either do simultaneously and swiftly disappear.

Following Mr. James's applied Swedenborgianism is another chapter of Mr. Robert Dale Owen's exceedingly readable autobiography, and these, with Prof. Shaler's "Journal of a Naturalist," we find the most taking papers in the magazine. Good reading for a pessimist and the "laudatores tempores acti" is Mr. W. J. Hoppin's "Contemporary Art in Europe." It is very encouraging indeed. Nearly all the articles are good; but two of the poems are oddly marred in the first stanza, and in the case of the "Intaglio Head of Minerva" the defect is a pity, as the poem is a good one. But it is of a kind of poems that require the last perfection of finish, or they are nothing; and the last degree of finish is not given when Minerva is spelt with a final r. Very pleasing in its simplicity, both of sentiment and expression, is another of the *Atlantic's* poems—Mrs. Anderson's "Poor Marie."

Readers of the *Galaxy* will find in the article entitled "The Parkman Murder" a revival of an old horror. To some it will have an interest of a certain kind, as being among old impressive reminiscences—their first murder, perhaps, or their great local tragedy. But we should say that, to the majority of the *Galaxy's* readers, its interest would be of a kind which it is better not to excite. A good article, if we are to accept its historical statements, is that on the cavalry charge at Balaklava and the controversy thence arising, by a writer unknown to us. It charges Lord Lucan with extreme wrongheadedness and obstinacy, and exculpates entirely not only Lord Cardigan, who simply obeyed positive orders from Lucan, but also Captain Nolan, who carried to Lucan orders which Lucan never obeyed. It closes thus:

"The dead Nolan could not answer; the living Lucan could speak in Parliament if he was not worth much in the field. Cardigan was his brother-in-law, and the two stuck together against the world, although they hated each other cordially. Between the two, the dead man's reputation was ruined, and all because he was poor and friendless. There was none to defend his memory. Kinglake himself, while carefully exhuming the truth, seems so blinded by the prejudice engendered by these two powerful noblemen, that he speaks only in a pitying and apologetic tone of the unfortunate Nolan, blaming him greatly for disrespect to what he seems to consider a superior officer. In fact, one thing about his whole conclusions is very noticeable. Nolan, dead in 1854, is blamed; Cardigan, dead a year before the book was published, is blamed with some sharpness; Lucan, the real and only cause of the disaster, as shown by the facts, is hardly blamed at all. But then Lucan is still alive, and an earl is a very powerful man in England."

General Custer ("Life on the Plains"); Mr. Theodore S. Fay ("The Revolution of 1848 in Berlin"); Mr. De Forest ("The Wetherel Affair"); Mr. R. G. White ('Linguistic and Literary Notes and Queries"), and Carl Benson ("Casual Cogitations"), are among the authors who fill up the August *Galaxy*. "Carl Benson," writing of coincidences and plagiarisms, speaks of a misreading of a passage in Polybius to which we may possibly owe an episode in Flaubert's 'Salammbo.' This novel has for its subject the war between the Carthaginians and their mercenaries after the First Punic war, and what Polybius says is that at last Hamilcar shut up the mercenaries in a defile with "the beasts" and slaughtered them all. What Polybius means by the beasts is the elephants of the mercenaries, for, as the dictionaries point out, Polybius habitually uses *θηρίον* instead of *ἐλέφας*. Flaubert, mistranslating the *θηρίον* into "wild beast," proceeds to draw a tremendous picture of lions, tigers, and other carnivora driven by Hamilcar's orders into the defile occupied by the mercenaries, where they devour those wretches, horse, foot, and dragoons, to the last man.

Mr. "Carl Benson" thinks that in making this discovery he may have found only a mare's nest, and that Flaubert may not have made use of Polybius, or may not have been misled by him; and, indeed, French writers of the school of Flaubert are capable, without aid, of great things in the way of battues and the like. In the *Catholic World*, M. l'Abbé Casgrain depicts for us a tremendous contest between a Pottawatomie and a Canadian rattlesnake, who comes out from a bush, near which the Indian is, at the moment, caught fast in a window or air-hole, through which he is trying to squeeze himself for purposes of burglary. The snake approaches the robber slowly and carefully, "as if aware of the strength and power of his redoubtable adversary." When within a few feet of the Indian, it raises itself up—on the tip of its tail apparently—and springs at its enemy. The latter, moving as quick as lightning the hand that is free, strikes the snake aside with a force that throws him some distance. Twice this happens. At last the serpent, now thoroughly aroused, "foaming at the mouth," its jaws swollen with rage, and drawing so near as to be almost within reach of the hand of the savage, springs forward and fastens his fangs in the dark cheek of the Pottawatomie, who, instantly seizing the writhing body, tears his victorious but captive enemy to pieces with his teeth. A few hours later, they find him black as ink and otherwise in a condition which can better be imagined than described, though if necessary the description may be found in full in the *Catholic World*. "Providence had indeed terribly avenged the assassination of the young officer." The Pottawatomie brave had just previously killed a French lieutenant, and Providence took this means of bringing him to his senses.

In *Scribner's*, an article which some of our readers will perhaps wish to read is Mr. Fitz Edward Hall's conversational account of the various pandits whom he employed when in India; Mr. Bret Harte has in this magazine the beginning of a story which opens promisingly; Mr. John Hay versifies a fine Buddhistic legend; Mr. Burroughs has a capital article on the bluebird, and is as well worth listening to as he always is when he speaks of birds and woods and beasts. He is evidently one of the men whom nature imbues with her own spirit, if we may say so. Of such there are one or two in a generation among the crowds of men who imbue nature with their own personal feelings. Or, rather, it is something like this proportion that holds among lettered and literary men, while the proportion among men and women in general is doubtless larger. *Scribner's* has also an article on Nantucket, which is good, though one might wish a slight infusion of guide-book. Now that from June on to the middle of November everybody puts scenery in print, it is a relief to come upon some advice about steamboats and hotels and rates of expense.

Lippincott's opens with the clever "New Hyperion," which does not deteriorate, although less than at first is it a gentle travesty of the old Hyperion, and rather is something done for its own sake. It is a pity the pictures cannot be put in better relations with the parts of the letter-press which they illustrate. This is the more to be desired because they are whimsical and allusive and punning pictures rather than direct illustrations. The story is in the nature of a luxury, and its full enjoyment should not be interfered with even by small disagreeables. We may recommend also to our readers a description of some of the vegetable wonders of Singapore, written by Mrs. Fanny Feudge, whose accounts of white pineapples and similar fruits ought to be enough to drive a vegetarian wild; while the blossoms she has seen will make her the envy of ladies who read of them. This latter class of readers will also find in *Lippincott's* a very goose-fleshy little collection of ghost stories almost of the regular approved kind, everything being present except the chain which clanks on the stairs.

Mr. Reginald Wynford can tell most people more about English deer-parks than they now know, and his article will be found interesting for other reasons besides; Mr. Black's "Princess of Thule" now promises to be a story of his sad kind; "Inside Japan" is a great deal better than most articles on this subject, though the book descriptive of the Japanese and explanatory of their recent remarkable history is still a desideratum. "Our Monthly Gossip," which is always worth reading in *Lippincott*, and different from the same and related departments in other magazines, is as good as

usual; a sketch entitled "A Monologue," which makes a young girl at the opera depict for us her changing emotions, is neatly and spiritedly done.

"Ten Years among the Boating Men," a timely article by Mr. William Blaikie, well known as an oarsman at Harvard some ten years ago, may be found in the August *Harper's*, and so may the beginning of a thorough account of the Sandwich Islands by Mr. Charles Nordhoff; a striking article about the young children employed in New York City at various trades; and a good quantity of other matter. It is hard to realize that in New York and the neighboring districts, practically a part of the city, there is an army of 100,000 children—"little slaves of capital," the writer calls them—constantly employed, and a corps of 15,000 "floaters," or children on their way from one factory or workshop to another. It is so stated in this article, which gives in detail the number of children at work in several of the occupations which employ them, and which seems to have been prepared by some one who had all the facts at hand. In closing, he speaks of a bill, seemingly very reasonable, which has been prepared for the regulation of factories employing persons less than sixteen years old, and says that certain manufacturers of Albany, last winter, exerted themselves in opposition to it. Whether or not it became law we are not aware, but if not, we here in New York are far behind other countries and other States, and are far short of justice or a prudent regard for the safety of the community. Benevolent persons will find this a useful report.

VARIOUS EDUCATIONAL WORKS—CLASSICAL, SCIENTIFIC, AND MISCELLANEOUS.

MOST of the Latin school-books which have appeared of late belong to some series, and about such collections in Latin one may be pardoned for feeling a little distrust. From the veteran book-maker, Dr. William Smith, who is never disposed to let a chance for a book escape him, we have a new edition of a 'Student's Grammar,' in 395 pages. The leading idea seems to be this: to "cover"—we believe this is the term used in speaking of patents—everything which has a bearing on Latin. The first and second parts contain the Accidence and the Syntax, to which is appended a Syntaxis Ornata. This part of the syntax, which deals with peculiar expressions and style, is entirely out of place in a Grammar. But over and above this we have chapters devoted to the style of different writers, of Sallust, Cæsar, Cicero, Livy, and Tacitus; and this extraordinary farrago is topped off with an Etymology, taken from Corssen, and the usual Appendices. While the old saying may hold, *nullum esse librum tam malum ut non aliqua ex parte prosit*, Dr. Smith's compilation certainly makes a poor show by the side of Mr. Roby's Grammar, of whose second edition we hope to speak by-and-by, or the work of Prof. Key, who is once in a while carried away by a whim, but always handles the Latin language with refreshing originality. Time-honored custom has prescribed that metres shall be attached to grammar, though, properly speaking, they make no part of it. But we must be jealous of further intrusions; it will never do to make grammar a sort of repository of miscellaneous information. It may be very convenient to have stylistic, and even historico-literary notices in a grammar; so too it would be a convenience to have on the fly-leaf of the grammar the days of sailing of the ocean steamers, and the numbers and situation of the fire-alarm boxes. There seems ground for the apprehension that our teachers and pupils will learn so much *about* Latin and Greek, that they will know neither Latin nor Greek; if by *know* we understand not a mere *kennen*, but a *können*, as it is well put in Nägelsbach's pithy dictum: "Der Lehrer muss Latein nicht bloss *kennen*, sondern *können*.

Mr. Bartholomew's grammar is not so pretentious, and has more unity of plan; it will be found really more serviceable for learning Latin. With some flaws in detail, and some traditional errors, it nevertheless shows a general acquaintance with the results of recent scholarship. In the dispute of the noun and the verb about precedence, the *pas* is accorded to the verb. There is something to be said in favor of this, and yet some beginners may find it easier to learn the inflexions of the noun first, from their greater simplicity. But after all it is very much like that question which will never be settled, unless perhaps at Penequeese this summer, *gallina prius an ovum exstiterit*. Practically it does not make much difference which one begins with; for as soon as the boy begins to translate, and he ought to begin as soon as possible, he will need both nouns and verbs. Inasmuch as this is the time of year when teachers' conventions are wont to meet and get confused over the subject of Latin pronunciation, it will not be amiss to quote Mr. Bartholomew's views on that subject:

"For many years prominent Latin scholars have earnestly considered the expediency of restoring the Roman pronunciation of Latin. Individual efforts toward reform could effect but little, especially when directed against the prejudices of long-established usage and national pride; and yet, in exposing the gross absurdities which characterize the two prevailing systems of pronunciation—the English and the miscalled continental methods—they greatly stimulated investigation. But more recent researches, made in the light of comparative philology, have cleared up many doubtful points, and, in the main, have satisfactorily answered the difficult question: How did the Romans themselves pronounce their words?"

The 'Syllabus of Latin Pronunciation,' recently prepared by the Professors of Latin in the English Universities of Oxford and Cambridge, agrees in all essential points with the system adopted and recommended by one of the oldest universities in our own country; and the sanction of the authorities gives assurance that uniformity in pronunciation may soon be secured, and that, too, on the foundation of historic truth.

A collection of Orations of Cicero, by J. H. and W. F. Allen and J. B. Greenough, contains some interesting orations and parts of orations not commonly included in school editions, with instructive notes. For the benefit of such people as believe in learning to swim with corks, we mention a Cæsar's Gallic War (five books), by "C. A." The main feature of this book is a reprint of the whole Latin text in the English or supposed English order. To our mind this is a hindrance to the principal object aimed at in studying Latin, which is ultimately to read the Latin authors as the Romans could read them themselves.

We have examined with care the Readers published by Messrs. Ivison, Blakeman, Taylor & Co., and they appear to us good. Whoever was learning his letters thirty years ago, or twenty, and has not had to repeat the process since or has not worked in the school-room, has no conception of the extent to which reading seems to have been made easy. Between the old fashion of learning the A B C by main force of memory and the way now pursued, the difference, on the surface at all events, appears to be world-wide. The boys and girls are to be pitied as born too soon whose first speculative effort was a wonderment over the fact that the a of "a-b, ab" sounded not at all like the "A" to which they gave its name when they pointed it out on the card-board. Or it may be that their successors are born too late; few either of the learners of to-day, or of those who learned their letters long ago, are competent to settle the question whether bald memorizing of the alphabet or a philosophical and scientific approach to its difficulties is better. The tendency of the text-books, however, is now all in the direction of the latter. This is the way in which an infantile pupil is taught out of the newest 'First Reader.' To begin with, "his attention is to be called to the picture," and the pictures are quite taking. It is in this case a picture of an ox, and apparently this "unhastie beast" is selected to start the pupil on his travels because "round O" is the easiest letter of all to be acquired; because X, also, is very easy, and because the animal is already an acquaintance of the child's. But first he must repeat the name of the ox several times, and repeat it distinctly, and must also learn to name the other animal that enters into the lesson. This is the "fox," and it may be reasonably hoped that when

Le Maout and J. Decaisne; with 5,500 figures by Steinheil and A. Riocreux. Translated from the original by Mrs. J. D. Hooker. The orders arranged after the method followed in the universities and schools of Great Britain, its Colonies, America, and India; with additions, an appendix on the natural method, and a synopsis of the orders. By J. D. Hooker.' London: Longmans, Green & Co. 1873.

'Ahn's Rudiments of the German Language. By Dr. P. Henn.' New York: E. Steiger. 1873.

the exercise is over the child can name the two animals aright, and has learned "o" and "x," and probably "f." But there is more for the acolyte to do in this lesson: he must learn to spell "ox" phonetically, giving to the letters their powers, and not their names. Here, and just beyond here—where he must be instructed "how to place the organs of speech so as to secure distinct articulation"—apparently may be his first puzzle; but otherwise this first lesson appears to be an excellently easy means of entering on a literary career. "The spelling, pronouncing, and reading exercises of this book," says the editor, "have been very carefully arranged, with a view to their progressiveness, simplicity, and naturalness," and we think that his word may be fully accepted. At the end of the book the pupil is advanced so far as to be using a good-sized vocabulary of monosyllables, and is ready for the 'Second Reader.'

The 'Second Reader' launches the student on the more troubled waters of the full tide of vowel sounds. He must know that the sound of "a" in "far" is numbered as the third sound of that vowel, and that the diacritical mark distinguishing it from the six other "a's" consists of two dots above the letter. A one-page treatise on punctuation this volume also gives, as well as instruction in articulation by means of exercises; and some insight into the nature of script hand may be got by a rhyming alphabet, in which that kind of character is used. In the 'Third Reader' the elocutionary exercises are made much of; lessons in definition supplement former lessons in pronunciation, and the practice of analyzing the lesson, in answer to questions from the teacher, begun in the 'Second Reader,' is continued in greater amplitude in this. The 'Fourth Reader' is distinguished by more exhaustive instruction in elocutionary principles, and of course by a maturer literature. Perhaps we may set thirteen or fourteen or fifteen years as the general age at which the last volume of this series will be useful; though we ourselves found them far from unentertaining as we ran through them. The selections are not hackneyed, and we saw none to which any exception could be taken.

Another 'Fourth Reader' that we can commend thoroughly comes to us from Louisville, Kentucky. It seems to us a highly sensible book. Mr. Noble Butler, its compiler, has in a very great measure freed himself from the task of teaching by direct rules the principles of elocution in its numerous and very difficult departments. Rules of this kind are in his belief "of as little use as rules for walking." The child "must learn to read well before he can understand rules, and then rules only tell him what he does without rules." Doubtless they do something more than that; formulating knowledge has as many conveniences as pigeon-holing documents, and more, and is for many reasons not to be despised; but his first remark has, we think, much good sense in it as pointing away from a rock on which many split. If the other volumes of Mr. Butler's series are as good as this one, he has given his young compatriots of the South a useful set of manuals. Not that this book is not adapted for use in all parts of the country so far as regards its political tone—a statement that cannot be made concerning every Southern text-book. But a good number of the faults which Mr. Butler assiduously sets himself to correct are distinctively Southern faults of speech, and to lecture Northern pupils in reference to them would be like addressing the schoolboys of Louisville on the defects of the Cape Ann dialect. Among the corrected errors which we noted as we turned over the pages are "mauster" for "master"; "necked" for "naked"; "*idea*" (sometimes heard in the North, but oftener in the South) for "idea"; "pŭt" for "put" (of which the same remark might once have been made); "fawther" for "father"; "mo'" for "more"; "woosh" for "wish"; "Jeems" for "James," a very common Southernism; "path" rhyming with "hath"; "pusson" for "person"; "potion" for "portion"; "cherfully" for "cheerfully"; "endyerd" for "endeared"; and a number more.

From the same house we have a posthumous work on elocution and the philosophy of vocalization, which merits a part of the same general praise that we have given to Mr. Butler's 'Reader,' that is to say, it is not weighted down with an enormous quantity of technical rules, and diagrams, and pictures—anatomical, geometrical, and pictorial—on a matter which we suppose every teacher of elocution that ever lived would admit must be taught *viva voce*. Yet Mr. Bronson talks very fully, beginning on the nostrils, and urging his readers to breathe properly—a function which the mouth can never perform for the true orator—and ends with a large and fairly well-chosen collection of duly accented and italicized pieces in prose and verse.

To anybody who wants to load himself down with a more exhaustive and ambitious treatise, we can recommend the work of Mr. Andrew Comstock, assisted by Mr. Philip Lawrence. In this volume he may once more see the same young gentlemen on whom he used to gaze with astonishment in the introduction to 'Lovell's Speaker' a generation ago, and in works still older. Here they all are, with the same tight-fitting pantaloons, cut to the exact shape of the lower limbs, and revealing so plainly the articulation of the leg-bone and the thigh-bone at the knee; we see the same straight-cut body-coat with the wide lapels; the same fine expressive countenances as the gentlemen step forward, or start backward, or bow down with "divers cringes," as Evelyn said about the mass priest, under the influence of terror, or veneration, or pride, or aversion, or hope, or deprecation, or despair; the same remarkable systems of dotted lines surround each orator, and show as of old what cycles and epicycles, orb on orb, the hands described in giving dumb language to the various passions and emotions of the human soul—how the left hand of Satan, at the moment when he said "Princes," in addressing the rebel angels, was parallel with the cap of his shoulder, the thumb-edge of the hand being presented to the audience, and the hand held palm downward; how at "Potentates," the next word of the speech, the hand was stretched high above the head, palm outward; how at "Warriors," the third word, the left hand was extended downward so as to be parallel with the waist of the archangel, who wears in these spirited illustrations a Roman helmet, and a tunic belted around the middle; how at the phrase "Flower of heaven," the left hand went up above the head again, palm outward; how on each of these occasions the right hand was as vigorously and variously used as the left, and how the legs were not idle—all these visions may be beheld again by purchasing Messrs. Comstock's and Lawrence's 'Manual.' Much more may also be found in this book, a deal of it being such as only a musical person could understand, for the management of the voice is as fully and learnedly treated of as the motions of the legs and arms. Mr. Lawrence appears to have selected the prose and verse of this collection; and we have him again, quite untechnical, in a good enough collection of his own.

Curious for several reasons is the 'New Japan First Reader,' a queer little evidence of the vast change that has come over the Land of the Fountain of Light. The object of the compiler is different from that of most persons whose business it may be to make a primary reading-book. The Japanese boy who wishes to learn English is, as a rule, too old for the simple language which, although Mr. Griffis stigmatizes it as "baby-talk," is all well enough for the English and American beginners. The young Japanese "has usually passed the age of dogs, cats, rats, and foxes, and wishes something new. Having to crack hard nuts, he wants kernels"; he wishes for ideas, not discipline; to read, not to converse; to get information, not to learn idiom. Mr. Griffis's 'Reader,' then, although it begins small, and gives a small quantity of phrase-book matter in the first few pages, soon goes on to convey information of several degrees of importance concerning "our institutions," and the habits and customs of the American people. To this there is added some precisely similar information about Japan and the Japanese. Thus the American mode of dress, both the women's and the men's, is described and illustrated with woodcuts, the black dress-coat, by-the-bye, covering the form of the most prominent and gentlemanly person of the male group. The personages in the female group are all cheaply and modestly attired, and will perhaps serve to correct the false impression of our countrywomen conveyed by a Japanese artist who was over here a few years ago, and who borrowed his portraits of female Americans from journals of but slight claim to character. Then comes some letterpress and pictures relative to Japanese dress, which, we are told, is being superseded by our own costumes. Descriptions are also given of the American dwelling-house, breakfast-table, steamship, railroad, gasworks, and system of chronology, and of the Japanese abacus, man-power wagon, pack-horse, and coins. The book gives but very few and very faint indications of a wish to proselytize.

"Putnam's Elementary Science Series" (G. P. Putnam's Sons), now in course of publication, will comprise more than twenty small text-books on mathematics, physics, chemistry, natural history, and their practical applications. The series is an English one, and has been prepared with the special view of meeting the wants of "students in science and art classes and higher and middle class schools," and for the most part with direct reference to syllabuses furnished by the Government Science and Art Department. A part of the work has been done sufficiently well (as far as can be judged from an examination of the eight books already on sale), while other parts seem to have been allotted to persons only indifferently qualified for the task, and certainly inexperienced in the preparation of text-books. The 'Introduction to Astronomy' is conspicuous for its bad treatment of the subject, as well as a general clumsiness and obscurity of expression. Its chief faults are a lack of clearness in setting forth the elementary conceptions without which the beginner can make no progress, and the utter failure of the attempt to present in simple language such difficult matters as Foucault's pendulum experiment, the universal law of gravitation, and the methods of determining the distance of the sun. A single quotation will suffice to show the faulty character of some of the definitions. "The perpendicular distance [of a star] north or south of the equator is called the

declination, and the angular distance measured from the starting-point along the equinoctial is called the right ascension." The use of the two terms "equator" and equinoctial is unnecessary, to say the least; while the contrasting of "*perpendicular*" with "*angular*" distance, which is found again in the definitions of celestial latitude and longitude, is certainly misleading. To the subject of "Steam and the Steam-engine" two books are devoted; the one professing to treat of the "Locomotive," the other of "Land and Marine Engines." Why two volumes are printed instead of one we are unable to see. Nearly one hundred pages out of the one hundred and sixty in each volume are identical word for word, the two prefaces are alike, with the single exception of the word "locomotive" in one where "steam" is found in the other. By omitting what is introduced about the construction of railroads and other irrelevant matter, the two volumes could easily be brought within the compass of one, though even then the work would not be of much use to the students in the schools of this country. This leads us to say of the 'First Book of Mineralogy,' which in the main has been prepared with good judgment, that to any one who intends to pursue the subject further with the aid of American books its value is materially lessened by the fact that the nomenclature and classification adopted are so different from those in use by the best American mineralogists. A similar criticism would not hold against the 'Machine Construction and Drawing,' or the 'Practical Plane and Solid Geometry,' both of which seem to have been prepared with care. In regard to the latter there is some danger of the reader's being misled by its title. 'Practical Solid Geometry' is synonymous with descriptive geometry, as the term is used in this country. The writer has explained quite clearly the elementary principles of descriptive geometry, and given a very fair collection of problems on lines and planes, which our teachers of industrial drawing can put with advantage into the hands of their pupils. The Messrs. Putnam also announce an 'Advanced Science Series' as in course of publication.

Lockyer's 'Spectroscope and Its Applications' (Nature Series: Macmillan & Co.) is a handsome and handy little volume, giving, in the form of three lectures delivered in 1869, but now carefully revised, and in some parts expanded, a simple and attractive account of what has been done and is doing in one of the most interesting fields of modern scientific research. Though it may be regarded by some only as an introduction to a more extended course, yet it will be none the less welcomed by the general reader who wishes to keep as well informed as possible of the course of scientific discovery.

We have had opportunity to examine the proof-sheets of about half the new (4th) edition of Elderhorst's 'Blowpipe Analysis' (T. Ellwood Zell), edited by Professors Nason, of Troy, and Chandler, of Columbia College. The form of page has been changed, and numerous alterations and additions made. The insertion of woodcuts in the opening chapters remedies an important deficiency of the earlier editions. The revision seems to be thorough, though we cannot help wishing that the editors had abandoned in the third and fourth chapters the awkward abbreviations of Bx. for borax, Blp. for blowpipe, and S. Co. for cobalt solution, the three together occurring not over three dozen times in seventy-five pages. R. Fl. and O. Fl. occur more frequently, and are not so objectionable. The new edition, like the previous ones, will be confined to qualitative analysis.

Professor Warren's 'Elementary Course in Freehand Geometrical Drawing' (John Wiley & Son) is, we believe, both the last and the least of his numerous works on kindred subjects. Primarily intended for students and young draughtsmen, its forty-eight pages of examples and practical hints will be equally suited to the wants of all persons who have a fondness for training the hand and eye to the accurate estimation of distance and direction. The subject of "Geometric Symbolism," which makes up the concluding chapter, we hope the author will not expand to any greater length, at least not in a text-book. The conchoid of Nicomedes or the hyperbola may be more symbolic, but this will hardly overbalance the material advantages of a quadrangular arrangement for university buildings.

Two recent botanical works deserve somewhat special notice on account of their importance and wider than common interest. The new 'Genera Plantarum,' by Bentham and Hooker, having now advanced to the middle of its second volume, gives fair promise of early completion. The first 'Genera Plantarum' by Tournefort, the second by Linnæus, and the third by Jussieu, each in their day marked and made an epoch in the science. In this generation, that of Sprengel was only an edition of the Linnæan work, that of Endlicher a literary rather than an originally scientific elaboration. The present work is the true successor of that of Jussieu, and equally represents the result of a complete study of the original materials themselves, so far as they can be had; and the Kew establishment, now the acknowledged headquarters of botany, has almost everything within its reach. The amount of labor involved in a work like this, even after a lifetime of preparation, is immense. It is not a case of editing and combining the works of others, but of doing the work themselves, every order being actually elaborated by one or the other of these authors. In the portion recently published, for instance, there is the order of *Compositæ*, which comprises a full tenth part of all flowering plants, and that of *Rubiaceæ*, if only half as large, yet in proportion twice as difficult, each embodying a fearful amount of work such as requires uncommon courage to undertake, and calls for the unbounded gratitude of the systematic botanists of the day, for whom "the rough places are made smooth."

The 'General System of Botany' is an English translation and edition of Le Maout and Decaisne's 'Traite Général de Botanique," just published by the Longmans. The translation is by Mrs. Hooker; the editorial work, appendix, etc., by Dr. Hooker, the new and worthy president of the Royal Society, the only naturalist (in our modern sense of the word) who has held that distinguished office since Sir Joseph Banks. The volume we are noticing is a stout, small quarto of over a thousand pages, containing 5,500 figures—admirable woodcuts. Most of these figures are strictly original and from M. Decaisne's own drawings. Those which are not are taken from the best original sources, of which none make a better appearance than those of Isaac Sprague. These 5,000 illustrations of the second and main part of the work ("Descriptions and Illustrations of the Orders") render it of inestimable value to all serious students, especially to those who have not access to a full botanical library; and few indeed in this country possess that advantage. The first part of the book ("Outlines of Organography, Anatomy, and Physiology") is brief and somewhat restricted in the English edition. It is very good, but not so surpassingly excellent. The main body of the work well supplies, in this country and in all English-speaking countries, a great want. Particularly is it to be commended to medical students, all the medicinal and principal economical plants being indicated. It may help on the restoration of botany to its legitimate place in medical education in the United States. In no other part of the world, perhaps, does botany enter so conspicuously into a common education. In no other is it excluded from the medical curriculum.

To the already vast number of German grammars Dr. Henn has added a very rudimentary one, for which hardly more is claimed than that it is a modification of Ahn's 'Grammar.' It contains the slightest number of rules—none at all for the declension of nouns, for instance. In short, it gives the meagrest outline of some principles of German grammar, and occasionally with a very unsatisfactory statement; as when we are told that the German *i* is pronounced like *i* in *bit*, or *ee* in *meet*, with no explanation of this difference. Other cases might be found. In our opinion, it would be better to have a grammar with fuller statements, of which so much as might be desired could be omitted at the beginning of the study of the language. This will give eager students an opportunity to do more work than is absolutely required of them; the other kind of grammar seems as if it were made to keep all the students on one level, and that a low one.

MALDEN PUBLIC LIBRARY

DICTIONARIES AND WORKS OF REFERENCE

PUBLISHED BY

HARPER & BROTHERS, NEW YORK.

*SMITH'S ENGLISH-LATIN DIC-*tionary. A Copious and Critical English-Latin Dictionary. Compiled from Original Sources. By William Smith, D.C.L., LL.D., Editor of the 'Classical Dictionaries,' 'Curtius's Greek Grammar,' 'The Student's Hume,' 'The Student's Greece,' 'Old and New Testament Histories,' etc.; and Theophilus D. Hall, M.A., Fellow of University College, London. To which is added a Dictionary of Proper Names. 8vo, sheep extra, $6.

ANDREWS'S LATIN-ENGLISH Lexicon. Founded on the larger German-Latin Lexicon of Dr. Wm. Freund. With Additions and Corrections from the Lexicons of Gesner, Facciolati, Scheller, Georges, etc. Royal 8vo, sheep extra, $6.

*ANTHON'S CLASSICAL DIC-*tionary. Containing an Account of the principal Proper Names mentioned in Ancient Authors, and intended to elucidate all the important Points connected with the Geography, History, Biography, Mythology, and Fine Arts of the Greeks and Romans, together with an Account of the Coins, Weights, and Measures of the Ancients, with Tabular Values of the same. Royal 8vo, sheep extra, $6.

*ANTHON'S SMITH'S CLASSI-*cal Dictionary. A New Classical Dictionary of Greek and Roman Biography, Mythology, and Geography. Partly based upon the Dictionary of Greek and Roman Biography and Mythology. By Wm. Smith, LL.D. Revised, with numerous Corrections and Additions, by Charles Anthon, LL.D. Royal 8vo, sheep extra, $5.

*ANTHON'S SMITH'S DICTION-*ary of Antiquities. A Dictionary of Greek and Roman Antiquities. Edited by Wm. Smith, LL.D., and Illustrated by numerous Engravings on Wood. Third American Edition, carefully revised, and containing also numerous additional articles relative to the Botany, Mineralogy, and Zoölogy of the Ancients. By Charles Anthon, LL.D. Royal 8vo, sheep extra, $6.

ANTHON'S LATIN-ENGLISH and English-Latin Dictionary. A Latin-English and English-Latin Dictionary for the use of schools. Chiefly from the Lexicons of Freund, Georges, and Kaltschmidt. Small 4to, sheep, $3 50.

*ANTHON'S RIDDLE AND AR-*nold's English-Latin Lexicon. A Copious and Critical English-Latin Lexicon, founded on the German-Latin Dictionary of Dr. C. E. Georges. By Rev. Joseph Esmond Riddle, M.A., and Rev. Thomas Kerchever Arnold, D.D. First American Edition, carefully revised, and containing a copious Dictionary of proper names from the best sources. By Charles Anthon, LL.D. Royal 8vo, sheep extra, $5.

M'CLINTOCK AND STRONG'S Cyclopædia of Biblical, Theological, and Ecclesiastical Literature. By Rev. John M'Clintock, D.D., and James Strong, S.T.D. With Maps and numerous Illustrations. Five volumes, comprising the letters A to Mc, are now ready. Price, per volume, cloth, $5; sheep, $6; half-morocco, $8.

*YONGE'S ENGLISH-GREEK LEXI-*con. An English-Greek Lexicon. By C. D. Yonge. With many New Articles, an Appendix of Proper Names, and Pillon's Greek Synonyms. To which is prefixed an Essay on the Order of Words in Attic-Greek Prose, by Charles Short, LL.D., Professor of Latin in Columbia College, N. Y. Edited by Henry Drisler, LL.D., Professor of Greek in Columbia College, Editor of 'Liddell and Scott's Greek-English Lexicon,' etc. 8vo, sheep extra, $7.

CRABB'S ENGLISH SYNONYMS. English Synonyms, with copious Illustrations and Explanations, drawn from the best Writers. By George Crabb, M.A., Author of the 'Technological Dictionary' and the 'Universal Historical Dictionary.' 8vo, sheep extra, $2 50.

*ENGLISHMAN'S GREEK CONCOR-*dance. The Englishman's Greek Concordance of the New Testament: being an Attempt at a Verbal Connection between the Greek and the English Texts; including a Concordance to the Proper Names, with Indexes, Greek-English and English-Greek. 8vo, cloth, $5.

FOWLER'S ENGLISH LANGUAGE. The English Language in its Elements and Forms. With a History of its Origin and Development, and a full Grammar. Designed for Use in Colleges and Schools. Revised and enlarged. By William C. Fowler, LL.D., late Professor in Amherst College. 8vo, cloth, $2 50.

Price $1 25 per volume.

HOLT & WILLIAMS,
25 Bond Street, New York.

MR. ROE'S GARDEN, from which, as he tells us in his entertaining book, 'Play and Profit in My Garden,' $2,000 worth of fruit and vegetables were sold in one year besides a large home supply, promises equally well the present season. On the 31st of May, his sales amounted to $257. On the 6th of May, he had seven distinct varieties of vegetables in abundance at his command. The story of this successful garden is told at length in his book, PLAY AND PROFIT IN MY GARDEN, which DODD & MEAD publish.

A. S. BARNES & CO.,
New York and Chicago.

D. APPLETON & CO. have just issued a new Educational Catalogue, admirably classified and arranged by subjects for convenient reference. The list of books is especially rich and full in recent works on Natural Science, Ancient and Modern Language, etc., making it of permanent value to every teacher and educator as a work of reference, while the elegance and beauty of its typography are strikingly attractive. Sent free on application to the publishers, D. APPLETON & CO., 549 and 551 Broadway, New York.

"*Not only good Text-Books, they are also very valuable works of reference.*"—Dr. Sears, in the National Quarterly Review.

LABBERTON'S HISTORICAL SERIES
FOR SCHOOLS AND COLLEGES.

I. OUTLINES OF HISTORY. With original Tables, Chronological, Genealogical, and Literary. By Professor Robert H. Labberton, Ph.D. Oblong 4to, cloth, $2.

II. HISTORICAL QUESTIONS. Logically arranged and divided. The companion to Outlines of History. Oblong 4to, cloth, $1 75.

III. AN HISTORICAL ATLAS. Containing a Chronological Series of 100 Colored Maps, Illustrating successive periods from the dawn of history to the present day. Oblong 4to, cloth, $3 50. (This Atlas can be used with any history.)

☞ The latest changes in the map of Europe are fully and accurately exhibited.

WHAT IS SAID OF THE WORK.

"Prof. Labberton's plan is an excellent one, and is carried out with great success. The work deserves high praise."—*The Nation.*

"The whole Series bears the marks of conscientious and faithful scholarship."—*N. Y. Tribune.*

"The method is likely to cause the most lasting impression on the mind."—*California Teacher.*

"A work which must become a constant companion of those who are beginning to study history in the right spirit. I was glad to learn that you had published an Atlas prepared by so eminent a historical scholar as Dr. Labberton."—*Prof. Charles J. Stillé, LL.D., Provost University of Pa.*

"The Atlas is an admirable one. The maps are beautifully executed. Both works are deserving of a large circulation."—*Philadelphia Inquirer.*

"The work approves itself to our judgment most highly. The Atlas is infinitely superior to any similar works that are accessible save by a fearful outlay."—*North American.*

"A want constantly felt by students of history is supplied in this work."—*Quarterly Review, Gettysburg.*

"A system far superior to anything of the kind we have yet seen, a set of works for elementary instruction which leave little to be desired. The outlines of history and the volume of maps are not only good text-books, they are also very valuable works of reference."—*Dr. Sears, National Quarterly Review.*

HOLT & WILLIAMS, PUBLISHERS, New York.

TWO IMPORTANT SCHOOL HISTORIES OF ENGLAND,

Extensively used in the

SCHOOLS OF GREAT BRITAIN.

WHITE'S HISTORY of ENGLAND,

FROM THE

EARLIEST TIMES TO THE YEAR 1858.

By the Rev. THOMAS WHITE,

author of 'The Eighteen Christian Centuries,' 'Landmarks of the History of Greece,' 'Landmarks of the History of England,' etc. New Edition. Crown 8vo, cloth, 856 pp., price $2 50.

In order to render this work complete as a student's manual, a critical analysis of the leading events of English history, subdivided into sections, is given at the commencement of each book or chapter, and a copious historical index appended to the volume.

Its very extensive use in the schools of Great Britain is a sufficient guarantee of its value as an educational work.

THE VICTORIA HISTORY OF England. From the landing of Julius Cæsar, B.C. 54, to the passing of the Irish Church Bill, A.D. 1869.

By ARTHUR BAILEY THOMPSON.

With a chronological table and summary of remarkable events, maps of England showing the Roman and modern names of cities, towns, rivers, etc. Illustrated with upwards of four hundred engravings by the Brothers Dalziel. Crown 8vo, cloth, 750 pp., price $3.

"This is, on the whole, the best History of England which we have yet met with. The plan of the volume is excellent, and the chronological tales, index, and maps of the appendix will make a useful hand-book even for older readers, and is in itself a striking proof of the great improvement in recent times of our educational literature."—*London Daily News.*

CICERO. THE SECOND PHILIPPIC Oration. With an Introduction, and Notes translated from Karl Halm. Edited by J. E. B. Mayor, M.A. Third edition. Fcap. 8vo, $1 25.

JUVENAL. THIRTEEN SATIRES. With Commentary by the Rev. J. E. B. Mayor, M.A. Second edition, enlarged. Vol. I. Crown 8vo, $2 50.

SALLUST. With English Notes. By C. Merivale, D.D. New edition. Fcap. 8vo, $1 50. The Catilina and Jugurtha may be had separately, price 75 cents each.

TACITUS: AGRICOLA AND GERMANIA. A Revised Text and English Notes. By A. J. Church and W. J. Brodribb. New edition. Fcap. 8vo, $1 25. Separately, 75 cents each. A Translation by the same authors, $1.

HINTS TOWARDS LATIN PROSE Composition. By A. W. Potts, M.A., Head Master of the Fettes College, Edinburgh. Third edition. Revised and enlarged. Extra fcap. 8vo, $1.

HELLENICA; or, A History of Greece in Greek: being a First Greek Reading-Book. With Explanatory Notes. Third edition. With a Vocabulary. By the Rev. J. Wright, M.A. Fcap. 8vo, $1.

FIRST GREEK READER. Edited after Karl Halm. With Corrections and Additions by J. E. B. Mayor, M.A. Second edition. Fcap. 8vo, $1 50.

GREEK FOR BEGINNERS. By Joseph B. Mayor, M.A., Professor Classical Literature in King's College, London. New edition. Fcap. 8vo, $1 50.

DEMOSTHENES ON THE CROWN. With English Notes. By D. Drake, M.A. Fourth edition. To which is prefixed, ÆSCHINES against CTESIPHON. Fcap. 8vo, $1 50.

HOMER. The Narrative of Odysseus (Homer's Odyssey, IX.–XII.) With a Commentary by John E. B. Mayor, M.A. Part I., pp. 1-144. 18mo, $1.

THUCYDIDES: The Sicilian Expedition. Being Books VI. and VII. of Thucydides. With Notes by the Rev. P. Frost, M.A. New edition, revised and enlarged. Extra fcap. 8vo, $1 50.

THE ELEMENTS of GREEK GRAMMAR. By J. G. Greenwood. Fourth edition. 12mo, $1 75.

MATHEMATICS.

ALGEBRAICAL EXERCISES, progressively arranged. By C. A. Jones, M.A., and C. H. Cheyne, M.A., Mathematical Masters of Westminster School. New edition. 18mo, 75 cents.

AN ELEMENTARY TREATISE ON Plane Trigonometry; with a numerous Collection of Examples. By R. D. Beasley, M.A. Third edition, revised. $1 50.

THE CAMBRIDGE COURSE of ELEMENTARY Natural Philosophy, Mechanics, and Hydrostatics. By J. C. Snowball, M.A. Fifth edition, revised and enlarged by Thomas Lund, B.D. $1 75.

MODERN METHODS IN ELEMENTARY Geometry. By E. M. Reynolds, M.A. $1 25.

AN ELEMENTARY TREATISE ON Conic Sections and Algebraic Geometry. With numerous Examples and Hints for Solution; especially designed for the Use of Beginners. By G. H. Puckle, M.A. New edition, revised and enlarged. Crown 8vo, $2 50.

GEOMETRICAL TREATISE ON Conic Sections. By W. H. Drew, M.A. Fourth edition. Crown 8vo, $1 75. SOLUTIONS, $1 75.

THE ELEMENTS OF PLANE AND Spherical Trigonometry. With the Construction and Use of Tables of Logarithms. By J. C. Snowball, M.A. Fourth edition. Crown 8vo, $2.

AN ELEMENTARY TREATISE ON Mechanics. For the Use of Junior Classes at the University and Higher Classes in Schools. With Examples. By S. Parkinson, D.D., F.R.S. Fourth edition, revised. Crown 8vo, $3.

A TREATISE ON OPTICS. By S. Parkinson, D.D. Third edition, revised and enlarged. Crown 8vo, $3 50.

ELEMENTARY HYDROSTATICS. With numerous Examples. By J. B. Phear, M.A. Fourth edition. Crown 8vo, $2.

A TREATISE ON DYNAMICS OF A Particle. By Professor Tait and Mr. Steele. Third edition, enlarged. Crown 8vo, $3 50.

For list of Mr. I. Todhunter's various Mathematical Works, see their General Catalogues.

HISTORY, ETC.

THE HOLY ROMAN EMPIRE. By James Bryce, D.C.L. Third edition, revised. Crown 8vo, $2 50.

OLD ENGLISH HISTORY. By E. A. Freeman, D.C.L. With Five Colored Maps. Second edition, revised. Extra fcap. 8vo, $1 75.

EUROPEAN HISTORY: Narrated in a Series of Historical Selections from the Best Authorities. Edited and arranged by E. M. Sewell and Charlotte M. Yonge. 2 vols. crown 8vo, $1 75 each.

A CLASS-BOOK OF OLD TESTAMENT History. By Rev. G. F. Maclear, D.D. With Maps. Seventh edition. 18mo, $1 50.

An Elementary Manual, for Junior Students. 50 cents.

A CLASS-BOOK OF NEW TESTAMENT History. By Rev. G. F. Maclear, D.D. With Maps. Fourth edition. 18mo, $1 50.

An Elementary Manual, for Junior Students. 50 cents.

MANUAL of POLITICAL ECONOMY. By Henry Fawcett, M.A. Third edition. Crown 8vo, $3.

FULL DESCRIPTIVE CATALOGUES WILL BE SENT ON APPLICATION.

MACMILLAN & CO., 38 Bleecker Street, New York.

VALUABLE EDUCATIONAL WORKS

PUBLISHED BY

J. B. LIPPINCOTT & CO.,

PHILADELPHIA.

NEW ARITHMETICS.

SANFORD'S ANALYTICAL SERIES.

COMPRISED IN FOUR BOOKS.

The Science of Numbers Reduced to its Last Analysis.

MENTAL AND WRITTEN ARITHMETIC SUCCESSFULLY COMBINED IN EACH BOOK OF THE SERIES.

BY SHELTON P. SANFORD, A.M.,

Professor of Mathematics in Mercer University, Georgia.

I. FIRST LESSONS. Illustrated, . . .	$0 35	III. COMMON SCHOOL, ...	$0 90
II. INTERMEDIATE, ...	0 50	IV. HIGHER, ...	1 50

"I think that Sanford's Arithmetics are the best books on the subject ever published; and I trust it will not be long before they will be introduced into every school in our State. In my judgment, they are the very perfection of school-books on arithmetic."—*Professor B. Mallon, Superintendent in the Public Schools of Atlanta.*

CUTTER'S PHYSIOLOGIES,

FOR COLLEGES, ACADEMIES, AND FAMILIES.

BY CALVIN CUTTER, M.D.

NEW SERIES.

*FIRST BOOK OF ANALYTIC ANA-*tomy, Physiology, and Hygiene, Human and Comparative. With 164 Illustrations. 12mo, 90 cts.

SECOND BOOK OF ANALYTIC Anatomy, Physiology, and Hygiene, Human and Comparative. With 186 Illustrations. 12mo, $1 50.

*NEW ANALYTIC ANATOMY, PHY-*siology, and Hygiene, Human and Comparative. With 194 Illustrations. $1 60.

With Questions, 60 pages additional. $1 70.

OLD SERIES.

HUMAN AND COMPARATIVE Anatomy, Physiology, and Hygiene. By Mrs. E.P. Cutter. Illustrated. 12mo, 50 cts.

*CUTTER'S FIRST BOOK ON ANA-*tomy, Physiology, and Hygiene. Illustrated. 12mo, 80 cts.

*CUTTER'S ANATOMY, PHYSIO-*logy, and Hygiene. Illustrated. 12mo, $1 70.

*** Accompanied by a Series of Anatomical Charts.

CHAUVENET'S MATHEMATICAL SERIES.

BY PROF. WILLIAM CHAUVENET.

A TREATISE ON ELEMENTARY Geometry, with Appendices containing a Copious Collection of Exercises for the Student, and an Introduction to Modern Geometry. By Wm. Chauvenet, Professor of Mathematics and Astronomy in Washington University, St. Louis. 12mo. extra cloth, $2.

"It is the only geometrical text-book which is based on true principles."—*C. H. Judson, Professor of Mathematics in Furman University, Greenville, South Carolina.*

A TREATISE ON THE METHOD of Least Squares; or, The Application of the Theory of Probabilities in the Combination of Observations. From the author's Manual of Spherical and Practical Astronomy. By Wm. Chauvenet, Professor of Mathematics and Astronomy in Washington University, St. Louis. 8vo, cloth, $1 75.

*PLANE AND SPHERICAL TRIGO-*nometry. By Wm. Chauvenet. New and Revised Edition. 8vo, cloth, $1 75.

☞ For sale by Booksellers generally, or will be sent to any address, carriage free, upon receipt of the price by the Publishers. Books for examination and introduction at special rates. Catalogues furnished on application. Address

J. B. LIPPINCOTT & CO., Publishers, Philadelphia.

Just Ready. 8vo, cloth, price $6 50.

THE THIRTY-NINE ARTICLES of the Church of England Explained in a Series of Lectures. By the Rev. R. W. Jelf, D.D. Edited by the Rev. J. R. King, M.A.

Sixth Edition of

OUR NEW VICAR; or, Plain Words about Ritualism and Parish Work. By the Rev. J. S. B. Monsell, LL.D. 16mo, cloth, $1 50.

New Edition of

HOUSEHOLD THEOLOGY. A Manual of Religious Information respecting the Holy Bible, the Prayer-Book, the Church, the Ministry, Divine Worship, the Creed, etc., etc. By the Rev. J. H. Blunt. 16mo, cloth, $1 25.

Post free on receipt of price.

POTT, YOUNG, & CO.,

Cooper Union, New York.

SCHOENHOF & MOELLER, Foreign Book Importers, 40 Winter Street, Boston, publishers of Alvergnat's 'French Pronunciation,' $1 25; Plœtz's 'Easy French Method,' $1 25; 'Biographies des Musiciens Célebres,' $1 50; Lacombe's 'Peuple Français,' 90 cts; Montague's Spanish Grammar, $1. All bound. Copies for examination at half price. New school catalogue just issued.

RECENT PUBLICATIONS.

CARMINA PRINCETONIA. The Songs of Princeton College, with music. Cloth, 8vo, $1 50.

CARMINA YALENSIA. A Collection of College Songs, with Music and Piano Accompaniment. Garretson's edition, cloth, $1 50. Heald & Dutton's edition, cloth, $1 75; gilt, $2 25.

AMERICAN SEASIDE RESORTS. A handbook for Health and Pleasure Seekers By Charles L. Norton. 16mo, cloth. Price $1 25.

THE CATSKILL MOUNTAINS and the Region Around. By Rockwell. 16mo, cloth. Price $1 50.

GEOLOGICAL MAP OF THE UNITED STATES and Canada. By Prof. C. H. Hitchcock, Dartmouth College. In sheets, $2 50; mounted, $3 50.

DICTIONARY OF WORDS AND PHRASES USED in Commerce. By Thomas McElrath. $6.

THE BOOK OF PSALMS, for Responsive Reading in Sabbath-Schools and Public Worship. Two Editions. 32mo edition, limp cloth, 30 cents; 16mo edition, cloth, 70 cents.

Any of the above sent by mail on receipt of price.

CHARLES FOLLEN McKIM, ARCHITECT,

57 Broadway, New York.

ALLEN & GREENOUGH'S LATIN COURSE.

Complete in Prose Department, Preparatory to College.

*ALLEN & GREENOUGH'S SE-*lect Orations of Cicero. Chronologically Arranged, covering the entire period of his public life. Edited by J. H. & W. W. Allen and J. B. Greenough, with References to Allen & Greenough's Latin Grammar. Containing the Defence of Roscius (abridged), Verres I. Manilian Law, Catiline, Archias, Sestius (abridged), Milo, Marcellus, Ligarius, and the Fourteenth Philippic. With Life, Introductions, Notes, and Index. $1 75.

ALLEN & GREENOUGH'S Shorter Course of Latin Prose: consisting of Selections from Cæsar, Curtius, Nepos, and Sallust ('Jugurtha'), with Notes adapted to Allen & Greenough's Grammar; accompanied by Six Orations of Cicero—the Manilian, the four Catilines, and Archias, with Vocabulary—thus forming a volume adapted to the second or shorter preparatory course at Harvard. $2 50.

ALLEN & GREENOUGH'S LATIN Grammar. $1 56.

ALLEN & GREENOUGH'S LATIN Selections. $1 56.

LEIGHTON'S LATIN LESSONS.

(Refer to A. & G.'s Gr.) $1 56.

(From Prof. W. D. Whitney, Yale College.)

"I have no hesitation in saying that Allen & Greenough's Grammar has impressed me more favorably than any other I have seen that is published in this country. Though brief, it is very comprehensive, clear in its statements, founded on an adequate basis of philological knowledge, and cast in the proper tone of describing the facts of the language rather than prescribing laws for it."

"OUR WORLD" SERIES OF GEOGRAPHIES.

(From Louis Agassiz, LL.D., Professor of Zoölogy and Geology, Harvard University.)

"Cambridge, January 1, 1873.

"MY DEAR SIRS: I welcome 'Our World,' No. 2, as a valuable contribution to the modern method of teaching geography. It is a very commendable and successful effort to add to the daily improving means of making geography more attractive in the school-room."

(From Hon. Geo. S. Hillard, LL.D.)

"Boston, December 11, 1872.

"MY DEAR SIRS: I think Miss Hall's work one of great merit. It invests the study of geography with the attractions that properly belong to it. It gives prominence to the facts, distinctions, and attributes which are permanent, and the work of nature, and does not burden the memory with those dry details of political geography which are variable and accidental. Thus it has all the interest of a well-written book of travels. The pupil here learns wherein one country essentially differs from another, what are the physical features, soil, and productions of each, what are the occupations and character of their inhabitants, and, in short, all the relations of man to the globe on which he lives."

Halseys Historical Chart, 33 x 48, $1 50. Goodwin's Greek Grammar, Reader, Moods and Tenses. Leighton's Greek Lessons. Liddell & Scott's Lexicons. Allen & Greenough's Madvig's & Allen's Latin. White's Junior Student's Latin Lexicon. Hudson's and Craik's Shakespeares. Pierce's Tables. English of XIVth Century, $1 75. National Primary, Intermediate, and Fourth Music Readers. National Music Charts, in Four Series, by Luther Whiting Mason.

GINN BROS., Publishers.

107 Fifth Avenue, Chicago, Ill.

GILMAN'S

FIRST STEPS IN ENGLISH

Literature.

Published by HURD & HOUGHTON, New York;

THE RIVERSIDE PRESS, Cambridge.

Price $1.

The Rev. Alexander McKenzie, D.D, a member of the School Committee of Cambridge, Mass., writes to the author under date March 11, 1873, as follows:

"I want to put on record my sense of the good work you have done. I think it is very desirable that this branch of useful knowledge should be more regarded in our schools and colleges. We have a language and literature worth studying, both for information and discipline. I am sure that your little book will be of the highest service, and trust it will have a yet wider use. I wish it was in the hands of every English-speaking man and child. Yours sincerely,

"ALEXANDER MCKENZIE."

THE WEEK IN TRADE AND FINANCE.

JULY 28, 1873.

THE money market continues very easy. There have been occasional efforts to advance the rates of interest, but 5 per cent. may be stated as the highest, with the bulk of the business at 3 to 4½ per cent. on call loans, whilst time loans secured by first-class Stock Exchange collateral are quoted as follows: 30 days, 4 per cent.; 60 days, 4½ to 5½ per cent.; 90 days, 7 per cent., and for the remainder of the year, 7 per cent. gold. Time loans are difficult to procure for a longer period than the remainder of the year. In commercial paper, preference is given to that maturing in October —an evidence of a feeling of caution against any repetition of last year's stringency. For prime paper having three or four months to run the rates are 6½ to 7½ per cent.

The weekly statement of the city banks was favorable, especially in the item of legal tenders, which show an increase of $1,084,500. The loss of about a million in deposits explains the loss also of $1,088,100 in specie.

The following are the statements for the past two weeks:

	July 19.	July 26.	Differences.
Loans	$289,878,100	$289,389,100	Dec. $489,000
Specie	32,273,600	31,249,300	Dec. 1,024,300
Circulation	27,281,500	27,225,100	Dec. 56,400
Deposits	240,206,400	239,118,300	Dec. 1,088,100
Legal tenders	48,872,500	49,957,000	Inc. 1,084,500

The following shows the relation between the total reserve and the total liabilities:

	July 19.	July 26.	Differences.
Specie	$32,273,600	$31,249,300	Dec. $1,024,300
Legal tenders	48,872,800	49,957,000	Inc. 1,084,500
Total reserve	$81,146,100	$81,206,300	Inc. $60,200
Circulation	27,281,500	27,225,100	Dec. 56,400
Deposits	240,206,400	239,118,300	Dec. 1,088,100
Total liabilities	$267,487,900	$266,343,400	Dec. $1,144,500
25 per cent. reserve	66,871,975	66,585,850	Dec. 286,125
Excess over legal reserve	14,274,125	14,620,450	Inc. 346,325

The stock market as a rule has been firm, with sometimes little "spurts" of activity. The most important features of the week have been the advance in Harlem and Western Union Telegraph, and the semi-corner in Erie. In the first-named stock, the rise of 4½ per cent., to 134, on Saturday was due to large purchases by prominent operators, whose movements are supposed to have been caused by an offer of $3,000,000 to the Company for the city railroad, and the expectation of an extra dividend in the shape of scrip or bonds, based on the enhanced value of the city property, and also representing an undivided surplus, which under the terms of a recent lease with the New York Central is no longer required to be withheld. Telegraph stock has been remarkably firm on reports of an expected stock dividend, supplemented by vigorous purchasing on the part of Commodore Vanderbilt's friends, and their frequent hints that the inevitable Jay Gould had been caught short, and that the contest was really one of pluck and pocket between himself and the Commodore. In the Erie corner, but little trouble was experienced in making deliveries, and on Saturday the stock declined at the close to 59¾ against 61 cash at the opening. The redistribution of Northwest and its handsome earnings combine to promise renewed activity and higher prices for that old-time favorite. In St. Paul, an evident effort is being made to keep down the price to allow of large blocks of its shares being quietly bought up by a well-known heavy capitalist, whose efforts seem altogether directed that way; and to the initiated there are everywhere evidences upon which to base a hopeful prospect of higher prices and the commencement of a wider speculation than has been witnessed this year. The exception to this favorable view is that *bête noir* of the Exchange, Pacific Mail. The negotiations for a loan on the Company's San Francisco real estate having failed, a law firm, to whom was referred Judge Pierrepont's opinion against the legality of issuing bonds, props up Captain Bradbury's backbone with an insinuation that the "general authority to sell and convey includes the authority to mortgage." This is "*an opinion as is an opinion.*" The issue of the bonds may be confidently expected, and with equal confidence may it be conjectured that the trustees, willingly or not, will find themselves personally responsible therefor when the Company goes into bankruptcy or into the hands of Mr. Stockwell and the Panama Railroad.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending July 26, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales.
N. Y. C. & H. R.	103⅞ 104⅛	104 104⅜	104¼ 104⅛	104¼ 104⅝	104¼ 104⅞	104⅜ 104⅝	29,000

Pacific Mail	38⅜ 40	36¾ 39⅛	36⅜ 37⅛	36⅜ 38½	37⅜ 38⅛	37⅜ 38⅛	91,100

The market for Government bonds is firm. The Treasury transactions began and ended with the sale of 5.20's last week. The week closes on the basis of 118⅞ to 119 for the 5.20's of 1867. Transactions in State bonds have been small, and confined to the most prominent. The report of an injunction restraining the State of Missouri from selling the Missouri Pacific Railroad is not unfavorable to the State, as the unsettling of financial affairs by a sale of the roads involved in the question at issue could hardly be otherwise than calamitous. In railroad bonds the business has not been large, but has been pretty well distributed. The sinking fund loan of $6,000,000 of the Lake Shore Railroad is reported by the agents to be closed out. Some attention has been attracted to auction sales of the bonds of the Willimantic R. R. Co. (principally known by the Brooklyn Trust Co. affair) and of the Midland equipment and Montclair bonds. The first were sold at 30, and the last two, as reported, at 14 and 40 respectively. It is announced that of the $8,000,000 consolidated mortgage bonds which the Chicago and Alton Railroad Company propose issuing, $3,470,000 will be set apart to retire and cancel bonds now outstanding and maturing. This year $1,500,000 of the remainder will be put on the market to build the bridge over the Mississippi at Louisiana, Mo., purchase steel rails, etc., etc. The remainder will be "issued as circumstances may require."

The gold market at the close of the week is dull and lower; on Saturday opening at 115¾ and closing at 115⅝. The bull party has been somewhat helped by a total shipment of $3,944,533 in specie last week, some of which, considering the low current rates of exchange, must have been for effect, like a school-boy's whistling to keep his courage up. The easy feeling and reduction of Bank rate in England have naturally produced an easier feeling in gold and exchange here. At the Treasury sale of $1,000,000 on Thursday, the total bids amounted to $2,635,000. Customs receipts of the week amount to $2,472,000.

BANKING-HOUSE OF FISK & HATCH,
No. 5 Nassau Street, New York, July 28, 1873.

We recommend to our friends and customers for investment of surplus capital, or in exchange for Government bonds,

THE CHESAPEAKE AND OHIO SEVEN PER CENT. GOLD BONDS; Principal and interest payable in Gold Coin in New York City; interest payable Jan. 1 and July 1; coupon or registered. Price 90 and accrued interest.

THE CHESAPEAKE AND OHIO RAILROAD IS A COMPLETE TRUNK LINE between the Atlantic Seaboard and the Great West, 420 miles in length, extending from tide-water at Richmond to Huntington, the most favorable point of railroad connection with the Ohio River, and developing the richest IRON, COAL, and TIMBER REGIONS in the United States.

Its FREIGHT TRAFFIC and PASSENGER TRAVEL are already large and remunerative, and they are increasing with a rapidity which shows the Chesapeake and Ohio to be one of the most valuable and successful railroads in the country.

These facts, together with the thorough construction and superior character of the Road itself, its advantages for economical and profitable operation, and the unquestionable security of the Bonds of the Company, enable us to recommend them with the utmost confidence.

Pamphlets, containing full information concerning the Road and the country it traverses, will be furnished upon application.

We also have on hand for sale the CHESAPEAKE AND OHIO SIX PER CENT. GOLD BONDS, at 88½ and accrued interest. Interest payable May and November. Denominations $100, $500, and $1,000—coupon or registered.

We continue to deal in Government Securities and CENTRAL PACIFIC and WESTERN PACIFIC; buy and sell Stocks and Bonds at the Stock Exchange on commission for cash, make Collections, receive Deposits, on which we allow interest at the rate of four per cent., and do a general banking business.

FISK & HATCH.

THE CONSOLIDATED 30 YEARS 7 PER CENT. GOLD BONDS of the ST. LOUIS AND SOUTHEASTERN RAILWAY COMPANY, issued upon a complete trunk line (between St. Louis and Nashville, Tenn.) earning more than enough to pay interest and operating expenses. A perfectly safe investment. Price 90 and interest. All marketable securities taken in exchange.

WINSLOW & WILSON,
Financial Agents,
70 William Street.

WM. H. VEYSEY,
PROFESSIONAL ACCOUNTANT,
150 Broadway, New York.
Consultations given on important matters.

$5 to $20 per day! Agents wanted! All classes of working people, of either sex, young or old, make more money at work for us in their spare moments, or all the time, than at anything else. Particulars free. Address G. Stinson & Co., Portland, Maine.

The Nation.

NEW YORK, THURSDAY, AUGUST 7, 1873.

The Week.

THE "Allen County Movement," as it is called in Ohio, is a movement of Liberal or Reform Democrats, who believe that both the existing parties are mere stumbling-blocks in the way of reform and progress, and desire to see a new party, founded by the honest men of both parties, but still possibly retaining the name of Democrats, take the field. On the other hand, the Liberal Republicans of Ohio are Republicans who also believe that both the existing parties are mere stumbling-blocks in the way of reform and progress, and also desire to see a new party formed by the honest men of both parties, but as to its designation they are not at all nice. To the most casual observer the objects of these two parties are strikingly similar. The Allen County Democrats, in convention assembled, resolved some little time since that they invite the people of Ohio, without regard to past political associations, to meet at Columbus in mass convention on the 30th of July, "to take such action as the exigencies of the times demand." By a natural coincidence, the Liberal Republicans were to hold a convention in the same city of Columbus on the same day. In accordance with the decision of a caucus held on the 29th, the Liberal Republicans decided to unite with the Allen County Democrats, and on the 30th, having done so, a joint, or, as it is called by its enemies, a "conglomerate" convention was held, a platform adopted, and a mixed State ticket nominated, the names on which are not known outside of Ohio. The meeting is said to have been held in a small apartment, to prevent the capture of the Convention by "John G. Thompson's bummers," a wise precaution which other conventions would do well to follow.

The Ohio papers, politicians, and public men seem to be very much distraught by this new movement. Mr. Groesbeck, for example, says that he does not wish to leave the old Democratic homestead; he likes it, and always has liked it; yet he cannot but think that the Democratic party is a "spoiled" party. Mr. Thurman, on the other hand, thinks that the Allen County movement is all a blunder, and appears to believe that Democracy is on the eve of a revival. The *Enquirer*, the leading Democratic organ, strongly supports Senator Thurman's position, and ventures the assertion that the Democracy will pay no attention to the Allen County people or the Liberal Republicans and their doings. The platform, however, of these parties in joint-convention seems well enough, although it is much sneered at by the Administration papers as negative and platitudinarian. It asserts, for one thing, that a tariff should be for revenue alone; for another, that by some means there must somehow be a reform of the civil service; and, for another, that we have gone too far away from the wholesome principle of local self-government. Platitudinarian or not, we suppose no one would read the resolution about centralization, which is the one most contemned, and not suspect that, after the success of the new party, revenue cutters would not be so much employed in Louisiana politics as they have been. Of the Liberal Republicans, or rather of the dissatisfied Reformers who were never of that pretended party, General Cox and Judge Stallo have spoken. So far as we can make out, they give a qualified adhesion to the movement. General Cox significantly advised the ratification meeting to remember that in such matters haste was made slowly, and success not to be soon expected. And this, we take it, he said less with reference to the numbers embodied in the nascent organism, for indeed their success is not worth any man's talking about, let alone General Cox's, but because he is of opinion that the truly reforming party of the future is yet to appear, and that as yet but little has been done in the way of getting it on foot. As for the Democracy and the Republicans, Liberal journals are hardly to be trusted to talk; they are somewhat hampered in all their dealing with the movement; for one thing, a number of old prophecies that the Democratic party was to die stand over from last year embarrassing them much, and with these are a number of ingenious proofs that, if the Democracy died, Republicanism also would perish. All the facts, however, point to something like an old-fashioned fight between the two great parties. The principal candidate of the joint party, or People's Party, as it is proposed to call it, is a respectable Democratic judge, Mr. Collins, and the rest of the ticket is made up of alternate Liberal Republican and Democratic names.

Certainly nobody is just now greedy for politics. Not even the "intellectual department, half European," of a distinguished contemporary of ours—which, by the way, some of its envious rivals accuse of going down to Castle Garden on the arrival of emigrant vessels from Queenstown, and then and there obtaining future members of said department by casting the lasso—has been equal to the task of rousing the country to the impending danger of "Cæsarism." Everybody has refused also to discuss with the customary fertility of epithet the Third Term Question. Politics have to be always going on nevertheless, and this year and this summer are like the other years and seasons in this respect. In Virginia there is some local excitement—a Virginia governor's term lasting four years, and Governor Walker's being on the eve of expiring. He was elected in 1869 by a majority of more than 18,000, and the State was definitely handed over to the Conservative or white party. Last year, however, owing to the inability of some Conservatives to look with patience, and of others to look with seriousness, on the nomination of the late Mr. Greeley, Grant actually carried the State by between one and two thousand majority—not the least unpredictable of the singular things in that curious campaign. Upon this result some persons are basing expectations that the Republican party ticket is to be successful in November next. Perhaps solider ground may be that occupied by those who expect the Federal Administration to work very hard for the success of that ticket, and who think that an influence favorable to such success will be exercised on the minds of many voters by the knowledge that the Administration favors the internal-improvement system. Virginia would like very much to see canals through the Alleghanies, and, as the Administration organ coolly remarks, she will be much more likely to see them if the State is "under Republican auspices" after November than if she remains Conservative. Democrats, it appears, deserve no canals and no prosperity. Colonel Hughes, the Republican candidate, was formerly the editor of a Confederate paper, but early became reconstructed and since the war has acted with the Republican party. His Conservative competitor, almost certain to be successful against him, as we suppose, has not yet been named.

Mr. Smith, who is said to be the chief manager of the Farmers' movement in Illinois, has been "interviewed" by the *Tribune* correspondent to whom we have once or twice before referred, and made several statements with regard to railroad "rings," some of which are interesting because they are true, and some because they are very much the opposite. He makes complaint that the cost of running the roads is unnaturally increased, in many instances, by illegitimate contracts in which the officers of the roads have an interest. For example, there is one road which has a patent "shoot" for coal at Kewanee, Illinois, where it takes 40 tons a day. The miner sells coal at the bank for $1 75 a ton. It costs 25 cents to cart it to the "shoot," so that the price there ought to be $2 a ton. Nevertheless, the company pays $2 75. There must, Mr. Smith says, be "some cat under that meal." This is very true, but

Mr. Smith seems to be of opinion that the people who are directly injured by such operations as this are the farmers, when in reality it is the stockholders, the very stockholders against whose exorbitant income the farmers are crying out. If, whenever there was an illegitimate coal contract, the rates of freight were raised, the farmers might fairly complain. Mr. Smith actually believes that this is done. He says "the rates of freight and fare are fixed with reference to the dividends it is desired to make." This statement is monstrous, for, as every one knows, there are dozens of railroads in the country which declare regular dividends on their stock, and whose freight rates nevertheless do not materially differ from the freight rates of roads which never declare any dividends at all. According to Mr. Smith, the rates ought to rise with the dividends. With regard to the Granges, it should be noticed that one of their objects is the purchase, through co-operation, of farming and domestic machinery, without the intervention of middlemen, at wholesale prices.

A transaction to which some of the local newspapers give a very dubious complexion, and which, at any rate, is full of instruction to everybody, has just taken place in Boston. There are in Massachusetts about one hundred and fifty State constables, whose main business is to enforce the Prohibitory Law, so-called, and of these twelve are stationed in Boston. Last week these twelve were requested by the Commissioners to resign, and, all but one refusing to do so, they were all dismissed. Two explanations of this action have been offered. One is, that the law ought to be enforced, and that these men have been inefficient, perhaps corrupt, in enforcing it, and were rightly turned out. The other is as follows: These constables may be said to have had in their hands, and entirely at their mercy, every man of the hundreds and hundreds of liquor-dealers in Boston. They not only could demand a daily salary for leaving the dealer free to sell to his customers, but in a vast number of cases they could, just as easily as taking money, send him and his barkeepers to the House of Correction. Now, as it appears, the liquor-sellers of Boston are like their order in our other large cities, in being very important men in the political world. They take an interest in politics, and they control many voters of the class that go to the primary meetings. Just at present it is important that their influence should not be cast in favor of Butler, yet they must do as their constable orders them, and Butler, if all this story is true, some time since secured the constables. These latter, therefore, were dismissed, and Butler is probably not to have so complete a control of the caucuses as it had been supposed he would have. Heavy firing may be expected in the direction of Massachusetts during this month and next. It will be seen that what with the opposition of the moral elements of the community; the coldness or hostility of the capitalist element, which in Massachusetts can be extremely powerful; and the sharpness of a set of State politicians who for a dozen years have had the party machine at their fingers-ends down to the minutest wire, and who would appear to be determined to use it, General Butler must work very hard if he means to win.

Whatever may be the political significance or insignificance of the removal of the Boston constables, the discussion attendant reveals some of the enormous difficulties that surround this question of prohibitory legislation, and which are quite as likely to surround it in other places as in Boston. As to the way in which the law has been enforced, the ex-constables' story presents some striking instances. Not long ago, a Commissioner called in a certain officer, and asked him why he did not shut up the bar of the Waverley House in Charlestown. He replied: "Give me an order to do so, and I will execute it." The gentleman in authority replied that the constable knew the law and was in duty bound to enforce it. But no written order came; "the officer never saw fit to make a prosecution in that place," and we suppose the Waverley House goes on selling liquors to whosoever chooses to buy across the counter. Such is the condition of public opinion. Rather, such is the condition of the public opinion of one-half of the public: "About a month ago, Chief Boynton went down to the rooms of the constables, and told them they were not doing business enough in their line; they must bring in more 'nuisances' and 'common sellers,' so a number of raids were made for a short time, and public opinion, which the constables consider to have been the gauge of action, was appeased." A statute which the higher and lower officials charged with its execution bandy between them, one set saying, "You execute it," and the other replying, "Give us a written order; we are not going to have the responsibility shoved off on us," certainly is not an ornament to any American statute-book. Yet Massachusetts has for twenty years been busy with this sort of legislation, now doing it, now undoing it, and all the time the air has been full of charges of bribery on the part of liquor-dealers, perjury on the part of jurors, corruption on the part of prosecuting officers, political terrorism on the part of constables, commissioners, and party managers.

Some lurid light has been thrown on the domestic-service question in New York by the report of Messrs. Laimbeer and Stern on the subject of the "Free Labor Bureau." Few people, perhaps, know what this Bureau is. In 1869, it seems, by the insertion of a clause in the tax-levy of that year, the sum of $10,000 was appropriated for the purpose of opening "a free intelligence-office for the poor and stranger seeking employment and information." The expenses of the Bureau gradually reached the sum of $21,333 66, some eleven thousand dollars more than the appropriation. This, however, the Commissioners think, would not matter much "if the institution had become in reality a medium of exchange between the honest, well-meaning, and well-behaved servant and the classes in need of help." They state, with regret, however, that the expectations of those who hoped for this result were not fulfilled, and that examination reveals the fact that the institution has become the resort of bands of "nomadic servants," "that wander from place to place, from mistress to mistress, with no known intention to remain longer in one place than it may suit their temporary whim and purpose." With the existence of these hordes we were all familiar enough, but few people probably attributed their numbers and strength to its proper cause. The Commissioners recommend (and their recommendation has been adopted by the Commissioners of Charities and Corrections) that the Bureau shall be continued for three months under a semi-military discipline, and then, if it does not work better, that it be abolished. Hereafter, nomad cooks and waiters may expect to find themselves looked upon with increased reserve.

The reform government which was erected by Congress two years ago in the District of Columbia appears to be on its last legs. It has incurred a debt of some $17,000,000, which, for its territory of sixty square miles, and small fixed population, is an enormous sum, and has begun to pay its subordinate employees in small bonds of the denomination of $50, instead of ready money. It is rumored that the Governor and the Board of Public Works intend retiring when Congress meets; and an attempt will probably then be made to saddle the debt upon the United States, where, indeed, it in great measure belongs, for it is to Congress that the creation of this government was due. The most singular thing about the history of this matter is that ever since Congress set up the government its financial proceedings have been thoroughly exposed in the newspapers, and the gravest doubts thrown upon its credit. Nevertheless, it has had no difficulty in negotiating loans, and has continued to do so until the bottom of its credit has been fairly knocked out.

The English newspapers are beginning to notice the decline of public interest in Parliamentary debates. The debates, which used to be published in full and read with attention, are now sadly cut

down, and in some cases wholly omitted. This is not only true of the speeches of inferior orators, but of some of those of the leaders of the House of Commons. A discussion is going on in the English press as to the cause of this phenomenon; and the true conclusion would seem to be that the public takes less interest in the debates because they are really less interesting than they used to be. The multiplication of the interests of the reading public has become so great that, mostly for the sake of proportion, a newspaper is obliged to curtail its parliamentary, or in this country, congressional and legislative columns. Formerly the newspapers here were as eager to publish the legislative debates as they ever have been in England; now the merest summary is all that it is thought the public can be made to endure. The *Pall Mall Gazette* thinks that oratory itself is a thing of the past; that successful speeches do not, as they once did, secure votes; the explanation of this being, probably, that votes in the English Parliament are more and more influenced, as they are with us, by the party machinery outside than by mere human persuasion within.

Mr. Joseph Arch, the leader of the farm-laborers' movement in England, is coming to this country in August to see whether the United States affords a fit home for the over-crowded farm-laborers of England. At a recent "demonstration" at Newbury, he told his audience that,

"if he found there a home for the agricultural laborers of England, he should tell them so; but if he found that farmers in America were men who wanted both sides of the bargain, and that the crows were as black there as here, he would advise them to stay in England. If he found America was the true home of the working-man, where the son of the poor man could sit down by the children of the rich, write on the same slate, and read out of the same book, and where they could have full electoral power, he would stand on her shores until he had drained the laboring serfs out of England, in order that they might settle in the fruitful field of America, with its ninety millions of acres yet untilled; and he would do this until the farmers of England were made to bite the dust if they refused to treat their laborers like men."

Mr. Arch has so far shown himself a sensible man, and we dare say he will know how to take care of himself over here; but it is greatly to be hoped for our own sake and his, and for the sake of the persons whom he will represent, that the reception he meets may be of an intelligent and moral kind, and that he may not be allowed to fall a prey to swindlers and designing politicians.

On the 12th of last month, M. Beulé, the Minister of the Interior, whose press circular created a scandal a few weeks ago, was taken to task in the Assembly for having given notice that members might have their speeches printed and circulated, and for having afterwards withdrawn the word "circulated." M. Beulé replied that deputies had, by the rules of the Chamber, the right to have their speeches printed—and the Government would not object to the circulation of speeches, except such as might be calculated to disturb the country. This explanation was received with a good deal of noise; and shortly afterwards a perfect tumult was occasioned by the remarks of a colonial deputy, who complained of language used by M. De Kendrel in speaking of the Colonial Jury Bill. It seems that M. De Kendrel had been guilty of committing himself to two propositions, both undeniably true, but also full of meaning. The first was that there was some difference between French and English colonies; and the second, that there was no party in London which excited one class against another in the colonies. Confusion ensued, and was only ended by the Acting-President, M. Benoist D'Azy, putting on his hat. The sitting afterwards being resumed, a discussion took place on universal suffrage, which led to nothing at all but a great speech from Gambetta, and a declaration of the Minister of Justice that the ministry were not conspiring against universal suffrage, but, on the contrary, only desired to be the servants of order and liberty.

At the next sitting, the Minister of Justice brought in a bill conferring upon the Permanent Committee, which will sit during the recess, the right of authorizing the prosecution of persons guilty of insulting the Assembly. This brought out strong protests from the left; M. Arago accusing the Government of desiring to establish a new Committee of Public Safety, and M. Gambetta exhorting the Government, or rather those supporters of the Government who are also Orleanists, to recollect their early devotion to the British constitution, and not to be such apostates to English traditions as to make an attempt on the liberty of the press. Other speakers followed M. Gambetta, and a stormy scene ensued; but finally, according to the report, amid much roaring and gesticulation, the Government carried its point and the bill was declared "urgent." These turbulent debates would not in themselves be of much importance, if they were not indications that the existing Government begins to feel its strength more and more. At this distance, a parliamentary discussion of the sweetness and beauty of free speech, in an assembly composed of gentlemen who are unable to discuss the general subject itself without getting into such a tumult of passion that they are silenced by their own noise, is rather amusing.

Italian affairs have been unexciting since the ten days' ministerial crisis beginning on the 25th of June. The retirement of Sella was brought about by an ineradicable difference between himself and the Minister of War, in which both were technically in the right, though Sella was probably the less discreet. In spite of the delay of Minghetti in forming a new cabinet, not the least disturbance took place in Rome, nor did any occur when it appeared that no attempt had been made by the Premier to form a coalition with the Left, to whose accidental co-operation he owed his position. Signors Lanza and Sella, so far from seeking the arms of the Opposition, assisted materially their successor in his difficult task, and furnished an additional proof of the good sense and patriotism of the present race of Italian statesmen. Scialoja, the able Minister of Public Instruction, Visconti-Venosta, distinguished for his prudent conduct of foreign affairs, and the Minister of War, Ricotti, remain in the Government. Of the strength of the new ministry it is difficult to judge, but those friendly to it fear that Minghetti, who, for the present, has charge of the finances, may experience the same difficulty with his colleague, Ricotti, that Sella did. He is, however, possessed of greater tact than his predecessor, and probably came to an understanding with his War Minister before inviting him to hold over. For the rest, parties are in much the same state of flux and dissolution that they are in the United States, and, as here, questions of the public debt, the currency, and the economical administration of the Government occupy the first place in the concerns of the present and of the immediate future. The material interests of the kingdom, and no longer general principles of unification and church and state, will determine the composition and policy of parties.

The part taken by the clergy in the funeral ceremonies of Rattazzi has drawn from the Pope a sharp censure, though it is alleged that his remarks were doctored in the report, and made stronger than they were in reality. The offending priests have not ventured to assert their innocence, and their apology has furnished a petty triumph to the Jesuits. The contemplated excommunication, on account of the Religious Corporations Acts will, it is announced, not descend to the detail of mentioning names, but will blast the adversaries of the Church in a lump, in phraseology little different from that found so effectual on previous occasions. A fresh cry of persecution has been raised on account of an order from the Prefect of Perugia, who simply acted under instructions from the Government, prohibiting the usual August pilgrimage to Assisi. This being a cholera year, he alleges a sanitary necessity for putting a stop to what, on considerations of police, is also a source of public peril. The people of Assisi are not debarred from visiting the shrine of St. Francis as often as they see fit.

CANADA.

THE little tempest which has been raging in the British province of Manitoba, though it may not involve a question of international law, will serve to direct some attention toward the peculiar condition of the country or provinces lying along our northern frontier. So far as the arrest or kidnapping of Gordon is concerned, the question, we are inclined to think, is little more than one of common law. The privilege of bail is an important one, carefully fostered by the common law, and the benefit arising from it is all on one side, and the relations between a prisoner and his surety are of an honorary and obligatory character; for all of which reasons, the common law makes all possible intendments in favor of the surety, allowing him to retake the person on bail at any time or place, and treating the relation between them as a *quasi* agreement to that effect. The foundation of the Gordon case, therefore, is not an offence against the laws of this country, by which our Government becomes a party, but an agreement between two men, to the end that if the one would go bail, and thereby enable the other to be released from arrest, the latter would surrender himself whenever and wherever requested. In extradition cases, the matter is between governments, and the obligation arises from treaty stipulations. Here the matter is between two individuals, and the obligation, if any, springs from their voluntary relations. The question, therefore, is simply whether the courts of a country will allow such an agreement to be enforced when it arose within another jurisdiction, and whether they will aid a foreigner in enforcing it just as they will aid him to carry out any other agreement not repugnant to their own law. Some of the newspapers have spoken of such an arrest as valid if made in another State, but as illegal if made beyond the bounds of the United States. We do not, however, perceive the grounds upon which this distinction must rest. The obligation upon a State to allow such an arrest must be imposed either by the Constitution of the United States or by ordinary international comity. The Constitution extends only to criminals and persons escaping from servitude, and therefore does not impose any such obligation. If such arrests have been held valid, it must have been upon the doctrine of the common law and ordinary principles of international comity—a doctrine and principles as applicable to Minnesota and Manitoba as to New York and New Jersey. The excitement at Fort Garry seems to be chiefly due to a fellow-feeling for a vagabond like Gordon, and it is noticeable how little the Canadian press seems to care about the matter. Nevertheless, these border difficulties are never without the chance of growing into international complications. In this case, there may have been some criminal intent underlying the attempt of a surety to retake his escaped principal, and the American consul may have mixed himself up in the matter in an extra-official way. The judges of Manitoba have committed the "kidnappers" for trial before the "Court of Queen's Bench," and have refused bail; and the affair suggests some enquiry as to the courts and government which will have to deal, at least in the first instance, with the prisoners' case.

The name Canada has been withdrawn from the old French province, and applied to the new federation of British provinces, which now forms a government hardly less than independent. Invested with power to make laws, to coin money, to enter into commercial and postal treaties, and even to levy duties upon British imports, yet with its executive officers directly under the control of the Crown, and its judiciary subject to the review of the Privy Council, it is something more than a province and less than a nationality, to which the term "Dominion" has been appropriately applied. In withdrawing the old historic name of Canada from two of the provinces and extending it to all, good taste and judgment were shown; for it is a name original and appropriate, and full of old heroic and religious associations. In renaming the younger or western province, it was also natural that it should take the melodious Indian name of the great lake which lies beside it; but we may question the propriety of giving the name of Quebec, which was and always has been strictly local, to the entire province of Lower Canada, and it would seem as if the designation of Ontario for the upper province might have suggested for the lower that of St. Lawrence, or the original, Cadaraqui.

The political position of Canada has always been something of an anomaly. Of all the British provinces at the time of the American Revolution, Canada, it must seem to the historian, ought to have been the first to revolt. It was a conquered province. The conquest was not yet twenty years old, so that the youth of twenty who witnessed the siege of 1759, and saw the house of the Jesuit fathers taken for English barracks in 1760, was still a young man when he heard from Concord the shot "heard round the world." The conquered were a people differing from their conquerors in race, language, and religion, the three elements above all others which should have kept alive the fires of discontent. Finally, their countrymen were the friends and allies of the revolutionists, and had been for generations and centuries the enemies of the English. The first settlements in Canada and New England were due to religious causes, and both had been maintained against the same extraordinary hardships in countries identical in the rigors of soil and climate. Each should have produced a hardy race equally intent on the maintenance of their rights. But the quiet contentment of the French peasant, his dislike of change and indifference to constitutional principles, were never so completely demonstrated as by his conduct at that time. One race deliberately went into seven years of war for a principle; the other were passively loyal to their new rulers, because they found their taxes lighter and their personal liberty more assured than they had ever been before. The peasant (or rather small proprietary) character of the population extends to all of the provinces, and may explain the subsequent apathy in matters of government; for in 1861, out of a male population of about 750,000, there were not less than 333,604 farmers, and only 160,702 laborers.

The traveller in Canada at the present time is generally struck with the want in the people of a sense of nationality. Of the true provincial spirit, with its petty vanity and still smaller prejudices, there is undoubtedly plenty; but the majority of the people do not seem to know to whom they belong. In the oldest province, a large majority are French-speaking, with French customs, and to-day governed under old French laws. A part are English, keeping up a close connection with the mother country, and manifestly feeling that politically they have hardly got beyond it. Not a small part, particularly among the active, money-making classes, are Americans; and a number of native-born Yankees, "naturalized" into British subjects, are generally to be found in the Canadian Parliament. The least prominent are the English-speaking natives of the provinces. Undoubtedly, the same causes which have operated to make the American what he is, are operating physically and morally with them. The English characteristics of speech seem to drop off, especially among the lower and middle classes, so that it needs a practised ear to detect a difference in pronunciation or intonation between the American and the Canadian. Frontier life, too, seems to produce the same swaggering, powerful, uncivilized creature as with us; and we note in the forensic efforts of Manitoba the same "hifalutin" so familiar on our own side of the border, and the ungracious incident that Mr. Attorney-General Clarke, though holding a commission from the vicegerent of the Queen, cut his opponent's argument short by throwing our national utensil, a spit-box, in his face, and calling him a dirty puppy, in open court.

But so far as national influence can be traced, it is apparent that the most potent is that of the United States rather than of England. The traveller's trunks are termed baggage and not luggage. In his drives he finds that vehicles turn out for each other to the right and not to the left. The places where he makes his purchases are known as stores and not as shops. And the money of the country, coined in its own mint, has become dollars and cents, and the pounds, shillings, and pence of the mother country are as unknown in the daily traffic of Quebec as of New York.

But it is most notably in the form of government in the provinces that the influence of the United States has been felt. The model

after which the federation was framed was confessedly the American Constitution, varying from it only so far as was necessary to maintain "the Sovereign of Great Britain as its sole and only head." Hence it reminds us in its fundamental principle of that plan which Burke proposed a century ago; and the same experiment is now beginning which, if it had been begun in 1773, might have resulted in the United States being now a magnificent province of the British Empire. But, notwithstanding its variations from the model, the characteristic of the federation is the American idea of government; or, as was said by Sir John Macdonald in some of the earliest consultations on the subject, "the remedy was a federal union of all the provinces, local matters being committed to local bodies, and matters common to all to a general legislature, constituted on the well-understood principles of federal government." In carrying out this idea and coupling it with that of continued fealty to the British sovereign, the entire executive of the provinces was kept directly or indirectly under the control of the crown. The Governor-General is in the first place appointed by the crown, and it is he who appoints the governors of the different provinces, who are styled lieutenant-governors, and paid by the general government. As in England and America, the legislative power is vested in two houses; and as in both England and America, the lower house is elected directly by the people. But the upper house is a curious mixture of the two countries, taking from the Senate to a limited extent the element of provincial apportionment, and from the House of Lords, so far as practicable, the aristocratic element of appointment by the crown and of holding the position for life. How legislators holding office for life on the one hand, but selected from the most respectable and intelligent ranks of society on the other, will work on American soil, especially when the greater part of them become old men, whose political prominence is connected with bygone questions, will be an interesting subject of future political study. But the federation differs materially from our own government in having but one judicial system. The plan, however, is ingeniously flexible, and designed to administer both local and general law. The judges are appointed by the Governor-General; they hold office for life; they are paid by the general government, and are removable only by the concurrent action of the federal Parliament and the Governor-General. Yet they can be appointed only from the bar of the province in which they are to serve, and they then become to all intents judges of that province. As to the laws which they administer, each province can enact its own in civil matters; but there is one criminal system for all. The arrangement is as though we had a single criminal code in the United States, and the judges appointed by the President administered both Federal and State laws. We perceive greater unity and simplicity in the plan, but are not prepared to say that it is better adapted for the United States than our own.

While there are many resemblances between our own federal history and that of the Dominion, there are also some contrasts. In America, the colonies were welded into nationality by the fires of a prolonged and painful war; in Canada, the provinces have drifted together in the progress of events. With us, the moving cause was the redress of grievances; with the provinces, it has been the expectation of improvement in material things. The American revolutionists took up arms to maintain principles and rights which had been disregarded by the British Government; but much more than the colonists of 1775 asked for has been accorded by the British Government at the mere request of Canada. The separation of the two countries with us was the work of the weaker, but now it is the mother country which is looking towards separation, and the Dominion which is most anxious to avert it. Whether that separation will come or be for ever postponed will depend on America, her growth and advancement and relations with Great Britain. Whether in case of separation Canada will be absorbed in the United States, or grow into a great and independent nation, is beyond useful conjecture. But let it be understood as elements of the problem that the new Dominion has now a population not differing much from that of the State of New York, but greater than that of Holland, Denmark, Switzerland, or Greece, and with a territory larger than that of the United States and nearly equal to the whole of Europe.

HOPES AND FEARS OF THE AMERICAN ABROAD.

THE *Anglo-American Times* of July 19 contains a very sensible article entitled "How the Republic gets a Bad Name," from which the casual reader would be likely to infer that any American who goes abroad just now might as well prepare to have himself looked upon as presumptively belonging to the class known to the police as habitual criminals.

> "If an individual lost no opportunity of letting it be known that he was a bad man; that he cheated when he got the chance; that he was an adept in creating these chances; that he could deceive and rob as a pickpocket, or bludgeon and rob as a highwayman; that he was without principle, and could slander as readily as steal—ought that man to be surprised and annoyed if he is spoken of abroad as wicked and one to be avoided? Were he to urge that what is said of him was untrue, the answer is—'You said it yourself!' Nor would the reply be satisfactory if he added—'Oh! that was myself in controversy, not myself in fact.' The great daily journals of the United States have been doing all they can to spread the notion abroad that the American community is dishonest; is not to be trusted commercially; electing judges who sell justice, and legislatures who sell measures. Two American parties, engaged in a furious political controversy, are endeavoring to heap opprobrium on each other; and as the nation may be broadly said to be divided into these two, when each is accused of the deepest corruption, the sight presented abroad, as seen through such spectacles, is not gratifying to American pride and self-respect."

Such charges as these are grave matters. The newspaper we have just quoted very truly says that there are two causes at work which produce in the minds of foreigners an exaggerated opinion of American dishonesty; first, the relatively greater amount of business done with the United States than with other countries; second, the spirit of exaggeration and want of self-restraint of the leading organs of public opinion.

In the first of these explanations there is no doubt a great deal of truth. The commercial relations of America with London, Frankfort, Berlin, and Hamburg are so close that thousands of Englishmen and Germans are compelled to follow current events here with a great deal of care. They hear almost as soon as we do of our railroad frauds, bank suspensions, legislative or judicial scandals, and, reading of them, very likely in scathing editorials, form exaggerated conclusions about the country in which such things take place. To take, for instance, London. London is the great lending market of the world. The United States is a country of borrowers. The transactions of London with the United States probably equal the transactions of London with all the countries outside the British Empire.

> "We have, then, the United States on one hand, and all the countries in which these centres invest and lend on the other; and as a consequence, to be as bad, the shortcomings in the United States ought to be equal to the total of all the others. But no such calculation is ever made; for if a railway yields no dividend, if a State stops payment, if a mine proves a swindle in the United States, the name of the Republic is called out as a defaulter, and this name reiterated, leads to the impression that there is more of such default in the United States than in any other borrowing country; and so there is. But the calculation should be, the United States against all these countries put together, and then, a fair average being struck, it would be shown that, instead of being more, there was less default in proportion there than elsewhere."

This calculation, which we believe to be quite just, ought certainly to be some consolation to the depressed American travelling public. Of the second explanation we cannot say so much; not that it is not true that the press of this country is wanting in self-restraint and filled with a spirit of exaggeration, as because the acknowledgment of this fact does not seem to mend matters. The press does exaggerate and distort; but at the same time, the press being the recognized organ of public opinion, the natural inference would be that the public itself was wanting in self-restraint and filled with a spirit of exaggeration and immorality. "After a foreigner had glanced through a file of a New York daily, and read a record of the crime, the denunciation of Congress for a salary grab, the closing scene of the reform legislature at Albany, the history of a culminated 'corner' in Wall Street, the charge against some judge, and the announcement that a State will not pay its

half-yearly interest; also a series of leaders declaring the nation to be on the high-road to disruption from the prevalence of corruption, is it surprising that the man laughs outright when he is told, 'Yes, there is truth in all the paper says; yet the community, as a whole, is the most moral, religious, and upright in the world; the most progressive, and with the best backbone'?"

It is, nevertheless, perfectly true that the impression derived from the file of the New York daily by the foreigner is incorrect, as any one may convince himself, if he chooses to attempt so laborious an experiment, by living for a short time in this very city itself, and comparing the actual life he sees with the impressions of life derived from his "daily." He will certainly find that this period of greed, and this era of the pistol and the knife, has been painted by his ambitious editor darker than it is.

The truth is that American public opinion, which has always been slow to move, and very powerful when once in motion, has been in the years which have succeeded the war undergoing a slow but gigantic change. The change is nothing less than a change from an attitude of self-laudation to an attitude of self-criticism and self-denunciation, which finds its expression of course in the press. If the foreigner who finds such conclusive proof of the rascality of Americans in the editorials of his American daily will turn back to an old file of the same daily, he will find that a few years—a very few years ago—its tone was quite different; he will find that the same press was then confidently boasting to the world of the possession by America, to a point of superabundance, of the very virtues which it now denies to her altogether. This change marks the difference between two points in American history which, we believe, when the whole of it comes to be written, will be seen to be as wide apart as the period of the foundation of the government after the Revolution was from the period of colonial dependence which preceded it. A conservative period of self-examination, distrust, criticism, censure, and we may sometimes say self-contempt, is different indeed from a period of mutual admiration and buoyant hopefulness. The application of this to the condition of the press is obvious. Before the war and during the war, it was the function of the press to blow trumpets, beat drums, and sing hosannas over the progress of the country; since the war, it has been the function of the press, which it has more or less clearly perceived, to do the exact opposite. On both occasions it has run into extremes. When a man is young and full of hope, and has brilliant prospects in life, he exaggerates the opportunities of the future in every possible way. When he has seen sorrow and adversity, and discovered by experience that there are no royal roads to success, he is very apt to begin to doubt his own capacity, to criticise his past efforts, and he is fortunate indeed if he does not exchange for a tone of boastful conceit a tone of almost equally objectionable distrust and cynicism. If most men of mature years published every morning a bulletin of their feelings about themselves for the benefit of the public, it may very much be doubted whether the public would form a favorable opinion of their character.

But this is the very thing which for us the press is all the time doing. In other countries there are a thousand things which prevent a system of public confessional; in England, for instance, both Parliament and the courts have a very strong hold on the press, and rigidly repress discussion of a sort which is very common with us. The *Pall Mall Gazette* was the other day obliged to apologize for referring to certain members of Parliament as "ultramontanes," and ascribing to an "ultramontane" cause their political activity. Throughout the Tichborne case, the press has been kept silent by the rule that discussion of pending suits is contempt of court. There can be little doubt that, were it not for these rules, there would be many revelations of English corruption which would be by no means flattering to English society. Owing to the absence of these restraints, journalism here has a much more unrestricted organic growth as a trade than it has in England, and is governed much more by the laws of trade than by considerations of respect for the powers that be or fear of punishment. The American press may always be expected to follow the market closely, and the market just now—for reasons which we have just pointed out, and which we consider creditable rather than discreditable—is one of incrimination and exposure. There is no doubt that the government of New York is to-day a more honestly administered government than it has been for years; if it had not been for the existence of a keenly competitive press, we doubt whether we should be able to say as much.

But the whole discussion is one on which it is possible to bear too heavily. There is no accusation which is so easy to make, or so difficult to make with a clear understanding of the meaning of the term, as that an entire country is dishonest. When the accusation is made against America, it may mean any one of many different things. It may mean that the country appears to be dishonest when tried by the standard applied in the country criticising; it may mean that it appears dishonest when tried by the standard usually applied to other people by persons not wholly disinterested; it may mean that we are dishonest when tried by domestic standards set up by ourselves, and wholly unlike those made use of by the observer. Again, the dishonesty may refer to small but universal cheating; or it may refer to great but circumscribed frauds; it may refer to bribery at elections, and it may refer to the adulteration of goods. Any one who is familiar with the accusations of dishonesty brought against the French and Italians for the first cause, to say nothing of the second, and against the English by the English themselves for the third and fourth, will be likely to hesitate some time before he indulges in wholesale abuse of the American or any other nation.

VACATIONS.

MANY of our readers are now actually in the midst of their summer holiday; whether by the sea, with its wholesome breath in their lungs, and its rhythm falling on their ear; or among the hills and roads, with the pines and the bayberries to flavor the air, and the mighty sun of August at work regaling their eyes and making their spirits exult, instead of meting out to them the nefarious treatment that it gives to those who stay in the town. These latter will be laboring away, lifeless, pale, and peevish, cursing the day that they were born into a world where summers are so hot, and business so unrelenting, and where yet, as Miss Berry said, we are doomed to cling to a life even while we find it unendurable. Fortunate for the one class, doubly unfortunate for the other, that they are; and fortunate in either case are we in being able to choose this time in which to urge that, for the relief of man's estate, the custom of summer vacation should become as nearly universal as possible.

That it is becoming more and more common among us there can be no doubt. Twenty-five years ago, clerks and young employees hardly ever expected a holiday, except as a matter of particular favor. Now a fortnight of freedom in the year is getting to be regularly understood as a part of their contract. A fortnight is but half enough; but we must remember that the employers are still of a race that can meet appeals for more by venting reminiscences of their apprenticeship when they were lucky if they got a fortnight's rest in all the seven years. That was a time when we lived under the dispensation of the favorite American proverb—no half truth even, but an invention of Sabbathless and unvacationed Satan—"Better wear out than rust out." But of those who repeated it with most faith, how many have since had enforced leisure to repent their shortsightedness. Men who, thirty-five years ago, thought with pride of their thoroughgoing "devotion" to business, and nothing but business, would now, for most cogent reasons, and for more reasons than one, be not a little ashamed of it. Who that has travelled in Europe is not familiar with the type of the broken-down American business-man, sent abroad to recruit his collapsed nervous system? With his haggard, hungry mien, unfitted by life-long habit for taking any pleasure in passive contemplation, and with too narrow a culture to be interested in the historical or æsthetic side of what meets his eye, he tries to cheat the *tedium vitæ* by a feverish locomotion, and seems to draw a ghostly comfort from a peevish and foolish criticism of everything he meets—the tyranny of despots, the dinginess of the old paintings, and the mendacity of the natives, the absence of the ballot-box, the crookedness of the streets, the fearful waste of raw material in walls, harnesses, and conveyances, and the barbarousness of the window fastenings. These Americans have been brought up to measure a man solely by what he acquires, or at best what he effects, hardly at all by what

he is. The narrowness of this view is partly transient, but probably to some extent a matter of physical temperament as well. We are too strenuous to merely enjoy for any length of time with a good conscience. If we could act up to Goethe's verses it would be well for us:

"Tages Arbeit! Abends Gäste!
Saure Wochen! Frohe Feste!
Sei dein künftig Zauberwort."

But those verses could never have been written by a Yankee. The shopkeeper in Germany, who for five or six months in the year spends a good part of every Sunday in the open air, sitting with his family for hours under green trees over coffee or beer and Pumpernickel, and who breaks into *Achs* and *Wunderschöns* all the week as he recalls it, has a sort of absolute belief and contentment in the fine weather, and the leaves, and the air, and himself as a mere part of it all, that lies as an immense reservoir of refreshment behind his working-day consciousness, and keeps him green to an age when his American brethren are many of them little better than dried herrings. These times of satisfied static existence are what he works to gain. Many of us would say so too; but we have so grown to the harness that when the hour of leisure comes we are unable to use it. The means have murdered the end. Our ceaseless scheming for the future has undermined for us all sense of reality in the present. We cannot rest with the present alone for our object. The fact is that every man who possibly can should force himself to a holiday of a full month in the year, whether he feel like taking it or not. First, for the reason we have considered hitherto—that that capacity for irresponsible enjoyment which is like air to space in the character, may not become wholly atrophied within him—though many cannot and many will not treat this as a "practical" reason. But second, for the reason that all must consider practical, namely, tone of mind and health of body. No man, were he composed of catgut and whalebone, can work for five years unremittingly at the same kind of work with impunity. None can work ten years even at a very varied occupation. One year may make no difference, a second and a third may follow, and the subject not suffer consciously. But ten years of the two systems will turn out two different human beings at their end. The patient may be loth to get away, but this is a distinctly morbid symptom, a cramp-like closure of the mind upon the subject of its cares, which should be an imperative signal to some friend to come and push him willy-nilly out of doors. We have ourselves known an ambitious law student who, when starting on his wedding tour, felt as if he could not afford to leave his law books at home, but put them into his trunk and read them at Niagara Falls.

An employer of labor who should see to it that each man and woman working for him got a solid month of holiday in the course of the year, would, we feel convinced, make money by it in the long run; for there is hardly an occupation, from sawing wood to writing poetry, in which the mental state of the workman does not influence the result; and wherever the mental factor exists the man will do more and better work in eleven months than in twelve. Of course some occupations are so automatic that quality of work does not tell much, and in others there is much waiting, the quantity performed depending less on the laborer's power than on what turns up for him to do. In these cases the economic advantage of a holiday would not rigorously apply. But even here more cheerful service, fewer interruptions from ailments, and fewer changes from discontent would be secured. And if this seems chimerical, let it be recollected in how short a time employers have been educated up to a fortnight of the month for which we argue.

As for the time of the vacation, the warm months should of course be taken by towns-people. We are glad to notice the constant increase, in the Northeastern States at least, of the practice of camping out. It was, some time ago, recommended for its economy to persons who could ill afford a hotel sojourn, all the extra outlay needed being that for transportation, with a couple of tents and india-rubber blankets, *plus*, perhaps, some fishing-tackle and an axe, all of which will last for many seasons. Many artisans, for example, who could afford to take the time, cannot yet afford to pay for their board in addition. For such, if they be of an active and "handy" turn, camping out on the shore, or on some mountain side, would seem to be just the thing. Two or three families might then club together and do it in handsome style, set up a cooking-stove, for example, and hire a boat from the nearest settlement, if by the water. The fact is, that every one is capable of enjoying this kind of life intensely for a few weeks. It may be truly called the normal life of man, if by the phrase we understand that life which most men in most ages have led. For, however civilized and far-plotting we may have become, to dwell in the open air, with no plans or cares beyond to-morrow, has been the lot of our ancestors, brute or human, for receding centuries of generations. And for us to dip into it again awakens half-extinguished feelings of delight, washes away the cobwebs and smooths out the wrinkles from the care-worn mind, as surely as sleep makes the weary body fresh again. In this life we become so good-natured and indifferent to our troubles that we hardly recognize ourselves. We remember thinking as we saw last summer the camp in which the president of one of our universities was passing his vacation, how rational a plan it was for men of affairs who see plenty of their kind throughout the year, and to whom a little solitude is not unpleasant for a change. And we shall not soon forget a party we stumbled upon this very season in the woods near a certain shore in Massachusetts. We had noticed a couple of tents by the rocks ten minutes before, and here, stretched on the grass in the verdurous sunlight that filtered through the boughs above, lay their inhabitants. The man sat against a tree-trunk, singing a song, his wife and little girl recumbent opposite, while his sister, with her own hair down her back, and a long tress of commercial hair waved about in her hand to keep time, reclined with her head upon his knee. No one stirred as we came up and held parley, and, in fact, the pretty young lady with the switch of hair seemed too unconscious, and too beatified even, to raise her half-closed eyelids and examine who we were. Unfashionable, but for once happy! with the deep, good natures of the fauns and nymphs of fable.

"There is of our acquaintance," as the old books used to say, "a pleasant gentleman," who is so enthusiastic on this subject of vacations, that he professes himself ready for a form of communism in which the government shall guarantee to every citizen one month of freedom in the year, which the citizen may take year by year, or let accumulate, if he choose, say for six years, and then spend six months in Europe. Thus, he says, we shall have organized a symbol of that ideal emancipation of which poets dream, and which the pious crave and hope for. Outside of its month, let humanity sweat and ache as best it may, he says; he cares not. This, of course, is hardly serious. But is not a step in the direction of it feasible? Why should not rich men desirous of doing good with their money, instead of endowing more schools or churches with it, bequeath a portion of it in some such way as this? Let the interest be assigned to a number of the doctors, clergymen, and men of affairs in the town, who come into relations with most human beings, and let these persons allot every season to a sufficient number of individuals who otherwise would have to stay at home, enough money to enable them to pass three or four weeks in the country. If care were taken that none but the needy and deserving got the award, there could hardly be a more profoundly beneficial form of charity. There are hundreds of persons of both sexes in every town whom a month of idleness in the year, far from the scene of their cares, would suffice to keep on the right side of the boundary-line between invalidism and health, and who without it would soon drift over to the wrong side, and thence speedily further; hundreds, too, whom nothing but the lack of fifty dollars or so holds prisoners. One hundred thousand dollars properly invested would set free every year no fewer than fourteen hundred such persons! Grasp with your imagination, O wealthy reader! if you can, the mass of happiness and sanity of mind which is implied in that proposition, and then try to do your duty. We have done ours.

Correspondence.

LAWFUL AND UNLAWFUL EXPANSION.

To the Editor of the Nation:

Sir: I have so long been in the habit of having the *Nation* do my thinking on all social, political, and financial matters, that it rarely occurs to me to question your conclusions; and so I have been as ready as any other backwoods dabbler in currency questions to speak contemptuously of the financial ability of Uncle Boutwell and Cousin Richardson, and especially to denounce their assumption of the power to expand or contract the volume of the currency at will. And this notwithstanding that I have diligently read in Mr. Henry Clews's advertising circulars his reasoning in support of the frequently expressed hope that the Secretary of the Treasury will stand ready to use this power—discreetly, of course—as the state of the money market may demand.

Some comments of the *Pall Mall Gazette*, however, on Mr. Lowe's proposed amendment to the Bank Act of 1844, have suggested two or three questions, which I venture to put in the most respectful spirit of enquiry:

1. In what respect would the issue by Mr. Richardson of a part of the $44,000,000 of reserve legal tenders, for the purpose, say, of relieving a real and widespread commercial panic, differ from the action which takes place in England when the Bank Act is suspended for a similar purpose?

2. Has there been any difference of opinion as to the expediency, not to say necessity, of such illegal action under the circumstances?

The necessity seemed so great in the last instance of overissue by the

Bank of England that, according to Mr. Patterson in his work 'On Finance,' the representative of the Bank, at the conference with the Chancellor of the Exchequer, weakly affected the bravado of indifference, knowing that it was perfectly certain that the Bank Act must be suspended.

3. Is it not, moreover, essential to the successful working of such remedial measure that its use shall depend upon an entirely uncertain contingency, such as the discretion of one man, or a limited number of men, in order that its effects may not be discounted by speculators and others, and so made nugatory? Mr. Lowe proposes to vest this discretionary power in four men, the provision of his bill being that whenever the First Lord of the Treasury and the Chancellor of the Exchequer, upon consultation with the Governor and the Deputy-Governor of the Bank of England, are satisfied that certain conditions exist (conditions, by the way, that are not demonstrable, and the existence or non-existence whereof must be determined by the judgment of these officials), then they may empower the Issue Department of the Bank to make a temporary issue of notes in excess of the authorized issue. "Or, in other words," as the writer in the *Gazette* puts it, "they may issue paper money beyond the limits of safety, and lend it to the public."

4. Is it not, also, a debatable question whether this power should not be used as a preventive rather than as a tardy relief after ruin has overtaken many perfectly solvent houses, unless we take our stand wholly on the non-interference theory of government?

5. The fact that we may have a weak and squeezable Secretary of the Treasury, while England just now has not, and that Mr. Clews may be but an indifferent substitute for the Governor of the Bank of England as a counsellor in such an emergency, may make all the difference between a beneficial and a mischievous use of this extraordinary power, but does it affect the principle?—Very respectfully, E. R. LELAND.

EAU CLAIRE, Wis., July 16, 1873.

[1. It would differ in this, that Mr. Richardson would, without authority of law, increase the volume of irredeemable paper currency, while Mr. Lowe would, with the authority of law, permit the Bank of England to issue more notes redeemable in coin on demand. In other words, the restraint of redeemability would still continue to exist in the latter case; it does not exist in the former.

2. There has; a controversy has raged for thirty years over the merits of the restriction which compels the Bank to hold coin for all notes it issues over $75,000,000, its opponents maintaining that inasmuch as the restriction is always removed by an act of arbitrary power during a panic, it is practically useless, and the Bank might better be allowed to exercise its own discretion.

3. The theory of the Lowe bill is that machinery can be created beforehand for indicating the existence of a panic and measuring the extent of the mutual distrust in which a panic consists. This seems to us impossible. The rise of the rate of interest does not measure it; it only measures the Bank's estimate of it. This, *mutatis mutandis*, would be true of all other preappointed signs or standards. The only advantage of the bill which we are able to see is the removal of the scandal of law-breaking which has hitherto attended all suspensions of the Bank Act.

4. It is; but to use it as a preventive would practically nullify the law altogether. If the minister said a panic was impending, and that he must hinder it, nobody could ever question his decision, because there would be no means of testing its correctness.

5. It does not; but we must admit that there seems to be an enormous difference between Henry Clews and the Governor and Deputy-Governor of the Bank of England as financial advisers.—ED. NATION.]

A DIFFICULT PASSAGE IN SHAKESPEARE.

TO THE EDITOR OF THE NATION:

SIR: One of Shakespeare's most troublesome passages, as you hardly need be told, is in "All's Well that Ends Well," Act iv., Scene 2. I refer to the dialogue between *Bertram* and *Diana*, where the former, with all his art and ardor, urges his lawless suit upon the latter. For reasons that need not now be stated, an arrangement has previously been made between *Diana* and *Helena*, whereby *Diana*, after enough of resistance to blind the eyes of her wooer, is to *make believe* that she accepts his vows. Then, just as she is on the point of seeming to yield, she says, in the original folio:

"I see that men make *rope's* in such a *scarre*,
That we'll forsake ourselves."

All the modern editors, so far as I know, from Rowe downwards, have given up *rope's* or *ropes* as an unquestionable corruption, and most of them have substituted *hopes*. Rowe reads, "Make *hopes* in such *affairs*"; Malone, "*Hopes* in such a *scene*"; Collier's second folio, "*Hopes* in such a *suit*"; Staunton, "*Hopes* in such a *snare*"; Dyce, "*Hopes* in such a *case*"; and Singer, "*Hopes* in such a *scarre*," explaining that "a *scarre* here signifies any surprise or alarm, what we would now write a *scare*"; which, I must confess, seems to me well-nigh absurd. White rejects all the fore-cited corrections, and prints just as in the original, "Make *rope's* in such a *scarre*," but without pretending to understand it or offering any explanation of it. Perhaps I ought to state further, that Mr. W. N. Lettsom proposes "*Hopes* in such a *scape*"; while the late Mr. W. W. Williams, in the *Parthenon* for September 6, 1862, would read:

"I see that men may *cope's* in such a *sort*,
That we'll forsake ourselves,"

and supports this reading with great ingenuity and fertility of argument, of course taking *cope's* as a contraction of *cope us*.

Thus much for the matter as it has hitherto stood. Now, it seems to me well worth considering at least whether, after all, *ropes* may not be the right reading.

It is well known to Shakespearian scholars that in the poet's time *in* and *into* were often used indiscriminately, and that the poet has many instances of *in* where our present idiom would require *into*. So in "Measure for Measure," ii. 3: "A gentlewoman of mine, who, falling *in* the flames of her own youth, hath blister'd her report." And in "King Richard III.," i. 2: "But first I'll turn yon fellow *in* his grave"; also in i. 3: "You do me shameful injury, falsely to draw me *in* these vile suspects." Again, in "Coriolanus," iii. 2: "Although I know thou hadst rather follow thine enemy *in* a fiery gulf." The same usage, as is well known to Biblical students, occurs in the English Bible, as I think it also does in the English Prayer-Book.

The question, then, is whether such may not be the case in the passage under consideration. I am much inclined to think it is. And I suspect there is, withal, some reference implied to what the poet elsewhere calls *ropery* and *rope-tricks*; that is, *rogueries*. So that *Diana's* meaning may be, "I see that men *weave ropes* or *rogueries into* such a *maze* as to catch and subdue us in spite of ourselves." She then proceeds, accordingly, to *feign* compliance with *Bertram's* solicitations, as if she were really *ensnared* by them, and the result is that she ensnares him.

In addition, I have but to ask a place for the above in the *Nation* as the most suitable medium for calling the attention of our Shakespearians to the matter. N.

BOSTON, July 21, 1873.

Notes.

FROM a circular sent us by Mr. Henry Blackburn, to whom we owe the Exhibition of English Water-colors in this city last winter, we learn that he is engaged upon the collection to be made for a similar exhibition here December 1. English artists desiring to be represented on that occasion are admonished to present their works at the Egyptian Hall, Piccadilly, by November 4. In a letter to the *Athenæum* on the subject of the former exhibition, Mr. Blackburn states that the sales at the Academy of Design amounted to nearly $5,000—the total valuation of the English collection being less than $20,000.——No. 44 of the Journal of the Berlin Geographical Society (New York: L. W. Schmidt) contains an account of Dr. Nachtigal's important journey through equatorial Africa, from Kanem to Borku, illustrated by a sketch-map forwarded with the narrative by the traveller himself. The same number will also be found interesting as giving on two sheets no less than 14 maps of the comparative knowledge of African geography, from Ptolemy (A.D. 130) to Livingstone, Stanley, Rohlfs, Schweinfurth, and Nachtigal. An article on the Chinese province of Kwang-tung, in Petermann's *Mittheilungen* for June 25, is accompanied by a good-sized map of the region from native and European sources. The second map shows the Norwegian winter voyage in Spitzbergen waters of the steamer *Albert*, November and December, 1872. Part 14 of Stieler's Hand-Atlas gives for its three sheets Central and Southern Russia and the Caucasus, and the sixth plate of the United States—the States lying east of the Mississippi and south of the Ohio. Part 9 of Spruner's Historical Atlas has maps of Europe in 1740, France (1610–1790), British Isles (1485–1830), Hungary at various periods, and the usual number of small supplementary maps, including one of Paris at the close of the last century. (New York: B. Westermann & Co.)

—We have just received a short document addressed to the alumni of

West Point, and dated at St. Louis. It appears that in June last eleven graduates of the Military Academy met at Barnum's Hotel, to consider the best means of inducing all the graduates, instead of those only who served on the Federal side in the late war, to be present at the Annual Alumni Meeting in 1874. At this meeting, Captain Eaton, of Massachusetts, a graduate of the class of 1827, presented a paper setting forth his opinion as to a circular calling on all graduates to meet at the Point, in June next. This was "a paper as strongly Southern as could proceed from a Northern stand-point." Another paper was then read by General Tench Tilghman, a graduate of the class of 1832, and appointed from Maryland, and this was "a paper as strongly Northern as could proceed from a Southern stand-point." The two papers were submitted to a committee, composed of General Tilghman, General Martindale of this State, and Colonel Renick, a graduate of 1835, appointed from Virginia. At a subsequent meeting, the committee reported that Captain Eaton's and General Tilghman's papers had been admirably harmonized by General Martindale, and General Martindale's address was accepted as the circular to be distributed. It makes some good points. The graduates of the Military Academy, it remarks, were in no sense responsible for the war. Indeed, it goes further, and says that in the opinion of the committee it is wrong to regard "even the people of the United States of this generation" as being responsible for a war which was the result of opposing domestic, social, and industrial systems which had been planted in the country at its first settlement, two hundred and fifty long years ago. "It is a grave mistake to assume that a crisis in human affairs momentous as civil war, especially in a republican country like ours, can be provoked except by antagonisms which spring from the deepest and sincerest, though opposing, popular convictions"; and, as a corollary to this truth, the committee think that no one has a right to feel "surprise that the graduates of the United States Military Academy gravitated to the support of their respective sections. We know that they were equally conscientious. It was natural, nay, unavoidable, that they should be divided as their fathers and brothers were divided." The committee then speak of the fact that the graduates never lost their personal attachment and esteem for each other; that each side produced brave and distinguished soldiers; that our sectional animosities are disappearing; that we are equal before the law; that there remains only the restoration of friendly social relations; and they conclude by asking what class of men can do so much to promote this consummation as the graduates of West Point? Certainly, one would say that among themselves, if not with the rest of us, they might all agree. And an agreement of this kind, even if confined to themselves, would be of distinct value to the country. The squaws are powerful, but now, almost at the end of ten years, the braves might have their turn.

—Two years ago Professor Tayler Lewis delivered at Albany, before the University Convocation, an essay on the well-worn subject of the value of classical studies, and this year it is published, or republished, in a thin pamphlet. The subject is indeed well-worn—so much so as to be in no slight degree repellent; of what has been written on the one side of it a vast deal has been dishearteningly blind, and in the strict sense of the word impertinent; and of what has been written on the other much has been so commonplace that it has been almost as profitless reading as the treatises it was meant to refute. But it can be said of Professor Lewis that he is never dull or commonplace, but always secures the thanks of his readers for his freshness, and usually for his instructiveness; and this essay is not exceptional among his writings. What it may do in the way of enlightening the devotees of the laboratories we do not know—

"'Tis the taught already that profits by teaching,"

and if a man has not within him some sense of literature and the ideal side of life, essays on classical study may probably be of no great benefit to him; but a good many old-fashioned people will get a deal of comfort from this discourse of the veteran professor at Union, who fifty years ago was inducting into the mysteries of Greek the grandfathers, perhaps, of some of the boys whom he sees around him now. Professor Lewis begins by saying that were one to judge by the newspapers one would suppose that a chief evil in our land was a plethora of Latin and Greek, and that we were in imminent danger of becoming a nation of pedants and bookworms—non-producers engaged in making Greek verses instead of managing railroads and newspapers, and developing the material resources of the country. That such an inference would be delusive he proceeds to show, though "in the language of the Psalmist," says he, "there were they in great fear where no fear was"; classical studies have held their own as against the physical sciences; considering the clamor of the press, it is a wonder that they have not disappeared altogether. Probably they have not done anything more than hold their own. That they have maintained themselves as well as they have is due to the fact, as Professor Lewis believes, that "there is in the study an inherent respectability which nothing can supersede," which even the common mind cannot help perceiving, and which young men of ability and aspiration feel keenly—"the speaker knows it," he adds, "from his own experience, both as a student and a teacher." Still he thinks it undeniable that there is danger that these studies may be driven from our colleges; and, in looking for the reason of this, he seems to himself to have discovered it in the fact that we nowadays busy the undergraduate too much with grammar and too little with literature. We should be glad to quote a large part of the Professor's argument, but must content ourselves with a little, and with saying that he illustrates his position by a comparison of the school of critical students even so great as Porson and Elmsley with the earlier school or schools, in which he places Ralph Cudworth, John Selden, Vossius, Lepsius, Grotius, Heinsius, Salmasius, and the earlier names of Casaubon, Usher, Pococke, Scaliger, and Bochart. The one school, admirable as it is, and deep as is our obligation to them, he regards as reading Homer for the sake of knowing Greek; the other, as knowing Greek for the sake of reading Homer. This we put more roughly than Professor Lewis does; but perhaps we make his meaning clear. The practical result of his belief has been that he has long made his pupils read more and study grammars less than was his custom at the beginning of his life as an educator. No teacher will regret reading this little pamphlet. How readable it is may be seen by this extract. A writer in the *Atlantic Monthly*, a while ago, unadvisedly, but not with much turpitude, after all, said by way of jest that "one Usher held that the world was created on the 20th of September." This arouses Professor Lewis to some wrath, and thus he defends the archbishop, who, in choosing the autumnal equinox as a point of departure, only did what all chronologers find it convenient to do:

"'One Usher' held so and so—a very odd opinion. There is no need of dwelling upon the merits of one who ought to be so well-known to every educated man. Who was 'One Usher'? He was among the most learned men of that exceedingly learned day. We produce no man that comes within sight of him in the amount and accuracy of his multifarious erudition. Take a Presbyterian General Assembly, Old School and New School united; lay upon that an Episcopal General Convention; add to it a Methodist General Conference, and a Congregational and Baptist General Association; pile upon the top of that all the weights of Boston free religion, and the whole mass would not contain more of substantial learning than was possessed by this 'One Usher' at whom the *Atlantic Monthly* writer so unworthily sneers."

—We shall not here name the English dramatist and general man-of-letters who is commonly reputed the author of a 'Life of Thackeray' which appeared shortly after the death of that author, and also of a 'Life of Charles Dickens,' published in 1870. The gentleman to whom these anonymous works are attributed has always, so far as we know, borne a respectable character, while as for the gentleman, whoever he may be, who is the actual author of them, he appears to be a literary workman who will bear a good deal of watching and whom his employers may profitably keep an eye on. Six years ago we happened to be put in possession of the facts in regard to Dickens's first connection with American publishers, and laid them before our readers. It may be worth while to state them over again briefly: It is now going on thirty years since the newly-established *Harper's Magazine* was contending with the *International* for the leadership of monthly periodical literature. Mr. W. A. Townsend, of the firm of Stringer & Townsend, who published the *International*, conceived the idea of buying from Dickens the advance sheets of his next novel, and, as soon as the thought occurred to him, persuaded his rather reluctant partner to cross the water with an offer of two thousand dollars for the exclusive right, so far as the novelist could confer it by giving advance sheets, of publishing 'Bleak House' in this country. But in an unlucky hour Mr. Stringer confided the knowledge of his enterprise to the late Dr. Griswold, then of the *Evening Post*, who almost immediately made it the subject of one of his paragraphs. This the Harpers had no sooner seen than they despatched a messenger post-haste to England, where Mr. Stringer had been visiting Dickens's publishers, and been told that he was not then engaged on any novel, and whence he soon departed for the Continent, rather pleased on the whole that the two thousand dollars were not to be at risk. The messenger of the Messrs. Harper, on the other hand, went directly to Dickens himself, and the bargain was at once made. This resulted first and last in putting a great many thousand dollars into Dickens's pocket; and another result was that the *International's* subscription-list was before very long transferred to *Harper's Monthly*. These facts we learned from the only person in the country fully cognizant of them, and he being a party chiefly interested in the transactions detailed, our statement of them (vide *Nation*, No. 95) naturally remained distinctly in his mind. But to his surprise he found the other day, on picking up the 'Life of Dickens,' republished in 1870 from the English original, that the author of that production had "lifted" the matter in question, and transferred it bodily

to his pages without note, comment, acknowledgment of indebtedness, or any indication that it was not his own. It is a piece of small dishonesty, that matters little, but it ought all the same to be exposed.

—The *Daily Graphic's* transatlantic aeronaut is busily preparing for his venturesome balloon voyage, which no one can regard without interest or good wishes. Mr. Wise's experience of the currents justifies him in feeling certain of moving rapidly eastward. His trip will not be an experiment in this respect, except to the minds of doubters. But though he knows that there are no currents from the east at high altitudes, he cannot interpret the various westerly ones which he has known, for he is reported as using the term "centrifugal" in reference to their more rapid motion than that of the earth. As this term is utterly misapplied to winds in every respect, it is an error worth nailing. The notion came from the familiar experiment of rotating a glass globe containing a colored liquid, which liquid is set in motion by its friction against a surface outside of it that moves more rapidly than the liquid can move even at its maximum, the maximum being attained at the equator of the globe. But in the case of the earth the surface is underneath the fluids, and moves no faster than they, for both are moved by a common force. Moreover, at the equator, where "centrifugal" power would be greatest, the oceans and atmosphere move slower than the part underneath with a shorter radius. Again, this so-called centrifugal force is greatest at the poles, where the air is driven away from the axis so strongly that the barometer falls indefinitely. The name being refuted, it may be interesting to consider what the thing is. It is simply the natural independence of fluids. It is only *solid* masses which act as units. Every drop of water in the ocean is attracted to the earth and moon and sun just as strongly as if there were no other drop in existence, and is rotated by a force in it separate from the force in every other drop. Apparently, this fact is disguised because friction modifies it. The power of the force of rotation is measured both by the mean velocity of the whole solid portion (the velocity of the axis being zero) and by the velocity of currents of air high enough to be free from friction with the earth's surface, which surface in the tropics moves faster than the average and thus accelerates the wind, but slower than the average near the axis, thus retarding the ocean and air which pass over it toward the east. It must be borne in mind that if the northern half of the axis be bisected, the middle will be in latitude 30°, not in latitude 45°. Thus the atmosphere moves all alike from west to east, trade winds and temperate winds just the same; it is the solid crust which is irregular, because so stiff that friction does its perfect work, whirling the torrid zone beneath its superincumbent ocean and air with an unnatural eastward speed, and cramping the temperate zones so that the regular rotation of the air above them appears like a special phenomenon of eastward velocity.

—The cardinal fact being thus explained, the cross currents are easily accounted for. Wherever masses of air of very unequal temperature lie adjacent, the tendency to interflow is greater than friction can hinder; but this exchange cannot overcome the general movement of rotation—which is tantamount to saying that a so-called polar current will appear as a W.N.W. wind at New York and as an E.N.E. wind at Key West, while a so-called equatorial current will appear at Key West E.S.E. and at New York W.S.W. To this general law there are two exceptions: first, if the unequally heated strata are next the earth's surface, the friction from the latter will annul the rotatory tendency, and the exchange will appear more direct, hence the S.E. sea-breezes of our Atlantic coast in spring and summer; secondly, an ascending mass of air, which is known by the lowness of the barometer beneath it, always revolves about a special axis, and if the area is many miles in extent, this revolution is often intense enough to reverse the apparent movement due to the latitude, hence especially our N.E. winds in winter, which occupy the northwestern segments of immense areas of revolving ascending superoceanic air. At the altitude which Mr. Wise proposes to attain, all these backward currents will have been overwhelmed, and he will only have to choose between W.N.W. and W.S.W. hurricanes. His real problem will be to guess correctly where to find each of these, and to rise or fall between them delicately enough to be carried by them to a chosen goal.

—Both in this country and in England, Sunday-school literature has stamped the impression, which, however, Sunday-school literature was not first to make, that the Sandwich Islanders of Captain Cook's day were cannibals. Later and better authorities than the early navigators in Pacific waters have disabused us of that belief, but to many of our readers there will still be news in a lecture recently delivered by a Dr. Winslow, for some years a resident of the Islands, who, as we are assured by persons having a very good knowledge of the islanders, native and foreign, may be relied upon as in every way worthy of credence. A portion of the lecture was devoted to Captain Cook, and it was here that Dr. Winslow brought up the subject of cannibalism. After Cook had unfortunately been killed, the people were astonished and distressed at the evidence of their barbarity towards one with whom they had been so friendly, and their only thought was to atone as far as possible for their ill conduct. They therefore proceeded to treat Cook's remains as they were accustomed to treat those of their highest chiefs, and as if he had been a divinity. They removed the great bones of his legs and arms; and the rest of the remains, except the entrails, they laid before their greatest idol, in a temple where they sacrificed dogs and pigs in honor of his memory, and in expiation of his sins and their own. The entrails they had carefully placed in a calabash, intending to make pious use of them in a subsequent ceremony, when a boy (who in 1845, at which time Dr. Winslow conversed with him, was an intelligent old man of seventy-five or eighty years), mistaking them for the entrails of a pig, cut off a piece, roasted it on the coals, and ate it. This is all the cannibalism there was; for in truth, the islanders were not then, and never were, eaters of human flesh, though we believe we are not mistaken in saying that pirates amongst them have now and again practised cannibalism very much as European brigands or conspirators may have drunk blood together, but not otherwise. When afterwards English navigators enquired about the fate of Cook, and the repentant natives brought them the bones, which had been preserved, the inference was at once drawn that his flesh had been devoured, and the Christian world immediately set down the newly discovered islanders as man-eaters, and afterwards persistently maintained it; but this, as we now know, was extremely unfair. However, the islanders, in consequence of this misconception, had afterwards to drink from a little cup, as have most uncivilized nations with whom people of our race come in contact. Indeed, to do us Christians justice, the pagan communities are not numerous who have ever got the better of us either in matters of violence or matters of craft. With the early Christians the case was different; but we later Christians can outkill and otherwise circumvent any existing tribe or people, whether of heathendom, Jewry, or of those nations that eat the filthy gobbets of Mahound.

—Of new English books we present a list, miscellaneous in character, which, containing no book of first-rate importance, contains several of value. 'Characteristics of Christian Morality' is the title of a controversial work by the Rev. Gregory Smith, who has been the Bampton lecturer for 1873, and whose lectures now appear in a permanent form. Their interest for clergymen will be seen when we say that the special assailants of Christianity which Mr. Smith selected for the Bampton attack of this year are the late Mr. Mill and Mr. F. W. Newman. The position held by these gentlemen—that Christian morality is defective, is bad, not as being unattainable, which is what is usually alleged against it, but bad because of its deficiencies—Mr. Smith is thought to have assaulted with marked success. Church clergymen will also take varying degrees of inimical or friendly interest in a book published by Messrs. James Parker & Co., entitled 'Church Goods in Hertfordshire,' which is an inventory of furniture and ornaments remaining in the parish churches of Hertfordshire in the last year of the reign of Edward VI. 'The Life of Charlotte Brontë,' by Mrs. Gaskell, is the last volume of Messrs. Smith, Elder & Co.'s 'Life and Works of Charlotte Brontë and Her Sisters'—a series of handsome volumes, in which we have in worthy dress not only the more famous novels but also the less read, 'Wuthering Heights' and 'Tenant of Wildfell Hall'—tales whose fascination does not fail however much we may condemn them, and to which we find ourselves at certain intervals returning with the certainty of being impressed by truth and poetry as well as by morbid power. Another biography that ought to be a good one, though we cannot reasonably expect it to be as good as Mrs. Gaskell's, is the 'Memoir of Sara Coleridge by her Daughter.' Praise we see given to Mrs. Arthur Treherne's 'Romantic Annals of a Naval Family,' which is understood to be true and not fictitious, although the events recorded often verify by their strangeness the old adage about truth and fiction. It has in it letters from William IV. and from Admiral Lord Howe and Admiral Lord Hood. To go back to religious books for a moment: Lord Stratford de Redcliffe—the firm-lipped god of Mr. Kinglake's idolatry, the great Elchi who sat by the Bosphorus baffling the Frenchman and the Russ and sustaining the empery of the Turk—has written a seventy-one-page pamphlet entitled interrogatively, 'Why am I a Christian?' and answering that question. Some of his critics indicate that the answer given is sufficient proof that his lordship is not a Christian. But they appear to have no better ground to go upon than his former diplomatic profession, and the proposition that if the evidences enumerated by him only "satisfy his reason," and do no more for him than that, he is no Christian at all. The book is said to be earnestly rather than convincingly written. Mr. William Rossetti appears with a new edition of the works of Mrs. Hemans, for which he furnishes a critical memoir of that facile poetess, who was compelled to write so much more than she should have written. Why

she should be now revived with these honors is not very clear. Many copies, however, will no doubt be sold. 'Life in Danbury'—which we believe is well on towards its twenty-fifth thousand in this country—is advertised in the English papers, and so is Dr. Mayo's 'Never Again,' that remarkable picture of "American life," and perhaps even more remarkable product of twenty entire years of mental labor on the part of an adult American novelist. Twenty years is said, at all events, to have been spent over it. Dr. Maudsley has revised and enlarged his work entitled 'Body and Mind,' and has added to it 'Psychological Essays.' "A Monk of St. Augustine, Ramsgate," writes a small pamphlet, 'Monastic Studies,' on university education as it was when under the guidance of the church. Followers of Mrs. Battle will perhaps wish to consult a work by Mr. Arthur Thistlewood, which he calls 'Whist in Rhymes for Modern Times,' and which, he says, renders the laws of the game into verse easy to be remembered. There are twenty-eight pages of it, including the references to various authorities, and the price of it is one shilling and sixpence.

—An article in the *Workshop*, on "Elementary Forms of Ornamentation," remarks that many learned archæologists have vainly endeavored to unfold the meaning of the lions, gazelles, eagles, and falcons which frequently occur in Saracenic tapestry. It then offers as a clearing up of the difficulty "some verses from Eastern poetry":

"Morning dawn grew clear and bright,
Heart and soul rejoiced once more,
When the coy gazelle, like night,
Fled the morning lion's roar.

"Life and action filled my breast,
Up I started firm and bold,
The falcon, with his wings of gold,
Hovered o'er its azure nest."

This, it will be seen, is one more addition to the ever-recurring and all-pervasive sun-myth. The gazelle is the night; the lion is the sun or the light before which she flees; the falcon is the golden day in the azure sky. How much the lion and the gazelle and the falcon had to do with the sun by the time they got into Saracenic ornamentation, and how they are the better as ornamentation because originally it pleased Providence to call them into the station in life of a sun-myth, the writer in the *Workshop* does not say.

—The famous Sydow case, which for eighteen months had by turns excited and exhausted the Berlin public in church and state, has been brought to a conclusion, through the restoration of the venerable pastor to his office under a qualified censure. For more than fifty years Sydow has been a faithful and acceptable pastor, and, though not distinguished for intellectual force nor for popular eloquence, he has borne a good reputation for learning and piety, has had a strong hold upon the affections of his congregation, and has received some special tokens of confidence from the Court, especially under the late King. A pupil of Schleiermacher, he has always inclined more to the Rationalistic than to the Evangelical side of his teacher's philosophy; and in January, 1872, in a public lecture, he went so far as to impugn the supernatural birth of Christ, the doctrine of the Trinity, and the divine authority of the Bible. For this he was arraigned before the Consistory of Brandenburg for heresy, and, after more than a year of controversy, was found guilty of a fundamental departure from the confession of faith which he had sworn to maintain, and accordingly was deposed from his office. An appeal lay to the Oberkirchenrath, the supreme Council of the Church, and the finding of this tribunal is, that Dr. Sydow had brought a grievous scandal upon the church by his doubtful utterances upon certain weighty doctrines; but nevertheless, those utterances were made not from the pulpit but in a scientific lecture, and were qualified by other phrases in the lecture itself and in Sydow's subsequent explanations—the amount of which seems to be that, in discoursing of the higher mysteries, the lecturer got himself into a fog, and then succeeded in befogging his judges. The Council further take into consideration Dr. Sydow's long standing in his office, his unimpeachable character, the devotion of his people, and his relations to the Court, and, in view of all the circumstances, revoke the sentence of the Consistory and reinstate the accused in his congregation.

—As a sign of the drift of ecclesiastical politics in Prussia, Dr. Sydow's case is significant. Not only Dr. Sydow's congregation, to whom he preached his heretical doctrines, but the press and the people of Berlin, had earnestly espoused his cause, making his a test-case of free thought and free speech, and especially freedom of scientific enquiry in theology. Public meetings were held at the City Hall to protest against the action of the Consistory, and a purse was made up for Sydow's benefit; clergymen and professors in different parts of the country joined in condemning his displacement—in a word, the new power of public opinion was brought to bear upon a case of ecclesiastical discipline. Neither Sydow nor his friends looked to the separation of church and state for relief from what they regarded as persecution, and his judges had good reason to fear that a separation would throw the bulk of the church property in Berlin into the hands of extreme Liberals as most fairly representing the majority of the parishes. In these circumstances, the voice of the public was heeded by the Council of the Church. It was whispered that the King, while engaged in a conflict of supremacy with the Roman Catholic hierarchy, was unwilling to endure the scandal of a controversy and a possible rupture in the Evangelical Church. It is said, also, that the Crown Prince sympathizes with Sydow's theology rather than with his orthodox accusers. Moreover, since the case began, the new ecclesiastical laws have created a civil tribunal of revision over ecclesiastical excommunication; and it would have been a travesty of this legislation if the sword sharpened for recusant Catholic bishops should first have been put to the throat of the Oberkirchenrath—the representative of the Evangelical dynasty—by a civil judge reversing its sentence. The Council has got out of the dilemma by a decision which would give say Mr. Frothingham and Dr. Tyng an equal status in the same church!

THOMS'S HUMAN LONGEVITY.*

THE subject of the extreme limit of human life is naturally one which interests most persons. Though, so far as profane history teaches, there has been little variation in the extent of days granted to mankind, taking the average in each generation, there has long been a belief that in exceptional cases a great age has been reached. In comparatively recent times there has been an unreasoning willingness to accept very large figures. Thus, in a catalogue of 1,712 persons who are said to have attained a century and upwards, we find the following ages recorded: 145, 152, 154, 169, 127, 132, 143, 126, 127, 185, 140, 138, 137, 172, 164, 130, 159, etc., etc. On the other hand, since the enunciation by Buffon of the law that in animals the duration of life bears a proportion to the duration of growth, and is, in the case of man, as Flourens states the rule, twenty years' growth and one hundred years' duration, there has been a decided reaction and a belief that ages much above one hundred years are impossible. The late Sir George Cornewall Lewis was perhaps the most noted writer who urged the incredibility of the existence of even centenarians. The book now issued by Mr. Thoms is a contribution to the discussion, valuable so far as it goes, but far from fulfilling the promise of its title. It is, indeed, rather a record of the investigations made by one critic, successfully disproving the claims made in certain cases, narrated at almost unnecessary length. The "suggestions for testing reputed cases" of centenarianism amount to just this: "deny everything and insist upon proof." The cases examined are the following: of Henry Jenkins, said to have attained the age of 169 years; of Thomas Parr, 152 years; the Countess of Desmond, 140 years; Mary Billinge, 112 years; Jonathan Reeves, 104 years; Joshua Miller, 111 years; Maudit Baden, 106 years; Thomas Geeran, 106 years; John Pratt, 106 years; George Fletcher, 108 years; George Smith, 105 years; Edward Couch, 110 years; William Webb, 105 years; John Dawe, 108 years; George Brewer, 106 years; Robert Howlison, 103 years; Robert Bowman, 118 years; *Frederick Lahrbush*, 106 years, and still living; Richard Purser, 112 years; William Bennett, 105 years; Mary Hicks, 104 years; James McDonald, George Peacocke, and Richard Taylor, all alleged centenarians at least.

It is evident that this part of Mr. Thoms's book is of little value in the main controversy on the possibility of centenarianism. He examines and possibly disproves some twenty-five cases; but with the exception of the first three and one other, these cases are of no special prominence. Such a disproval goes but a very little way towards affecting the numerous other alleged examples of centenarianism already in print. The most that can be said of them is that Mr. Thoms has done well in investigating so many cases and in exposing error. The famous cases of Jenkins, Parr, and the Countess of Desmond are very carefully examined, and, we think, disproved. The other case, that of Frederick Lahrbush, is of interest mainly because the person in question has been for some years one of the notabilities of New York. Without opening the question for discussion, it is proper to say that Mr. Thoms comes to the decision that Mr. Lahrbush was born about 1786, and is therefore far from being a centenarian yet. The facts upon which this opinion is formed by Mr. Thoms seem certainly to be very strong, and will probably remain uncontroverted.

But Mr. Thoms has done one very considerable service in presenting certain cases of centenarianism which he considers to be entirely proved. These merit a full presentation as important witnesses in the main case:

1st. Jane, youngest daughter of Francis Chassereau, was "baptized at

* 'Human Longevity—its Facts and Fictions: including an Enquiry into some of the more remarkable instances and suggestions for testing reputed cases. Illustrated by Examples. By William J. Thoms, F.S.A., Deputy Librarian House of Lords.' London: John Murray; New York: Scribner, Welford & Armstrong. 1873. 8vo, pp. 320.

St. Martin-in-the-Fields, London, November 14, 1739; born November 13," as the parish record shows. She married, October 27, 1764, Robert Williams, Esq., a banker, and M.P. for Dorchester, and died October 8, 1841, aged almost 102 years. There was evidence that November 13 was always observed as her birthday; and of course no question as to her father's name. In 1820, she wrote her name in a Bible given to a grandson; and he added the note, "written in her 81st year"; and again in October, 1822, to her signature he appended, "written in her 83d year." Evidence of such an age is of course perfectly credible, and if accepted the case is established. Of course, as Mrs. Williams left numerous descendants, there is a continuous chain of evidence proving that long before she arrived at the age of 100 years, she made statements which proved that she believed that she was born in 1739.

2d. Mr. William Plank was the son of James and Hannah Plank, and was baptized at Wandsworth, Surrey, November 20, 1767. He alleged that he was born on the 7th of that month, which is, of course, most probable. He was apprenticed to his brother as a calico-printer, May 23, 1782, at which time he must have been 14 years old and over, and took up his freedom in the Salters' Company, October 20, 1789, when he must have been 21 years and upwards. He remained always a member of the Company, and died at Harrow, November 19, 1867. He was clearly a centenarian, and as a man is likely to know his birthday, he undoubtedly exceeded the century by twelve days.

3d. Jacob William Luning was born at Hamelvörden, in Hanover, May 19, 1767, son of the clergyman there, Meinhard Conrad Luning, as the existing record shows. In 1784, his uncle published a genealogy, in which Jacob William is mentioned, and the above date of birth is given. In 1790, he came to London, and was employed as a book-keeper. He insured his life in the Equitable Office at the age of 36, and was admitted to Morden College, March 30, 1859, when he stated his age was 91 on his previous birthday. He died June 23, 1870, aged 103 years 1 month 4 days. A clearer case than this can hardly be imagined.

4th. "Catherine, daughter of Sir John and Lady Dorothy Eden, of Windleston, was baptized, February 11, 1771," as the record shows, and was born on the previous day, as she always declared, and is reasonable to believe. She was selected in October, 1790, by the Lords of Treasury, as one of the lives in a Tontine, being then described as aged 19 years. Her life and identity were proved annually, till her death, March 19, 1872, when she was aged 101 years 1 month and 9 days. She married, in 1803, Robert Eden Duncombe Shafto, M.P., and had six children. Here the evidence is continuous and conclusive.

5th. David Rennie, of Dundee, farmer, was born February 28, 1755, and died March 2, 1857. This fact is given on the authority of Sir Alexander Spearman, who quotes it as another Tontine case in the records of the National Debt Office, and who adds: "The evidence in this case was perfect." To these five undoubted cases, Mr. Thoms adds four others as probable, viz.: Mrs. Martha Lawrence, Mrs. Sally Clark, Mrs. Peggy Longmire, and Mrs. Elizabeth Puckle, the first, at least, being almost proved. They are at all events interesting, as proving that the ordinary age of mankind is sometimes very considerably exceeded.

We may now sum up Mr. Thoms's evidence on the main question as furnishing five undoubted cases of centenarianism occurring in England within the present century. The thought will naturally arise whether or not any equally well-proved examples can be produced from our American records. Answering briefly that we expect to produce such instances, we pause to state that we believe many other cases have occurred in England, which are now probably incapable of rigid proof. Having once established the fact that there is no Divine law which prohibits mankind from living one hundred years, it is impossible not to begin to give some credence to the earlier cases recorded in the lists. It by no means follows that the better classes in England pursue the mode of life most favorable to longevity; and if it be true, as Sir G. C. Lewis states, that "no person of royal or noble rank mentioned in history reached the age of a hundred years," this does not affect the case of exceptional lives in the lower classes. We may also affirm that it is reasonable to expect that cases of centenarianism will increase in number hereafter. If it be true that the average duration of human life in each generation has increased for the past three centuries, owing to a more general knowledge of the laws of health and a wider observance of them, it is fair to expect that this gain will also be felt in extreme old age. If the average be now forty years instead of thirty, we may expect to see as many persons exceed one hundred years of life as formerly reached ninety years and upwards.

In leaving Mr. Thoms's book, it is proper to state that he pleads defective eyesight as an excuse for any deficiencies. Considering the good work done by him for many years as editor of *Notes and Queries*, we may well accept the excuse with hearty regret for its existence. As to American centenarians, much information is obtainable. In fact, Mr. Thoms had in his own magazine a number of well-established cases recorded, though for some reason he did not enter upon this branch of his subject. (See *N. & Q.*, 4th S., viii. 231; ix. 40, 223, 323; x. 246.) Of these, four instances were of graduates of Harvard, and therefore were in all respects worthy of careful attention. We give brief abstracts of these instances:

1. Dr. Edward Augustus Holyoke was born at Marblehead, August 1, 1728, and died at Salem, March 31, 1829. The record of his brother and sisters shows the impossibility of any substitution of a later child for an earlier one of the same name. Besides, when he entered Harvard, of which college his father was President, in 1742, his age was entered according to custom on the register, and was fourteen years. He lived all his days in Salem and its vicinity, and a public dinner was given him on the day when he completed his century.

2. Hon. Timothy Farrar was born at Lincoln, Mass., June 28, 1747, and died at Hollis, N. H., February 21, 1849. His birth and those of the rest of his father's family are duly recorded, as is also his age on the college register. Mr. Farrar was a judge of the Superior Court of New Hampshire for twenty-five years, a gentleman of the highest character. He certainly believed in his asserted age, for he was present at the delivery of a sermon commemorating his completion of a century, an attestation under the circumstances of the greatest value.

3. Sampson Salter Blowers was born at Boston, Mass., March 22, 1742, and died at Halifax, N. S., October 25, 1842. He was a Royalist, and, settling in Nova Scotia, became Chief-Justice there, an office which he held for thirty-two years. Here, again, the proofs are ample: his birth as recorded at Boston, his entry at Harvard in 1759, aged seventeen years and a quarter, his prominent position, and contemporary recognition of his reaching the age of one hundred years.

4. Dr. Ezra Green was born at Malden, Mass., June 23, 1746, and died at Dover, N. H., July 25, 1847. He was a surgeon in the navy, and served on board Paul Jones's vessel, the *Ranger*. He was a member of the New Hampshire State Convention which adopted the Constitution, and all his life was before the public. His age was recorded at Harvard when he entered.

In these four cases, which are fully set forth in *Notes and Queries*, we have evidence superior even to the English ones. Our records give the date of birth; the English parish registers give baptisms mainly. The register at Harvard, made at the time of entering college, is an independent witness of the highest value, since at the early age of admission no boy could be mistaken as to his exact age. After graduating, the chain of evidence is continuous. The catalogues and the yearly meetings at commencement-time keep every case of extreme longevity before the minds of hundreds of educated and intelligent men. It is impossible for error or fraud to occur in the cases of college graduates.

5. Of other well-authenticated cases, we will cite that of Rev. Daniel Waldo, who was born at Windham, Conn., as the records show, September 10, 1762, and who died at Syracuse, N. Y., July 30, 1864. He was a preacher all his life, and in 1856 was chosen chaplain of the United States House of Representatives. Thousands of persons living must remember him, and the fact that he was then known to be ninety-four years old. The Rev. Charles Cleveland, the well-known Boston missionary, lacked but sixteen days of completing his century. He was born at Norwich, Conn., June 21, 1772, and died at Boston, June 5, 1872. His case, however, is a good witness in substantiating instances of centenarianism.

6. Mrs. Mehitable Piper was the daughter of Joseph Barker, and was born at Acton, Mass., January 24, 1771. She died there March 25, 1872, having resided in that town all her life. The town records are complete, and in 1849 she was mentioned in the 'Piper Genealogy' as being seventy-eight years old.

7. Mrs. Anna Dix was the daughter of John Stimpson, of Charlestown, Mass., and was baptized there, as the records of the First Church show, October 27, 1771. She died in Boston, May 14, 1872. Her family state that she was born on the 14th October; but taking simply the date of baptism, she lived over one hundred years.

Numerous other cases of alleged centenarians might be cited, but the above list comprises the instances which have been investigated by the writer. To it might be added, if space permitted, a list of the last twenty-five Revolutionary pensioners, kindly furnished us by the Commissioner. It is reasonable to believe that the Pension Office carefully investigated each case. Of these, all but seven are set down as having exceeded one hundred years (the extremes being 101–109). Of one man's age no record was kept. The rest at least survived the age of 97.

The Liberal Education of Women—the Demand and the Method. Current Thoughts in England and America. Edited by James Orton, A.M. (New York and Chicago: A. S. Barnes & Co. 1873.)—Professor Orton has done a useful work in collecting in one volume a batch of the more remarkable of the articles which the above subject has called forth during the last four or five years. He has been as impartial in his selection as could be expected, considering that one side does nearly all the talking; and as there has been much talking on this theme, those who are interested will be glad to know where to find the best of it. To such we can commend the volume as very profitable reading.

After they have read it, the conclusions they will come to will be something like the following: Among thoughtful and intelligent men and women, both in England and America, there is no diversity of opinion as to the need of giving women a higher education than they have now. Concerning the nature of this higher education, there is some, but not a great, division of sentiment. All, or nearly all, are substantially agreed that it ought to be somewhat the same as that given to boys—that is, a combination of classics and mathematics and the natural sciences. It is over the amount of this education which girls ought to receive, and the machinery by which it ought to be imparted, that the divergence of ideas first shows itself. That there is very great divergence there is no denying, and it plainly has its origin in wide differences of opinion on the radical question of woman's place in nature and in society. Those who belong to Mr. Mill's school, and who hold that women are simply an abused and down-trodden race, whose equal participation with men in *all* the work of life is needed to make our civilization complete, hold also naturally that their education should be identically the same with that of men, and be imparted in the same places and by the same machinery. Those who hold, on the other hand, that the function of child-bearing which has been assigned to women has entailed differences of mental and moral as well as of physical organization, hold that female education should be regulated by a strict reference to this function; that education should be restricted in amount, so as not to unfit woman for the proper discharge of it, and because the probability that she will be called on to discharge it, and thus incapacitated for contending with men for the ordinary prizes of life, renders a man's training practically unnecessary for her. The discussion, therefore, which rages in the books and magazines is mainly over the question of degree; the question of method, though also important, is subsidiary and probably temporary in its interest. If it be once settled how much education women ought to receive, and were a general agreement once reached as to her place in society, there would probably be little difficulty in reaching an amicable conclusion as to *how* she ought to be taught.

We need hardly say that, owing to the fact that the education question is only part of the larger and more serious question of woman's proper sphere, there is very little calm or restrained writing on the former. Nearly everybody who approaches it, feeling that there are mighty interests at stake behind it—interests over which it is not in human nature to be cold or rational—apparently considers it his duty to imitate the detachment of trumpeters which Napoleon sent round on the enemy's flank at Lodi—"blow hard and charge furiously." Professor Orton himself, though he endeavors to hold the balance fairly, is occasionally carried off his feet, and even in his preface becomes slightly inarticulate, as when he compares the "woman movement" to the march of the Reform Bill over the House of Lords threatened by Brougham, and likewise to Sherman's "March to the Sea," and threatens everlasting repose among "the fossils" to everybody who opposes it.

The articles in the volume which we have marked as displaying the results of most thought or experience are President Raymond's, on the general question; the Rev. J. M. Capes's, on "The Mental Peculiarities of Women"; "The Difficulties," from the *Edinburgh Review*; "Joint Education," by the Rev. Thomas Markby; and President Fairchild's and President Blanchard's account of the experience of Oberlin and Knox Colleges respectively. We have been somewhat entertained by finding the fallacious suggestion that knowledge is food for the mind in the same sense that matter is food for the body, figuring in several of the arguments. The precious discovery first shows itself in an article from the *Westminster Review* on "The Suppressed Sex." Then President White of Cornell gets hold of it and uses it as a clencher in favor of coeducation. Then President Fairchild uses it, but with modifications; and, finally, Colonel Higginson flings it in the face of President Eliot at the Social Science Association. We think it high time now to withdraw it and put it in the garret. Dr. Freeman Clarke, of Boston, has a very singular way of meeting those who fear that if their daughters went to college with young men, they might get engaged or married to persons in a "different sphere of life and belonging to different social positions." This he confesses might happen, but this would be "a real advantage" instead of a misfortune, as it would bring a new element into the girl's family and social circle. This alone may serve to furnish an idea of the difficulty there is, and always will be, for a large portion of the class which sends its children to college in coming to terms with progressive people like Dr. Clarke. There is a great gulf of sentiment between them. To most fathers and mothers, what Dr. Clarke extols as a blessing would be a great grief and disappointment, and Dr. Clarke is evidently of opinion that the simple assurance of himself and his friends that they are all wrong ought to act as complete consolation, and cause them to send their girls to be "coeducated" at once.

Outlines of German Literature. By Joseph Gostwick and Robert Harrison. (New York: Holt & Williams, F. W. Christern. Boston: S. R. Urbino. 1873.)—On the whole, this book is deserving of commendation. It is a painstaking compendium, very full and accurate considering the size of the book and the dreariness of most of the writers who had to be dealt with. In the first chapter, we have a brief account of the language, with its historical divisions, and a short mention of the few writings in the old High-German. An abstract is given of the old "Nibelungenlied," of the two romances, "Parzival" and "Tristan," as well as of the other early products of German literature. A few intelligent words are written about the *Minnelieder* and the Master Singers. The first one hundred and fifty pages bring the history up to the time of the Thirty Years' War, near the end of which Leibnitz was born. About fifty pages are devoted to the period 1725–70, in which Gottsched, Bodmer, Winckelmann, Klopstock, Lessing, and Wieland are the best known names. Nearly three hundred pages follow, treating of Goethe, Schiller, and the romantic school; and the last one hundred and twenty pages discuss the most prominent names in the literature of the last forty years, in which, to be sure, certain omissions may be noted (for it is easy to forget certain of the second-class poets of Germany), but which in general goes over the ground very carefully. In fact, the book comes down to so late a period that Strauss's 'Der alte und der neue Glaube' and the *Kutschkelied* are mentioned. In handling the more important authors, a brief sketch is given of their lives, extracts are given from some of their writings, and of others there is but a short account. The philosophers and theologians have a few pages given to the elucidation of their systems. The criticisms are of the sort which may be called safe. No popular idols are overthrown, no neglected genius receives unaccustomed adulation. What we may call the good, average opinion of the present time is expressed. It may be seen, then, that this is in no way an original book; it is not, for instance, a book like Taine's 'History of English Literature.' Even the omnivorous general reader will probably fall asleep over it, but it has its merits as a work of reference; for other purposes it would have but little more value than an ordinary table of contents. But what it professes to do it does well. It might easily be made more valuable as a text-book—indeed, more valuable to every one, in school or out, who might have occasion to consult it—by the insertion of a list of English and French books treating of the various authors under discussion; as Lewes's 'Life of Goethe,' for instance, as well as of a certain number of review articles, like Mr. Lowell's on Lessing in the *North American Review*, republished among his essays, Cherbuliez's on the same writer in a number of the *Revue des Deux Mondes* of a few years ago, or Mr. Gryzanovski's article on Schopenhauer in the last *North American*. This would enable the reader to supplement the meagre accounts of this hand-book, and see what more thorough criticism has to say about the writers. Such information, which should be at hand and save a discouraging hunt through catalogues, would be of great service to many and would be in the way of no one.

Wie studirt man Philologie? Eine Hodegetik für Jünger dieser Wissenschaft. Von Wilhelm Freund. (Leipzig. 1872.)—In Dr. Freund's pamphlet of 158 pages, the well-known author of 'Freund's Lexicon,' 'Andrews's Lexicon,' and in fact every lexicon of the last thirty years, undertakes to reply at once to the questions put him from various quarters by young men beginning their philological studies. The first question is "What is Philology, and what is its extent?" And this question settled, the next is "How shall all this amount of study be compressed into the short space of three years?" The ordinary German university presents a variety of means and appliances: (1) the lectures; (2) the philological seminary; (3) the archæological museum; (4) the library. Now, if to these public aids we add the philological exercises of a more private character, carried on by the individual instructors under various names, such as "Philological Preparatory Seminary," "Greek Society," "Grammatical Society," "Philological Society," "Archæological Seminary," etc., etc., the embarrassment of riches becomes great. But this is not all. The lectures run over all departments of ancient life, from the Encyclopedia and Methodology of Philology to Numismatics, from the "Homeric Question" and Pindar's Hymns to the interpretation of Diodorus Siculus and the Apokolokyntosis of Seneca. How is the raw gymnasiast, coming from his prescribed course of study, ever to thrid

this tangled maze, and escape sliding off into some one-sided specialty before he has fairly surveyed the ground and made himself master of the situation?

To remedy this obvious difficulty, Friedrich August Wolf shaped his lectures into a three years' course, and his example has been followed by other eminent men, such as Niebuhr, Boeckh, and Bernhardy. Briefly condensed, the course recommended for the three years is, I., Grammar, criticism, and hermeneutics; II., Antiquities—public, private, and sacred, including mythology. The history of literature, begun the first year, is continued. The student is also expected in the second year to be a member in full standing of the Philological Seminary. III., Art, including rhetoric, poetry, metres, and archæology, together with numismatics.

Dr. Freund is naturally compelled to discuss one question which has been somewhat agitated in this country, namely, the relative importance of lectures and of practical exercises, corresponding to some extent with the American recitation system. It will surprise a great many people who fancy that a German university is an agglomeration of lecturers and lectures, and that the lectures are like the loose talks to mixed audiences which are called lectures in this country, to hear with what emphasis he speaks of the importance of the philological seminary, and what a decided preference he gives to the dialogic method over mere passive or receptive lectures. "Without disparaging in the least," he says, "the value of university lectures, it is an indisputable truth that instruction in the form of dialogue is far more profitable than lectures of the very highest order. It is a proof of Wolf's keen vision that he revived the ancient Socratic and Platonic method of *φιλολογία*, the 'discussion of subjects of knowledge,' by establishing the philological seminary." This view of Dr. Freund's is entirely confirmed by the progress of philology in Germany for the last twenty-five years. No name in this department of learning is so conspicuous as that of Friedrich Ritschl; no school of philology has made its mark so decidedly as his; to be a "*Ritschlianer*"—an approved pupil of Ritschl's—at once ensures respect and opens the way to speedy advancement. This wide-spread influence of Ritschl's is not due to his lectures, though his lectures are in the highest degree instructive and stimulating; more than anything else it is due to the struggles in the philological seminary, where everything is sifted to the bottom, where the student is plied with all sorts of questions, has sudden and unexpected dangers constantly sprung upon him, and fences with a master whose quick eye and equally quick blow keep the pupil ever on the alert. The English system of education, where the weight is thrown entirely upon written examinations, undoubtedly gives great poise and aptness at answering questions. But its weak point is that it is not productive and does not train to original investigation, and the blind admirers of this system would be puzzled to answer the questions: Where are the results? Where are the books? What school of young English philologists can be set by the side of the disciples of Ritschl and Curtius? Though Dr. Freund's book is primarily intended for German students, it will be useful and instructive to American students who propose to go to Germany to study philology; also to another and very meritorious class of men, teachers whose means do not allow them to go to Europe, but who are anxious to push their studies out beyond the narrow college curriculum. Some notices of distinguished philologists and hints for the formation of a modest private philological library, may interest a larger class of readers.

The Science of Exchanges. By N. A. Nicholson, M.A., Trinity College, Oxford. Fourth Edition. (New York: Cassell, Petter & Galpin. 1873.)—Mr. Nicholson has succeeded in getting more information about money, value, price, currency, coinage, and exchange, and even rent and taxation, into small compass than, we may safely say, any author we know of, and the secret of his success lies simply in the command of a remarkably lucid style, and a curious and somewhat original use of the device of "question and answer." Ordinarily attempts to impart knowledge in this way result in the construction of a dreary dialogue—one of the parties to which appears as a helpless but docile ignoramus, and the other as a ponderous and preternaturally solemn pedagogue. Mr. Nicholson's questions are, however, very much such as any intelligent man you meet in the street and who had never given any thought to economical subjects would be apt to ask, and the answers will probably strike nine readers out of ten as the very thing they would have themselves liked to say. Their value as aids to attention is increased, too, by a vein of grim, sarcastic humor in which Mr. Nicholson's own prejudices crop out in a somewhat comical way, as where, after quoting an opinion of the London *Times* on banking, he puts as Question 236, "Can you mention *any one* whose opinion is different from the *Times*?" and then quotes as the answer Mr. Tooke and Sir Robert Peel; and where he refers the student to the writings of Mr. John Stuart Mill for the answer to the question—"What can be said in favor of small farms?" on the ground that "small farmers are so much more comfortably off in his books than they are elsewhere."

Mr. Nicholson is an out-and-out free-trader, an ardent supporter of the Bank Restriction Act of 1844, an indomitable "hard-money man," a believer in large farms and in a judicious mixture of direct and indirect taxation. The most striking original observations in his book are those in which he derides the ponderous discussions which have taken place on the nature and origin of rent, showing that they have no more mystery or importance in agriculture than in manufactures, in butter-making than in button-making, and in which he maintains, against Mr. John Stuart Mill, that the doctrine that land is limited in quantity, and property in it ought not, therefore, to be left open to competition and the operation of the ordinary laws of trade, is fallacious in this—that it is limited in quantity to the same extent as all other commodities, and no more, if we consider the land of the globe in its relation to the human race; and the proof he finds in the fact that the products of the earth, which for man's purpose are the earth, increase as fast as the consumers of them. He acknowledges that land in one place, as in England, for instance, is limited in quantity, but asks what difference this makes as long as the nation has made up its mind not to rely on its own agricultural products for support. This is all acute and ingenious, but does not cover the whole case, as it does not touch on the influence of landed property on character and institutions—or, in other words, passes by without notice the political bearing of land laws. The book is one, however, which will make anybody who masters it and accepts it a very formidable antagonist on any of the leading economical questions of the day. The publishers or the author make a mistake in putting nothing on the outside but a Greek title, which not one in a thousand of those to whom the book might be most useful will understand.

The Fishing Tourist: Angler's Guide and Reference Book. By Charles Hallock, Secretary of the "Blooming Grove Park Association." (New York: Harpers. 1873.) *I go A-Fishing.* By W. C. Prime. (New York: Harpers. 1873.)—These two books belong to different classes. Mr. Hallock's is chiefly filled with practical advice for fly-fishing, or rather (for neither he nor Mr. Prime is of those purists who disdain on all occasions to bait their hook) for trout and salmon fishing. His advice is sensible, and will be found of advantage to the fisherman in almost every part of the trout and salmon region of the United States.

Mr. Prime is a writer of another kidney. His object is perhaps not so much to imitate Isaac Walton (or, as he is commonly called by thoroughgoing fishermen, Old Isaac Walton) as to write a book immeasurably finer than anything which Isaac Walton could ever have dreamed of writing. It is a sort of book for parts of which Mr. Hallock would have a great contempt, as he says in his preface that "with a few notable exceptions, our sporting literature is composed of technical scientific treatises, . . . or else the books are mere recitals of personal exploits, supplemented by sentimental apostrophes to nature, and rounded off with highflown periods." There is, to be sure, a good deal besides this in Mr. Prime's book, containing as it does wonderful stories of Eastern love and revenge, bibliographical discussions, investigations into the character of Agnes Dürer, dialogues on the morality of angling, and many other interesting topics. For our part, we must say that we object much more to the moralizing than to the fish stories. There is a sort of pleasure to be got—not, perhaps, wildly exciting, but still a pleasure—from the anticipations aroused in the mind when we read about the deliberate preparations, the cautious steps through the long grass or the bushes, the calculation of the distance from the pool, the "cast," the light descent of the yellow, or the red, or the green, or the blue flies upon the surface of the water, the sure "rise," the steady "strike," the fearful "whirr" of the reel, the agonizing run of the line, the unexpected turn of the fish, the doubtful recovery of the "slack," and all the subsequent manœuvres of the angler and his victim. We like this better, for instance, than such an extraordinary production as that called 'Iskander Effendi.' We have found Mr. Prime's book, in short, rather tedious, on account of the ambitious style in which it is written. It seems, however, to contain a good deal of sense about fishing. On one point he deserves the thanks of all those who have ever cast a line. Almost all neophytes in the art of fishing are confused by the strange things they hear about the particular kind of flies it is necessary to use, and find by experience that the directions given them are actually worthless. After fishing all day with flies of approved pattern, it often happens that some strange bit of color like nothing recommended will suddenly kill fish after fish. The explanation of this is, according to Mr. Prime, that the habits of breeding of trout—and no doubt it is true of salmon also—are different in different pieces of water, not only as to hours, but as to food; and it is hence useless to try to form any opinion as to what fish will do in any given place, without actual experience of the water. The particular fish to be attacked must be studied and understood.

DICTIONARIES AND WORKS OF REFERENCE

PUBLISHED BY

HARPER & BROTHERS, NEW YORK.

*SMITH'S ENGLISH-LATIN DIC-*tionary. A Copious and Critical English-Latin Dictionary. Compiled from Original Sources. By William Smith, D.C.L., LL.D., Editor of the 'Classical Dictionaries,' 'Curtius's Greek Grammar,' 'The Student's Hume,' 'The Student's Greece,' 'Old and New Testament Histories,' etc.; and Theophilus D. Hall, M.A., Fellow of University College, London. To which is added a Dictionary of Proper Names. 8vo, sheep extra, $6.

ANDREWS'S LATIN-ENGLISH Lexicon. Founded on the larger German-Latin Lexicon of Dr. Wm. Freund. With Additions and Corrections from the Lexicons of Gesner, Facciolati, Scheller, Georges, etc. Royal 8vo, sheep extra, $6.

*ANTHON'S CLASSICAL DIC-*tionary. Containing an Account of the principal Proper Names mentioned in Ancient Authors, and intended to elucidate all the important Points connected with the Geography, History, Biography, Mythology, and Fine Arts of the Greeks and Romans, together with an Account of the Coins, Weights, and Measures of the Ancients, with Tabular Values of the same. Royal 8vo, sheep extra, $6.

*ANTHON'S SMITH'S CLASSI-*cal Dictionary. A New Classical Dictionary of Greek and Roman Biography, Mythology, and Geography. Partly based upon the Dictionary of Greek and Roman Biography and Mythology. By Wm. Smith, LL.D. Revised, with numerous Corrections and Additions, by Charles Anthon, LL.D. Royal 8vo, sheep extra, $5.

*ANTHON'S SMITH'S DICTION-*ary of Antiquities. A Dictionary of Greek and Roman Antiquities. Edited by Wm. Smith, LL.D., and Illustrated by numerous Engravings on Wood. Third American Edition, carefully revised, and containing also numerous additional articles relative to the Botany, Mineralogy, and Zoölogy of the Ancients. By Charles Anthon, LL.D. Royal 8vo, sheep extra, $6.

ANTHON'S LATIN-ENGLISH and English-Latin Dictionary. A Latin-English and English-Latin Dictionary for the use of schools. Chiefly from the Lexicons of Freund, Georges, and Kaltschmidt. Small 4to, sheep, $3 50.

*ANTHON'S RIDDLE AND AR-*nold's English-Latin Lexicon. A Copious and Critical English-Latin Lexicon, founded on the German-Latin Dictionary of Dr. C. E. Georges. By Rev. Joseph Esmond Riddle, M.A., and Rev. Thomas Kerchever Arnold, D.D. First American Edition, carefully revised, and containing a copious Dictionary of proper names from the best sources. By Charles Anthon, LL.D. Royal 8vo, sheep extra, $5.

M'CLINTOCK AND STRONG'S Cyclopædia of Biblical, Theological, and Ecclesiastical Literature. By Rev. John M'Clintock, D.D., and James Strong, S.T.D. With Maps and numerous Illustrations. Five volumes, comprising the letters A to Mc, are now ready. Price, per volume, cloth, $5; sheep, $6; half-morocco, $8.

*YONGE'S ENGLISH-GREEK LEXI-*con. An English-Greek Lexicon. By C. D. Yonge. With many New Articles, an Appendix of Proper Names, and Pillon's Greek Synonyms. To which is prefixed an Essay on the Order of Words in Attic-Greek Prose, by Charles Short, LL.D., Professor of Latin in Columbia College, N. Y. Edited by Henry Drisler, LL.D., Professor of Greek in Columbia College, Editor of 'Liddell and Scott's Greek-English Lexicon,' etc. 8vo, sheep extra, $7.

CRABB'S ENGLISH SYNONYMS. English Synonyms, with copious Illustrations and Explanations, drawn from the best Writers. By George Crabb, M.A., Author of the 'Technological Dictionary' and the 'Universal Historical Dictionary.' 8vo, sheep extra, $2 50.

*ENGLISHMAN'S GREEK CONCOR-*dance. The Englishman's Greek Concordance of the New Testament: being an Attempt at a Verbal Connection between the Greek and the English Texts; including a Concordance to the Proper Names, with Indexes, Greek-English and English-Greek. 8vo, cloth, $5.

FOWLER'S ENGLISH LANGUAGE. The English Language in its Elements and Forms. With a History of its Origin and Development, and a full Grammar. Designed for Use in Colleges and Schools. Revised and enlarged. By William C. Fowler, LL.D., late Professor in Amherst College. 8vo, cloth, $2 50.

HAYDN'S DICTIONARY of DATES. Haydn's Dictionary of Dates, relating to all Ages and Nations. For Universal Reference. Edited by Benjamin Vincent. Assistant Secretary and Keeper of the Library of the Royal Institution of Great Britain; and Revised for the Use of American Readers. 8vo, cloth, $5; sheep, $6.

*LIDDELL AND SCOTT'S GREEK-*English Lexicon. Based on the German Work of Francis Passow. With Corrections and Additions and the Insertion, in Alphabetical Order, of the Proper Names occurring in the principal Greek Authors. By Henry Drisler, LL.D. Royal 8vo, sheep extra, $6.

*MARCH'S ANGLO-SAXON GRAM-*mar. A Comparative Grammar of the Anglo-Saxon Language, in which its forms are Illustrated by those of the Sanskrit, Greek, Latin, Gothic, Old Saxon, Old Friesic, Old Norse, and Old High-German. By Francis A. March, LL.D., Professor of the English Language and Comparative Philology in Lafayette College, Author of 'Method of Philological Study of the English Language,' 'A Parser and Analyzer for Beginners,' etc. 8vo, cloth, $2 50.

MARCH'S ANGLO-SAXON READER. An Anglo-Saxon Reader, with Philological Notes, a Brief Grammar, and a Vocabulary. By Francis A. March, LL.D. 8vo, cloth, $1 50.

ROBINSON'S GREEK LEXICON OF the New Testament. A Greek and English Lexicon of the New Testament. By Edward Robinson, D.D., LL.D., late Professor of Biblical Literature in the Union Theological Seminary, N. Y. A New Edition, revised and in great part rewritten. Royal 8vo, cloth, $6.

☞ HARPER & BROTHERS *will send any of the above works by mail, postage prepaid, to any part of the United States, on receipt of the price.*

THE LEISURE HOUR SERIES

Published this day.

A PAIR OF BLUE EYES. A Novel. By Thomas Hardy. $1 25.

"A valuable accession to the higher ranks of modern novel-writing authors. . . . Not only quick observations and sparkling humor and true moral instinct, but a delicate and subtle analysis of varieties of character and moods of feeling, a poet's sympathy with human passion, and an artist's eye for every aspect of nature."—*London Spectator.*

LATEST VOLUMES.

INGO. By Gustav Freytag, author of 'Debit and Credit.'
DIMITRI ROUDINE. By Ivan Turgénieff.
A SLIP IN THE FENS. With Illustrations.
WHAT THE SWALLOW SANG. By F. Spielhagen.
HERO CARTHEW. By Louisa Parr.
BABOLAIN. By G. Droz.

Price $1 25 per volume.

HOLT & WILLIAMS,
25 Bond Street, New York.

MR. ROE'S GARDEN, from which, as he tells us in his entertaining book, 'Play and Profit in My Garden,' $2,000 worth of fruit and vegetables were sold in one year besides a large home supply, promises equally well the present season. On the 31st of May, his sales amounted to $257. On the 6th of May, he had seven distinct varieties of vegetables in abundance at his command. The story of this successful garden is told at length in his book, PLAY AND PROFIT IN MY GARDEN, which DODD & MEAD publish.

NEW BOOKS.

THE LIBERAL EDUCATION OF Women. The Demand and the Method. 296 pp. 12mo, full cloth, $1 50.

A series of papers by eminent thinkers on this subject. Collected and edited by Prof. James Orton, Vassar College, N. Y.

EDUCATION ABROAD. (In Press.) An able discussion of "Should Americans be Educated Abroad?" A question that deeply affects the School system and youth of our country. By Hon. B. G. Northrop, Superintendent of Schools, Conn.

TRUE SUCCESS IN LIFE. 12mo, full cloth, $1 25.

For young people. By Ray Palmer.

REMEMBER ME. 16mo, full cloth, $1 25.

A Gift Book for new Communicants. By Ray Palmer.

THE MOUTH OF GOLD. 16mo, full cloth, gilt edges, $1.

A series of Dramatic Sketches of the Life and Times of Chrysostom. Wonderfully clever in conception and diction. By Edwin Johnson.

RESPONSIVE WORSHIP. 16mo, full cloth, 60 cts.; paper, 40 cts.; with Psalter, 16mo, full cloth, 90 cts.

A Discourse, with Notes, by W. I. Budington, D.D., and letters from distinguished clergymen.

SUNNY HOURS OF CHILDHOOD. Stories. 12mo, full cloth, 75 cents.

BRIEF HISTORY OF TEXAS. 12mo, half roan, $1 25.

Intended for schools and general reading. Illustrated. It brings the history of Texas down to date, and is full of most valuable information regarding that wonderful State. By D. W. C. Baker.

LATIN PRONUNCIATION. 12mo, full cloth, 140 pages, $1.

An enquiry into the proper sounds of the Latin language during the Classical period. By Walter Blair, A.M., Professor of Latin in Hampden-Sidney College, Va.

A. S. BARNES & CO.,
New York and Chicago.

D. APPLETON & CO. have just issued a new Educational Catalogue, admirably classified and arranged by subjects for convenient reference. The list of books is especially rich and full in recent works on Natural Science, Ancient and Modern Language, etc., making it of permanent value to every teacher and educator as a work of reference, while the elegance and beauty of its typography are strikingly attractive. Sent free on application to the publishers, D. APPLETON & CO., 549 and 551 Broadway, New York.

"*Not only good Text-Books, they are also very valuable works of reference.*"—Dr. Sears, in the National Quarterly Review.

LABBERTON'S HISTORICAL SERIES
FOR SCHOOLS AND COLLEGES.

I. OUTLINES OF HISTORY. With original Tables, Chronological, Genealogical, and Literary. By Professor Robert H. Labberton, Ph.D. Oblong 4to, cloth, $2.

II. HISTORICAL QUESTIONS. Logically arranged and divided. The companion to Outlines of History. Oblong 4to, cloth, $1 75.

III. AN HISTORICAL ATLAS. Containing a Chronological Series of 100 Colored Maps, Illustrating successive periods from the dawn of history to the present day. Oblong 4to, cloth, $3 50. (This Atlas can be used with any history.)

☞ The latest changes in the map of Europe are fully and accurately exhibited.

WHAT IS SAID OF THE WORK.

"Prof. Labberton's plan is an excellent one, and is carried out with great success. The work deserves high praise."—*The Nation.*

"The whole Series bears the marks of conscientious and faithful scholarship."—*N. Y. Tribune.*

"The method is likely to cause the most lasting impression on the mind."—*California Teacher.*

"A work which must become a constant companion of those who are beginning to study history in the right spirit. I was glad to learn that you had published an Atlas prepared by so eminent a historical scholar as Dr. Labberton."—*Prof. Charles J. Stille, LL.D., Provost University of Pa.*

"The Atlas is an admirable one. The maps are beautifully executed. Both works are deserving of a large circulation."—*Philadelphia Inquirer.*

"The work approves itself to our judgment most highly. The Atlas is infinitely superior to any similar works that are accessible save by a fearful outlay."—*North American.*

"A want constantly felt by students of history is supplied in this work."—*Quarterly Review, Gettysburg.*

"A system far superior to anything of the kind we have yet seen, a set of works for elementary instruction which leave little to be desired. The outlines of history and the volume of maps are not only good text-books, they are also very valuable works of reference."—*Dr. Sears, National Quarterly Review.*

FIRST STEPS IN ENGLISH Literature.

HURD & HOUGHTON, New York;
THE RIVERSIDE PRESS, Cambridge.

Price $1.

"Its clearness and conciseness, the interesting historical facts introduced as closely related to our literature or to the history of our language, the judicious selection of authors, and the bold rejection of others, by which your work is kept within the proper limits of such an undertaking, are some of the points which have specially impressed me."—*Cyrus Northrop, Professor of English Literature in Yale College.*

VALUABLE WORK.

ROGET'S THESAURUS
OF
ENGLISH WORDS AND PHRASES,

SO CLASSIFIED AND ARRANGED AS TO FACILITATE THE EXPRESSION OF IDEAS, AND ASSIST IN LITERARY COMPOSITION.

BY PETER MARK ROGET.

Revised and edited, with a List of Foreign Words defined in English, and other additions, by Barnas Sears, D.D., late President of Brown University. A New American Edition, with extensive Additions and Improvements. Royal 12mo, cloth, $2.

This great and noble work of Dr. Roget, occupying his attention more than fifty years in its preparation, furnishes, with respect to the English language, a collection of the words it contains, and of the idiomatic combinations peculiar to it, arranged (as expressed by the author) "not in alphabetical order, as in a dictionary, but according to ideas which they express. The purpose of a dictionary is simply to explain the meaning of words, and, the word being given, to find its signification or the idea it is intended to convey. The object here is exactly the converse of this; the idea being given to find the word or words by which that idea may be most fitly and aptly expressed." As one has well said: "It gives a writer a word he wants when that word is on the tip of his tongue, but altogether beyond his reach."

The stereotype plates of this work were destroyed in the recent great fire; thus an opportunity has been afforded for a thorough revision and extensive additions and improvements.

In the preparation of the present new and enlarged edition, it has been the aim of the publishers to reproduce from the latest London edition the subject-matter of the original work unabridged and entire, though with variations of arrangement and numerous valuable additions.

The "Phrases" and a certain class of words which in former editions, for certain reasons indicated, were transferred from the body of the work, and placed together as an appendix to the volume, also the foreign words, have in the present edition been restored to their original place in the body of the work, as arranged by the author; while, for the benefit of those only acquainted with the English language, the list of foreign words—Latin, French, Italian, Spanish, Greek Words and Phrases—which most frequently occur in works of general literature, defined in English, and to which large additions have been made, is retained at the end of the volume, rendering it in all respects more full and perfect even than the author's edition.

Just published by

GOULD & LINCOLN, Boston.

HARVARD UNIVERSITY, 1873–74.

Members of one department have a right to attend lectures and recitations in any other department of the University without paying additional fees; for example, Law students may attend any exercises they please in Harvard College, Medical students the exercises of the Scientific School, etc.

The degrees of Master of Arts, Doctor of Philosophy, and Doctor of Science are open to Bachelors of other institutions.

The year begins in all departments on Thursday, Sept. 25, 1873. Examinations for admission to Harvard College, the Lawrence Scientific School, the Mining School, and the Bussey Institution will begin on Thursday, September 25, at 8 A.M. The examination for advanced standing in the Medical School takes place Sept. 22; for advanced standing in the Law School, Sept. 25.

The University Catalogue (including examination papers of 1871-72) may be obtained from Charles W. Sever, Bookseller, Cambridge, price 50 cents. Circulars describing the several departments may be obtained on application to James W. Harris, Secretary, Cambridge, Mass.

SPECIAL NOTICES.

TERMS: In advance, one insertion, four cents per word; five insertions, three cents per word, each. The enclosure of a stamped and addressed envelope will secure a numbered box, to which communications may be addressed.

RESEARCHES IN THE CALCULUS of Variations. Principally on the Theory of Discontinuous Solutions. 8vo, $3 50. [Just published.

New Editions, revised and greatly enlarged.

LIDDELL & SCOTT'S LEXICONS.

Universally acknowledged to be the best Greek Lexicons published, and in use by all students.

I.

A GREEK-ENGLISH LEXICON. Compiled by Henry G. Liddell, D.D., Dean of Christ Church, and the Very Rev. Robert Scott, D.D., Dean of Rochester, late Master of Balliol College, Oxford. Sixth edition. 4to, pp. xvi. 1,864, $12; half-mor., $18.

The present edition has been again carefully revised throughout, and, though brevity has been studied, the number of pages has been increased by one-eighth. Much of this increase is due to a collation of the copious Greek-German Lexicon of Palm & Rost, and of the last numbers of Dindorf and Stephanus; much also to the length at which the forms of irregular verbs have been treated—an addition for which full acknowledgments ought to be made to the exhaustive list of these verbs by Mr. Veitch, lately published at the Clarendon Press.—*Author's Preface.*

II.

THE SCHOOL EDITION.

LIDDELL & SCOTT'S GREEK-ENG- lish Lexicon, Abridged. New edition, carefully revised throughout. Square, half-bound, $3.

The present edition has been completely revised, and has also been considerably enlarged—chiefly by the addition of a number of irregular tenses of verbs.

III.

A COPIOUS GREEK-ENGLISH VO- cabulary. Compiled from the best authorities. 12mo, cloth, $1 50.

The Greek-English Vocabulary which is now submitted to the public is intended to furnish within the narrowest compass a useful and convenient manual of reference. It will be found copious in regard to the number of words, and the explanations of them have been given from the Lexicon of Liddell & Scott with as much brevity as possible.—*Preface.*

MACMILLAN & CO.'S Educational Catalogue, containing a complete list of their Educational Works, with a short description of each, will be forwarded, mail free, on application to

MACMILLAN & CO.,

PUBLISHERS TO THE UNIVERSITY OF OXFORD,

38 Bleecker Street, New York.

NEW ARITHMETICS.

SANFORD'S ANALYTICAL SERIES.

COMPRISED IN FOUR BOOKS.

The Science of Numbers Reduced to its Last Analysis.

MENTAL AND WRITTEN ARITHMETIC SUCCESSFULLY COMBINED IN EACH BOOK OF THE SERIES.

BY SHELTON P. SANFORD, A.M.,

Professor of Mathematics in Mercer University, Georgia.

I. FIRST LESSONS. Illustrated, . . $0 35
II. INTERMEDIATE, ... 0 50
III. COMMON SCHOOL, ... $0 90
IV. HIGHER, ... 1 50

"I think that Sanford's Arithmetics are the best books on the subject ever published; and I trust it will not be long before they will be introduced into every school in our State. In my judgment, they are the very perfection of school-books on arithmetic."—*Professor B. Mallon, Superintendent in the Public Schools of Atlanta.*

CUTTER'S PHYSIOLOGIES,

FOR COLLEGES, ACADEMIES, AND FAMILIES.

BY CALVIN CUTTER, M.D.

NEW SERIES.

*FIRST BOOK OF ANALYTIC ANA-*tomy, Physiology, and Hygiene, Human and Comparative. With 164 Illustrations. 12mo, 90 cts.

SECOND BOOK OF ANALYTIC Anatomy, Physiology, and Hygiene, Human and Comparative. With 186 Illustrations. 12mo, $1 50.

*NEW ANALYTIC ANATOMY, PHY-*siology, and Hygiene, Human and Comparative. With 194 Illustrations. $1 60.

With Questions, 60 pages additional. $1 70.

OLD SERIES.

HUMAN AND COMPARATIVE Anatomy, Physiology, and Hygiene. By Mrs. E.P. Cutter. Illustrated. 12mo, 50 cts.

*CUTTER'S FIRST BOOK ON ANA-*tomy, Physiology, and Hygiene. Illustrated. 12mo, 80 cts.

*CUTTER'S ANATOMY, PHYSIO-*logy, and Hygiene. Illustrated. 12mo, $1 70.

*** Accompanied by a Series of Anatomical Charts.

CHAUVENET'S MATHEMATICAL SERIES.

BY PROF. WILLIAM CHAUVENET.

A TREATISE ON ELEMENTARY Geometry, with Appendices containing a Copious Collection of Exercises for the Student, and an Introduction to Modern Geometry. By Wm. Chauvenet, Professor of Mathematics and Astronomy in Washington University, St. Louis. 12mo, extra cloth, $2.

"It is the only geometrical text-book which is based on true principles."—*C. H. Judson, Professor of Mathematics in Furman University, Greenville, South Carolina.*

A TREATISE ON THE METHOD of Least Squares; or, The Application of the Theory of Probabilities in the Combination of Observations. From the author's Manual of Spherical and Practical Astronomy. By Wm. Chauvenet, Professor of Mathematics and Astronomy in Washington University, St. Louis. 8vo, cloth, $1 75.

*PLANE AND SPHERICAL TRIGO-*nometry. By Wm. Chauvenet. New and Revised Edition. 8vo, cloth, $1 75.

J. B. LIPPINCOTT & CO., Publishers, Philadelphia.

HURD & HOUGHTON,

NEW YORK;

THE RIVERSIDE PRESS, CAMBRIDGE,

ask attention to the book advertised below, believing that it presents certain advantages for the teaching and study of American History not to be fonud in any other work:

A HISTORICAL VIEW OF THE American Revolution. By George Washington Greene, author of 'The Life of Nathanael Greene, Major-General in the Army of the Revolution,' Non-resident Professor of American History in Cornell University. In one volume crown 8vo, cloth, $1 50.

"In the small space of 450 octo-duodecimo pages, the accomplished author gives a complete view of the principles, laws, and development of the contest, with enough of the details to illustrate their concrete action, so that the reader who desires to pursue any one of the lines of investigation indicated can do it under the direction of definite ideas. The volume thus fills a place in our literature which is occupied by no other work. It is at once a generalized history of the Revolution and a stimulating guide to the study of its details."—*Boston Transcript.*

RECENT PUBLICATIONS.

ALLEN & GREENOUGH'S LATIN COURSE.

Complete in Prose Department, Preparatory to College.

*ALLEN & GREENOUGH'S SE-*lect Orations of Cicero. Chronologically Arranged, covering the entire period of his public life. Edited by J. H. & W. W. Allen and J. B. Greenough, with References to Allen & Greenough's Latin Grammar. Containing the Defence of Roscius (abridged), Verres I. Manilian Law, Catiline, Archias, Sestius (abridged), Milo, Marcellus, Ligarius, and the Fourteenth Philippic. With Life, Introductions, Notes, and Index. $1 75.

ALLEN & GREENOUGH'S Shorter Course of Latin Prose: consisting of Selections from Cæsar, Curtius, Nepos, and Sallust ('Jugurtha'), with Notes adapted to Allen & Greenough's Grammar; accompanied by Six Orations of Cicero—the Manilian, the four Catilines, and Archias, with Vocabulary—thus forming a volume adapted to the second or shorter preparatory course at Harvard. $2 50.

ALLEN & GREENOUGH'S LATIN Grammar. $1 56.

ALLEN & GREENOUGH'S LATIN Selections. $1 56.

LEIGHTON'S LATIN LESSONS.

(Refer to A. & G.'s Gr.) $1 56.

(From Prof. W. D. Whitney, Yale College.)

"I have no hesitation in saying that Allen & Greenough's Grammar has impressed me more favorably than any other I have seen that is published in this country. Though brief, it is very comprehensive, clear in its statements, founded on an adequate basis of philological knowledge, and cast in the proper tone of describing the facts of the language rather than prescribing laws for it."

"OUR WORLD" SERIES OF GEOGRAPHIES.

(From Louis Agassiz, LL.D., Professor of Zoölogy and Geology, Harvard University.)

"Cambridge, January 1, 1873.

"MY DEAR SIRS: I welcome 'Our World,' No. 2, as a valuable contribution to the modern method of teaching geography. It is a very commendable and successful effort to add to the daily improving means of making geography more attractive in the school-room."

(From Hon. Geo. S. Hillard, LL.D.)

"Boston, December 11, 1872.

"MY DEAR SIRS: I think Miss Hall's work one of great merit. It invests the study of geography with the attractions that properly belong to it. It gives prominence to the facts, distinctions, and attributes which are permanent, and the work of nature, and does not burden the memory with those dry details of political geography which are variable and accidental. Thus it has all the interest of a well-written book of travels. The pupil here learns wherein one country essentially differs from another, what are the physical features, soil, and productions of each, what are the occupations and character of their inhabitants, and, in short, all the relations of man to the globe on which he lives."

Halsevs Historical Chart, 33 x 48, $1 50. Goodwin's Greek Grammar, Reader, Moods and Tenses. Leighton's Greek Lessons. Liddell & Scott's Lexicons. Allen & Greenough's Madvig's & Allen's Latin. White's Junior Student's Latin Lexicon. Hudson's and Craik's Shakespeares. Pierce's Tables. English of XIVth Century, $1 75. National Primary, Intermediate, and Fourth Music Readers. National Music Charts, in Four Series, by Luther Whiting Mason.

POTT, YOUNG, & CO.,

Cooper Union, New York.

THE WEEK IN TRADE AND FINANCE.

AUGUST 4, 1873.

THE money market has remained very easy since our last, with no change to notice in call rates. On time, money is freely offered for 3 to 5 months at 7 per cent. gold. Loans having a shorter time to run are readily obtainable at 5 to 6 per cent.

The Bank of England rate of discount was again reduced ½ per cent. on Thursday, and now stands at 3½ per cent. The Bank gained £96,000 in bullion last week, and the Bank of France gained in specie 7,000,000 francs.

The weekly statement of the Clearing-house banks on Thursday was unfavorable. The banks lose $895,600 in their total reserve, while the total liabilities have decreased but $314,500. The surplus reserve now stands at $13,803,475, against $14,620,450 last week—a decrease of $816,975.

The following are the statements for the past two weeks:

	July 26.	August 2.	Differences.
Loans	$289,389,100	$289,986,200	Inc. $597,100
Specie	31,249,300	32,272,200	Dec. 977,100
Circulation	27,225,100	27,188,000	Dec. 37,100
Deposits	239,118,300	238,840,900	Dec. 277,400
Legal tenders	49,957,000	50,038,500	Inc. 81,500

The following shows the relation between the total reserve and the total liabilities:

	July 26.	August 2.	Differences.
Specie	$31,249,300	$30,272,200	Dec. $977,100
Legal tenders	49,957,000	50,038,500	Inc. 81,500
Total reserve	$81,206,300	$80,310,700	Dec. $895,600
Circulation	27,225,100	27,188,000	Dec. 37,100
Deposits	239,118,300	238,840,900	Dec. 277,400
Total liabilities	$266,343,400	$266,028,900	Dec. $314,500
25 per cent. reserve	66,585,850	66,507,225	Dec. 78,625
Excess over legal reserve	14,620,450	13,803,475	Dec. 816,975

The stock market has been quite active for the time of year. The dealings, however, have been mostly confined to the "Vanderbilt stocks," with Western Union Telegraph as the leading feature. The sales of Western Union reached 124,500 shares, or double those of any other stock, excepting Pacific Mail and Lake Shore. The rumors respecting the leasing of the Lake Shore Road to the Central and Hudson continue, and seem to be sufficient to keep up a very "bullish" feeling in the stock. The basis spoken of, upon which the road will be leased to the Central, is 8 per cent. guaranteed dividends by the latter to the former; but, of course, nobody goes so far as to say when the lease will be made, or what are the terms.

Pacific Mail has been quite active at times. On Friday, the property of the Company in this city was attached by the county and city for non-payment of taxes. The amount due was subsequently paid and the property released. The feeling against the present board of directors is very bitter, and in the Exchange during the week very plain language has been used respecting their conduct in the administration of the Company's affairs. The general belief is that the directors are short of the stock, and are consequently anxious that the price should go down, in order that they may "buy in" at a profit.

There is a better feeling in some of the investment stocks, and we notice that the price of Chicago, Burlington, and Quincy has advanced to 106, after having sold at 98½. Michigan Central is also firm, with a good demand from investors.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending August 2, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales.
N. Y. C. & H. R.	104⅛ 104⅞	104⅛ 105⅛	105⅛ 103⅞	105⅜ 105⅝	105⅛ 105⅝	105⅛ 105⅛	35,900
Lake Shore	93⅞ 94	93⅞ 94⅜	94⅜ 93	94⅜ 95¼	94⅜ 95	94⅛ 95⅛	61,700
Erie	58½ 59⅜	59 60¼	59¼ 60⅜	59⅜ 61½	59⅜ 59⅞	59⅜ 59⅜	29,000
Do. pfd.	.....	72½	72½	.... 74½	73¼	....	.....
Union Pacific	27⅞ 28	27⅝ 28	28 28½	28⅜ 29½	28½ 28⅜	28⅜ 29	19,700
Chi. & N. W.	69⅛ 70⅜	69¼ 69⅜	69¼ 69⅜	69⅜ 70	67⅜ 69¼	68⅛ 69	18,700
Do. pfd.	83	83 83¼	83 83¼	84 83¼	83 83⅜	....	100

Rock Island	110⅜ 110⅜	110⅛ 111	110⅜ 110⅜	110⅜ 110⅜	110⅜ 110⅛	....	10,900
Mil. & St. Paul.	51⅜ 52¼	52¼ 52⅜	52⅛ 52⅛	53⅜ 53⅜	52⅜ 53⅛	52⅛ 53⅛	19,500
Do. pfd.	71⅜	.... 74⅛	73½	73⅜ 74	74	....	700
Wabash	71⅜ 72⅛	72¼ 72¼	72⅛ 73	72½ 73	72⅜ 72⅝	72⅛ 72¾	15,100
D. L. & Western	100¼ 100⅜	100¼ 100¼	100½ 101	101 101¼	101⅛	101⅜ 102	9,900
R. H. & Erie	2⅜ 2⅞	2⅜ 2⅜	2⅜ 2⅜	2⅜ 2⅜	2⅜ 2⅜	....	400
O. & M.	39⅜ 40⅛	40 40⅛	39⅜ 40⅛	40 41⅛	39⅜ 40⅛	39⅜ 40⅛	17,600
C. C. & I. C.	31⅜ 31⅝	32 32¼	31⅝ 32⅛	32⅛ 32¼	31⅜ 32⅛	31⅜ 32⅛	8,800
W. U. Tel.	91⅜ 92⅛	92⅜ 93⅛	91 93⅛	92 92⅝	91⅜ 92⅛	92⅛ 91⅝	124,500
Pacific Mail	37⅜ 38⅛	37⅛ 38	37⅛ 37⅝	37⅛ 38½	37 38	36⅝ 38	71,600

Government bonds have been very quiet, with the floating supply upon the market small. The net decrease in the public debt amounted to but $370,518 for the month of July. The final settlement was completed on Wednesday, with the Syndicate, for the $50,000,000 5-20's called in March 1, 1873.

The business in railroad bonds has been very light, owing to the absence of many investors from the city. We hear of a few defaults in the payment of the August interest upon railroad bonds, mostly by new roads. The July interest upon the bonds of a number of new roads was passed, and this has doubtless caused some timidity and interfered with investment purchases.

The gold market has been very dull, with a downward tendency in price. The range of quotations for the week has been between 115⅞ and 115¼, with 115⅜ to 115½ as the closing price.

TRAVEL.

ONLY DIRECT LINE TO FRANCE.

The General Transatlantic Company's Mail Steamships between New York and Havre, calling at Brest. The splendid vessels on this favorite route for the Continent will sail from Pier No. 50, North River, as follows:

VILLE DE PARIS..Garay..... ...Saturday, July 26
VILLE DU HAVRE.Surmont.....Saturday, Aug. 9
PEREIRE. .....Daure .....Saturday, Aug. 23
ST. LAURENT. . ..Roussan..... Saturday, Sept. 6

Price of Passage in Gold (including wine) to Brest or Havre: First Cabin, $125; Second Cabin, $75. Excursion tickets at reduced rates.

These steamers do not carry steerage passengers.

American travellers going to or returning from the Continent of Europe, by taking the steamers of this line, avoid both transit by English railways and the discomforts of crossing the Channel, besides saving time, trouble, and expense.

NEW YORK, THURSDAY, AUGUST 14, 1873.

The Week.

THERE seems to be much quietness at present in Massachusetts on the subject of the approaching election among that part of the population which may be supposed to be by instinct anti-Butler; but there are signs that work is to begin at once, of which the most significant is the action of the State Central Committee in fixing the time for the assembly of the convention. The General's friends wished it called soon, in order that they might take advantage of the summer weather, which renders the good inactive, but only stimulates the energies of the bad, and pack the delegate conventions. The Committee have put off the day till the 17th of September, when his enemies will be back from the seaside and the country. The Hamilton Hall gentlemen are reported as saying that they are not only "going to beat Butler, but they are going to beat him badly." The General himself has published his reply to a constituent who wrote several months ago to enquire into the back-pay business, and given his reasons for advocating the passage of this bill. They are—first, that the bill merely equalized salaries; second, that the increased salary is not too large; third, that Mr. Washburne's statement that he lives on $17,500 a year in Paris is not true; fourth, that those members who have returned their back-pay have done so for fear of newspaper clamor; fifth, that Senator Morton, Vice-President Wilson, Mr. George F. Hoar, and several other gentlemen have manifested the greatest inconsistency in what they have said and done about back-pay; sixth, that benevolent institutions are crazy to get the money, and write letters to him by the dozen, suggesting the devotion of his increased pay to pious and charitable works, on the ground that he cannot honestly keep it himself; seventh, that the newspaper clamor on the subject is caused by the abolition of the franking privilege. This document he has caused to be printed as a supplement to many country papers, but the editors rail at it and him all the same.

It will be seen that most of these reasons are not new; and as those which are new are as specious as those which are old, it seems unnecessary to examine them. Indeed, as the General is a statesman whom very few people would believe under oath, his journalistic productions hardly merit the attention they receive. When Congress meets in the winter, it may be predicted that an internecine and fratricidal struggle will be waged between those members who have taken their back-pay and those who have sent their pay back. Feeling is beginning to run high on the subject. One Congressman, Mr. Hambleton of Maryland, is quoted as saying that unless his constituents are willing to maintain him properly, "he will be damned if he will represent them at all," and a Mr. Lamison of Ohio, being called upon to resign by a party convention, replied in terms of even more decisive profanity—language, moreover, exhibiting the most deep-seated contempt for the opinions of the people. Mr. Willis B. Machen, on the other hand, who was sent to the Senate by Kentucky to serve during an unexpired term, in reply to some condemnatory resolutions, says that the resolutions are "dignified and gentlemanly," and expresses the hope that we may "all be happy yet."

The Ohio Democracy has met in convention, and appears to have made fully as great a mistake as the conventions of that party have, by confession of Democrats themselves, been constantly making for many years. In brief, they acted on the notion that the Republican party has shown itself so unfit to govern, so corrupt in office, that the people will admit to power the old Democratic party while it still obstinately refuses to say that its recent attitude toward the General Government and the four millions of newly emancipated citizens has been mistaken and faulty. Because some Republicans are thieves, we are to submit the government to the party whose spirit and policy are dead against the last three amendments to the Constitution, and whose last public performance was the gigantic folly and fraud of pretending to support Greeley and Brown on a Republican platform. It is true that the Republican party was never before so obnoxious to criticism in these respects; nevertheless, as we suppose, the Democratic notion is a complete delusion, and we expect that the result of the canvass under Mr. Allen's leadership will make this perfectly evident. A platform which goes no further than to "accept dead issues" is not all that is required of a party which only last year showed itself so entirely unscrupulous that its grudging concessions are not likely to be estimated at a high value as pledges of its future action; and that we feel satisfied the Democracy is going to learn once more for the hundredth time. The candidate put upon the platform would have been, and indeed was, a good candidate thirty years ago. We do not refer to Mr. Allen's age. What we mean is, that he holds the principles and beliefs of a sort of Democracy which was in its vigor a generation ago, and is unfit for a complete political creed to-day. We presume it is no secret that the party wished to nominate for the governorship Mr. Thurman, a justly popular leader, in the hope of carrying the State Legislature on the strength of his name, and then giving him the senatorship—an office which he certainly adorns and which it will be a pity to have him lose. He could have had no hope of getting it again had the more liberal movement favored by Mr. Groesbeck succeeded. Unless with a purely Democratic majority in the House and Senate, he doubtless would be regarded as a Democrat of too pronounced a school to be returned to the Senate. Mr. Allen, his relative, is, however, his candidate, and the campaign is in his interest.

We dare say that Mr. Thurman is sagacious enough from his point of view. If reports are to be credited, the Allen County movement was a very hot-weather movement, useful to the newspapers in the dull season rather than a means under Providence of revolutionizing our politics. The author of the ringing and progressive resolutions which heralded this latest onward step was Mr. T. E. Cunningham, and Mr. Thurman's estimate of his value to the party, and of the significance of his change of base, may seem more just if we consider that in 1866 Mr. Cunningham was a Republican in good standing, and indeed was a member of the Republican Committee of this same Allen County. But in that year he thought that he "saw a great light," as the saying is, when, in point of fact, he saw only thick clouds and the blackness of darkness, and in consequence he made the deplorable miscalculation of "Johnsonizing" and being made an assessor of internal revenue, by which acts he lost his standing in the party, and was compelled to become a Reform Democrat. Associated with him is one Dr. Harper, who also was once a Republican, but, like Mr. Cunningham, he also Johnsonized, and at first became postmaster in the town of Lima; but by-and-by another took his office, and Dr. Harper also became a Democrat, and, after a lapse of years, a leader in the Reform movement. So, too, Mr. Shelby Taylor, a banker, who held the position of revenue collector in 1866, and did not wish to lose it, went over to Mr. Johnson, and in that way retained his collectorship, but on the advent of President Grant was reduced to Democracy and Reform. Doubtless the following of these leaders is not so great as to influence perceptibly the mind of Mr. Thurman, although leaders like Mr. Groesbeck, who has long been a dissatisfied Democrat, have been ready enough to applaud the aim of the movement. Nor do we count the Liberal Republican

following as of much more moment. The mistake of last year was an enormous mistake, and one which is not going to receive any justification from the present efforts of the authors of it to run speedily to a success in which the memory of their former blunder may be swallowed up and forgotten. Sincere reformers will not greatly care to assist them. Still, it must be remembered that in several parts of Ohio, and notably in Cincinnati, there are numerous men, formerly Republicans, who look with dislike on the party as at present managed. But Mr. Thurman's convention has done nothing to conciliate these men. He has simply called out once more to the front the unterrified Democracy, which to-day, as five years ago, looks askance and bitterly at the negro, and squints towards bond taxation, as it did in the days of Pendleton. These assertions a look at the platform will verify.

The Virginia Democratic Convention—whose action throws some light on that of the Ohio Democrats—was a contentious body, but at the last was enthusiastic. A "railroad ring" is said to have secured the success of General Kemper's candidacy, and this made his opponents angry, they having been strong for Colonel Withers, who was put in nomination in the convention by Gen. Fitz Hugh Lee, seconded by Gen. Jubal Early, and who was the favorite of what was probably the most excitable and eloquent portion of the assemblage. The speech-making was something extraordinary, even for the land of barbecues. All became calm, however, when Colonel Withers magnanimously accepted the second place on the ticket. "A white man's government" is said to have been the burden of the convention's song; but then, the Southern Democracy always was a desperately heavy weight for the Northern Democracy to carry. It is no more than fair, however, to admit that when the convention pointed to the condition of Virginia, and contrasted it with the "condition of those States which have been under Radical rule," there is little left for some of us to do but turn away our eyes and momentarily, at least, hold our tongues. We suppose, too, that we ought to accept as made in good faith the convention's assertion that the Conservative party of Virginia has for its chief purpose to secure to every citizen, white or black, native or naturalized, "equal and exact justice," and we are to suppose also, we trust, that "justice" would be defined alike by Virginians and Northerners, and by both in accordance with the spirit of the recent Amendments. One of the resolutions of the platform applauds the Virginia school-system, and asserts that as intelligence is the only safety of popularly governed States, the party intends to support good schools for the white and colored races "respectively," which means separate schools, no doubt. Another resolution of interest was a declaration that Virginia Conservatives would not judge President Grant's Administration in any captious spirit—a declaration not without political wisdom, but perhaps not destined greatly to embarrass Major Hughes, the recently nominated Republican candidate for the governorship, in his mission to Washington, where his "business is of a political character and has reference to the approaching campaign"—in other words, is meant to secure the control of patronage for use in the election. As had been predicted, the convention also demanded that the General Government should complete the James River and Kanawha Canal, and the favor with which this scheme is met by men of all creeds points perhaps to a principal issue in our immediately coming politics.

Of no little importance is an event which occurred in North Carolina on the 7th instant, and which has not had the notice it deserves. We speak of it as having occurred; it has almost certainly occurred, although nothing positive will be known in the matter until the returns of an election which took place on that day shall all be in. This election was for the purpose of passing upon eight amendments to the State constitution—amendments drafted by a Democratic legislature, mainly opposed by the Republicans and mainly voted for by the Democrats. The latest reports from the State say that the negro counties gave heavy majorities against them, but that they have been carried. Of the eight, the important one is the fifth. This provides for striking out of the Constitution that portion of it which declares the public debt to be inviolable and never to be questioned; and further, that part which requests the legislature, by appropriate legislation and by adequate taxation, to provide for the prompt and regular payment of the interest and principal. It is to be hoped that before the time arrives for legislative action the legislature will see that its best course, even if it thinks of no more than the pecuniary interest of the State, will be to refrain from using the freedom just granted it. But we must admit that this is something to be hoped for, and is not a thing to be confidently expected. North Carolina was never rich, and beyond doubt the Holden government laid on her a fraudulent burden of millions. Still she might at least behave as an ordinary bankrupt does—ask consideration from her creditors, and do the best she can by them for as long as she can.

Out of about forty sketches submitted for the Philadelphia Centennial Exhibition building, the Committee last week selected ten as entitling their authors to the award of a thousand dollars each, and the privilege of a second and final competition. We believe we do not exaggerate in saying that a more fantastic and puerile set of designs than some of these forty were never offered in any competition. The mere sight of them must have done much to lighten the gravity of the Committee's task, while the reading of the accompanying descriptions, if performed aloud, must have had a very boisterous effect upon the judges. Six of the preferred plans were the work of Philadelphia architects, but one was from New York, and none came from Boston. It is, therefore, proper to state that the leading architects of both these cities, Mr. Vaux excepted, declined to enter the competition on the conditions laid down, which they deemed unfair to the profession, unprofitable, and morally certain to call out only inferior designs. What the chances are of good work at this stage of the proceedings may be guessed from the fact that each of the ten architects admitted to a second trial will be furnished with photographic copies of the plans of the other nine, and that the term allotted for making a fresh design, with estimates, is something less than six weeks. It will be strange indeed if the result is not to add one more to the long list of our failures to produce anything creditable to the taste of the age, or of permanent gain to art, by architectural competitions.

The citizens of Montreal have held a large mass-meeting to express their indignation at the Pacific Railroad scandal. The meeting passed resolutions demanding a thorough investigation of the charges; denouncing any intervention on the part of the executive officers implicated as an attempt on the liberties of the people and the prerogative of the House of Commons, as well as of its committee of investigation, appointed in pursuance of the "immemorial usage of the House of Commons in England;" deprecating delay, and recommending a petition to the Governor-General, praying him not to prorogue Parliament "until the House of Commons has had an opportunity of fully satisfying public opinion on the subject of the charges," and also the House itself, praying it to take into serious consideration the necessity of immediate action. Professor Goldwin Smith has written for a magazine which he is said to edit an article denouncing the Government in unmeasured terms, and saying that "the dark line of corruption is deepened by a shade of treason." What this means we do not know, for the secret, illegal employment of foreign money for the purpose of domestic improvement does not fall within any definition of treason as laid down in the books, though treason in the British Empire is a vaguer term than with us. Sir John Macdonald bears the brunt of the attack now, and his disgrace would lead to what is called on this side of the line a "new deal all round" in politics. He is not accused of having pocketed public money, but of having used public money to debauch the public mind.

The most important news from England is that both the Ministry and the Opposition have come to the determination that household suffrage must be extended to the counties. This measure, which would add another 900,000 to the voting population, was brought forward by Mr. Trevelyan, apparently for the purpose of taking the wind out of the Government's sails, but the Government were quite equal to the occasion. Mr. Gladstone, who was absent on account of illness, deputed Mr. Forster to communicate to the House of Commons the opinion of the Ministry that the measure was "wise and politic," and could not long be delayed. Parliament was shortly afterwards prorogued, so that nothing more was done: but it is believed that at the next general election the Government intend to make this extension of the suffrage a subject of appeal to the country.

Evidently the design of the recent changes in the English Cabinet was to strengthen a ministry that clearly needed strengthening, and as evidently that will be to some extent the result. To have Mr. Gladstone himself in his old and favorite place, the Chancellorship of the Exchequer, which no one can fill as he can, will, of itself, be felt as a welcome change from the administration of Mr. Lowe, who has repeatedly made embarrassing and damaging mistakes, and who has never shown great capacity for the higher range of the duties of his position. He succeeds Mr. Bruce in the Home Secretaryship, a position where his native abilities will have all the scope that he could desire. Interviews between him and committees who desire the use of Hyde Park for political meetings will not be marked by tears, as once was the case in Mr. Bruce's time, or, if they are, it will not be Mr. Lowe's eyes that will be dim. Perhaps his one superior in the art of snubbing delegates is Mr. Ayrton, and that gentleman resigns the place of First Commissioner of the Board of Works, in which position he has insulted, annoyed, and irritated so many people, some of them men of the eminence and utility of Dr. Hooker. He becomes Judge Advocate General in the Army Service. Mr. Bruce (formerly Home Secretary) goes into the peerage, and takes the Lord Presidency of the Council, the Marquis of Ripon vacating it. The ministry also loses Mr. Childers and Mr. Baxter, but gains Mr. Dodson, a very useful parliamentary official, who becomes a Financial Secretary in Mr. Baxter's place; Mr. W. P. Adam, a Scottish member, and especially Mr. Bright, who takes the sinecure position of Chancellor of the Duchy of Lancaster, succeeding Mr. Childers. Mr. Arthur Peel becomes the Liberal whip in the room of Mr. G. G. Glyn, nephew of Charles Kingsley and of J. A. Froude, and an excellent sample of the modern English peer. He has just become the second Lord Wolverton—a title, by the way, which was taken by Mr. Glyn's father from a little wayside village, raised from insignificance to opulence by one of his railways, he having been not only a banker who conducted the affairs of a banking house founded in 1712 by an English squire, but also one of the earliest, most courageous, and most successful of railroad kings. He carried on his operations on the Continent, too, as well as in England. The success of the Grand Trunk Road of Canada, which we may regard as a part of our own railroad system, was largely due to the faith, perseverance, and liberal expenditure of Mr. Glyn. Sir John Coleridge was offered the position of Master of Rolls, but declined it, and it was then given to Sir George Jessel.

The Tichborne trial still continues to excite a good deal of attention. Dr. Kenealy, of counsel for the defendant, has made his opening speech, which seems to have been of an astonishing character, very like some of the forensic efforts which we are accustomed to hear delivered on this side of the water by gentlemen who practise in the criminal courts of this city. He began by announcing his intention of calling hundreds of witnesses, who, he said, would not come forward for money, not for hundreds or thousands of pounds, not mere adventurers or men sought out by detectives or attorneys—in short, witnesses as different as possible from those of the prosecution—men who knew the defendant to be the true Sir Roger, and only desired to tell the truth, because they thought the prosecution bad and wicked. He then proceeded to indicate his line of defence, which seems to be a general admission of the vulgarity and depravity of his client's character, coupled with the insinuated argument that his moral and intellectual defects are due to his Jesuit education. No attention was paid to his education, because Jesuits do not want mental training; the influence of the Roman Catholic clergy might be seen in France, a country which it had converted into a "cesspool of corruption and ignorance." He described his client as an outcast, a vagabond, lost to every sense of honor or decency, but said that this is the very character which, from his Jesuit education, Roger Tichborne ought to have. Dr. Kenealy accounted for his client's forgetfulness of his life in Paris by saying that this was strictly in accordance with psychical philosophy, things being remembered in proportion to their pleasurableness and *vice versa*. The more painful they were, the sooner they were forgotten. As to these psychical views, however, the Chief-Justice expressed on behalf of the bench grave doubts.

The most that can be said in regard to the general state of affairs in Spain is, that extreme activity prevails there among all classes of partisans; that the Intransigentes appear, on the whole, to be getting the worst of it, whenever they come in contact with the Government troops; that they are proving themselves as wild-headed, wolfish, and incompetent as ever did any French Communist mob; that the Carlists more than hold their own, but clearly are not in a condition as yet to do anything approaching the decisive; and that the Government at Madrid can still be said to exist. Specific acts of importance have been the report to the Cortes of a committee which recommends that the Government be allowed to prosecute such members of the Cortes as went down into the provinces to stir up insurrection; and the adoption of a resolution authorizing the prosecution of nine of them. Very singular ideas obtain in the Peninsula nowadays among the gentlemen who believe in a republic, or several republics, for Spain. Here is what one of the deputies—and not only a deputy, but one of the ministers—said in debate the other day:

"I am ready to fight the Carlists, tooth and nail. I am ready to punish inexorably the assassins and incendiaries of Alcoy, or those who elsewhere may commit or have committed similar atrocities. But when it becomes a question of shedding the blood of those who share my political creed [*correligionarios*], I confess that my heroism does not go so far as this. (A voice—'But if they are rebels?') They may be rebels in your estimation, and even in mine; but it is one thing to consider them rebels, and another to fight them. There are here only two courses open—a policy of resistance and attack, or one of concession and conciliation. May I speak frankly? (Cries of 'Yes.') I declare that, as concerns our *correligionarios* actually in rebellion at Cartagena, or any others who may rebel elsewhere, we ought to practise towards them a policy of conciliation and concession. (A voice from the Center—'This would make government impossible.') I would never set my signature to a document ordering troops to attack with bayonets or bullets our *correligionarios*, though in armed rebellion. (Vociferous applause from the Left.)"

While this theory of government was undergoing ventilation, the Premier was being sent for to come down to the Cortes and answer a charge of conspiracy; but he could not leave the telegraph. It seems that the Spanish Premier spends a good part of his time in conversing by telegraph with any province or city which can succeed in "calling" him and getting his ear. This last is no easy thing to do, as nearly every one of the various governments of the various cities throughout the republic wants him daily. At the moment when the charge of conspiracy required his attention in the House, he was busy persuading Barcelona not to carry out a threat of revolting instantly, as Cartagena had done, and declaring herself independent. Four hours of steady work at the wires is said to have been necessary to effect this, but the result of it was that half the towns in Spain were furious at the Premier's supposed neglect of their telegrams.

ANARCHICAL POLITICS.

SIR HENRY MAINE, in his work on 'Ancient Law,' published in 1861, made some observations on the part played, and likely to be played, in modern politics by Rousseau's notion about the law of nature (which includes the doctrine of "natural rights," with which we are so familiar here). These remarks have been verified in a very remarkable manner by the events of the last ten years:

"It is chiefly," he said, "by allying themselves with political and social tendencies that the doctrines of Nature and her law have preserved their energy. Some of those tendencies they have stimulated and others they have actually created; to a great number they have given expression and form. They visibly enter largely into the ideas which constantly radiate from France over the civilized world, and thus become part of the general body of thought by which its civilization is modified. The value of the influence which they thus exercise over the fortunes of the race is of course one of the points which our age debates most warmly, and it is beside the purpose of this treatise to discuss it. Looking back, however, to the period at which the theory of the state of nature acquired the maximum of political importance, there are few who will deny that it helped most powerfully to bring about the grosser disappointments of which the First French Revolution was fertile. It gave birth and intense stimulus to the vices of mental habit all but universal at the time, *disdain of positive law, impatience of experience, and the preference of à priori to all other reasoning.* In proportion, too, as this philosophy fixes its grasp on minds which have thought less than others and fortified themselves with smaller observation, *its tendency is to become distinctively anarchical.* . . . On this point it is a curious exercise to consult the *Moniteur* during the principal eras of the Revolution. The appeals to the Law of Nature and the State of Nature grow thicker as the times grow darker."

Of the soundness and acuteness of all this, the events of 1871 in France, and of the present year in Spain, afford abundant illustration. The whole body of political and moral ideas known as Socialist, and to a large extent the polity known in Europe as democratic, rest on the theory that political society ought to be and can be rearranged in harmony with a law of nature evolved by a certain number of advanced thinkers from their own breasts. The faith in this idea has mostly taken in Europe the form of determined hostility to property, which again is a close deduction from the doctrine of human equality. A poor man is not equal to a rich man in society as at present organized, but under the law of nature he ought to be; therefore, let us make him so. But it also takes inevitably the form of hostility to all distinctions whatever. It refuses to allow any class of society to be exempt from manual labor, or to wield any greater amount of the public force than any other body. Hence, an intense repugnance to officers of the law, whether policemen, soldiers, or magistrates. With courts of justice, in particular, it has no patience, inasmuch as they are composed of men who are armed with exceptional powers, and are forced to assume a certain moral and intellectual superiority to those who come before them for judgment. How anarchy results from all this is easily seen. If you once admit that experience may be disregarded, and society reorganized on an ideal basis, and that all men are of equal weight and authority, the question on *whose* ideal shall society be reorganized at once comes up, and it is incapable of solution. The consequence is that whenever the Reds get possession of a government, we at once witness a succession of revolutions which, for aught one can see, would last interminably if nobody from the outside intervened with the strong hand. Gambetta, for instance, first has his turn, but his ideal is not satisfactory to Pyat, so Pyat overturns him and tries his own, which in like manner gives no satisfaction to Raspail, who furiously demands his innings, and so on. During the reign of the Commune in Paris, the leading managers arrested each other nearly every day, so that it was impossible to say on any given day in whose hands the management of affairs would be. These rapid revolutions, too, are heartily applauded and supported by the rank and file, partly because of their permanent distrust of all men in power, but mainly because rapidity of realization is an essential feature of the Socialist programme. A slow working-out of results is something of which the genuine radical will not hear. He demands the perfect society now and here, and finding that one contractor does not supply it as he promised on Monday, he tries another on Tuesday.

Another and perhaps the strongest reason of all why the doctrines of the radical school are anarchical is that they call for an enormous increase of the machinery of government. A society in which everybody would be protected by the state against the consequences of folly, or imprudence, or laziness; in which all the products of industry would be equally divided by an impartial hand, and every man led to his appropriate task every morning by a policeman, all children carefully educated, and all women provided with husbands or lovers, or even a society in which the principle of competition was to any considerable extent displaced by state superintendence, would call for a prodigious increase of officials and of official wisdom. No such bureaucracy, no such system of accounts, no such opportunities for peculation or waste, were ever seen or dreamed of, nor any such state of things as many of our reformers, either of the advanced or semi-advanced school, talk of. It would be ponderous and complicated beyond example, and almost beyond conception, and would, even if put into successful operation, kill human energy and darken the human mind as rapidly and inevitably as Egyptian priestcraft. But even if such a state of things were desirable, it is not practicable, because the world does not contain enough administrative talent for the management of even one nation on the Socialist plan. We cannot as we are to-day get enough of it for our government—simple as it is, and limited in its functions as it is—or our railroads, or our commerce, or our industry, or our steamships or armies. When, therefore, any considerable body of people makes an attempt suddenly to extend the functions of government, and to launch the ship of state on the dark and unknown *à priori* sea, honest men, who will not lie or deceive or undertake what they cannot perform, at once quit the deck, and the charlatans and jugglers and posture-masters rush up and take charge, and confusion reigns.

The question to what extent the "Law of Nature" has gained a hold on minds in this country is a more practical one than the extent of the ravages made by it in France and Spain. If we take Maine's three marks of its influence—"disdain of positive law, impatience of experience, and preference for *à priori* reasoning," and use them as tests, we should say that this influence was mainly, if not solely, visible among the reformatory speculators, who are, after all, a small body. The main body of the people are too busy, and the returns of labor too rapid and too large, and the national genius too intensely practical, to give much chance as yet for the ideal social state to become a subject of eager study and expectation. Probably nothing would do more, however, to spread and develop the anarchical tendencies of the new school in our politics than the admission of women to the suffrage. The female-suffrage movement here is in a large degree the result of the betrayal of a great philosopher into forgetfulness of his own canons of reasoning, through the disturbing influence of sex on his mental and moral vision—a phenomenon which the world has had many a time to deplore, and of which Mr. Mill was by no means the first or only illustrious example. It has, too, all the marks of the Socialist movement in Europe, and especially the strongly anarchical tendency, of which it furnished a striking illustration the other day, when, speaking through its principal organ about the election of Judge Craig in place of Judge Lawrence in Illinois (of which the Illinois people were already ashamed), it deduced the conclusion that any judge who decided "contrary to justice and *public opinion* ought to be impeached and deposed." This is, of course, simply another rendering of the Socialist plan of substituting "the justice of the people" (*i.e.*, judgment by a mass-meeting or large crowd) for that of courts composed of professional lawyers. The same paper warmly approved of young Walworth's assassination of his father, on the ground that marriage, as at present legalized, is a despotism which needs to be "tempered by assassination." This is worthy of note, inasmuch as it is an example of the readiness which we have remarked among nearly all the journals opposed to capital punishment to approve of private killing, if performed on a bad man, with a reasonable amount of provocation: that is to say, the killing of a human being by society, under the law, after judicial enquiry, and with official solemnity, they cannot bear; but slaughter by an individual, without forms or

investigation, even that of a father by his son, they can see fitness in. The same tenderness for private vengeance under sentimental sanctions has been shown, and in much the same quarters, in the case of the killing of Goodrich by his mistress. So, too, when the *Nation*, commenting on the Walworth case the other day, spoke of the shocking amount of brutality of which women in the poorer classes were the silent and uncomplaining victims at the hands of drunken or depraved husbands, it was solemnly called upon by the *Woman's Journal* to assist in redressing this great wrong by advocating female suffrage—the writer's belief being evidently that if, when Pat came home drunk or irritable from a day's hod-carrying in the sun, he found that Bridget had the ballot, far from chastising her as usual with the poker, he would creep into bed in respectful silence. These things seem trifling on the surface, but as illustrations of the anarchical tendency, as Maine calls it, which runs through a good deal of the sociological speculation of the day, even among ourselves, they are worthy of note.

LAW REFORM AND JUDICIAL REFORM.

THE judicial power of England consists of eighteen Common Law judges, four Equity judges, one judge for Probate and Divorce, another for Admiralty, and about half a dozen whose duties are exclusively those of an Appellate Court. There is also a Court of Bankruptcy, several criminal tribunals, and a few local or city courts of limited jurisdiction. The county courts we need hardly name, for their jurisdiction is little more than that of an American Justice of the Peace,-though they are presided over by barristers who receive salaries about equal to that of a United States Circuit Judge, and do a really large and useful business in adjusting differences, and making peace, and enforcing, but easing, the payment of small debts among the poor. Laying aside these inferior tribunals, we find, then, that the entire judicial power of England rests upon the shoulders of about thirty men. That this mere handful of men—not enough to half-fill an American railway-car—should do all of the judicial work of a great and wealthy manufacturing and commercial people down to disputes involving less than £50; and that their official utterances and conclusions should be looked up to and styled "authority" by the keen, critical, logical profession of two nations, are facts which seem overwhelming evidences of the wisdom and perfection of a system that can extract such comprehensive results from such exceedingly narrow means. To this statement it should be added, that these judges' conclusions are not the mere result of individual wisdom and discretion, like those of an Oriental kadi, but that, on the contrary, their decisions are guided and restricted by pre-existing rules, requiring that kind of continuous study and reflection which is termed legal learning, and requiring, also, that the decisions shall be so uniform that it will make little or no difference to which of these thirty men a given state of facts shall be presented, and that the utterances of all shall blend into one harmonious system, which will not only serve to settle disputes among men, but will reach the higher and more important end of settling them before they grow into the wasteful evil of litigation.

Whatever may be the complainings of the English newspapers, and the chronic discontent of the English people, and the ridicule thrown on the law by humorists and novelists, it must be evident to any rational mind that administering justice according to a comprehensive and uniform standard is an immense task, and that the facts which we have enumerated constitute an immense result. An active manufacturing and commercial community, whose daily transactions run through every form of human device and extend to every quarter of the habitable and uninhabitable globe, and which is, moreover, embarrassed by greater accumulations of wealth than any other community in the world, is necessarily one that abounds in all of the causes of litigation. These new and intimate and complex transactions of men, involving mutual dependence and trust, and aiming always at the acquisition of wealth, must lead to novel conditions and unforeseen occurrences, and may be said to breed disputes. When, therefore, such a people can reduce the judges of their superior courts to less than one for every million of inhabitants, and find that all of their litigious business is disposed of without accumulation, they demonstrate beyond all reasonable doubt that, notwithstanding a few exceptional cases, the mass of their disputes is disposed of in advance of legal proceedings, and the remainder with such certainty and rapidity that men cannot afford to resort to the law as a mere speculation in which something may turn up to their advantage, and delinquent debtors cannot invoke its aid as a roundabout form of injunction, which by the ultimate payment of costs will grant them several years of dishonest delay. Such a result is certainly a very great achievement of human intelligence, and may be said to be the direct fruit of an intelligent perseverance which has been content to learn by experience, and to improve and perfect without resorting to the revolutionary remedy of hasty destruction.

In the caustic novel called 'Piccadilly,' an American millionaire in London, being congratulated on the immense amount of money he has made in one of his New York transactions, says, deprecatingly, that the profits were not so large as is supposed; first, he had to bribe the press, which cost him one-fifth, and, next, he had to keep his own judge to grant and vacate injunctions, which was very expensive. If modern society, with its great accumulations of capital and its intense desire for wealth, were to accept as sound philosophy all that is said against the law, and were to go back to an Oriental system of individual wisdom and discretion, it would very soon result in every large operator having his own kadi at the gate. The tribute of praise which is paid in the oldest book in the Bible, and in the comparatively modern Eastern tale, to him who does justice in the cause of the poor, shows that such a system was never, as a rule, one of even-handed justice. The modern court has for its glory the fact that it is placed above the plane of individual discretion, and is designed to administer justice irrespective of the parties before it and of the amount involved in the controversy. Senator Carpenter, who is certainly a much better lawyer than legislator, while persistently shutting his eyes to the English civil service—of which he knows nothing—bears this testimony to the English administration of justice, as to which he knows, like every intelligent lawyer, a great deal:

> "I am no admirer of the British Government; but with all her injustice, with her oppression of Ireland, and the blood that stains her garments in India and her other possessions, yet to her glory it must be said, that in no other nation on earth is the law, after it is made, so impartially applied to all classes of society as in England. Wealth and influence, even noble blood, give no immunity to crime in a British court. The rich and the poor, the nobleman and the peasant, a prince of the blood and a scavenger of London, stand on a perfect level at the bar of justice in a British court."

With a state of things existing, apparently, so satisfactory to all concerned, it must cause some surprise on this side of the Atlantic that the advancing spirit of modern reform has laid its hand on the English judiciary, and even appears to be overturning courts which on the one hand have done their work so well, and, on the other, go so far back into English history as to have become a part of it. In one sense, the change is remarkable. The "Queen's Bench," direct descendant of the *Aula Regis*, the "Common Pleas," the "Court of Exchequer," the "High Court of Chancery," and the "House of Lords," are names of legal antiquity which we are hardly prepared to see swallowed up in our familiar, modern, American titles of "Supreme Court" and "Court of Appeals." But aside from the external matter of names, there is no overturning. It is improvement without the revolutionary element of destruction, and is, in fact, merely the consummation of a change whose slow and steady growth goes back nearly thirty years. The establishment of the Court of Probate was an important step toward the unification of the English judicial system. Law reform, which is something entirely distinct from judicial reform, came along between 1850 and 1860, when, by the Common Law Procedure and the Law of Evidence Acts, Parliament, with the co-operation of the judiciary and the bar, entirely changed the legal practice of the country. These statutes were so carefully considered and slowly elaborated as to have remained almost wholly free from the usual blemishes called

amendments. When the system of legal practice was simplified, and the change well established, the public mind travelled on to the subject of perfecting the judicial machinery. The order of events has been a succession of natural sequences in which the mediæval instruments have been refitted, part by part and piece by piece, for the multiplied necessities of modern society. The process has been thus: First, the law itself, civil and criminal, under the great law-reform movement of Brougham; next, the methods for administering the law, which come under the term of practice; finally, the tribunals which administer the law. This last is the change which for three years and more has largely filled the public mind of England—the mind of her legislators, judges, lawyers, merchants, editors, and has called out intelligent discussion from every class, going down to its minutest details. In our own experience in this State, we reversed the method and have failed to reach the result. The Convention of 1846, though legal in form, was revolutionary in its method of proceeding. It is the characteristic of revolutionists to destroy first and build up afterward—to accomplish everything by a blow instead of a process—and to think that things will be excellent for no better reason than that they are the opposite of the things that went before. The Convention, sitting but a few months and doing work which was beyond practical revision or repeal, abolished the distinctive practice of law and equity, and by one blow struck down every existing court in the State from the local Common Pleas up to the Chancery and Court of Errors. Immediately afterward, and coincident with the establishment of the new courts, came the destruction of the old system of practice and the hasty adoption of a Code of Procedure which has been the subject of endless amendment and of as many constructive decisions as the Statute of Frauds. There was thus a new system of practice committed to a new system of courts, and it was difficult to tell to which system many perplexing mistakes belonged. Added to these difficulties was the fact that the changes provoked the hostility of bench and bar, and, instead of being their work conjointly with the legislature, were thrust upon them by the younger politicians of the State. Having thus sown the seed of uncertainty and delay, we are now reaping the crop—on the civil side of our courts in chronic procrastination; on the criminal, in series of trials like those of Foster and Stokes. Our State courts are much less the courts of poor men than those of England, for an involved system and a weak bench make the result too dependent upon the ingenuity and skill and audacity of counsel. A New York "scavenger" employing a single mediocre attorney would be very far from standing "on a perfect level" with Mr. Vanderbilt in a New York court. Our Federal courts are substantially in the position that the Judiciary Act placed them more than eighty years ago, and thus far their advancement seems to be a matter beyond the comprehension of Congress.

There is, however, one change about to be made in the English system which is of peculiar interest, and to some extent an apparent exception to what has been said, viz., the removal of judicial power from the House of Lords. The court of last resort has been the House of Lords in name, but not in fact. It would be nearer the truth to say that the judges of the highest appellate court have been *ex-officio* members of the higher legislative body. The system is not a bad one which brings a few leading judges to aid with their learning and experience the work of legislation, or which confides the responsibility of final judicial review to a few men who have been eminent as lawyers and pre-eminent as jurists. When a Lord Chancellor retires from office, he receives a pension of £5,000 per annum, but continues for life a judge of this court of last resort. But the judicial duties of the House of Lords have overgrown the court, and the court is one liable to grow weak when it most requires additional strength. For instance, the present court is composed, first, of the Lord Chancellor (Sir Roundell Palmer), one of the ablest and most accomplished of living lawyers; but he is obliged to act as Speaker of the House and as Chancellor. Next comes the Chancellor of Ireland, who, we believe, is almost entirely occupied with his own duties. Then come four ex-Chancellors, Lords St. Leonards, Chelmsford, Cairns, and Hatherley. Finally, there are Lords Colonsay, formerly Justice-General of Scotland, Penzance (better known as Sir James Wilde), late Judge of the Court of Probate and Divorce, and Romilly, well known to American lawyers as Master of the Rolls. Some of these are men of great age, like Lord St. Leonards; others retired, like Lord Hatherley, because of broken health. Out of the list of nine, probably Lords Cairns and Penzance are the only men able to give to the court of last resort the daily attendance and hard work which it demands.

Behind these measures of judicial advancement are others for the establishment of Tribunals of Commerce, to assure merchants of simpler and cheaper means for judicial redress; and behind them again are others for trying patent rights, etc., etc. With such advancement going on by our side, how long, we would ask every intelligent American, can America afford to stand still in the path of governmental progress and trust in the assurance of her political demagogues that she is "the most enlightened nation ever known"?

AN EXCURSION UP THE OISE.

PARIS, July 16, 1873.

OLD books have their history; they have a long tale to tell, a kind of personality. I happen to own a copy of Montaigne's 'Essays,' which has still its ancient binding, on which is printed, in large letters of gold, OURSCAMP. I had for years desired to see what remains of this celebrated abbey of Ourscamp, which was once almost as famous as Cluny, and now quite as forgotten. I knew little of it, except that it was situated in the valley of the Oise, not far from Noyon—the old episcopal city where Calvin was born—in the very heart of Picardy. I found, to my great satisfaction, that there was a railway station at Ourscamp, on the Northern Railway, and, accordingly, went directly there from Paris. I noticed everywhere, as soon as I arrived in the valley of the Oise, the beauty of the small Gothic churches in the villages. Noyon had evidently been a great architectural school, and the smallest of the chapels scattered through the country around it have a great style. A geologist would explain this profusion of architectural beauty by the fact that the valley of the Oise is an endless quarry of fine calcareous stone. At Ourscamp I made enquiry of the station-master: Where is the village? where are the remains of the old abbey? He seemed bewildered by the mention of the abbey. There was a factory on the other side of the river—a large factory, which employed a thousand people. That was Ourscamp. Then there was the new village. I did not care much about the new village, and I guessed that the abbey had become a factory. It is situated about a mile from the railway. As soon as I saw the great solid, majestic walls of what the station-master called the *établissement*, I felt sure that they had been built by a rich congregation of monks, and not by eager speculators. When I passed the iron gate, having asked permission to enter, I saw, at the end of a noble avenue, a palace built in the Louis XIV. style; an immense building, which was evidently the house of the abbots and of the canons. It is inhabited now by three brothers, Alsatians by birth, who have turned the whole place into a velvet factory. I was received with much kindness, though my hosts were somewhat unaccustomed to receive any archæological pilgrims. The first object which struck my view in the large drawing-room was a picture over the huge stone chimney, representing the miracle of Ourscamp—"Ursi Campus." Saint Remi, walking in the fields, met a poor peasant who was crying. A bear had killed one of his two oxen, and he could no longer plough his field. The Bishop found the bear, brought him to the peasant, placed him under the yoke, and ordered him to do with the remaining ox the work of his new master. The picture represents the bear and the ox under the same yoke, the Saint in his sacerdotal gown, and a crowd of devout serfs.

I was then taken to the ruins of the chapel of the convent. It was indeed more than a chapel—a noble church; the entrance is still erect as well as the transept and the whole of the choir. It is impossible to imagine a more romantic ruin; it is as fine as the abbeys which are visited by the tourist in England. The delicate vaults are entire, covered with garlands of ivy, and here and there trees have been allowed to grow; their trunks seem like natural columns, and their foliage shades the summits of the vaults. If through the columns the chimneys of the factory were not seen emitting their dark smoke, the beauty of these ruins would be mingled with a sense of perfect solitude, as they are completely surrounded with trees. From the church I went to a quaint building supported by rows of solid round pilasters. This was the *maladrerie*, a hospital which the Dominicans kept open for all sick wanderers; it is in perfect preservation; one half of it is now used as a chapel, and the other half as a school for the children of

the factory. It is in the Roman style; the windows are all round-arched, and there is no trace yet of the Gothic style. The church, on the contrary, is completely Gothic, but was built long before the florid period. The buildings which were occupied by the congregation are immense; they seem built for eternity. My hosts could not even tell me the place of the library, where my Montaigne once had its place among the ponderous manuscripts, the Aldi and the Elzevirs. Everything was broken up at the time of the French Revolution. It was a consolation to see the admirable management of the modern establishment. It is conducted in the most paternal manner; the children are well taken care of, and look in fine health. Most of the families who live there, some in the ancient buildings, some in cottages, have come from Belgium. "The Belgians," said my conductors, "are steady; they are easily satisfied, and stay with us, as we always have given them work, even during the war."

I went from Ourscamp to Noyon. Notre Dame de Noyon is one of the most celebrated Gothic churches in the North of France. It has been fully described by M. Vitet, and by others, and is now among the historical monuments which are kept in repair at the expense of the state. It marks the transition between the Roman and the Gothic style; its chief characteristics are its two square solid towers, the porch, which forms a quadrangular building in front of the church, and the splendid open gallery, which runs all round the four branches of the cross, over the aisles, and the chapels which surround the choir. In no church have I seen a gallery of such importance. Over this first floor, if I may call it so, runs a second small gallery, supported by Roman pillars. The effect of this magnificent building is somewhat spoiled by the whitewash which covers the stone. At the places where it is fallen, traces of the Roman polychromy are everywhere apparent. It would cost an immense sum to restore this cathedral completely, and Noyon is now become such an unimportant little town that the state is not disposed to sink many millions in it. There is no longer any bishop in Noyon; the houses of the chapter, which occupy a circular range round the church, are dilapidated and occupied by poor people. I gave a glance at the Hôtel de Ville, built in the florid Renaissance style, with ornamental windows. The respect for architecture has so completely vanished that a citizen of Noyon has been allowed to build a common house right against the Hôtel de Ville, so as to cover a third, at least, of its elegant façade. Calvin was the son of one of the small officials of the chapter of the cathedral, and, as he was a very promising scholar, he was educated at the expense of the chapter. But the Reform never made much progress in this episcopal town, which owed everything to its bishops. I tried in vain in the remains of the library of the chapter to find some documents on Calvin. The library now hardly deserves the name, and I only found one curious manuscript of the tenth century, in its ancient wood and ivory binding. This manuscript was concealed during the Revolution, when all the precious books were either stolen or destroyed.

I derived so much pleasure from my visit to Ourscamp and Noyon, that I determined to end my tour by a visit to a neighboring town, Clermont, where St. Louis is said to have been born. Clermont has a lovely situation on the brow of a hill, surrounded by woods. It is in one of these woods, called Bois Bourbon, that St. Louis, according to tradition, was born. At any rate, the beautiful church of Clermont was built by Robert, Count of Clermont. There is a chapel in it dedicated to him, and another to his brother the king. The church is small, but it is a perfect jewel, and as the county of Clermont fell in the appanage of the House of Orleans, the princes of that family have from time to time repaired and adorned it. On the top of the hill is the ancient castle of the Count of Clermont, and in various parts the battlements of old times and the old walls are still visible. This fort, which seems built for eternity, has become a prison for females condemned to hard labor. There is not one of the six hundred prisoners who has not committed a heinous crime. The director, an old retired officer, insisted upon showing me all parts of it. The view from the higher terraces is admirable, and the air is so pure that the prisoners enjoy better health than the honest laborers of the industrial towns. I could not help pitying the poor Gray Sisters who have voluntarily devoted themselves to the reformation and to the guard of the female convicts. Some of these Sisters, I was told, once belonged to the best society. Their life now is the hardest that can be imagined, for even at night in the dormitories a constant guard must be kept. Many of the prisoners have the most uncontrollable tempers. They cannot be trusted with knives in the refectories; their meat is cut beforehand, and they eat, Japanese fashion, with wooden sticks. They work with sewing-machines, and sometimes use the needles of their machines to wound their guardians. The goods they manufacture, chiefly *bottines*, are sold, and they can make a little capital, which is given to them at the expiration of their term. The most frightful trait of the régime is the obligation of absolute silence, day and night. The Gray Sisters told me that with liberty of speech among these corrupt and criminal females, they could not undertake to keep guard over them.

The Sisters never lay their hands on a rebellious convict; when a rebellion takes place, they call for male guardians, who keep the door and approaches of the prison, and who only exceptionally enter its precincts. I found the prisoners at church, six hundred women dressed in the same uniform, and singing psalms. This singing becomes a great pleasure for them, as they are never allowed to talk; so does confession, and the almoner confided to me that he was obliged to shorten and to regulate the confessions, as many of the prisoners would never end them, if it were left with them to do so. I noticed with pleasure that there are two separate departments, one for the hardened sinners, old women who are condemned for life, and who would have a bad influence on the rest of the prisoners; and another for the young women, condemned for infanticide. Their régime is not so hard, most of them being very penitent and very young. On the whole, it seemed to me that the prison was conducted with as much humanity as was consistent with the character of the convicts. But this visit quite filled me with sadness. I could not help being disgusted at finding such inmates in a place which was once the favorite stronghold of noble knights. Henry IV., during the wars of religion, once took refuge in it; there is hardly a Bourbon prince of the old times who did not rest in it after hunting in the woods which cover the plain. The church is still there as a glorious monument of the past, and it gave me pleasure to see how proud the inhabitants of Clermont are of their architectural jewel.

We often travel very far when there is much to see at a short distance. Nothing can be more pleasant or easier than this short tour in the valley of the Oise and to Clermont; but I doubt if one Parisian in a thousand has ever thought of making it. It would bring a foreigner into the very heart of old France, show him at a glance the birthplace of the old French monarchy, and the birthplace of Calvinism in the very heart of an episcopal town.

Correspondence.

A CORRECTION FROM MISS MARTINEAU.

To the Editor of the Nation:

Sir: In the number of the *Nation* for July 10 (page 24, paragraph 3) I see that I am mentioned, with the late Mr. Mill, as "having died."

As my handwriting is not unknown to you, I think it best to write to you myself in assurance of my not "having died," as your paper intimates. The length and gravity of my illness may go some way towards accounting for the mistake; but, as I have friends in various countries, and not a few in your own, to whom the news of my death must be painful, I must ask you to insert in your next number (unless it has been done in the interval) the fact that I was living at this date.—Yours respectfully,

Harriet Martineau.

The Knoll, Ambleside, July 26, 1873.

[We can only say that we sincerely regret the occurrence of this mistake, and cannot understand how it was overlooked at the time. —Ed. Nation.]

STEEL PENS AND "WRITER'S CRAMP."

To the Editor of the Nation:

Sir: The writer of this note has probably covered more paper with his penmanship than most men, and has always aimed at two things—rapid writing and a legible manuscript. He adheres still to the use of the "feather plucked from the pinion of one goose to spread the opinions of another." Occasionally he uses the steel pen, but he follows the directions given him in his youth: to rest the forearm on the desk, and the point of the little finger on the paper, as a guide to his hand, holding the pen lightly between the thumb and two first fingers, and using those two fingers and the thumb as flexible members, and not as the inflexible jaws of a small vise. Consequently, his manuscript *is* manuscript. Many modern writers work at arm's length, holding the stiff pen with a vice-like grasp, the point of the pen only touching anything; thus they strain the tendons of the arm, and are kept at a constant exercise of nervous anxiety about their "up-strokes and down-strokes." They experience, in writing, the same distress that a painter would who should lay aside his maul-stick and leave his arm unsupported. This mode of writing could not be practised with the quill, for obvious reasons, and should not be practised with the steel pen. No other solution of the causes of "clerk's paralysis" is needed than may be found in these circumstances. Let a rational mode of holding the pen be resumed, and the

"paralysis" will probably disappear. John Quincy Adams, who persisted in immense clerical labor to the last, was in the habit of holding his right wrist with his left hand as he wrote.

H. H. W.

Riverton, N. J., August, 1873.

THE FARMERS' GRIEVANCE.

To the Editor of the Nation:

Sir: What is the farmers' grievance? It is this: the production of a greater quantity of grain than can be moved at a profit above the cost of production. In other words, "*a glut of farm products*," the very bugbear of the advocates of a tariff for protection, has ensued under the operation of the highest protective tariff ever enacted.

This glut has been caused in part by the tariff and in part by other causes of like character, the chief one of the latter being the undue stimulus given to the construction of railroads by the national system of land-grants and the general system of county, city, and town grants for the same purpose.

From these causes has come a much wider diffusion of population than is either wholesome or economical. The true dependence of the farmer is upon the home market, using that term in its true sense, and not in the manner in which it is usually perverted by the advocates of protection. The great market of the farmer is, or ought to be, found in the consumption of those who minister to his wants at points near his farm, and whose service cannot be rendered to him if they are at any great distance, because their work is of a kind that cannot be moved at all, or cannot be moved any great distance. For instance, there can be no community of farmers at any point unless there is near by a blacksmith. We never hear much of the blacksmith in the discussion of the tariff; he is not spoken of as one of those whose consumption furnishes a great home market, and whose industry must be promoted by a duty on a foreign product of like character to his own. We do not find the lobby member hanging around the doors of Congress and urging upon the members of Congress to support the blacksmiths as well as the steel-makers at the public expense. On the contrary, the argument is, "Support the steel-makers at the cost of the blacksmiths, lest the farmers should lose the market which the great manufacture of steel gives them. What if the blacksmiths must pay a little more for the steel they use for a time? they will have more work to do, because the farmers will need more tools wherewith to raise the crops to supply the makers of steel with food."

Now it needs only to examine the statistics of the last census on the occupations of the people of the United States, to expose the fraudulent nature of the argument for protection in order to create a home market for farm products. From those tables, which have been found to be more accurate than any other portion of the census, we find that there were in 1870 in the United States 5,922,471 persons employed in agriculture; 141,774 blacksmiths; 2,437 steel-makers, engaged in making cast, forged, and Bessemer steel.

It thus appears that in order to protect a branch of industry which belongs in this country by the law of nature, but which is controlled by the owners of only thirty establishments all told—who, having doubts of their own skill and capacity, have asked and obtained an enormous bounty at the public cost—and which employs a force of workmen only equal in consuming power to the product of one good-sized Western farm, the six million farmers, the majority of the voters of the country, have taxed themselves millions upon millions on steel. They pay this tax to the blacksmiths and steel users, by whom a small portion is paid into the Government treasury on foreign steel imported, but by far the greater portion to the owners of the thirty establishments named; and they have so taxed themselves upon the false pretence that unless they did so their great home market would be lost.

It is true that there are other branches of industry ostensibly protected by the tariff that employ more workmen than the manufacture of steel, but the same rule holds good throughout. There are about 70,000 persons engaged in mining coal for iron furnaces, in mining iron ore, and in making pig-iron; in their behalf, and in order to maintain the home-market, iron is very heavily taxed; but their market is not the true home market for the Western farmer; they must be concentrated in a few places, and, in supplying them, a large cost of transportation must be paid. On the other hand, it is safe to say that, for every one man engaged in making iron, there are ten men engaged in its use, and the ten men, from the nature of their employment, are or may be *near* to the farmer. Every Western town and city has a portion of them. Stoves, tools, pipes, pumps, ploughs, and the like either may be or must be made near their point of use; that point is not only near but next to the farm. These users of iron outnumber the iron-makers ten to one, and yet they who live thus near or next the farm are made the tax-gatherers from the farmers, on the pretence that unless the little force of pig-iron makers, who are so far off that it absorbs two bushels of wheat to get one to them, are supported by this tax, the farmer will have no market for any wheat.

As to textile fabrics, the mill operatives are far outnumbered by those who make the cloth into clothing; the former are concentrated, the latter are widely diffused, and are or may be next the farmer.

The nub of the difficulty lies here. Under the pretence of fostering a home market, those branches of industry that require the most capital in proportion to wages paid, and that must be concentrated at special points distant from the Western farms, have been aided by tariff bounties at the public cost. Those branches of manufacture and the mechanic arts which use the protected articles, have been made the medium of collecting the tariff tax from consumers. This latter class outnumber the laborers in the protected industries by ten to one, and they are, or ought to be, next the farmers.

Thus, while the tariff has hampered and crippled about 380 of the manufacturing and industrial occupations of the country out of 390 listed in the census, and has thus prevented the blacksmith, the carpenter, the stove-maker, the tinman, the clothier, the shoemaker, and the like from following the farmer into distant States as rapidly as they would have gone in the absence of Government interference, every effort has been made to diffuse the farming population at the most distant points—land-grant railroads have been built out into the wilderness, and the farmers, led by the vision of cheap land and a virgin soil, have been induced to follow.

The true need of the farmer now is, not so much to cheapen the cost of transportation to distant markets as to bring the market near to him, by establishing around him that diversity of employment, and next to him that true home market, without which no thorough prosperity can possibly exist. To this end the distrust of railroad bonds and stocks which may come from the wild blows that the farmers are now striking will surely tend. They will cause capital to avoid building more roads at present; farm products being in excess, other occupations will come in. The mechanic as well as the farmer will migrate, and presently Iowa, Minnesota, and Nebraska will cease to export food, as New York and Ohio have done, for the reason that their own home market will need it all. When they depend only on distant markets to take the smaller rather than the larger parts of their crops, their true prosperity will have come. How, then, will New England be supplied? Let her alone and she will find an answer. By meddlesome interference, the Government have succeeded in promoting discontent on every side and in every section. Is it not time to try the method of liberty and freedom from the perversion of the power of taxation?

New Englander.

Notes.

A NEW edition of Bishop Berkeley's 'Principles of Human Knowledge,' edited by Prof. Charles P. Krauth, is announced by J. B. Lippincott & Co. It will include a life of Berkeley, an essay on his philosophy, the entire notes and illustrations of Fraser and Ueberweg, besides much original matter by Dr. Krauth. The same house will publish a 'Lord Lytton edition' of Bulwer's works, and have besides in press the following: 'Thinkers and Thinking,' by J. E. Garretson, M.D.; 'Liberty and Law under Federative Government,' by Brittan A. Hall; 'Mission of the North American People, Geographical, Social, and Political,' by William Gilpin, late Governor of Colorado, who used, we remember, to believe that mission to be to come up and settle about Pike's Peak; 'Sparks among the Ashes,' almshouse reminiscences of Rev. F. C. Pearson; and 'Berrytown, and Other Stories,' by Mrs. Rebecca Harding Davis.——The Harleian Society is about to publish the 'Visitation of London,' made in 1633–4–5, under the editorship of Dr. J. J. Howard (who has already edited the 'London Visitation' of 1568) and of our countryman, Col. J. L. Chester. This publication will interest Americans who trace their descent from old London ancestors. The donation of one pound for the purpose of illustrating it with woodcuts of the coats of arms, etc., occurring in the 'Visitation,' will entitle a subscriber to a second copy. Dr. Howard is the Society's treasurer, and may be addressed at 3 Dartmouth Row, Blackheath, Kent. ——J. R. Osgood & Co. will, we believe, publish a series of lectures on Church and State in North America, lately delivered in Berlin by the Rev. Dr. J. P. Thompson, formerly of this city. A German translation, published by L. Simion, has met with a very favorable reception in Germany, and the work is calculated to prove a useful and timely contribution to the discussion of the principles with which it deals. ——Gebbie & Barrie, Philadelphia, have undertaken to reproduce Boydell's

Shakespeare Gallery by the heliotype process. The work comprises 100 plates, and will be issued in twenty-five parts, at $1 each. The reduction in size is about one half.

—The works which gave Mr. Bret Harte a national reputation have begun to find, through translations, a very appreciative audience in Germany. In late numbers of the *Weser-Zeitung* 'Mrs. Skaggs' Husbands, has been thus reproduced, and simultaneously at Leipzig have appeared (1) a selection from our author's prose tales (*Californische Novellen*), by Wilhelm Hertzberg; and (2) the first volume of a complete version, both prose and verse (*Die Argonauten-Geschichten*), by an anonymous translator. Hertzberg had already acquired distinction as a translator of parts of Chaucer, Shakespeare, and Tennyson, and his work in the present instance is pronounced much better than that of the rival edition, with which, as far as it goes, it may be directly compared. It embraces the 'Luck of Roaring Camp,' 'Bliss,' 'Brown of Calaveras,' and 'Princess Bob.' In the difficult task of rendering the California dialect, Herr Hertzberg has used the familiar language of Germans in humble life, which of course inadequately represents the slang of the mining camp. It is, however, probably the best that could be done under the circumstances. The report, which originated in this country, that Freiligrath was to undertake a translation of Mr. Harte's works, does not appear to be confirmed. He has indeed contributed versions of one or two of the latter's poems to Paul Lindau's periodical, *Die Gegenwart*.

—Mr. Wm. F. Poole's report of the condition of the Cincinnati Public Library for the year ending June 30 presents a very encouraging picture of progress. The number of volumes has grown in less than three years from twenty-three thousand to nearly sixty thousand. Part of this increase has been due to the deposit with the Library of certain special collections, theological and medical (Cincinnati Hospital Library), which will serve as the nuclei of departments of the general collection. The classification of the books circulated during the year is almost identical with that of 1872. A slight gain was made in German and French literature (11·2 per cent. against 10·5), and a gain (by loss) of 1 per cent. in English Prose Fiction and Juveniles (73·8 per cent. against 74·8). It still remains true, therefore, that three-fourths of the utility of any public (or perhaps we should say popular) library is to gratify the taste of novel-readers. In Cincinnati, as Mr. Poole shows, the female sex does more of this reading than the male. "Of all persons taking books, those below the age of twelve years are 2·9 per cent.; those between the ages of twelve and sixteen are 19·4 per cent.; and those above the age of sixteen are 77·7 per cent." From this it might be inferred that two-thirds of the adult readers were addicted to fiction, but we presume this not to be the case. It is quite likely that the twenty-two or three per cent. of readers under sixteen devour twice as many books as those who have passed that age. The experiment of Sunday opening has proved so entire a success that, as the president and superintendent of the Young Men's Christian Association inform the librarian, they are not only earnestly in favor of it, but know of no opposition to it among the evangelical clergymen and laymen who belong to their Association.

—As we make out from its issue of July 31, the Toledo *Blade* has been offering a book premium on subscriptions, and the account it gives of the direction of the popular taste in the choice of reading matter is rather surprising. According to its list of books called for "in the past few weeks, the proportion stands about as follows": Leading off, and apparently at the head of the roll, stands our old acquaintance, Flavius Josephus, of whose works no less than 700 copies were ordered. But if we understand the matter aright, it is only apparently that Josephus is at the head, and really the superiority must be awarded to Shakespeare by large odds: "The 'Shakespeare' of list No. 1" is set down as having been ordered by 528 persons, "the 'Shakespeare' of list No. 2" by 230, and "the 'Shakespeare' of list No. 3" by 627, and these figures give a sum of 1,385, or within fifteen of being double the number of those persons who chose Josephus. Still, that 700 people out of 2,677—which is the total number of persons recorded as having taken a premium at all—should have selected Josephus is something remarkable, and we need not wonder that Messrs. Lee & Shepard inform the editor that "the *Blade* orders have again exhausted the supply of Josephus in this country," and that they will have to send to Scotland for more. The historian cannot have been in such request for years. Very probably it was the progenitors of this generation of "Western Reserve" Republicans who transmitted to their descendants the respect which these are now showing to the confirmer and illustrator of the sacred books, and transmitted also the sort of affection and personal gratitude which the Connecticut boys and girls of half a century ago used to entertain for the historian of the siege of Jerusalem—as the author of the only readable reading that in those days was allowed them on Sundays. Besides the 1,385 'Shakespeares' and the 700 'Josephuses,' the *Blade's* subscribers have called for "330 'Arabian Nights' of list No. 1, 132 'Arabian Nights' of list No. 3, and 122 'Byrons.'" It will be agreed that this is not a bad showing for the newspaper readers of the region round about Toledo. And the standard character of the works selected, if it leaves us in the dark as to the nicety and delicacy of the literary taste of the Rev. Mr. Nasby's subscribers—for the *Blade* is Mr. Nasby's paper—speaks well for their conservatism of temperament. And on the whole, the regular reading of the Bible, with Josephus as a commentator, 'Shakespeare,' the 'Arabian Nights,' 'Lord Byron' in small quantity, and a weekly paper like the Toledo *Blade*, ought to result in a fairly good type of Ohioan and citizen.

— The third volume of the 'Transactions of the American Philological Association' has just appeared. It may be got by application to the Secretary of the Association, Professor G. F. Comfort, on payment of two dollars, and the first and second volumes of the series are to be had at the same price. They make an interesting series of books, the contents of which are various in value but all worth having and some excellent. This third volume contains ten articles, which treat respectively of the following subjects: "Studies in Cymric Philology" (Prof. E. Evans); "Words derived from Indian Languages of North America" (J. Hammond Trumbull); "The Byzantine Greek Pronunciation of the Tenth Century" (Prof. James Hadley); "The Substantive Use of the Greek Participle" (Prof. W. A. Stevens); "Erroneous and Doubtful Uses of the word 'Such'" (C. A. Bristed); "Notes on the Lingoa Geral of the Amazonas" (Prof. Ch. Fred. Hartt); "Material and Form in Language" (Prof. W. D. Whitney); "Is there an Anglo-Saxon Language?" and "Some Irregular Verbs in Anglo-Saxon" (Prof. F. A. March); "Notes on Forty Versions of the Lord's Prayer in Algonkin Languages" (J. Hammond Trumbull). There is also a paper entitled "Proceedings—Fourth Annual Session, Providence, 1872," which makes brief synopses not only of the articles just named but also of others that were read before the Association. Of most interest to the general reader is Mr. Hammond Trumbull's article on English words now or formerly in use and derived from the Indians. Of this we have spoken once before (*vide Nation*, No. 370, p. 74), but not at length. Mr. Trumbull's list includes "wigwam," "totem," "wampum," "succotash," "hominy," "samp," "suppaun," "persimmon," "pekan" (pekan nuts), "hickory," the Canadian "toboggin," which is the same as our (obsolescent?) "pung," "tomahawk," "papoose," "canticoy," "cockarouse," "canoe," "tobacco," "barbecue," "buccaneer," and the famous "caucus" which has so often, after the true fashion of false philology, been derived from "caulkers," and attributed to Tory derision of patriotic ship-caulkers' meetings at the North End of Boston. Mr. Trumbull finds its origin in an Indian word (caw-caw-was-sough), meaning one who advises, a pusher on, a promoter, a caucusser. From this same word he derives the term cockarouse, once colloquial in ante-Revolutionary Virginia, where it meant "one that has the honor to be of the king's or queen's council." Canoe, tobacco, buccaneer, barbecue, and hammock Mr. Trumbull regards as importations into Virginia from the Antilles. As early as 1635, the English in Guiana used the word "barbecue" to denote "the Indian method of curing meat or fish by laying it on a hurdle or wooden gridiron supported by four stakes driven into the ground, and exposing it to the heat of the sun or the smoke of a slow fire." So too of buccaneer: the West Indian "buccaneer" was originally a hunter of wild cattle who "boucanned" his meat to preserve it, the Brazilian Indians giving to the process of grilling which the Guiana Indians called "barbecue" the name of "boucan." In process of time, the wild hunter's name was transferred to the lawless sea rover and robber. "Pâcan" was the common name for all nuts of so hard a shell as to require a hammer for cracking them, but at the West and South this term, in the form "pekan" or "pecan," has been exclusively reserved for the fruit of the *Carya olivæformis*. "Hickory," from the Virginian "powcohicora," is properly the name neither of the tree nor the nut, but of a kind of milk or oily liquor pressed from the shells. Hence, perhaps, the name of "hickory" given to cloth dyed in a decoction of hickory shells, or hickory bark, whichever it is. The Canadian "tarbogin"—to adopt Mr. Trumbull's way of spelling it—is from a northern Algonkin equivalent, "ooda"ba"gen," "that on which something is drawn," from which the transition to "tarboggin" or "toboggin" was easy. That "pung" is derivable from the same source does not look so plausible till we learn that a hundred years ago the pung was the "Tom Pung," with the emphasis apparently on the "Tom"; as for instance in a description of Roxbury in 1798 as

> "That famed town which sends to Boston mart
> The gliding Tom Pung and the rattling cart."

Altogether, this will be found a very entertaining essay by every one who likes to dabble in etymologies, and dabbling in etymologies is a pleasure to an incredible number of people.

—A few months ago it was stated, on very high authority, that Aristotle knew more about the shark than anybody since his day, and could still be profitably consulted on that subject. This was, perhaps, not one of the "extravagant claims urged in favor of the recognition of Aristotle as an exponent of classificatory science" which Dr. Gill had in mind, but it was recalled to us on reading his paper in the August number of the *American Naturalist*, "On the Status of Aristotle in Systematic Zoölogy." Dr. Gill is not only abundantly qualified to speak to this point, but he professes to do so while being "a hearty admirer of the great philosopher (more excellent in intellectual than in physical science)" and after "careful and repeated perusal of Aristotle's biological treatises." In general, he finds that Aristotle "was a tolerably good observer and compiler, and surpassed ordinary men, perhaps, in ability to embody in words the results of his observations of various disconnected facts. There is, however, no co-ordination of the facts observed, no valuation, and no subordination which would entitle his observations to be considered as a body of scientific facts or doctrine." Thus, touching his complete and scientific recognition of the Class as now limited, it appears that "among the viviparous animals are included man, the horse, the seal, and others with hair; and, among marine animals, the cetaceans; but"—and here the shark comes upon the scene—"so are also the *Selachians* (I. iv. 1); and, in another chapter (I. vi. 2), the viper is added." Homologies Aristotle recognized in a vague manner, but "adopted the current view that all animals, except the elephant" (he forgot even the monkey) "differed from man in the contrary flexures of the limbs"; stated that the lion has no vertebræ, but only one bone in the neck; and, instead of noting this creature s resemblance to the cat, likens its internal parts, when exposed, to those of the dog. The groups which Aristotle recognized were obvious to common observers, and "are the crude materials with which the naturalist has to deal. He was unacquainted even with the characters which furnish the criteria for classifying them, and to assign to him any definite views respecting their relationship is an anachronism, and may involve wrong to himself." Another paper in the *Naturalist* which will repay reading is that on the Distribution of Californian Moths. The writer, Dr. A. S. Packard, jr., extends to insects the doctrine of a circumpolar origin which Dr. Asa Gray has shown to be demonstrable for vegetation, when discussing the astonishing similarity of the flora of the Atlantic United States with that of Northeastern Asia.

—The notorious English clergyman who calls himself a Benedictine monk, and goes about the country under the name of "Brother Ignatius" or "Father Ignatius," wearing a mock-monkish costume, keeping the crown of his head shaved, carrying a crucifix, and so forth, has recently been having some experience in the courts. It appears that on the fourth of June last a youth, aged seventeen, the son of a Mr. Todd, who had been placed in a London counting-house for the purpose of being bred a merchant, suddenly informed his father that he wished to become a monk. His father, who was naturally startled and displeased at this information, withheld his consent, and on the fifth of June young Todd disappeared, leaving behind him no clue as to his whereabouts, except a letter from a Mr. Joseph Leycester Lyne, appointing the place and time for a meeting between the boy and himself. This Mr. Lyne is no other than "Father Ignatius," Lyne being the real name of that gentleman. The boy was, by-and-by, traced to a village near Hounslow, where there is an imitation convent in which a certain number of women are living an imitation conventual life under the supervision of the Rev. Mr. Lyne. From this place, and in reply to a communication from his father, young Todd wrote that he felt convinced that he was doing right, and that at the end of six weeks he was going to take "the novice's vows." Upon this, his brother and his uncle went to the house, but found that the boy had been removed to Llanthony, where Mr. Lyne has set up a Benedictine monastery, so-called, and where, by-and-by, Todd's relatives found him, with his head shaved and his body clad in appropriate raiment of a monastic fashion. They could not prevail on him to obey his father, and were obliged to go away without him—leaving, however, a letter for Lyne, warning him of the consequences that would ensue if he abetted the boy's disobedience. Various letters followed this one, all of Lyne's beginning with a formula which, as it appears, that gentleman always uses—"Jesus only. Pax"—which of itself must have exasperated Mr. Todd not a little. In one of these agreeable communications, Ignatius invited the elder Todd to effect a specified pecuniary transaction with him, as, if this was not done, Ignatius would be compelled to turn the younger Todd into a menial servant of the abbey. Apparently, this convinced Mr. Todd that the point of too much for human endurance would speedily be reached, and he betook himself to the law. In this storehouse of wonderful devices he discovered the effective weapon for which he was looking. Acting under legal advice, he began by purchasing for Master Todd one hundred pounds' worth of consols, and constituting himself a trustee of that amount; then he filed a bill in Chancery, so as to make young Todd a ward of the court, and directed his solicitors to write to Ignatius, requiring him to restore the boy. To this the reply was: "Jesus only. Pax. It is quite news to me that I am a ward in Chancery. Directly the Lord Chancellor requires my presence in court, I have no doubt the Reverend Father Superior will allow me to come up for the occasion." The order was soon forthcoming, and on the twenty-fifth of July the Vice-Chancellor, Sir R. Malins, ordered Master Todd into the custody of Mr. Todd—much to the satisfaction of the latter; much, also, to the satisfaction of a Protestant Episcopal and Nonconformist mob outside, which hooted Father Ignatius very much, as he drove away in a cab, and which a friend of his describes as having been far more blasphemous than any set of persons ever before under his observation. Within the court, however, Father Ignatius is said to have been treated with great benignity, and to have been in return extremely mild and sweet himself—these suave qualities, however, not decreasing, but rather augmenting, the rage and fury of his enemies, who become all the more excited the more the good Father turns up his eyes in prayer for them and exhibits marked blandness. Sir Robert gently questioned him about his seeming contumacy, and Ignatius was profuse in expressions of respect for the laws, and declared that his "character as a Christian" would alone render it impossible for him to disregard an order of the Vice-Chancellor.

—The case of Todd *versus* Lyne has moved the *Pall Mall Gazette* to give a particular account of Mr. Lyne, and to discuss the nature of "vows" taken by persons who disown allegiance to the Pope. As for Mr. Lyne, he appears to be a very insupportable person. In a recently published discourse, he speaks of himself as having lain pawned in the devil's pawnshop until Christ came and redeemed him. "Do you know," he adds, "I often think Christ must have very bad taste to choose a poor wretch like me?" "Troubles," he goes on afterwards, "drop off the saint like water off a duck's back." "Some saints," he says, "are so overcome by a sense of their own unworthiness that they are obliged to cry out, 'No, don't, Lord; please don't; this is too much.'" In the same discourse, he indulged in the following pleasantry: "I always feel tempted to say funny things when I am preaching; it appears to me that when I haven't been thinking of Christ I get a fit of spiritual indigestion." In extenuation of this kind of remark—for repeating which we ought perhaps to make an apology—it may be said that it was uttered before an illiterate audience, and that the preacher probably thought it his best course to talk down to the assumed level of the congregation's intelligence; but we can all see the plight in which this plea leaves the good judgment and good taste of the preacher, and how natural must be a parent's resolution to prevent his son's taking "the novice's vows" in Mr. Lyne's establishment. As for the difference between vows taken in the Roman Church and those taken in the English, it is thus defined by the *Gazette*: A vow is a contract between a man and God—a contract in which the person has no power whatever to withdraw from his engagement without the express permission of God himself. Now, in the case of all monastic vows, the Pope acts as the representative of God, and the superior before whom the vow is made is the intermediary between the Pope and the person making the vow. The Pope, in the exercise of absolute divine authority, accepts the vow, and gives God's sanction to the contract, which is a complete contract as soon as the novice is informed that God has ratified it, and cannot be broken without grievous sin. The Pope can absolve any monk from his vow just as he can accept the vow; in annulling, as in accepting, he speaks as God, having in fulness the divine authority. Now, in the English Church do the wildest of superiors or superioresses maintain that in receiving vows of obedience they are the personal representatives of God, capable of speaking for him and making a binding contract between him and the person vowing? To ask this question is to answer it. The whole thing is an audacious profanation; not intentional, of course; but as a matter of fact, and in itself, the assumption of the clergy who accept these vows is as audacious a profaneness as the annals of priestcraft have to record. In reality, continues the *Gazette*, there is not a shadow of difference between the quiet, piously meant, secret self-sacrifices now encouraged in various convents of the Church of England and "the profound irreligiousness of this mock Benedictine monk, with his advertisements in the newspapers, as he goes starring about the country." The inmates of the convents would repudiate his proceedings with disgust; but in the essential respect of the binding quality of the so-called vow, that administered by him and them is alike worthless.

—It seems from an article by the late Mr. Mill, published in the *Examiner*, that the designs of the English "Land Tenure Reform Association," as Mr. Mill understood them, were not so comprehensive as the public generally supposed. According to the popular notion, it was the belief of the Association that the state ought to take for the general use of the community whatever increase of value in land came from the general improvement in prosperity of the country, and did not come from the labor of the owner. What

portion of the value has come from the labor of other people, and not his own, should belong to those others; if it be improvement made by a tenant, they or their value should belong to the tenant; if it be through a general improvement in the social condition of the country, brought about by general activity, the country at large should reap the benefit. "The growth of towns, the extension of manufactures, the increase of population consequent on increased employment, create a constantly increasing demand for land, both for the habitations of the people and for the supply of food and the materials of clothing. They also create a constantly increasing demand for coal, iron, and all the other produce of mining industry. By this increase in demand the landed proprietors largely profit, without in any way contributing to it. The income from rural lands has a constant tendency to increase; that from building lands still more, and with this increase of their incomes the owners of the land have nothing to do except to receive it. The Land Tenure Reform Association claims this increase for those who are its real authors." Mr. Mill says, however, that though the Association asserts the extreme right of taking all this increase by special taxation, it has "no intention of paring down the increment of rent to the utmost farthing." A margin ought to be left to ensure against mistakes. This modification is a very important one, for it recognizes the fundamental difficulty in the imposition of such a tax—the difficulty of being able to distinguish between the increased value which comes from the general labors of the community and that which comes from other causes which it is impossible to investigate. In this country, the principle, so far as it relates to the increase produced by tenants' improvements, has been generally recognized and provided for by legislation. The other tax will probably never be laid in this country, whatever may be the fate of the proposition in England, until some method is discovered of keeping an accurate record of the annual increase in value of each square foot of land throughout the country, combined with a register of every ounce of manure or phosphate put upon it, every day's labor hired, every tree planted, and finally every thought, doubt, hope, and fear of the landlord weighed in the balance and accurately estimated. When this is done, it will be probably found that the difference in most cases between the present value of the land and the value of the money actually invested in it at compound interest, would be extremely small.

THE CREDIBILITY OF MYTHICAL HISTORY.*

STUDENTS wonder at the slow credence obtained among men of common sense for the negative results of historical criticism. More than a generation has passed since Niebuhr gave a new turn to historical speculation, yet every day makes it plain that the doubts thrown by him and his followers on the credibility of early myths and legends have penetrated but a little way into the minds of so-called educated readers. Last year an assembly of politicians, church dignitaries, and professors celebrated at Oxford the thousandth anniversary of a supposed event in English history which every historian knew had never taken place. You may read any day in newspapers addressed to an educated public naïve expressions of doubt as to the legend of William Tell, while any man who has looked even cursorily into the subject may learn for himself that the story of Tell and his bow is one of those few myths of which the falsehood can be shown almost to demonstration. Every year writers appear who think they can re-establish belief in early Roman history by showing that it is within the bounds of possibility that a wolf may suckle a couple of deserted babies, and the public obviously hold that such theorists have a right to as respectful a hearing as the men who have by laborious research established the difference between myth and history. Persons who see the depth of ignorance which exists as to the nature of historical evidence are far too apt to overlook the real cause which hinders men of intelligence from accepting results which at least ninety-nine out of every hundred students hold to be established past question. Yet until this cause is appreciated, it is impossible to remove those misconceptions as to the credibility of legends and myths which students are apt to attribute to simple prejudice or perversity. The cause is not hard to find. A man of common sense who hears for the first time that the history, *e.g.*, of the Roman kings is open to doubt, naturally approaches the subject as follows:

"What reason is there why I should disbelieve the events of the reign of Romulus or of Tarquin? They have been believed for centuries; they are handed down to us by grave historians, the mass of whose assertions no one questions. Surely the burden of proof lies on those who maintain that early Roman history is incredible. To show that some of the events narrated are strange, or even portentous, amounts to little or nothing, for the same thing may be shown with regard to the most certain historical transactions; and when you have proved that some of the anecdotes told of Romulus or Remus have an air of poetry about them, you have proved little more than that ancient history is, like other history, not strictly accurate, and have certainly not proved that the early annals of Rome do not represent a substantial basis of fact."

To a man who argues in this way, the single criticisms of Niebuhr and his followers appear to have little weight. The fall of the Tarquins is not in itself more incredible than the expulsion of the Stuarts. If there is something marvellous in the legend of the defence of the bridge by Horatius, there is much that is marvellous in Hannibal's march from Spain to the walls of Rome. Our supposed man of common sense asks himself why he should not believe Livy when telling of the siege of Rome by Porsena, if he is to put full credit in his account of the battle of Cannæ, and comes to the conclusion that the one event is well-nigh as credible as the other, and generally that the doubts thrown on the credibility of early Roman history are the fruits of professional scepticism, untempered by everyday common sense. This line of argument, or something in substance like it, is harder directly to refute than students are quite willing to admit. The only way to attack it with success is to deal directly with the assumption on which it rests. This assumption is that tales that have long been believed as history, and have been handed to us in good faith by respectable historians, have *primâ facie* a strong claim to be believed, and ought to be treated as history until their baselessness can be all but demonstrated. Grant this assumption, and there are few of the ancient myths, from the tale of Troy downwards, which cannot make out a fair claim to pass as historical narratives. They have been believed to be true for centuries. They come to us forming part of the works of writers who transmit to us an immense number of unquestioned historical facts. The ages in which the alleged events took place are so utterly unknown to us that it is in most cases impossible to show that the narrative we have received is inconsistent with other known facts. If you grant the assumption that there is a strong *primâ-facie* ground in favor of early Roman history, you will scarcely be able to prove that Romulus was not the founder of Rome and did not slay his brother Remus. The point to be disputed is the assumption. All history depends on evidence. The question in every case is not, why should you disbelieve, but why should you believe, an assertion as to the past? The reason why you believe that Cæsar died by the hand of Brutus and his fellow-conspirators is at bottom because you can trace up the assertion that he did so to a large number of persons living at the time and knowing the facts and making assertions which are fully accounted for by the fact that Cæsar was murdered, and which could never have been made at all unless the fact asserted had really happened. Unless, for example, Cicero's letters could be shown to be a forgery, the main facts of the fall of the Republic are as certain as the main facts of the French Revolution. You believe that Brutus killed Cæsar, not because the fact has been long received as history, but exactly for the same reason on which you believe that the Convention put Louis XVI. to death. Take the early history of Rome, and you will find that no similar reason for belief exists. Livy lived centuries after the events he narrates. He narrates them as if he knew the words and thoughts of the actors in the drama, but we know that the evidence which induced him to believe in the existence of Romulus was merely the fact of the tradition that Romulus existed, and of the worth of this tradition we are better judges than Livy or any man of Livy's century.

It will of course be urged that the mere existence of the tradition is *primâ-facie* evidence of the truth of the facts handed down. It is exactly at this point that historical investigators, and what for want of a better term may be called men of common sense, join issue. The one class assert that a tradition, no doubt, sometimes may and does embody real facts, but that the mere existence of the tradition is certainly no proof of the truth of what it reports. The other assert or rather imply that the mere fact of a narrative having long passed as history affords a strong presumption of its truth. The negative views of historical critics will never gain the currency they deserve until historians have boldly met the issue presented to them, and have made it perfectly plain that the mere existence of a tradition affords but the very slightest presumption in favor of the truth of an event unsustained by other evidence. How to make this plain is the chief difficulty which meets all persons who wish to propagate sound views of criticism. The only way in which, as it seems to us, their object can be effectively achieved, is to take some definite myth which has long passed current as history, and show its historical baselessness. It is, as we have already pointed out, very rarely that this can be done, but occasionally the desired result can be achieved, and when once obtained it is of inestimable worth. Show demonstrably that one piece of received history which rests on no sound evidence is certainly untrue, and you weaken indefinitely the weight of authority in favor of tales which men still think themselves bound to believe, simply because, for a long time, these tales have been reputed true. Looked at from this point of view, the

* 'Fables respecting the Popes of the Middle Ages. By John J. Ign. von Döllinger. Translated, with Introduction and Appendices, by Alfred Plummer, Fellow of Trinity College, Oxford.' London: Rivington & Co.

actual importance of the legend criticised becomes of minor consequence. Any tale, however childish in itself, is a good *corpus vile* on which to execute the experiments of criticism. It is this reflection which makes every careful reader consider Dr. Döllinger's 'Fables of Papacy' a weighty contribution to the philosophy of history. The book possesses a transitory interest as bearing on Papal controversies, and as a work of controversial importance and of curious erudition received due attention when it first came out in 1853. The appearance of an excellent translation by Mr. Plummer, accompanied by very valuable appendices, which are the work of the translator, shows that the educated public appreciate the permanent importance of Dr. Döllinger's investigations. Our object at present is to neglect entirely their controversial aspect, and to call attention to the light they throw on, at any rate, the possible worthlessness of legends which have long usurped the name of history.

No tale ever established a better *primâ-facie* case to be counted historical than the story of Pope Joan. About 850, so ran the tale, a woman came to Rome disguised as a man, and gained a high reputation as a professor. This teacher, on account of her irreproachable character and immense attainments, was, without any one even suspecting her sex, elevated to the Papacy. The Popess, to use Mr. Plummer's convenient term, reigned for rather more than two years. In the midst of a procession she gave birth to a child and expired. Her strange career left permanent traces on the ceremonies attending the installation of subsequent Popes, and was commemorated for all time by the fact that Papal processions always avoid the street in which she expired.

The story sounds to modern ears incredible enough, and a suspicion suggests itself that the tale owes its origin to Protestant malignity. But the legend, whatever its worth, is long anterior to the days of the Reformation. The history was apparently at least recorded in 1278 by Martinus Polonus, who lived at the Papal Court, and whose annals of the popes have some title to be considered an official history issuing from the Curia itself.

"Quite at the beginning of the fifteenth century, the bust of Pope Joan was placed in the Cathedral at Sienna along with the busts of the other popes, and no one took any offence at it."

Not one of the three popes whom that city produced thought of having the bust removed. At the Council of Constance, Huss supported his argument by appealing to the case of Pope Joan, and Chancellor Gerson proved from the history of the woman-pope that the church could err in matters of fact. No one dreamt of denying the fact on which the Reformer and Gerson relied. It will further be found that the history of Pope Joan was spread far and wide by the Dominican order, and was, in short, for ages looked upon as an historical fact as certain as the martyrdom of St. Thomas of Canterbury. If it is urged that the tale bears its own falsehood on its face, the strangeness of the story cuts two ways, and it might well be argued that a legend so improbable could never be invented, but must at any rate have been suggested by some real event. Who, it may be said, could believe that from Rome itself, from the very mouth, so to speak, of the popes, would issue a lie which covers the whole Papacy with discredit? This is precisely the argument on which the German writer, Luden, relies:

"It is inconceivable," he says, "how it could ever enter into any man's head to invent such an insane falsehood. He must either have invented the lie out of sheer wantonness, in order to scoff at the Papacy, or he must have intended to gain some other object by means of it. But of all the dozens of writers who mention Pope Joan and her mishap, there is not a single one who can be called an enemy of the Papacy. . . . Moreover," he adds, "it is inconceivable how people in general could have believed in the story, and that without the slightest doubt, for nearly five hundred years from the eleventh century onwards, if it had not been true."

Dr. Hoefer, in a French work published in 1858, treats the belief in Pope Joan as one which had "reigned in the Christian world from the ninth century to the Renaissance"; and Mosheim has added his weighty authority to the support of this astounding tale. After narrating the history of the Popess, he remarks:

"During the five subsequent centuries the witnesses to this extraordinary event are without number; nor did any one prior to the Reformation by Luther regard the thing as either incredible or disgraceful to the church. But in the seventeenth century learned men, not only among the Roman Catholics, but others also, exerted all the powers of their ingenuity both to invalidate the testimony on which the story rests, and to confute it by an accurate computation of dates. . . . Something must necessarily have taken place at Rome to give rise to this most uniform report of so many ages; but even yet it is not clear what that something was."

In short, every *à priori* argument which can be urged in favor of the credibility of a myth has been urged, and that by men of undoubted ability and learning, in support of the legend of the woman-pope. The prevalence of the belief, the existence of ceremonies supposed to have their rise in the facts handed down by the tradition, the improbability of error, the absence of any temptation to fraud on the part of those who propagated the report of this papal scandal, the very improbability of the tale, have all been urged with prodigious force to prove it true, and are exactly the considerations which suggest themselves to every one unacquainted with early history when attempting to estimate the value of mythical narratives. Yet we venture to say that no intelligent man can read Dr. Döllinger's essay without coming to the conclusion that there is no more reason to believe in the existence of Pope Joan than the existence of a centaur or a chimera.

Our space does not allow us to trace out minutely the course of Dr. Döllinger's argument. The lines of reasoning by which he assaults the credibility of the tradition are, speaking generally, as follows: He shows, in the first place, and this point he may be said absolutely to demonstrate, that the tale, despite a *primâ-facie* appearance to the contrary, cannot be traced to any date earlier than 1278, and that there is every reason for supposing that it did not circulate even as a popular tradition till three or four centuries after the date assigned to Pope Joan's death. He again shows that, as is the way with legendary tales, the tradition becomes more and more circumstantial the further it removes from the time of the events to which it refers. He lastly takes the ceremonies and other circumstances which are supposed to bear witness to Pope Joan's death, and shows that each of them has in reality no reference to her, but that collectively they probably afford the basis, slender as it is, on which popular imagination built up the legend. The avoidance by the Papal cortége of a particular street because it was too narrow for a procession to pass through it; the existence of a strange statue which seemed to the populace to resemble a woman; the fact that a pope at his installation seated himself on an oddly-shaped seat, seem to have been the materials which suggested to the fancy of the ignorant and imaginative inhabitants of Rome the marvellous legend which was created by the people, caught up by annalists and preachers, and at last intruded into the records of history.

As Dr. Döllinger treats the legend of Pope Joan so he treats the Donation of Constantine and the myths which have grown up round Sylvester II., and turned a pope held in great honor by his contemporaries into a necromancer who entered into a league with the devil, and exercised his pontifical office in the devil's service. The tales he deals with are of various degrees of interest, but his mode of treatment is unvarying, and the result of his careful analysis is always the same. He invariably establishes the one great and important result, that in certain stages of civilization, and under certain conditions, myths spring up with the rapidity and exuberance with which weeds arise in a rich but uncultivated soil. It is of course perfectly true that to prove one tradition false or uncertain, is very far from proving, what no competent critic would maintain, that traditions never embody popular reminiscences of real transactions. The immediate effect of such speculations as Dr. Döllinger's is merely negative. They show that the mere fact that narratives have been for ages received as history does not of itself afford any strong presumption that they are historical. But if once this be granted, the groundwork of the argument in favor of the credibility of, *e.g.*, the early history of Rome is knocked away, and the person who makes the concession is prepared to commence historical investigations at the right end, by asking not why should we disbelieve, but why should we believe, the facts of so-called mythical history? This enquiry suggests the further and most interesting question, Is it possible to lay down any rules or canons by which to discriminate the mythical and historical elements of tradition? This is an enquiry to which we may at some future day return, but which is not directly proposed or answered in Dr. Döllinger's beautiful analysis of 'Papal Fables.'

'THE RED COTTON NIGHT-CAP COUNTRY.'*

MR. BROWNING'S latest poem tells with rather less than his usual convolutions a story which has to the full the quality of psychological subtlety in which he so much delights. The introduction, too, is fine-drawn to a degree that corresponds with the structure to which it is the porch. It is, perhaps, indefensibly whimsical, and wraps up in as many wrappings as Mr. Browning used to allow to a mummified princess, a body of little or no value. Still it is read with pleasure as well as curiosity, though one smiles to think of what would be made of it all by a reader who had not been broken to Browning before he wrote 'The Red Cotton Night-cap Country.'

It seems that Miss Thackeray, the novelist, who knows Normandy well by often summering there in "the quiet seaside country," has been struck by the drowsy aspect of life in that old province, where nothing stirs but the fingers of the high-capped peasant women plying their lace bobbins:

* 'The Red Cotton Night-cap Country; or, Turf and Towers. By Robert Browning.' Boston: J. R. Osgood & Co.

"Bobbins that bob you ladies out such lace!
Oh, you observed! and how that nimble play
Of finger formed the sole exception, bobbed
The one disturbance to the peace of things,
Where nobody esteems it worth his while,
If time upon the clock-face goes asleep,
To give the rusted hands a helpful push."

And all this slumberousness so suited and soothed her eye that she was moved to make a small descriptive joke:

. . . "Call the land
By one slow hither-thither-stretching, fast
Subsiding-into-slumber sort of name,
Symbolic of the place and people too,
White Cotton Night-cap Country."

Excellent, most excellent this effort of description seems to Mr. Browning, who never stints compliments to his female friends, and who is quite enraptured over so extraordinarily happy a piece of nomenclature. Evermore, he says, shall Normandy be "named and famed 'White Cotton Night-cap Country.'" Then he thus goes on to speak of a related matter:

"Do I hear—
Oh, better, very best of all the news—
You mean to catch and cage the winged word,
And make it breed and multiply at home
Till Norman idlesse stock our England too?
Normandy shown minute yet magnified
In one of those small books, the truly great,
We never know enough, yet know so well?
How I foresee the cursive diamond-dints—
Composite pen that plays the pencil too—
As, touch the page and up the glamour goes,
And filmily o'er grain-crop, meadow-ground,
O'er orchard in the pasture, farm a-field,
And hamlet on the road-edge, floats and forms
And falls, at lazy last of all, the Cap
That crowns the country! we, awake outside,
Farther than ever from the imminence
Of what cool comfort, what close coverture
Your magic deftly weaving shall surround
The unconscious captives with. Be theirs to drowse
Trammelled, and ours to watch the trammel-trick!
Ours be it, as we con the book of books,
To wonder how is winking possible!"

And yet, says the poet, he himself is at such a distance from the world that it is the whole world which commands his regard, not any part of it, albeit that part be a province perfect in itself; and the backward glance that he gives over the subject returns laden with other spoils of vagrancy, and he puts the question,

"Which sort of night-cap have you glorified"

after all? He imagines Miss Thackeray answering that of course it is the normal night-cap, "old honest guardian of man's head and hair":

"What should the Night-cap be
Save Night-cap pure and simple? Sorts of such?
Take cotton for the medium, cast an eye
This side to comfort, lambswool, or the like,
That side to frilly cambric costliness,
And all between proves Night-cap proper. Add
'Fiddle!' and I confess the argument."

The feminine expletive in the last line gives the poet opportunity for a digression on violins and the exhibition of violins at Kensington a year ago, the return to the immediate subject being effected by supposing a similar exhibition of nightcaps—Pope's "sickly head sustainment," Cowper's "soothing sarsnet stripe," the night-caps which Hogarth used to clap on the heads of his figures, "Voltaire's imperial velvet," last of all the cap that the hangman draws over the eyes of the criminal. No, not that; another:

"If we needs must trench
For science' sake, which craves completeness still,
On the sad confine, not the district's self
The object that shall close review may be."

The object that closes review is the red cap of liberty, that on a certain day in 1792 King Louis was shown in while the mob howled below. Here there is introduced a somewhat vigorous, but really somewhat cheap and commonplace, picture of young Lieutenant Bonaparte, the King's antipodes. Still, such as it is there is not much in the poem that is at all better:

"And note the ejaculation, ground so hard
Between his teeth, that only God could hear,
As the lean pale proud insignificance
With the sharp-featured liver-worried stare
Out of the two gray points that did him stead,
And passed their eagle owner to the front
Better than his mob-elbowed undersize—
The Corsican lieutenant commented,
'Had I but one good regiment of my own,
How soon should volleys to the due amount
Lay stiff upon the street-flags this canaille!
As for the droll there, he that plays the king,
And screws out smile with a Red night-cap on,
He 's done for! somebody must take his place.'
White Cotton Night-cap Country: excellent!
Why not Red Cotton Night-cap Country too?"

To this question Miss Thackeray is understood to reply by demurring that exceptions do not make rules, and that the poet's scruple whether "white" or "red" describes the local color best she finds inopportune and impertinent. Little Saint-Rambert, where they converse, has certainly conserved the pure tradition; it is white from head to heel; the nearest approach to the sinful scarlet is made by this Saint-Rambertese here, who has just been caught smuggling half a pound of tobacco; or perhaps this other who, without a shooting license, has despatched a hare which he avers he took to be a hedgehog, the clods obstructing his vision. As for the women of Saint-Rambert, there is no possibility that the poet can find the faintest ruddy tinge, the least suggestive of a romantic fault, in any of them. To all this the male interlocutor answers, that he sees his antagonist has got her shelf in the night-cap exhibition completely filled with white caps, while his red shelf is as yet an empty cavern. He will fill it, however; he only insists that as everything about them is so white, he shall be considered the victor if he can show in the land or the people the least "faintest pretension to be wrong and red and picturesque"; "any the least flush of pink" he demands shall be accepted for red, and "labelled scarlet for the nonce." It is so agreed, and the story begins of the pious Léonce Miranda, wealthy, who gave more than a tithe of his substance to the poor—young, yet a model of piety and devotion and a favored servant of the church. "This first white rag that flutters snowily in sight" the poet will take and rub it to a thread; surely if in that glistering fabric he can find traces of the fatal dye he must be adjudged the prize of the contest between "British man and British maid," and the country must be Red Cotton Night-cap Country, and not White.

It is not necessary to say that he who told the story of the "beautiful girl, too white, who lived at Pornic down by the sea," succeeds perfectly in his task. The poet who gives in his adhesion to Calvinism for this one thing alone, if for no other—that it teaches the corruption of the human heart and the total depravity of the will, is very safe to show us the corruption of young Miranda's and Clara Muhlhausen's after he has handled them long enough and pulled them to pieces sufficiently.

The performance of this familiar task may be said to be the main business of the poem, but of course one line of thought sedulously adhered to and obviously presented is not commonly to be looked for in anything that Mr. Browning writes. For him, the morning and the evening are never the day, as they are apt to be with poets of his rank; the goings forth of his day are pretty sure to be the million incomings and outgoings, downsittings and uprisings, and all the thousand details of the twenty-four hours. This is perhaps the least poetical, in fact the most prosaic, of all his works; for it is prose which not only has almost no poetry interfused, but which wants also that unprosaic if not strictly poetical element which Mr. Browning's writing very frequently contains in enormous measure. For example, the spiritual and religious questionings and theories of this poem we find ourselves compelled to consider of little interest or importance. How, it asks, shall we reconcile faith and reason in the mind of a man who is the son of a Spanish father, with a Spaniard's inherent capacity for fiery faith, and of a cool-headed French mother, the son being rather a weak-minded man, who apparently goes mad in the struggle? We do not know, and we do not know that the reader need care much, and this especially as the victim of the problem is so far from being a universally typical personage that about two years ago his name was figuring in a French court at Vire, and perhaps was sole and unique. Or what is the possibility of morality and right conduct if it is unbraced by religion? An important question enough, but not set forth here very profitably in all this allegory, to call it so, of Turf and Tower. Or what are we to say as to the relative merits of Clara Muhlhausen, with her *artistically* rounded, shallow, and hard nature, and of Léonce her lover, who perpetually fretted in the bonds of a sinful connection which yet he could not break and hardly wished to break, yet which at last killed him? Mr. Browning gives the case in favor of Miranda, and the reader goes with him—or would, if the reader did not remember that we have here again two particular cases, not the general case, and that to settle the relative worth or worthlessness of a self-seeking, unreligious woman, and a semi-Spaniard who is partly a fool and partly a madman, is a matter not of high obligation, and one that can concern neither us nor the poet very much. Here we may quote the passage in which Mr. Browning delivers judgment for Miranda. Part of it suggests some thoughts as to the subject-matter of much of his poetry, both early and late, and as to his poetical methods and poetical rank, and suggests, as nearly all men will admit, no little condemnation of them all:

"Clara I hold the happier specimen—
It may be, through that artist preference
For work complete, inferiorly proposed,
To incompletion, though it aim aright.
Morally, no! Aspire, break bounds! I say
Endeavor to be good and better still,
And best! Success is nought, endeavor's all.
But intellect adjusts the means to ends,
Tries the low thing, and leaves it done, at least;
No prejudice to high thing, intellect
Would do and will do, only give the means.
Miranda, in my picture-gallery,
Presents a Blake; be Clara—Scissonier!

> Merely considered so, by artist, mind!
> For, break through Art and rise to poetry,
> Bring Art to tremble nearer, touch enough
> The verge of vastness to inform our soul
> What orb makes transit through the dark above,
> And there's the triumph!—there the incomplete,
> More than completion, matches the universe—
> Then, Michelagnolo against the world!"

Nor need one care much to find in one's book of poetry a statement of the author's belief that Protestantism is a form of religion preferable to Catholicism, the latter being essentially wrong in its attitude toward the human mind and soul, and infested with superstitions. Doubtless, that is a proposition which can be made good in both prose and rhyme; but, for choice, prose might better be used.

On the whole, the admirer of Browning will find in this poem, or this story in blank verse, a pleasant production of the *musa pedestris* of its author; and an occasional touch reveals the master—as where the poet meets his fair friend as if their meeting-place

> . . . . "Were just that Rome
> Out in the champaign, say, o'er-rioted
> By verdure, ravage, and gay winds that war
> Against strong sunshine settled to his sleep."

But no new admirers will it give him; and some backsliders it will confirm in their fallen state.

Coal Regions of America: their Topography, Geology, and Development. By James Macfarlane, A.M. (New York: D. Appleton & Co.)—Nearly every State in the Union where coal has been discovered, or supposed to lie buried beneath the surface-rock, has expended more or less money in conducting geological surveys, with greater or less ability, for the purpose of developing the natural resources of its territory. The results of these surveys, many of them extending over periods of several years of diligent labor, have been published in large, unwieldy volumes, as official documents, either by the State or General Government. Many of the original works are now only procured with difficulty. These official volumes form the basis of Mr. Macfarlane's work; from them he has collected, with great care, all that is of practical importance for his subject. He has shown much skill and judgment in the selection of his facts, discarding everything of a strictly scientific nature. He has brought together, in a comprehensive manner, a large amount of material relating to the structure, position, character, and extent of all our coal-fields. This book is not the work of a professional geologist, as is occasionally evident in the reading, but rather, as we are told, of one who gives his experience "picked up in the course of sixteen years' active employment in a large coal business"; and it carries indications throughout that the author has watched the progress of innumerable coal-mining companies, studied the causes of their success or failure, and recorded the results of his observations. The interest of the work consists, therefore, not merely in the bringing together of the geological data of coal, but in the consideration of the practical bearing of the science, with the important questions of management, production, transportation, and the relation of railways to mine and market. Upon the value of geological surveys Mr. Macfarlane places a high estimate. His opinion, coming from a man of wide mercantile experience, is noteworthy. Speaking of Pennsylvania, he says:

"All the appropriations made by the State for the survey from 1836 to 1855 appear by the statute laws to have amounted to $111,570, of which $34,750 was for the publication of the report, leaving only $76,820 spent in making the survey itself. Unfortunate as was the delay attending the publication, and the loss from the failure of the first contractors for printing the final report, yet the State has never before or since derived so much benefit from the expenditure of the same sum of money. No State now so much needs another geological survey as Pennsylvania."

Treating the coal regions in their geological order, the carboniferous coal measures, divided into four large fields, are first considered, and occupy the greater part of the volume. The first, the Appalachian field, embraces the States of Pennsylvania, Maryland, West Virginia, extending westward to Ohio and southward to Tennessee. In this large area Pennsylvania stands decidedly foremost, and the chapters on the bituminous and semi-bituminous districts form the best portions of the work. The second field lies within the State of Michigan, is of poor quality, highly impregnated with sulphur, and the production limited to a few thousand tons. Indiana, Illinois, and Western Kentucky claim the third, while the fourth field lies west of the Mississippi, in Iowa, Missouri, and Eastern Kansas. Two brief chapters discuss the position and present condition of the Triassic coals of Virginia and North Carolina. Mr. Macfarlane then passes to the lignite formations of the Rocky Mountains and the Pacific coast. For his information and data of the Wyoming and Colorado coal-fields he relies almost exclusively on the report of Mr. J. T. Hodge, who confined himself chiefly to a description of the localities and amount of work accomplished in the mines up to the summer of 1870. Mr. Hodge agreed with Dr. Hayden in placing the coal-beds in the Tertiary, but our author follows Clarence King and others in referring them to the Cretaceous—a view now very generally adopted by geologists. These Western lignites, although far inferior as coals to the Pennsylvania deposits, are destined to play an important part in our national economy, even if limited in application to the generation of steam for locomotive boilers along our great and rapidly increasing lines of railway in the far West. But the time is not very distant when they will be not only largely utilized for domestic fuel, but become of still greater value for metallurgical purposes. Recently conducted experiments have demonstrated the calorific power of these lignites to be higher than that of any similar coal in the world, and comparison has shown that many of them are but slightly inferior in heating power to the Sand Creek block-coal of Indiana, now successfully used in iron smelting.

Five Hundred Mistakes of Daily Occurrence in Speaking, Pronouncing, and Writing the English Language Corrected. Thirty-second edition. (New York: James Miller. 1873.)—The fashion of writing hand-books of manners, etiquette, deportment, and so on, which was in a flourishing condition a generation ago, seems to be now almost superseded by the fashion of writing hand-books of language. Vulgar errors in pronunciation, in spelling, or more frequently in speaking, take the place in these treatises of vulgarities in dress, in conduct at the dinner-table, or at evening parties. There is one similarity, however, in these widely different kinds of books, which is perhaps worth a moment's attention, and that is the apparent similarity of the audiences for which they have been prepared. The general impression derived from looking over a "young ladies' guide" used to be of a deeply degraded condition of taste on the part of those for whom it was written. That all young ladies were by nature endowed with a more than male brutality and ignorance seemed to be generally taken for granted by the authors, the value of whose advice was certainly not to be disputed if the assumption were correct. The young lady of the period was counselled, for instance, "not to poke her neighbors' ribs at table with her elbows"; not to snatch things out of servants' hands, and particularly not to "throw her bones under the table." In the same way, the audience for which the writers of hand-books of language write seems to be supposed more in need of elocutionary instruction of the sort given by the careful mother of a Christian family than of any minute or abstruse philological study. In the case of 'Five Hundred Mistakes Corrected,' we find that even thirty editions already exhausted have failed to eradicate some of the most shocking errors in popular use. To take one or two examples. That there were people in the lower walks of life who were in the habit of saying, "I done it," instead of using the more correct phrase, "I did it," we were aware; but surely the perversity which leads any one to make use of such an expression as "I know I am him whom he meant" is so ingenious that there can be little hope of influencing him for the better. Some people, it seems—perhaps they belong to the same class as those do who insist on saying, "I dislike to be eaten out of the same plate with"—still cling to such forms. We should be inclined to think those who use the term "sparrowgrass" were also beyond reproof or warning, for, as the author justly remarks, "it is only the grossest ignorance which confounds this word with "asparagus." The same is the case with "ing-uns" for "onions," in the agricultural districts, "soldier arms" among military men, and "foudling" for "foundling," and "genus" for "genius," in a still different class.

It would be only natural to infer from such corrections as these that the class of readers who had absorbed thirty-one editions of this book were not the most cultivated in the world, and therefore the reader may fairly object to some of the rules as altogether too puristic and nice. For example, instead of "the *two last* letters were dated from Calcutta," the 144th mistake corrected directs us to say, "the *last two*, etc." The 145th rule, too, is of the same kind: "The soil in those islands is so very thin that little is produced in them *beside* cocoa-nut trees"; "*beside* cocoa-nut trees" means strictly *alongside* or *by the side* of them. *Besides* or *except* should be used. *Besides* also signifies *in addition to*; as, "I sat beside the President, and conversed with him *besides*." It seems hardly probable that distinctions so delicate as this will be grasped by gentlemen who say sparrowgrass for asparagus, or inguns for onions, or by ladies who say of one child that he is a "fondling," of another that he is a "genus." We should make the same objection to the 146th rule: "He could neither *read nor write*;" say, more properly, *write nor read*. "All persons who can *write* can *read*, but not all who *read* can *write*. This sentence as corrected is much stronger than the other form." These, however, are slight blemishes. On the whole, there is much consistency in the work, which, affording a great deal of innocent pleasure to the general reader, is well calculated to stimulate the curiosity and feed the mind of the ignoramus.

Thoughts on Life and Character. By S. P. Herron. (Philadelphia: J. B. Lippincott & Co. 1873.)—The thinking on life and character which has been done by Mr. Herron is not, he tells his readers, to be confounded with the labored productions of writers who reflect in set forms of thought, for the author has not so much called these thoughts into existence as arrested them when they spontaneously presented themselves to his mind. This system has some advantages, and also some dangers; a man who arrests and takes into literary custody a spontaneous thought is sometimes wiser and sometimes less wise than he who makes haste to drive the thought spontaneously out of his mind as soon as it has entered: which course to pursue depends entirely on the character of the thought. For example, in the division of these "thoughts" called "Notes and Laconics," Mr. Herron arrests the thought in its passage through the mind that "an angry word, if it can be suppressed till to-morrow, will not then be so urgent in its demand for utterance"; and adds, that in "virtuous minds anger is a coal that is sure to die in a little while; and it is great wisdom to wait for that event before we act"—a timely suggestion for irascible readers. But when on the same page Mr. Herron says that, driving along a few days ago, and crushing with his wheel a worm as it crept in haste across the road, he reflected that he had done something for which he ought to be humbled, that he owed an account to the Deity for the unfeeling selfishness that would not take the trouble to save a life that he had given, that He who made both author and worm must take note of the transaction and behold it with a look of displeasure which penitent confession must disarm, that if he would reflect he would be convicted of a blind and savage cruelty which he would shudder and abhor in another being as much superior in size and strength to him as he is to the worm, we must confess that we incline to think Mr. Herron has arrested one thought too many, or else that he must live in a part of the country in which worms are rarer and more easy to avoid than they are with us. This, however, is a trivial blemish. In the main, Mr. Herron's thoughts are perfectly safe—for example, the thought that "as a blade of grass, as it springs, pierces without displacing the withered leaf that happens to lie upon it, so the gentleness of love conquers others without alienating their affection, or giving them pain"; or a botanico-political reflection such as this: "To-day, on my accustomed walk in the woods, I observed where the trunk of an old and naked pine, overthrown by the wind, had dashed to the ground as it fell two young and flourishing oaks. Thus, long-cherished political evils, however ripe for destruction, seldom perish but with violence and without spreading melancholy devastation around them. Hence the danger in forming national constitutions of allowing a place to any element that is unjust or favorable to the pride or avarice of mankind." These last extracts are well adapted to show the extraordinary flexibility of the human mind when it is honestly set spontaneously at work. Mr. Herron divides his work into "Notes and Laconics," "Essays," and "Themes from Battle-fields." In these distempered times it is a satisfaction to find a man so filled with thoughtful earnestness as the author. The book ought to do something to help "roll the stone from the sepulchre of public virtue."

Old New England Traits. Edited by George Lunt. (New York: Hurd & Houghton. 1873. 12mo, pp. 244.)—There is a very unnecessary show of mystery about Mr. Lunt's book. It would not be hard for an entire stranger to discover that the town in question—whose name is never once mentioned, except incidentally in the Appendix—is Newburyport; and if the title had plainly said so, it would have described the book far better. For the subject is not "New England" as a whole, but one New England town, and, for the matter of that, it is properly not "Traits," but "Incidents" or "Anecdotes." Further, whatever personalities are left undetermined in the book itself are, for the most part, explained in the Index, and it seems a piece of affectation to make any pretence of keeping them concealed. For the rest, the book is made up of such material as could be gathered in any old town—material very well worth gathering. The characters described are those strong and individual ones in which New England abounded in the olden times. The stories are, many of them, entertaining in themselves, and many of them such as can be very entertaining in the mouth of a good story-teller. We are sorry to be obliged to add that they are not here particularly well told, and that many of the anecdotes appear rather flat. The style is heavy and lacking in directness. Boston, for instance, is generally spoken of as "the capital of the State." The material does not seem to have been arranged on any special plan, but to have been jotted down as the several items came into the writer's head. On the whole, while a book of this class is always acceptable, it must be said that a far better book could have been made out of Newburyport, or any other New England town of its age and standing. The Appendix contains considerable valuable matter.

FREEMAN'S HISTORICAL SERIES.

FISKE'S CLASS-ROOM TAINE.
BAIN'S ENGLISH GRAMMAR.
WHITNEY'S GERMAN COURSE.
OTTO'S GERMAN COURSE.
OTTO'S FRENCH COURSE.
PYLODET'S FRENCH SERIES.

Nearly all the books for modern languages used at Yale, Harvard, and similar institutions. Correspondence invited from educators and students. Catalogues free on application.

HENRY HOLT & CO., PUBLISHERS, New York.

OUR NAVAL SCHOOL AND NAVAL OFFICERS: A glance at the condition of the French Navy prior to the late Franco-German War. Translated from the French of M. de Crisenoy by Commander Richard W. Meade, U.S.N. 12mo, flexible cloth, 75 cents.

D. VAN NOSTRAND, Publisher,
23 Murray Street and 27 Warren Street.

*** Copies sent free by mail on receipt of price.

JUST ISSUED. Priced Catalogue of Choice Books—Shakespeariana, the Drama, Americana, Trials, etc., together with a large collection of Engraved Portraits, adapted for extra book-illustration, Scrap-Albums, etc.
Catalogue sent free on application.
T. H. MORRELL, Agt., 78 Nassau Street, New York.

DONALDSON BROTHERS, Steam Lithographic Printers, 56, 58, and 60 Park Street (One Block from Centre Street) New York. Orders for Bonds, Certificates of Stock, Insurance Policies, Checks, Drafts, Letter and Note Headings, and Commercial Blanks of every description, promptly executed, in the highest style of the Art, at reasonable prices. Designs and Estimates furnished. P. O. Box 2791.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*
Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.
The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.
Harper's Catalogue sent by mail on receipt of six cents.
Address HARPER & BROTHERS,
Franklin Square, New York.

Just Ready. 8vo, cloth, price $6 50.

THE THIRTY-NINE ARTICLES of the Church of England Explained in a Series of Lectures. By the Rev. R. W. Jelf, D.D. Edited by the Rev. J. R. King, M.A.

Sixth Edition of

OUR NEW VICAR; or, Plain Words about Ritualism and Parish Work. By the Rev. J. S. B. Monsell, LL.D. 16mo, cloth, $1 50.

New Edition of

HOUSEHOLD THEOLOGY. A Manual of Religious Information respecting the Holy Bible, the Prayer-Book, the Church, the Ministry, Divine Worship, the Creed, etc., etc. By the Rev. J. H. Blunt. 16mo, cloth, $1 25.
Post free on receipt of price.

Cooper Union, New York.

A. DENHAM & CO., Publishers and Importers of English and Foreign Books, 17 Murray Street, near Broadway, New York. PRICED CATALOGUES of our English and Foreign Books issued monthly, and sent free.

HENRY K. VAN SICLEN, BIBLIOPOLE, 133 Nassau Street, New York.
American or Foreign Publications sent by mail, postpaid, at Catalogue prices.

MR. ROE'S GARDEN, from which, as he tells us in his entertaining book, 'Play and Profit in My Garden,' $2,000 worth of fruit and vegetables were sold in one year besides a large home supply, promises equally well the present season. On the 31st of May, his sales amounted to $257. On the 6th of May, he had seven distinct varieties of vegetables in abundance at his command. The story of this successful garden is told at length in his book, PLAY AND PROFIT IN MY GARDEN, which DODD & MEAD publish.

WORKS OF ART AND HOUSEHOLD DECORATION. Chas. F. McKim, 57 Broadway, offers for sale and inspection photographs by the first English amateurs and professionals, viz., Gordon's unsurpassed views in England and Wales; Robinson & Cherrill's landscape and sky studies; W. England's prize-medal cabinet, Rhine views, etc., etc., together with W. J. Stillman's scenery and architecture of Normandy, Greece, and Crete, and Album of the Acropolis of Athens (26 plates, bound). Also photographs of statuary and other objects in the British Museum, and the Berlin Company's photographs of Old Masters from the principal galleries of Europe. Etchings—autograph and photograph.
Orders taken for the above and for similar works, if in sufficient amount.
*** Orders received for old and rare furniture, porcelain, table service, etc., and for commissions to be executed by Morris & Co., London.
Address CHARLES F. McKIM,
57 Broadway, New York.

Attention is called to the beautiful picture of "Maidenhood," for sale by all Art Dealers.

THE WEEK IN TRADE AND FINANCE.

AUGUST 11, 1873.

THE past week has been unusually dull and without any interesting features. The hot weather has taken many of the leading men from the Street, and during their absence it has been impossible to get up anything like an active market. Money continues easy at 3 and 4 per cent., and difficulty has been experienced in using balances on call at these rates. Time loans are quoted as follows: For thirty days, 4 and 5 per cent.; 5 and 6 per cent. for sixty days; 6 and 7 per cent. for ninety days; and 7 per cent. gold for five months.

Cable advices report that the Bank of England gained £307,000 in bullion last week, but the discount rate remains unchanged. The Bank of France lost 37,000,000 francs in specie, in consequence of the German indemnity payment on the 5th inst.

The weekly statement of the Clearing-House banks on Saturday was again unfavorable, showing a falling off of $1,488,400 in the total reserve (mostly in legal tenders), and a decrease of only $1,682,300 in the total liabilities, which, as shown in the statement published below, is equal to a net loss of $1,067,825 in the surplus reserve.

The following are the statements for the past two weeks:

	Aug. 2.	August 9.	Differences.
Loans	$289,986,200	$290,758,100	Inc. $771,900
Specie	32,272,200	29,820,000	Dec. 452,200
Circulation	27,188,000	27,223,500	Inc. 35,500
Deposits	238,840,900	237,123,100	Dec. 1,717,800
Legal tenders	50,038,500	49,002,300	Dec. 1,036,200

The following shows the relation between the total reserve and the total liabilities:

	Aug. 2.	August 9.	Differences.
Specie	$30,272,200	$29,820,000	Dec. $452,200
Legal tenders	50,038,500	49,002,300	Dec. 1,036,200
Total reserve	$80,310,700	$78,822,300	Dec $1,488,400
Circulation	27,188,000	27,223,500	Inc. 35,500
Deposits	238,840,900	237,123,100	Dec. 1,717,800
Total liabilities	$266,028,900	$264,346,600	Dec. $1,682,300
25 per cent. reserve	66,507,225	66,086,650	Dec. 420,575
Excess over legal reserve	13,803,475	12,735,650	Dec. 1,067,825

The following table separates the National from the State banks:

	National.	State.	Total.
Loans	$249,908,100	$40,850,000	$290,758,100
Specie	26,695,400	3,124,600	29,820,000
Legal tenders	43,194,000	5,808,300	49,002,300
Deposits	204,407,800	32,715,300	237,123,100
Circulation	27,191,300	32,200	27,223,500
Percentage of reserve to total liabilities	30 18-100 p.c.	27 28-100 p.c.	29 82-100 p.c

The leading feature in the stock market was the sharp advance in Pacific Mail from 37⅞ to 41⅞. The dealings in the stock were comparatively active, and the sales reached 117,600 shares for the week. The advance in the stock is apparently due to the efforts of some of the "shorts" to cover, and rumor mentions one of the directors of the Company as the moving spirit, assisted by a certain Broad Street speculator. No unfavorable reports have been circulated recently in relation to the Company's affairs, and it would seem as if the "trustees" of the stockholders had exhausted for the present at least their means of creating any panic and forcing holders to sell out so as to allow them to purchase. Beyond the movement in Pacific Mail, there is nothing worth noticing in the speculative share list.

The usual five per cent. semi-annual dividend has been declared by the Chicago, Burlington, and Quincy Railroad Company. The price of the stock has advanced since our last to 106, at which figure small sales were made on Saturday and to-day.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending August 9, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sal s.

Government bonds are strong and in good demand in both this and the foreign markets. The London quotations show a fractional improvement, and cable advices report a strong demand for U. S. bonds in Germany, where the recent purchases by the Government have added to the feeling of confidence which the people of that country have always had in our bonds.

The bull clique in gold have again been checked in their movements to advance the premium. The Treasury sells $6,000,000 during this month—an amount which the clique can hardly be in as good condition to manage as it was at the commencement of its operations. The short interest, always a great element of strength to the bulls, is not likely to be increased after the experience which business men have already had, and whom the clique will find to sell out to is just now an important question. During the week the price has ranged between 115¼ and 115½

TRAVEL.

ONLY DIRECT LINE TO FRANCE.

The General Transatlantic Company's Mail Steamships between New York and Havre, calling at Brest. The splendid vessels on this favorite route for the Continent will sail from Pier No. 50, North River, as follows:

VILLE DE PARIS..Garay..... ...Saturday, July 26
VILLE DU HAVRE.Surmont.....Saturday, Aug. 9
PEREIRE. .....Daure .....Saturday, Aug. 23
ST. LAURENT.. ..Roussan ..... Saturday, Sept. 6

Price of Passage in Gold (including wine) to Brest or Havre: First Cabin, $125; Second Cabin, $75. Excursion tickets at reduced rates.

These steamers do not carry steerage passengers.

American travellers going to or returning from the Continent of Europe, by taking the steamers of this line, avoid both transit by English railways and the discomforts of crossing the Channel, besides saving time, trouble, and expense.

GEO. MACKENZIE, Agent, 58 Broadway.

RUSSIA LEATHER GOODS.

TRAVELLING-BAGS, DRESSING-CASES, PORTFOLIOS, WRITING-CASES, POCKET-BOOKS, FLASKS, etc., etc.

CULBERT & CO., 24 Maiden Lane, N. Y.

NORTH GERMAN LLOYD STEAMSHIP COMPANY

FOR SOUTHAMPTON AND BREMEN.

The steamers of this Company will sail every Wednesday and Saturday from Bremen Pier, foot Third Street, Hoboken.

RATES OF PASSAGE TO LONDON, HAVRE, AND BREMEN,

Payable in Gold, or its Equivalent in Currency.

First Cabin, $120; Second Cabin, $72; Steerage, $30.

For freight or Passage, apply to

OELRICHS & CO., Agents, 2 Bowling Green.

THE COMMERCIAL AGENCY REGISTER,

PUBLISHED BY THE

McKILLOP & SPRAGUE COMPANY,

109 & 111 WORTH STREET,

New York.

This volume is semi-annual, and undertakes to give the name and residence of nearly every man in business in the United States and Dominion of Canada, and to state the kind of business, the Credit and Financial strength of each. At the end of the book is a list of banks, their officers, capital, and New York correspondents.

The names on the Register are taken from the Records of the Agency, where the facts are given in detail respecting each, and are revised every six months. Thus a history of every business man is kept written up fully. These histories run back in many instances over thirty years.

THE HOUSEHOLD.

ADJUSTABLE EASY CHAIR.

Lounge, Sofa, Bed, Baby-Crib, Ottoman, Stool, and Writing-Desk Combination—Wrought-Iron Frames. Adapted for Parlors, Churches, Public Halls, Theatres, Hospitals, Lawns, and Gardens. Shuts up like a knife. Sent anywhere, C O.D. Illustrated Circulars by mail.

SPRINGFIELD IRON FURNITURE CO.,

NEW YORK, THURSDAY, AUGUST 21, 1873.

The Week.

THE Special Commission, consisting of Messrs. John Jay and Thomas McElrath, appointed by the State Department to investigate the charges against General Thomas B. Van Buren, have made a report which ought to set the Vienna scandal at rest. They find that no malfeasance is proved against any of the old commissioners except General Van Buren and his assistant Mayer. The taking of $500 by the former from Hitzel for bars, and $1,000 from Boehm & Wiehl for the same purpose, the Commission condemn in terms sufficiently plain, and they find the general management, "which General Van Buren appears to have left to his subordinates, to have been marked by a lack of judgment and foresight, an absence of effective system and order, and a looseness in contracts, in instructions, and in accounts, calculated to ensure the ruin of any private business, and which in a great national trust like that entrusted to General Van Buren was to the last degree discreditable and intolerable, as indicating indifference or incapacity, or both combined." With regard to Mayer, the Commission do not examine his defence in detail; among other reasons, because it merely consisted in shifting the responsibility for the taking and soliciting money upon General Van Buren's shoulders. No approval by the chief commissioner could have rendered the acts of which Mayer is accused any less criminal. With regard to the management of the new Commission, the report speaks of their efforts in complimentary terms, and says that they have done as much as was possible to redeem the reputation of the country from the disgrace brought upon it by General Van Buren.

The Southern Historical Society, formed some years since and now endeavoring to get at work, has been in session during the past week at Richmond, and urges its members to enter with vigor on the work of collecting at once, and where possible from the living actors, materials for the true history of the late war. In the end, at all events, they will be materials for such a history; at first, and we do not know that it is possible or even desirable that the case should be otherwise, they will probably be materials for a very Southern and biassed history of the war. But we need not deny that there are extant some Northern histories of the same series of events which are not exactly impartial either. In the end, the truth will appear from a comparison of all accessible sources of information, and no more need be asked. The only thing in the proceedings of the Society which appears to us to require unfavorable comment is the behavior of Mr. Jefferson Davis, who was present, and who made a speech which could not have been less to the interest of the South, and of the North also as bound with the South, had Mr. Davis deliberately resolved to make as much mischief as he could in the time allotted him. He said that the late Confederacy had been cheated into a surrender rather than conquered; that had the Confederate authorities not placed too much reliance on certain promises which, as he implied, had been made by the United States officials, the Confederacy would have fought on till its independence was acknowledged; finally, that he was glad to say that, however it might be with Southern men, he had never yet seen a reconstructed Southern woman. This language is very unworthy of a man who has in any way, *ex-officio* merely or otherwise, held a conspicuous place among historical personages. Its falsity to historical fact is equalled only by its extreme puerility. But it will do harm all the same, although it is, speaking plainly, ill-advised to the point of silliness.

The well-known talent of the Hoar family for letting drop a few words calculated to attract attention and secure order in meeting has been exercised this week by Mr. George F. Hoar in behalf of Mr. B. F. Butler, who, to do him justice, appears to have awakened about as much of Mr. Hoar's wrath on this occasion as he has on all occasions enjoyed of Mr. Hoar's contempt. The result is a letter, which is lively reading; and the address to the electors, which the Hamilton Hall Committee is rumored to be preparing, will have to be a clever document to attract more attention than this document, and to command more approval and disapproval in the Anti-Butler and Butler camps respectively. The letter was devoted to two general topics, Mr. Butler's character and history for one, and for the other Mr. Hoar's application of his "back pay" to the needs and uses of some educational institution in his district, which Butler suggested was to curry favor with the mechanics. Mr. Hoar's way of treating Butler is refreshing, because of its comparative newness and its trueness, in both which respects it appears to us superior to the common way. Mr. Hoar has no marked respect for Butler's conduct during the rebellion. He can see no enormous and unpaid-for merit in his keeping a city full of women reasonably quiet by means of a United States army in 1862, nor in his out-blackguarding a New York mob in 1864. There is no doubt something of the exaggeration of contempt and dislike in this synopsis of Butler's warlike achievements; but it is not substantially unjust if we consider how many things and what sort of things would have to be included in any record that should be full, and if we consider the enormous amount of talk that has been contrived to be made about the New Orleans exploits. Nor does Mr. Butler's courage, any more than his energy and efficiency, seem to Mr. Hoar so tremendous a quality as some "office-holders of feeble virtue," as he calls them, would have it appear. He is always blustering, says Mr. Hoar, always quarrelling, and always failing. Swagger, quarrel, and failure sum up his history. "He has quarrelled with Grant, Wilson, Colfax, Blaine, Andrew, Sumner, the Washburns, Bingham, Schenck, and Dawes, and they have been compelled, each in his own way, to chastise and punish him, because he deserved to be whipped." This, it has been maliciously suggested, is not the way in which it has been usual to speak of the imperfect members of the party; but indeed the cup of this one has been running over for a longer time than that of any other that we can recall.

As for his "back pay," Mr. Hoar is at pains to explain his course—perhaps at too much pains, for we suppose it is not the amount of money which will be taken out of the Treasury that people care about so much. We dare say they acquiesce without anger in the increase of all the salaries except those of Congressmen. Nor is it that they think the act itself illegal; they know well enough that it is not. But it is far more the brazen indifference to decency which could prompt such a proceeding as the exorbitant comparative increase in the salaries of Congressmen, who, if we are to try them by a wages standard, notoriously do their half-year's work so ill; and the still more brazen impudence of making the bill retroactive. We do not suppose ill-will is going to be harbored against any man of approved character who, working honestly against the bill, afterwards showed his sense of the impropriety by putting the money away from him, even although he may have made a mistake in his disposal of it. Mr. Hoar's point would seem to be that it was clear to him that he could have nothing to do with the money: honor and delicacy, to say nothing of decency, compel honorable men to oppose such projects as Butler's Salary Bill, and preclude them from reaping benefit from it. But as to the moral obligation to dispose of it in one specific way, to the exclusion of all others, that was not clear to him. It was legally his money, equitably it was the people's money, and to the people it should go. He decided "within ten minutes" that his share should go to the people of his district. This may have been a right or a wrong settlement of the

point, but that matters little; in cases of this kind the honorable intention is everything.

We mentioned, some time ago, the case of the Postmaster at Westfield, Massachusetts, removed by the Administration for reasons best known to itself, against the wishes of the people of the town, and in the teeth of remonstrances from the soldiers and business-men of the place, and in spite of the fact that the Postmaster was a veteran as well as a Republican himself, and had for four years performed the duties of his office faithfully. As a curious instance of the subordination of every feeling to that of devotion to party, we may mention the fact, which we have on good authority, that this removal had no effect whatever upon the party loyalty, either of the veterans of the place or of the removed Postmaster, but, when the next campaign began, they all fell into line, and went to work to do all in their power to elect to Congress the regular party nominee, Mr. Dawes, to whom the removal was due, and who had been fiercely denounced by them at the time for the part he took in the affair.

This is an off-year in politics, and the regular party conventions which are being held in the various States chiefly occupy themselves with discovering safe candidates, and making what pugilists call "play." The Maine Democrats have nominated Joseph Titcomb for governor, and passed resolutions against "dead issues," in favor of a strict construction of the Constitution; against packing the Supreme Court, in favor of a revenue tariff, banking reform, and cheap money; denouncing railroad monopolies, complimenting the artisans and farmers; denouncing land-grants, favoring retrenchment; denouncing the Salary Bill, the interference in Louisiana, and "corruption generally," and also partially approving, as a correspondent puts it, compulsory education. The Maryland Democrats had only a comptroller and a clerk of a Court of Appeals to nominate, which they did, placing their candidates on a platform made up of the following planks: reaffirmation of Democratic principles, recognition of the Federal constitutional authority, strict construction, opposition to centralization and monopolies, affirmation of the co-ordinated independence of the three departments of Government, denunciation of a tariff for anything but a revenue, promises to promote the advancement of the laboring classes, redress of farmers' grievances and equal justice to all, declarations of adherence to the policy of preserving the public lands for actual settlers, and denunciation of land-grants and the Salary Bill, and a demand for the immediate repeal of the latter, promises of extension and improvement of the free-school system, recommendation and promises of rigid economy in the State government.

It might be inferred from the resolutions in Maine, Maryland, and Pennsylvania that things were pretty much as they had been with the regular organizations. In Iowa, the irregulars have taken the field in a convention of the Anti-monopolists, who declare both the Republican and Democratic parties dead; demand, in addition to legislative regulation of freights, "the abrogation of the theory of the inalienability of chartered rights"; the repeal of the Salary Bill, and the passage of another fixing "a lower and more reasonable compensation"; oppose land-grants; advocate a law which shall give every honorably discharged soldier a quarter-section; denounce the corruption of the Republicans and Democrats, and call on all men to help in putting an end to it. A free-trade resolution was also passed, demanding a general revision of the tariff, "free salt, iron, lumber, and cotton and woollen fabrics," and the reduction of the whole system to a revenue basis only. This resolution received more applause than any of the others. It is said that the convention, while not very large, was attended by farmers only, who had all been previously Republicans; and it is also said that the Democrats have given up all idea of contesting the State, or even making a nomination.

Senator Cameron has recently been endorsing, as it is called, several prominent politicians, and simultaneously the newspapers in several parts of the Union have been calling attention to the condition of politics in Senator Cameron's State, and asking, by implication, what Senator Cameron's endorsement is worth. The condition of Pennsylvania politics is too well known to make comment necessary, or anything but tedious, but what is the Pennsylvania opinion on that head has recently been made known in a very curious manner. In the constitutional convention, Judge Black, after remarking that everybody knew the State Senate, House, and lobby to be weltering together in moral putrefaction, proposed as a remedy the following measure: Within twenty days after the adjournment of the Legislature, every legislator whose term expires at the next general election shall go before a designated officer and make oath or affirmation that he has received no gift or bribe, that he has had the promise of none, that he has not knowingly listened to corrupt solicitation from interested parties or their agents, that he has not voted or spoken on any matter in which he was interested—in short, that in his legislative capacity he has acted as an honest man. It is difficult not to believe that this measure was proposed rather to cast a slur upon the party which has so long had the upper hand in Pennsylvania, than *bona fide* as a true remedy. But in fact both parties are no doubt equally amenable to the charge so openly preferred and acquiesced in by the convention, and neither Democrat nor Republican will seriously deny its perfect truth and its equal applicability.

To bestow many words on such a device would be useless, but people in their perplexity are groping after more than one of the sort. We are offered the details of one which in substance allows no bill whatever to go into effect till a legislature has discussed it at one session; and then at a second, after an interval of months, in which the people are to be supposed to have discussed it, the bill is to be enacted as a law. The general answer to all such schemes is that somewhere you have to begin to trust your representative, be he Assemblyman, Congressman, or Governor, and that to select a man of whom you are not ashamed, and whom experience has shown to be worthy of confidence, is the only safe rule. To be sure, it is true that even him it is no harm to watch; but the original selection is the important thing, and of that we have all been for a long time oblivious.

The reports as to the cotton crop from the South are very encouraging. The New Orleans Cotton Exchange Committee on statistics and information have published an account of the condition of the plant in ten States, which has been made up from answers to letters sent out by the Committee during the month of July. The month of July, for cotton, is a speculative month, during which veracious gentlemen who are interested in raising the price telegraph to the North depressing accounts of the condition of the crops and the ravages of the army-worm. Millions of fictitious bales of cotton change hands on the strength of these reports, the operation being one of the same kind with "short" sales of stock. It invariably turns out, so far as our experience goes, that the earlier reports are grossly exaggerated, and sure to be contradicted by later accounts. The New Orleans Committee say that in Mississippi the crop is "fully as large, if not larger, than last year"; in Louisiana, the "general condition of the crop is represented as being good," and the "area under culture is estimated to be about equal to last season"; in Texas, the area under cultivation "shows a marked increase over last year," and the condition of the crop is represented as good. The reports from Arkansas, Tennessee, Alabama, North Carolina, South Carolina, Georgia, and Florida are all favorable. The worm seems to have done no serious damage anywhere, and the appearance of the plant is generally fine. The picking will begin generally later than last year.

Certain women in Laramie, Wyoming, have very innocently brought down on their heads a great deal of virtuous indignation from the male politicians of that Territory, who, at last advices, were fainting away in all directions over a disclosure of female corruption. The women have lately been "developing political strength in Laramie, and this summer showed a disposition to have some voice in choos-

ing their law-makers." Their first demonstration was to attend a primary meeting of the "Hash Party," "Hash" being a term of opprobrium applied to a political faction, and having none other than a political significance. The women demanded, modestly enough, that they be allowed one delegate in this faction's county convention. Not only was this proposal declined, but it was indignantly hooted down, and its proposers were compelled to leave the primary, which was then run in the usual male manner. The ladies were, however, not disconcerted. They called a mass convention of a size not stated, but, as they confess themselves, in a minority; and as the useful and, we may say, knock-down doctrine that a minority "with God" is a majority has not reached Wyoming, this mass convention only nominated two out of six candidates—one lady for the Territorial Council and one for the House. Now they say that whichever one of the two parties will accept these two candidates shall have their votes, for votes, be it remembered, they have, the men of the Territory some years since having conferred the suffrage on women. In other words, say the "Hash" organs with unaffected horror, they propose to "sell themselves out to the highest bidder"—an act unprecedented in our political history. The organs of the other party repeat this exclamation, and the women do not know what to say amid the objurgations heaped upon them. Meantime, the true friends of female suffrage, of whichever party, urge the women not to sell out to the other side in this disreputable way, but to work side by side with a certain set of male voters for the triumph of principles.

Christ Church, Chicago, the Rev. Mr. Cheney's, is once again the scene of trouble, and the condition of the new clergyman's mind is fully as unintelligible as ever Mr. Cheney's was. It seems that a year and a half ago a call was extended to the Rev. Mr. C. H. Tucker, of the diocese of Long Island, to become an assistant minister in the discordant parish. Mr. Tucker procured from his bishop the proper letters dimissory, and went out to Chicago, where he left his letters at Bishop Whitehouse's residence. The bishop himself he did not see. In a few hours Mr. Tucker received a letter from Bishop Whitehouse, enclosing a copy of the canon law on the subject of the settlement of rectors and assistants, and informing Mr. Tucker that the bishop had received no official notification of the action of the vestry of Christ Church in regard to the call. To this Mr. Tucker made what seems a very odd reply, but perhaps the facts are somewhat distorted in passing through the lay editorial minds which have narrated the story. As the story goes, Mr. Tucker replied that he was amazed to find that there was such a canonical provision as the one just submitted to his attention, but that he had Mr. Cheney's assurance and the vestry's that he should be called in full accordance with the canon law. The meekest or most careless of bishops might well enough deem it proper to be decisive with a cleric who should speak in that manner of the powers and duties of a gentleman who stands in Mr. Cheney's present relations to the clerical office. The recognized superior powers long since deposed him. Bishop Whitehouse, at all events, declined to receive Mr. Tucker's letters dismissing him, and commanded him to refrain from preaching and all other church work. Mr. Tucker would not refrain, and he was then requested by his own bishop, Littlejohn, to stop, and, not stopping, he was in due time summoned home to Long Island to stand trial for disobedience and violation of the canon. He did not go, thinking, it is said, that his attendance in person was unnecessary, and on the 14th of July last he was deposed from the ministry. What he is thinking now, or if he thinks at all, is not said, but he obeys no more than he did before. Of such mental process as does go on within him the outcome is that "God called him to Chicago; that such being the case, it would be an ungodly act for him to cease from his labors; that as it would be ungodly in him to stop, to admonish him to stop must be an ungodly admonitory act; that it was only to the 'godly admonitions' of his bishop that he promised obedience in his ordination vows; that therefore he is right to disobey both bishops.

We noticed last week the resignation of Mr. Ayrton, First Commissioner of Works, not a very popular member of the English Ministry. He had lately been getting himself into hot water in a peculiar way, exhibiting a spirit of insubordination which seems to have brought down upon his shoulders the whole weight of the English Constitution. A vote of £8,500 for the acquisition of land under what is called the Thames Embankment Act, over the execution of which Mr. Ayrton presides, being proposed by the Government, Mr. Ayrton took occasion to disclaim all knowledge of the expenditure and wash his hands of it. In the estimate as originally proposed by him, the amount was provided for expenditures of a different kind, and the Treasury altered the particulars, though not the amount, and struck out an explanatory note appended to the original draft. According to all the rules of ministerial government, Mr. Ayrton should, under these circumstances, have held his tongue, the Ministry being supposed to act as a unit, whatever differences of opinion may exist among its members. Mr. Ayrton was urged in the press to resign, the *Economist* going so far as to say that "his clear duty under the system which made him a great official was to appeal to the Cabinet. Instead of that he appealed to Parliament. He might as well, as far as duty was concerned, have appealed to the streets."

The French Assembly has been prorogued until November 5, and the Permanent Committee announces its intention of sitting every alternate Thursday during the recess. Before the adjournment, a message from the President was read by the Duc de Broglie, congratulating the Assembly on the satisfactory condition of affairs, and especially on the harmony between it and the Government, which had been productive of the happiest results, "important laws" having been voted "almost without debate." The rather novel view of the functions of parliamentary bodies implied in this congratulation attracts of course little or no attention, except from journalistic satirists of the non-Latin races. Just before the prorogation, the Chamber adopted the new treaties of commerce with England and Belgium. Before the meeting of the Assembly in the autumn, German occupation will have ceased. The rumors of a fusion of Legitimists and Orleanists are again revived, the Duc de Chambord having, it is said, declared his intention of being willing to forget the White Flag. It is also rumored that General MacMahon does not intend to retain the Presidency more than six months, as the interests of the country require his presence with the army. These two rumors do not conflict with each other, but nothing certain is known.

This commercial treaty with England is the old treaty negotiated by Napoleon III., which M. Thiers desired abrogated. This act, and the abolition of the *surtaxe* on foreign shipping, show a very liberal spirit in all that relates to trade on the part of the present Government. This *surtaxe*, according to the calculations of M. Thiers, was to have exceeded six millions of francs a year. It actually yielded, however, only one million ($200,000), a sum certainly too small to justify what is called in a recent official report "a great artificial dam, raised at great cost at the mouths of our rivers and ports, and the certain effect of which is to deprive France of the natural transit to which its position entitles it." An amusing instance of the extraordinary divergence in economical calculations between one French Government and another is to be found in the history of the tax on raw materials. When M. Thiers was in power, and had to raise six or seven hundred millions by new levies, he decided on this tax, and at once set the whole army of Government officials at work calculating what the tax would yield, adopting unassailable bases of calculation. They all reported that the tax would produce from 93,000,000 to 140,000,000 francs. M. Thiers went out of office, and M. Magne, the new Minister of Finance, sent for the same army of officials and requested a new report based on facts equally unassailable. They reported that the tax could not possibly be made to yield more than six millions, and the tax was suppressed.

THE "SITUATION" FOR SENATOR MORTON'S COMMITTEE.

THE best method for electing the President of the United States is now practically an open question, and Senator Morton's committee may proceed to find the right way with as much freedom as though no constitutional precedent existed to embarrass their conclusions. What are the desirable elements of the method? Upon what basis shall it stand, and by what process shall it be effected? Undoubtedly, most men will be ready to answer in a general way that these elements are equality of representation, safety in the means, and convenience in the machinery. And undoubtedly these are the elements in a general way; but when we come to give effect to them, a number of practical questions immediately arise. Shall the office of President represent population or States? Shall it continue to represent both in an imperfect manner, with all the irregularities of the present system, or shall the present system be modified while it is retained? These questions are of great importance; but of no less gravity are those which relate to the safety of the process—*i. e.*, the certainty of an election; its elevation above ordinary chances of fraud or violence; the assurance that it shall represent the people or the communities of whose will it is intended to be an expression, and shall not fall into the hands of those enemies of true government who seek the control of the Government as a mere personal or political acquisition.

Since the subject was first weighed by the statesmen of the Revolution, the ground for reflection has shifted. Then the great difficulties to be pondered were directly or indirectly those of representation: not, "how shall the President be elected?" but, "by whom shall he be elected?" Now it is thought by many that not only the groundwork of representation should be changed, but also that the means provided by the system of electoral colleges is so insecure as to amount to a constantly recurring danger to the Republic. The framers of the Constitution were manifestly more afraid of difficulties that would keep States out of the Union, than of dangers which might menace the Republic after its Government should be well established. Fraud, corruption, and the unscrupulous abuse of political power were evils which they did not have immediately confronting them. Since then a number of deleterious causes have combined upon the American political field. The management of the Government has passed from accomplished statesmen to "acute politicians"; the better classes of society have ceased to assume the control of national affairs; a class has gradually come into existence whose trade and business in life is to force the Government into the hands of their own party, or section of a party, unscrupulous as to means and regardless as to consequences. It was predicted by some of the wisest of American statesmen and jurists that if the Federal Government is ever shattered, it will be upon the rock of the transfer of executive authority from one Administration to another. All things now tend to confirm the prediction.

Mr. Morton is one of the very few public men of the day who with the pursuits of a politician has many of the capabilities of a statesman. In his avocation of politician he has been unscrupulous in efforts to keep up the dangers and the evils of a growing class of political "professionals"; but in his character of statesman he has the ability to perceive that the Presidential election is a danger, constantly increasing and not likely to grow less, so long as the presidency and its appointments are to be fought for with the same sense of glory and profit that is to be found in contests for "the champion's belt and a thousand dollars." Our fathers inherited from their fathers that jealous apprehension of government which is bred only under a limited, constitutional monarchy. They provided against tyrannical power in government as though our Government descended from above like the divine right of kings, instead of being the constant re-creation of the people; but they did not foresee that a class of men would gradually come upon the political stage to whom Government would be not a power or a terror, but a fund to be disbursed for their benefit. How completely the framers of the Constitution relied upon a community, intelligent, calm, scrupulous, not likely to resort to violence, certain not to countenance fraud, and able to comprehend the fact that political success should be only the means toward securing the end of the general welfare, nothing can better illustrate than the method which they prescribed for the selection as well as election of the President. We now know that there is literally no possibility of a President's posting his troops in the avenues of Washington and acquiring control of the United States by any such *coup d'état;* but we also know that there is very great danger of usurpation coming in the guise of law—of usurpation like the Democratic "system" in New York, or the Republican "system" in Philadelphia, or the conjoint "system" of Louisiana and of Congress. So long as Government is administered for the general welfare of the governed, so long there can be little to fear in an intelligent community from those changes which come in its course of constitutional routine. But when it is administered for the welfare of the administrators, and the transfer of executive power is regarded as a pecuniary prize by several hundred thousand "professionals" out of office, and as the loss of livelihood by a considerable number who chance to be in, and the legislative authority has been allowed to acquire a direct personal interest in the same official plunder, then it must be evident that every change is fraught with danger, and that fraud on the one hand and violence on the other may be the sequel of any Presidential election. The changes of Administration with us come with every fourth or eighth year, and their regularity leads the common mind to accept them as inevitable; but the changes from one political party to its opponents have been exceedingly rare, and we certainly do not know by experience how the self-control of the country can stand the strain which the sordid interests of the political class may throw upon it with the first transfer of power from one party to another. The plainest common-sense dictates that every servant of the nation should find his own welfare united to the cause of law and order; that the members of the civil service, like those of the military, should have a direct interest in the safety and maintenance of the Government; and that the number of those who are to win or lose by the result of a Presidential election should be reduced to our legislative representatives and a few chief officers of state. But while the public intelligence is slowly growing up to the dictates of common-sense, it is certainly desirable to guard against the danger, though the remedy does not go to the root of the disease.

The question, as we have said, is now an open one. It is indeed singularly open, for all of the old conditions of difficulty which perplexed the statesmen of 1789 have dropped off, and not a single new one has been imposed. The first difficulty which befell the framers of the Constitution was the fear of the small States that they would be absorbed or destroyed or in some indefinable way injured by the large ones. Hence they demanded not merely proportionate equality, but an influence or representation greatly exceeding the ratio of power and population which they were to contribute to the common stock. Experience has shown that these fears were utterly groundless; that no small State has ever suffered as such by the Union; and that the influence of a State in the national councils depends much more on the intellectual magnitude of its representatives than the disproportionate number of its votes. Nothing can now seem more preposterous than the spectacle of little Rhode Island standing out for two years against the Union; yet we see history renewing the spectacle in Prince Edward Island, which, with a population of 80,857 (in 1861), refused for several years to enter the Canadian Dominion. The boundaries of the States of this Union are for the most part artificial or political lines, separating imaginary rather than real interests, such as the sentiment of State pride. As soon as the conflict of real interests came, these lines gave way to those of natural geography, and instead of a visionary conflict of States there was a real conflict of sections. So long as the sectional lines were marked by free and slave labor, the small States chanced to be an important, almost a controlling, element in the contest, and any attempt to disturb their disproportionate influence would have been resented almost as much as if the disproportion had been

intended as an express guaranty to the South. With the universality of free labor the sectional lines immediately changed, and for the North and South we now have the South, the East, and the West. Between these three sections the small States are almost evenly distributed, and the inequalities which exist in the distribution are steadily growing less. So far as the map of the party manager is concerned, the uncertainties of future politics do not admit of anything very definite being said; and we suspect that there is hardly an "acute politician" in the country who has ever "posted up" the comparative influence of the small States, or can tell whether a change in the basis of their representation will in any way affect his future "slate."

It is next to be noted that the deliberative character of the electoral colleges has entirely passed away. One of the many difficulties for which our first statesmen had to provide a remedy, was the want of intercommunication between the people of the colonies which they were uniting into a country. It is not easy now really to apprehend the problem of providing for a people whose habitations extended from Maine to Georgia, and from the Atlantic to the Ohio, but who were absolutely without steamboats, railways, or telegraphs, and almost equally without roads, mails, and newspapers. We now have the means for an unfailing interchange of opinions. We have more—the means for an interchange of those primary thoughts and impressions which precede the formation of opinions. But, with such a want of means for the dissemination of intelligence as existed in 1788, it was wisdom, if not a necessity, to provide for the *selection* of the President by the same bodies that were formally to elect him. The country has outlived the deliberative character of the electoral colleges, for the simple reason that it has outlived the necessities of the situation. The electoral system is now without practical utility, and equally without a hold upon the minds or imaginations of the people. All men do not perceive the dangers which lie dormant in it, but to all it appears a useless piece of machinery, not inconvenient or expensive, but wholly without a rational purpose.

It is also to be remembered that the Convention thought it best to allay suspicion by allowing the States to choose the electors in their own way. Accordingly, in some of the States they were chosen by the Legislature. The people of South Carolina, we believe, down to the time of the Rebellion, never voted for a President of the United States. That phase of the old suspicion has also passed away, and the people of the different States gradually and voluntarily have come to employ precisely the same means for both selecting and electing the head of the Government. Finally, the three-fifths representation of slaves in some of the States, and the varying property qualification of voters in others, are no longer conditions imposed upon the constitution-builder. The variable values of votes in different States absolutely debarred Jefferson and Hamilton from allowing the citizens of all to meet in one poll and vote directly for whatever candidates they pleased. The complexity of their system was not voluntarily chosen, but was the complexity of the circumstances with which they had to deal. Now that we are relieved from the complication of the circumstances, there is no need of retaining the intricacy of the system. Messrs. Morton and Bayard are not bound by the restrictions that were set upon the first architects. The wonderful simplicity of those architects' plan we can only apprehend by studying the extraordinary complication of the circumstances to which it was adapted. Our present engineers come upon the ground after the Hill of Difficulty has been graded and the Slough of Despond filled up. The circumstances of their case are these: State distrust entirely passed away; sectional jealousy singularly in abeyance; every man a voter in every State (which gives to all votes an equal value); a practice already established essentially inconsistent with the old prescribed form of proceeding; a people entirely willing to put aside the old form, and self-educated to the conclusion that the most desirable elements in the method for electing the President are directness, simplicity, and safety.

THE CONDITION OF PARTIES.

THERE are now seven parties in existence in the United States, all possessing names, all issuing from time to time strenuous appeals for public support, all holding conventions, all making platforms and keeping up the appearance of an active organization and existence. Of the six, two have had a great deal of actual experience in governing the country, and have had in times past definite principles of government on which to act, or definite objects to attain. They are both now generally admitted to be destitute of either, except that one, being in actual control of affairs, desires to retain that control, and the other, not having been in control for some twelve years, desires to regain it. Whether parties in this condition ought to be called dead or alive is a question which seems hardly worth arguing. The one important thing about them is that neither has any more definite notion of its own aims than that we have just indicated. A most amusing and recent proof of this seems to have escaped most people's attention. It is only a year since the country was all ablaze with the fierce excitement of a Presidential contest. The union of the Democrats and Liberal Republicans brought into opposition to the Republicans a party one of whose principal aims was civil-service reform. The Republican party, however, assured the public that so far from being against civil-service reform, it was their own peculiar measure, and to convince all sceptics it was made a separate plank of the Philadelphia platform. There can be little doubt that the insertion of this reform in the platform saved many votes for the party. To make the matter still more prominent, General Grant was no sooner elected than a contest arose inside the party over some appointments which were said to have been made against the spirit of the rules adopted by General Grant's own Civil-Service Commission. The chairman of the Commission resigned, as the public understood, because it was impossible for him any longer to believe that the rules were to be followed. General Grant, however, renewed his profession of faith in the reform and his determination to carry it out. Under these circumstances, and considering all the public clamor made at the time of Mr. Curtis's resignation, one would have said that if there was one matter on which it was vitally important for the Republican party to keep straight, and one matter on which it was vitally important for the Democrats to keep the attention of the country riveted, it was civil-service reform. Yet we do not remember a single Democratic platform since the election which has taken the least notice of the resignation of Mr. Curtis or its assigned reasons, or a single Republican platform which has taken the pains to mention the subject in any way. Nobody who had lately come to the country and had read the late party platforms would imagine for a moment that one of the great reforms to which the party in power had pledged itself, and which the party out of power had denounced it for not carrying out, was the reform of the civil service.

The Liberal Republicans afford a curious instance of a party living everywhere throughout the country on the strength they are supposed to have somewhere else. It is no uncommon thing for gentlemen to establish what is called an international reputation in this way, growing famous in England on the strength of the reputation they are supposed to have in America, and famous in America from the reputation they are supposed to have in England. The Liberal Republicans have merely turned to the account of a party the methods which have heretofore been made use of among individuals. They are certainly as strong to-day as they have ever been, and are hardly likely to be, as an independent organization, stronger. It is impossible to distinguish a Liberal Republican when you see one from a Democrat. He professes the same principles, and on examination is found to hold them, though as a general rule he has not held them quite so long.

The Labor Reformers and the Female Suffrage Reformers can hardly be said to be in any better case. Labor Reform a few years ago seemed about to become an active cry in Massachusetts, but after polling some twenty-five thousand votes in one election, and twelve in another, the vote dwindled down to nothing and disap

peared. The Crispin Society, which was perhaps the most powerful organization whose support the movement had, is itself now in need of support to prevent its going to pieces; the labor-reform cries have ceased to be heard, and, indeed, for the last year there has even been a lull in the non-political labor movement—among the organizers of strikes. The advocates of female suffrage seem to have lost faith both in the feasibility and in the efficacy of their reform. As to its feasibility, the politicians have shown lately but little interest in it; and as to its efficacy, the growing conviction among the male population of the very slight value to the individual male citizen of the ballot, the numerous exposures of election frauds, and perhaps more than all the disagreeable vicissitudes in the lives of the Woodhull-Claflin sisterhood, have damped the ardor of the honest and sincere woman-suffrage reformers, and led them to that frame of mind in which they look upon the reform as one to be steadily kept in view rather than immediately adopted. The history of the causes which led to the introduction of female suffrage in Wyoming, too, recently published in a Western magazine, have not been of a kind to make converts. Wyoming has always been pointed to as a place in which the advantages of the reform have actually been tested and approved by experience. It seems, however, that there are a mere handful of women in Wyoming, and that the male citizens of the Territory, having heard that women desired above all things the right of suffrage, conceived the idea of attracting wives by promising them the ballot and allowing them to serve on juries. These calculations, however, turned out to be totally mistaken. However precious the ballot may seem to woman in the abstract, she will not go to Wyoming and be married to a Wyoming citizen for it, and the result is that there is a strong pressure for the repeal of the law. There have never been enough women in this Territory, or men either, to test the effect which the change would have in thickly settled communities. The Temperance party has as yet made no organized attempt to gain possession of the National Government, and is very unlikely to do so.

Of the Farmers' Movement we have spoken very often, not, as some of our contemporaries seem to suppose, in a cynical spirit, but simply for the purpose of examining into the causes of the farmers' discontent and the proposed remedy. The farmers have grievances enough, but it is a moral impossibility that any lasting party can be founded on such a declaration of principles as that chartered rights are not inalienable, that the State shall fix the price of all transportation, or that the swindling of directors shall be made up to the agricultural population out of the scanty profits of the stock and bondholders, who are the very persons in most cases who have been swindled.

The accuracy of this picture of the political field, so far as it relates to any one party, will not probably be questioned by a member of any of the other seven, but within the limits of each party there is a strong feeling that the fate of the country depends on its immediate success in the coming elections. Therefore, we hear on all sides terrible shouts of warning about Grant's third term, Cæsarism, monopolies, salary-grabs, land-grants, centralization, and many things besides. The newspapers are full of them naturally enough, because it is all news, in the ordinary acceptation of the word. Nevertheless, the excitement, unless we are very much mistaken, will pass away in a month or two, and leave the country very much in the state it was before. And this for many reasons, some of which we have just endeavored to point out.

One additional reason, and a very important one, is a reason which the popular orators and exhorters are not fond of taking into account; and that is, that the people are not only full of virtue and intelligence, and capable of great exertions in behalf of liberty, law, and order, fond of falling into line, and marching on to victory at the polls; they are also capable of fatigue, and just now the people are fatigued with politics, really weary to death of them. If the people had only one vote to cast every few years, the probability is that it would never grow weary of casting or pretending to cast it. Unfortunately, however, it is the privilege of the people to be able to cast a ballot every year, and often every six months, for a number of candidates for State, United States, and local officers about whom it knows nothing and hears everything. For the past year, it has heard not only that pretty much all the present incumbents of these offices are corrupt men or the tools of corrupt men, but that the political class itself is so depraved that all possible candidates are corrupt men or the tools of corrupt men. Under these circumstances, it cannot be wondered at that the people should look upon the extraordinary exertions to redeem and save various parts of the country, now being made by the various parties in the field, with a good deal of indifference.

THE NATIONAL UNIVERSITY SCHEME.

FEW people, probably, except editors of newspapers, and those professionally interested in the business of education, will read with care President Eliot's report on the scheme for establishing a national university at Washington. Most people take, as it appears from the report itself, very little interest in schemes for national establishments of the educational kind, and the public will probably in this case content itself with remembering the fact that Mr. Eliot came out in opposition, and was generally believed to have given the finishing blow, to a project—devised no one knows by whom, and to be effected no one knew how—of having an institution for the promotion of the higher education subsidized and fostered into life by the General Government. Indeed, this is pretty much all the public, as public, need care to know about the matter. The fact that the plan was opposed in a report signed by a gentleman occupying the position and commanding the respect due to Mr. Eliot, is reason enough for inferring, as the press seems generally to have done, that the plan has been really killed. We should have feared, *à priori*, that on the appearance of the report the charge would at once have been made that its conclusions were dictated by the jealousy of new foundations entertained by an older university. A few years ago this charge would unquestionably have been made. It is not difficult to recollect a time when the chain of reasoning which would have been found at the bottom of many of the editorials written on the appearance of such a report as this would have been of this kind: "President Eliot is President of Harvard; Harvard is a Massachusetts university; now we see why Mr. Eliot is so bitterly opposed to a national university." The hearty expressions of approval with which the report has generally met are gratifying in two ways—not only because of the intrinsic value of the report itself, but also as an illustration of the much more catholic and cosmopolitan spirit in which the subject of university education is now discussed.

The report is in fact a beautiful piece of destructive criticism, and has the merit, which so much destructive criticism lacks, of showing that the conclusions reached are not merely based on an examination of the reasons for opposing the plan, but also on a general and wide-reaching study of the subject in all its branches. Mr. Eliot does not merely give his readers to understand that for such and such reasons a national university would, instead of being a national blessing, be a national curse. He evinces at every turn a comprehensive grasp of the fundamental question—what an American university ought to be.

The history of the report is also interesting, as it shows what sort of a foundation of committees and organization and agitation is needed to lend an appearance of importance to any scheme which has a public title. On the 20th of August, 1869, it seems, a meeting of the National Educational Association was held at Trenton, New Jersey, at which a resolution was unanimously adopted directing the appointment of a committee, consisting of one member from each of the States, to take the whole matter of a national university, spoken of in the resolution as a "leading want" of American education, into consideration, and to report at the next annual convention. This convention was held at Cleveland in August, 1870, and meantime the committee, which was duly appointed, had done nothing. The chairman, however, Dr. John W. Hoyt, of Wisconsin, who was at the bottom of the whole movement, had done a good deal, and presented what was called a preliminary report, on the general subject, couched in elevated language, but without any definite recommendations whatever, except that there should be a single central university, and that for its creation the citizen, the State, and the General Government must unite, coupled with a request for more time, which was granted. It would have required, perhaps, no ghost to come from the grave to predict that at the next annual meeting, held in St. Louis in August, 1871, another report would be presented making a little clearer what the recommendations about the union of the citizen, the

State, and the United States meant. At any rate, at the St. Louis meeting Dr. Hoyt and a minority of his committee reported that the function of the United States was to subsidize the university, that the function of the several States was to have a voice in its management, and the function of citizens was that they "should be cordially invited to endow such departments . . . as shall most enlist their sympathies." The committee recommended that "there should be raised a new and permanent committee of less numbers than the present—say fifteen— . . . to be known as the National University Committee," "that a quite limited number of members thereof should be a quorum for the transaction of business at any regularly called meeting, and that a majority shall have power to supply . . . vacancies. . . ." The concluding sentence of the report was as follows: "A committee of this character would be able, in the first place, to concentrate the best thought of the country upon the various important questions involved in the perfection of a plan for the institution; and, secondly, to marshal the strength of the country in systematic and effective support of the measure, when at last formally brought to the attention of Congress."

The project had now got so far as to have secured a minority report. Enthusiasm was at its height, and the permanent committee recommended was appointed. The subsequent proceedings may be given in a few words. The members of the permanent committee were all busy men, and were scattered over the country from one end to the other. Several of them were appointed without their knowledge. There has never been a meeting of the committee competent to transact business. Dr. Hoyt, however, has been by no means inactive. Regarding the necessary enthusiasm as already created, he repaired to Washington, and spent the winter of 1871-2 in writing letters to a large number of persons interested in education, asking their opinion and advice about a national university, and enclosing a draft of a bill to establish such an university. These letters were supposed to have additional weight because they were written on the paper of the Bureau of Education, and were sent out from that office with envelopes for the free transmission of replies to that Bureau. At length Dr. Hoyt's plan of the campaign culminated in the introduction into Congress of a bill to establish the university, drawn by himself, and presented by Senator Sawyer of South Carolina, which was supposed by all concerned to be the bill of the National Educational Association, and was referred to by General Eaton, Commissioner of Education, in a letter to Mr. Eliot, as "favored by the committee" of that association; the committee, that is, which had never been called together. Another bill for the same purpose was also introduced apologetically by Senator Howe of Wisconsin, and, according to that Senator, was "drawn by some one, he did not know who." The bills were read twice, and referred to the Senate Committee on Education and Labor.

Mr. Eliot enters upon an examination of the scheme, as it appears in these bills, and shows very effectually that their passage could lead to nothing but jobbing and corruption, inefficiency, and an endless succession of scandals. Senator Howe's bill specifies ten different faculties and designates almost all the professorships. The president of the university is to be appointed by the President of the United States, with the consent of the Senate; the heads of faculties by the president of the university, also with the consent of the Senate. The president and heads of faculties constitute the university senate, and control all subordinate appointments. There is no reason whatever, Mr. Eliot very wisely says, to suppose that these appointments would be made on any better method than that which now prevails in United States custom-houses and post-offices, and he suggests that the spectacle of a national university "ring" would be even less edifying than that of a custom-house or post-office or even of an agricultural-college "ring." Here, indeed, is the root of the matter, so far as it relates to practical methods. There is no way of obtaining a grant of money from Congress for such an enterprise as this without giving the politicians an important voice in the appointment of officers, and every one knows that, as politics now go, this means an open door to every kind of iniquity. What a national university would be with its governors appointed by the same authority which has put Governor Holden into the Raleigh Post-office after the Legislature of his own State had impeached and convicted him for corruption—a conviction which for ever disqualified him from holding office under the State government; with its professorships and tutorships parcelled out among the various States and Territories geographically, and distributed among needy placemen, broken-down littérateurs, and rising poets, it is not difficult to imagine. It was impossible for Mr. Eliot to examine this branch of the subject with reference to the experience already obtained in the case of particular colleges which have been to a certain extent dependent not upon a distant central government, but what might be supposed much less dangerous, upon a local State government. There is, for instance, a university in California in which politicians had at one time a controlling voice, and their operations made the university a laughing-stock and by-word among those who knew anything about the matter, so that a story was told which was supposed to illustrate the peculiar condition of education in California at the time, of a certain important professorship the incumbent of which had made himself obnoxious to the political gentlemen at the head of affairs; they did not know how to get rid of him, as they had no reason to allege for his removal; but at length they bethought themselves of an old political device—they abolished the professorship itself. Mr. Eliot has had reason, also, to know the evils of State control in the case of the college of which he is president. The governing body of Harvard consists of a corporation and a board of overseers; the entire body were, till within a few years, elected by the Legislature of Massachusetts, and it is a well-known fact that so long as the board remained in the hands of the Legislature, it was used as a convenient place of repose for gentlemen whom their friends in the Legislature desired to find places for, and was inert and almost lifeless. A few years since the Legislature surrendered its prerogative to the alumni of the college, and the alumni now elect the overseers. The change has resulted in the conversion of the board into an active, energetic body, in full sympathy with the college, respected by the graduates, and taking a part it never had taken before in the government of the institution. Indeed, so far as the experience of Harvard College goes, we may say that it shows the prosperity of a university to be in the direct inverse proportion to the interference of the State.

No effective security is provided in either of the bills—and, in the nature of things, no effective security is likely to be provided by a Government which itself supplies the funds—that appointments will not be of the nature of political appointments, and the tenure of office a political tenure.

"This is a fatal defect in any Congressional bill to establish a university, so long as the principles of appointment to United States offices and the tenure of those offices remain what they now are. The only tenure of office which is fit for a teacher is the tenure during good behavior and competency, and this is the only tenure which will secure the services of competent professors in colleges and universities. The frequency of the elections of teachers is a very bad feature in our public-school system. Permanence of tenure is necessary to make the position of a teacher one of dignity and independence. Young men of vigor and capacity will not enter a profession which offers no money prize, unless they are induced by its stability and peacefulness and by the social consideration which attaches to it. The system which prevails in most of our large cities and towns of electing the teachers in the public schools at least as often as once a year, is inconsistent with this dignity, peacefulness, and consideration, unless a firmly established custom of re-electing incumbents converts the constantly recurring elections into mere formalities. We must all bitterly deplore the mortifying fact that for more than a generation neither dignity, peacefulness, nor social consideration has attached to any appointment in the civil service of the United States."

We have not space to examine in detail the two bills of Senators Howe and Sawyer, or perhaps of Dr. Hoyt, but among their peculiar features we may mention that the latter bill provides for a board of regents, consisting of one member from each State of the United States, to be appointed by the Governor, with the advice and consent of the Chief-Justice and the Superintendent of Public Instruction or other like officer of his State; five members from the country at large, and a number of *ex-officio* members raked together from all quarters. With regard to this provision, Mr. Eliot very justly says, that while the principle of local representation is natural enough for ordinary political matters, different States having frequently different interests with regard to taxes, railroads, commerce, and so on, it is absurd to apply the principle to the governing board of a university—philology, history, philosophy, science, and mathematics being pretty much the same in Massachusetts as they are in California. Besides this, Senator Sawyer's bill grants $20,000,000 in what Mr. Eliot calls the "singular form of an unnegotiable certificate of indebtedness of the United States, bearing interest at 5 per cent. a year," and both the bills plant the proposed university at Washington—a situation which, considering the physical and moral atmosphere of the place, would seem to have been selected for the purpose of putting into a practical form Artemas Ward's joke, that Harvard College was "pleasantly situated in the bar-room of the Parker House."

But in his demolition of this university scheme, Mr. Eliot does not stop at practical considerations. He considers also the theory on which the whole rests, and says very truly that it belongs to an order of society and development wholly different from our own, and that its importation would be a deplorable error. The National University is based on an obsolescent conception of the relation of government to society—the paternal theory of government. On the Continent of Europe this theory is in full force, and in France and Prussia paternal instruction is its necessary corollary, just as a state church is. The old American theory, on the other hand, has always been local taxes for universal elementary education, voted by those locally interested, and for the higher grades of instruction permanent endowments, administered by incorporated bodies of trustees. "This is the American

voluntary system," and is "in sharp contrast with the military despotic organization of public instruction which prevails in Prussia and most other states of Continental Europe. Both systems have peculiar advantages, the crowning advantage of the American method being that it breeds freemen."

FRANCE—THE POLITICAL INTERREGNUM.

PARIS, July 30.

THE French Assembly is prorogued for three months. The echoes of Versailles will be silent, and France will live for a while like the *Belle au Bois Dormant*. It would be idle to deny that the country is enjoying keenly this hope of silence and rest. Great satisfaction is felt at the liberation of the territory from the last German regiments, and the liberation of the political field from the ravages of the Left.

If we cast a glance over the last session, we shall find as complete a change as has ever perhaps been worked out in so short a period. When the deputies met a few months ago, the star of M. Thiers was in the ascendant, the monarchical parties seemed quite discomfited; one after another the old parliamentary warriors, as well as the young aspirants, joined the army of the so-called Conservative Republic. Every step, every word of M. Thiers was carefully noted; the ambassadors of all the powers had followed him to Trouville. They were to be found almost every evening at the Elysée or at Versailles. Bismarck was convinced that the Monarchists were only making themselves ridiculous by futile efforts against the all-powerful, ever-ready, bold, and resolute *petit-bourgeois* who had been treating with him. Prince Orloff was courting him and sounding him on the eventualities which might arise from a conflict between Germany and Russia. In every party election, the candidates, Conservatives or Radicals, offered themselves to the electors as the friends of the President. The Radicals all over France had, at the dictation of Gambetta, adopted the clever policy of representing themselves as the most ardent defenders of the Government; they overruled by this means the very prefects and all the timid agents of the administration. The country was drifting, as by an irresistible current, into the definitive Republic.

We all remember how the triumph of M. Thiers came to an end. He had rendered such services to the Republicans, he had given to their cause such an artificial air of solidity, of grandeur, of strength, that he thought that his "quos ego" could never be resisted. The Radicals had been his instrument; he had used them in order to terrorize the Conservatives and the Monarchists. The time came when they thought they could use him. The coalition between the Conservative Republicans and the Radicals ended in the defeat of M. de Rémusat and the election of MM. Barodet and Ranc, two open representatives of the bloody Commune. The veil was torn in an instant. The abyss concealed by the thin screen of the Conservative Republic was shown to every eye. The recoil of the country was immediate, and the parliamentary revolution which in one day placed Marshal MacMahon in the place of M. Thiers was one of the easiest that was ever seen in any country. Ever since, the reaction against the men and the ideas which were in the ascendant with M. Thiers has been constant, and it requires almost an effort of the imagination to remember the moral state of the country a few months ago. It seemed as if all was lost; people were gravely meditating whither they should fly if the Commune became the legal Government of the country. I know a bibliophile who had already sent his choice books to England. The daily telegrams from Spain were read like a sort of "mene, mene, tekel, peres."

With an elasticity peculiar to the French character, all is now hope and confidence, and this curious optimism became visible among all ranks of the population during the festivities of the visit of the Shah. I was, I confess, less interested in the diamonds of this Oriental monarch than in the people who followed him everywhere. Even during the Empire, at the time of the Congress of Paris or of the visits of the sovereigns during the great Exhibition, I have never seen such magnificent spectacles as those which the capital of France offered during a fortnight. The vision of royalty, the glittering uniforms, the fireworks, the sight of Paris from the Trocadero with its monuments shining in the darkness; the march of sixty thousand men in the Bois de Boulogne before a battalion of generals, headed by MacMahon; the fêtes at the Elysée and at the Foreign Office, had completely distracted the Parisians. They were out of mourning, proud again of their city, and drinking night and day the waters of Lethe. Who would have dared to remark, when the batteries of artillery passed in such magnificent order, that all the guns were unserviceable? When the wind shattered the flames of the Bengal fires, who would have made a comparison between the spectacle offered to the Shah and the conflagration of the Commune? Wherever MacMahon passed, he never heard an opposition cry. No "Vive la République," no "Vive Thiers." The Republic was forgotten, Thiers was forgotten, all was forgotten. The monarchical instincts of the nation have again triumphed, and though the word Republic is still on every public document, the Republicans feel that their cause is nearly lost. The present President of the Chamber once told me, long ago, "It might be possible to make the Republic live in France, but only on one condition: the Republicans inspire the masses of the Conservatives with so much dread, and are so unruly, that they must be carefully excluded from the Government; the Republic must be confided exclusively not only to Monarchists (for a Monarchist may be a Liberal), but to Conservatives, even to reactionaries, to clericals, to soldiers. A military, reactionary, clerical Republic may perhaps be allowed to live."

I am afraid that this prediction was only too true. There is a certain innate solidity in the monarchical principle which would allow a constitutional king to be almost a Liberal, but a republican government in France is constantly obliged to reassure the country, and it is drawn forcibly towards what is vaguely called the Reaction. The present Government is composed of men who began their political career in the ranks of the opposition to the Empire. The Duc de Broglie would like to be considered as a Liberal, but the majority of the Chamber is much more preoccupied at the present time with order than with liberty. "We want a strong government" has become a sort of proverb. The Duc de Broglie, who comes from an old military race, is trying, and so far successfully, to unite the *suaviter in modo* with the *fortiter in re*. Strong as he is, as the representative of order and of the coalition of all the Conservatives against the Radicals, he is not blind to the difficulties of his situation. The existing political solution is merely a negative one; MacMahon in power means neither the Republic, nor the Monarchy, nor the Empire; it means simply, no Commune. But the terrors of the Commune will some day be forgotten, and France will become again uneasy, finding itself without any definitive institutions and, so to speak, without a future. The Duc de Broglie has made his platform—he represents the coalition of all the social forces against the anti-social parties; he not only proclaims a truce between all political parties, he implicitly proclaims equality between all these parties. The constituent rights of the Assembly are now inactive, but the constitutional race must begin at no very distant time, and the present era of good feeling will be used by all parties. The alarming feature of the situation seems to me to be this: the Imperial party, which seemed utterly defeated at Bordeaux, is no longer excluded from what I have called the constitutional race which is to come; public opinion is getting accustomed to consider the Bonapartist solution as a possible one. If we compare the Duc de Broglie to a starter, it is clear that, while he has his favorite horse, he will give the signal for all the jockeys when they are all well in line. The Bonapartists are only a small band in the Chamber, but the vote of the 26th May, which placed MacMahon and the Duc de Broglie in power, was only carried by fourteen votes; and though this majority, by the natural effect of victory, has now swollen to a hundred, the Bonapartists in the Assembly feel that they have had the fate of two administrations in their hands. Outside of the Chamber, the Bonapartists are very active; they have more than a hundred papers in the provinces, and eight in Paris. Many of the Bonapartists are mere Conservatives, who would be satisfied with any strong government; but there is a band of Bonapartists proper, who will have it that no government can be strong but the government of a Bonaparte; that only the Bonapartes can satisfy the love of order and the love of equality which are the two strongest instincts of the nation, and they add that only the Bonapartes can satisfy the Catholic clergy without being themselves clerical and without becoming the tools of Rome.

The Duc de Broglie, who always was an enemy of the Empire, is now trying to prove that a government can do as much as the Empire did for order, for the material prosperity of the country, for equality, and for the religion of the people, without destroying the public liberties. It is a difficult undertaking; as he is a sincere Catholic, he cannot do as much for religion as M. Jules Simon, who is an infidel. He was obliged a few days ago, in a discussion which took place in the Chamber about the construction of a church on the hill of Montmartre, to separate himself from the Extreme Right, which has strong clerical propensities. One man can steal a horse, while another cannot look over a hedge. The Duke, who is a leader of the liberal Catholic party, is constantly denounced by the Republican press as a clerical, a Jesuit; the German papers represent him as the head of a formidable conspiracy in favor of Rome against modern civilization. There is much injustice in such attacks; but as Figaro says in the comedy of Beaumarchais: "Calomniez, calomniez, il en restera toujours quelque chose"—an impression is created, and by degrees it permeates the public.

Clericalism has become the cry of the Republicans. They have found nothing better. They could not say that the parliamentary revolution of the 26th May was a *coup d'état;* they cannot attack the majority of the Chamber; they cannot speak even in the name of the Republic, as the Republic continues its official existence; they cannot accuse the Duc de

Broglie of conspiring—his character and his sincerity are too well known; they cannot say that he favors this or that pretender—he is known to be a friend of the Orléans, but he has solemnly said that he would not touch any constitutional questions, and would remain on the narrow ground where he has been placed by a coalition of Legitimists, Orleanists, and Bonapartists. His position is almost unassailable as long as he enjoys the confidence of the majority of the Chamber, and this majority seems now perfectly compact; but the accusation of clericalism is the weapon which has been discovered against the formidable power of MacMahon's government. "We are not clerical," said M. Batbie, the Minister of Public Instruction, a few days ago, "but we are religious"; and the organ of Gambetta retorted to him: "It is just the reverse; you are not religious, but you are clerical." One of the ministers, M. Ernoul, the Minister of Justice, is taunted daily for having once signed the address of a few deputies to the Pope—an address which expressed an adhesion to the doctrines of the Syllabus. To me, I must confess, the whole substance of the Cabinet, if I may say so, is in the Duc de Broglie, as he alone is in constant communication with Marshal MacMahon, and has more than the position of an English premier. The Duke comes from an Italian stock, and the *Broglios* have kept some Italian qualities. The present Duke is no fanatic, either in politics or in religion; he understands the necessities of the time; he is not vacillating, but he can yield, and I shall be surprised if he is not soon treated like an enemy by the Ultramontane party.

Notes.

PORTER & COATES, Philadelphia, announce Dean Stanley's 'Sermons' and 'Travels in the East'; 'Northern Lights,' tales translated from the Swedish and Finnish by Selma Borg and Marie A. Brown; 'Romain Kalbris,' from the French of Hector Malot, by Mrs. Julia McNair Wright; 'Floating Lights,' by R. M. Ballantyne; and 'Lord Chesterfield's Letters, Sentences, and Maxims.'——Dodd & Mead will publish 'Against the Stream,' by the author of the 'Schönberg-Cotta Family'; 'Crooked Places,' by Edward Garrett; 'Hester Morley's Promise,' by Hesba Stretton; and Dean Howson's 'Character of St. Paul.'

—We alluded, some weeks ago, to the completion of the last instalment of the catalogue of the Tosti Collection of engravings in the Boston Public Library. The several parts have now been brought together between two covers, though not under one alphabetical arrangement, and there is the still further drawback for ready reference that fully three-fifths of the brochure is devoted to the regular book-list of the Bulletin. These are, however, defects which can be remedied hereafter. The main thing—to have a complete and accurate record of the 6,500 prints given by Mr. Appleton to the Library—has been accomplished in the most praiseworthy manner, thanks mainly, we believe we may state, to the intelligent painstaking of Mr. James L. Whitney, whose name is almost a guaranty of laborious and cautious research. Comparing the Tosti catalogue with that made by Mr. Louis Thies for the Gray Collection at Harvard College (noticed at length in the *Nation* of Jan. 13, 1870), we find that the former is superior in two important respects: (1) it has an alphabetical index of painters and designers, and (2) it is supplied with cross-references under subjects. Comparing the two collections, we should say that they were defective in nearly the same way; for instance, very little of the English school of engravers appears in either. The Tosti Collection is stronger in portraits and in representatives of the Italian school. The two series will probably reinforce more than they will supplement each other. We must again express the hope that they will some day be united in the future art museum of Boston.

—We have received from Messrs. A. S. Barnes & Co. the prospectus of a new quarterly review to be called the *International Review*. It appears to have grown out of a projected periodical of a decidedly different character. "It first took shape," says the prospectus, "in the following address, which explains itself: We, the undersigned, believe that the time has come in our history as a people when there should be established a truly national Quarterly Review, to discuss with the best ability of our country the great questions of the age." This statement was signed by the late Chief-Justice Chase, the late Bishop McIlvaine, Justice Swayne, Dr. McCosh, Dr. Tyng, Dr. E. Irenæus Prime, Dr. Philip Schaff, Dr. Ray Palmer, and others, who added to their original declaration the declaration that in their opinion the scheme propounded by Prof. John M. Leavitt was a sound one, and that the quarterly should be established in accordance with it. But this scheme was afterwards greatly enlarged, and instead of a national, it was resolved to set on foot an international review. The aim of the proprietors now is "to secure the very best writers in the world," who shall treat of "all the great questions of our age and country, literary, scientific, social, national, and religious," but who shall "never assail the divine authority of the Scriptures or the supremacy of our Constitution over a united republic." The *International* "will not, like most quarterlies, address merely scholars and divines, but will furnish guidance and information in pleasing and copious forms to practical men in business and the professions. To the solidity of the quarterly it will strive to unite the sprightliness of the monthly, avoiding extremes of weariness and superficiality." The *International* will strive to be a representative of the Old World and the New—"to the maturity of the former uniting the energy of the latter." A good list of contributors is given as already secured. It includes the names of Mr. C. F. Adams, President Woolsey, President McCosh, Dr. Bushnell, Professor T. W. Dwight, President Porter, Dr. Peabody, General O. O. Howard, Professor Edwards Park of Andover, Dr. Mark Hopkins, Dr. F. Wharton of Cambridge, Dr. Howard Crosby of this city, and several other American gentlemen, while among the names of foreign contiibutors we see those of Stanley, Jevons, Carpenter, Froude, Thomas Hughes, Müller, Lightfoot, E. A. Freeman, Laboulaye, Pressensé, Père Hyacinthe, Dr. von Holtzendorff, Sig. De Gubernatis, and others. Ten of these gentlemen, seven Americans and three foreigners, are under promise to contribute to the first number, which will come out on the 1st of January next.

—A correspondent, who has given a great deal of attention to the subject of longevity in the United States, furnishes us, in addition to the examples of centenarians cited in our review of Thoms, the following, taken from the Rev. Geo. T. Chapman's 'Sketches of the Alumni of Dartmouth College' (Cambridge, 1867): Rev. John Sawyer, D.D., who graduated at Dartmouth in 1785, "was born at Hebron, Conn., October 9, 1755, and died at Bangor, Me., October 14, 1858," aged 103 years 5 days. Rev. Nathan Birdseye, who graduated at Yale in 1736, died January 28, 1818, aged 103 years 3 months 9 days. These cases, like our own, are from among a class of cultivated and conspicuous men, concerning whose age there would hardly seem to be room for mistake. For some very curious vital statistics of college graduates, our informant refers us to the March circular of the Bureau of Education, in which Dr. Charles Warren gives the result of his enquiries concerning 1,024 alumni of Harvard, Yale, Dartmouth, and the Wesleyan University in the quarter century 1836–1860.

—The *Times* of this city has, within a few days, published two interesting letters which, until then, had never seen the light. One was written by Washington and one by Jefferson. The former is as follows:

"HEAD QUARTERS, NEWBURGH, April 20th, 1782.

"GENTLEMEN:

"I have been favored with your Letter of the 16th of April by General Forman.

"Convinced, from the state of facts which has been exhibited to me, that justice, expediency and necessity require that satisfaction should be obtained for the Murder of Captain Huddy; I have in the first instance made a representation to Sir Henry Clinton, & demanded that the Officer who commanded the Party, or if he was not a Captain, such a number of the Agents in the execution as are equal by Tariff to that rank, should be delivered up to condign punishment. In case of refusal I have formed the resolution that Retaliation shall take place upon a British officer of equal Rank. It therefore remains with the Enemy alone to prevent this distressing alternative: for having formed my opinion upon the most mature reflection and deliberation, I can never recede from it.

"I have the honor to be
"Gentlemen
"Your Most Obedt. Servant,
"G°. WASHINGTON.

"The Honble. Majr. Gen. KNOX, & Go. MORRIS, Esqr."

Captain Huddy was an American officer who was besieged in a block-house near Monmouth by a party of regular troops and loyalists. He made an obstinate resistance, but was obliged to surrender, and the Tories appear to have persuaded the British commanding officer to let them hang their prisoner. The Jersey Whigs were greatly enraged at this act, and, indeed, nothing could be more bitter than the neighborhood war carried on between the local Whigs and Tories. Congress was petitioned, and with effect, as may be seen by Washington's letter. A certain number of British captains were compelled to draw lots to ascertain which of them should be hanged in retaliation for Huddy's murder, and the lot fell on a Captain Asgill, a youth of nineteen. Clinton was unable or unwilling to send the real offenders across our lines, and Asgill, although his death was long deferred, would doubtless have been executed as André was, if his mother, hearing of his danger, had not been sagacious enough to betake herself to Paris and beseech the intercession of the King and Queen of France. This was not refused, and as the requests of our ally were at that time potential, and as Washington was probably not inclined to obduracy in so hard a case, poor Huddy went unrevenged.

—In the other letter of which we have spoken Jefferson gives, with sufficient plainness, his opinion of M. Beaumarchais, the witty and versatile composer, dramatist, pamphleteer, and projector. Mr. Jefferson's note may be taken as his comment on a passage in one of the biographies of M. Beaumarchais: "Se lança dans les spéculations commerciales et déploya un tel génie en cette genre qu'en peu d'années il eut acquis une grande fortune; ce fût surtout lors de la guerre de l'indépendance des Etats-Unis qu'il s'enrichit en approvisionnant les Américains d'armes et de munitions." The following is Jefferson's letter, he being the Secretary of State; and Gouverneur Morris, to whom it is addressed, Minister to France:

"PHILADELPHIA, June 13th, 1793.

"DEAR SIR:

"It has long since been observed that of the three millions of livers given by the court of France to aid us in the commencement of our revolution, one million was unaccounted for by the hands into which it was paid. The date of the paiment is fixed to have been the 10th of June, 1776, but to whom it was paid has never been known. Suspicions are that it was to Beaumarchais; and that with this very money he purchased the supplies furnished us by him, for which large sums have been paid him already, and a further large sum is lately certified to be due to him as the balance of that account. I inclose you a letter from the Secretary of the Treasury on this subject, with all the papers relative to the same which his office can furnish; and as you are on the spot, I must beg the favor of you to make an immediate and thorough investigation of it. No reasons of state can now exist for covering the transaction longer under mystery.

"I have the honour to be with great and sincere esteem Dear Sir,

"Your most obedt. & most humble servt,

"TH: JEFFERSON.

"Mr. MORRIS."

When Beaumarchais's accounts were settled, the missing million of livres was deducted as never having been received, and his claim was cut down to that extent. His heirs demanded it, and the French Government urged their suit, the French ambassador being described by Hildreth as rudely pertinacious in pressing it. He maintained that Beaumarchais had not embezzled the missing million, though it was conceded that the money had been expended for other purposes than supplying munitions of war. It was a long time, however, before the claim was successful. In 1835, Congress satisfied it with $160,000, or four-fifths of the sum demanded.

—Letters from Washington and Jefferson also appear in the newly issued 'Proceedings of the Massachusetts Historical Society' (1871–73). Those from the former had been printed before. They were addressed to Lund Washington, the presumed kinsman of the General, and his agent for superintending his plantations. Jefferson's letter (inedited) bears date of Aug. 13, 1800, and was written to Gideon Granger, of Connecticut, formerly United States Postmaster-General. It discusses the prospect and necessity of a change from Federalism to Republicanism in New England, and takes the familiar Jeffersonian view of the dangers of centralization, or, as he expresses it, "of a common law being in force in the U. S." He says that upon the true theory of our Constitution, the General Government should be "reduced to foreign concerns only," and he concludes by hoping that time had been given the New England States "to recover from the temporary phrenzy into which they had been decoyed, *to rally round the Constitution*, and to rescue it from the destruction with which it had been threatened even at their own hands." This is an early, doubtless not the earliest, instance of the use of a phrase which had its greatest vogue fifty years later, in the mouths of Union-saving Whig orators and statesmen. The same volume of the 'Proceedings' contains a bibliography of the Society, by Dr. S. A. Green, Mr. Whitmore's papers (already mentioned in the *Nation*) on the origin of the names of Massachusetts towns, and a nearly fac-simile reprint of Captain John Smith's 'New England's Trials' (London, 1620), besides a large quantity of fragmentary matter of more or less permanent historical value.

—The question whether 'Mother Goose's Melodies' derived their English title from a Boston family named Vergoose is causing a good deal of excitement in antiquarian circles in that city. The affirmative was confidently maintained in an elaborate preface to the Riverside edition of the 'Melodies' (1870) on the strength of a statement made years ago by a gentleman now deceased, that he had seen in the library of the American Antiquarian Society at Worcester the title-page of Thomas Fleet's 'Songs for the Nursery, or Mother Goose's Melodies for Children' (Boston, 1719). The sole witness being dead, and the fragment not being known to the library at the present day, the call for proof has been met only with an appeal to family tradition. Mr. John Fleet Eliot represents both the family and the tradition. Fleet married the daughter of Elizabeth (Foster) Goose, and is supposed to have honored his mother-in-law by collecting her nursery lore and putting her name to it. Mr. Eliot is her great-great-grandson. He makes bold to conclude that "until a copy [of Mother Goose] of an earlier date than 1719 can be produced, the account given in Houghton's edition of 1870 must be considered correct." We can hardly think this conclusion justified, or that it will end the controversy, which has, by the way, been carried on in the *New England Historical and Genealogical Register* for April and July. The missing title-page, or the complete edition of Fleet, if it be really an *editio princeps*, would amply reward the discoverer.

—A week ago to-day Colonel James F. Meline died at his residence in Brooklyn. For some years past, Colonel Meline had devoted himself entirely to literary pursuits, writing for the *Catholic World*, for this journal, and for other periodical publications, but making himself best known by his strictures upon Mr. J. A. Froude's treatment of the case of Mary, Queen of Scots. Competent authorities everywhere pronounced this attack to be as damaging to Mr. Froude's reputation for accuracy and careful candor as any other that has ever assailed him; but it was warmed by a zeal and an indignation which were more manly and honest than they were perhaps judicious. This zealous little book had a good circulation in the United States, and some circulation in England. At an earlier date, in 1867, just at the beginning of this final literary period of his life, Colonel Meline published another book called 'Two Thousand Miles on Horseback,' which was received with a good degree of favor, as it well deserved. Portions of it were far above the level of the letters which correspondents usually send home to their newspapers, and it was as letters written to the Cincinnati *Commercial* that the 'Two Thousand Miles on Horseback' first saw the light. A chapter of that work is devoted to an acute enquiry as to whether the survivors of De Soto's men pushed on, under command of Luis de Moscoso, across Texas and into the desert Staked Plain—an enquiry here first made, all authorities having previously agreed that De Moscoso certainly got no further West than the eastern part of our Indian Territory. There are also in 'Two Thousand Miles on Horseback' one or two interesting chapters of the little-known early history of New Mexico. We believe these are his two most considerable works; but there should be added a brief abridged translation of a life of Sixtus V. and numerous essays, which, though not appearing in book-form, might well have been so published, in virtue of the research, unusual in our periodical literature, which underlay them, and the vigor with which they were expressed. This was sometimes to be called excessive, Colonel Meline being a good Catholic and his subjects often of a polemical character. Colonel Meline was born in the United States fort at Sackett's Harbor, his father having been a Federal officer. He was educated at the Catholic college of Mt. St. Mary, Emmettsburgh, Maryland, and afterwards was admitted to the bar. We think he practised law but little in the course of his life. During the war he was on General Pope's staff. In 1865, he made his Rocky Mountain trip. At the time of his death, Colonel Meline was about sixty years old.

—Evidence of the growing need in science of frequent public communication between workers is furnished by the recent action of the Geographical Society of Berlin. Heretofore its proceedings have regularly appeared at the end of its *Journal*, which is published every two months. Hereafter, beginning with July, they will make a separate publication (*Verhandlungen der Gesellschaft für Erdkunde zu Berlin*), to be issued as promptly as possible after the meeting of the Society. The *Verhandlungen* will retain the size and general typography of the *Zeitschrift*, to whose subscribers it will be furnished gratis; but it will have its own paging. No. 1, reporting the session of July 5, is rich in geographical news, the Russian commander against Khiva, General Kaufmann, furnishing a long communication on some of the scientific results of his expedition down to April 19. It is worthy of remark that the column which he was then directing was obliged to employ 6,700 camels, and that the column coming to meet him from Kazalinsk had 2,800 more. These figures are calculated to strike the Western imagination, accustomed to see the camel only in menageries and zoölogical gardens, or in pictures, in which the attempt is seldom made to depict a multitude. A letter from Dr. Nachtigal, from Kuka, relating the difficulties under which he labored for want of some promised funds; an account by Gerhard Rohlfs of the exploration of the Libyan Desert which he is to make next December, under the patronage of the Viceroy; and papers by Herr von Richthofen, Herr Euler, Herr Neumayer (on a new instrument for measuring deep-sea temperatures), together with geographical notices, complete this very interesting number of the *Verhandlungen*, which, as will be seen, makes a near approach to Petermann's *Mittheilungen* in point of freshness. Naturally, the *cadre* of this new publication is as yet imperfectly filled. For example, it is part of the design of its conductors to give abstracts of the proceedings of all the German geographical societies, so far as they may be obtainable.

LITERATURE AND DOGMA.*

IT has been objected to Mr. Arnold's book that no one can divine from it exactly what the author's theological opinions are; that while some of its readers look upon it as subversive of Christianity, others have found it in their own experience a bulwark of the distinctively Christian doctrines. The objection does not seem to us very well taken. One would say that only a very heedless, or a very prepossessed, or a very dull Evangelical reader could be able to go through Renan's 'Vie de Jésus' and at the end of the perusal say with enthusiasm that the book is one that should be placed in every Sunday-school library in the country. Yet we have known exactly that to be said. The lady who has found herself strengthened in her purpose of leading a righteous, godly, and sober life, and her conception of the character and mission of Christ vivified, by a perusal of Mr. Arnold's book, has no doubt made a good use of it and may justify herself by the book itself; but if very clear-headed, she would not for all that call Mr. Arnold a member of her particular church. We suspect that 'Literature and Dogma' will not be accepted by any Christian denomination, except perhaps the denominations called Liberal or Advanced Liberal, as adequate credentials for admitting Mr. Arnold to fellowship and full communion; and, as we have said, we do not see why anything contrary to this or otherwise than this need ever have been said.

The title of the book may perhaps be a little misleading, for it describes but ill the essential substance of the matter presented, which really is Mr. Arnold's view of what was the Jewish conception of God, what was Christ's conception of God, and of man's relation to God, including the relation in which he himself stands towards his Maker and his fellow. In other words, Mr. Arnold tells us in 'Literature and Dogma' what, in his opinion, Christians ought to think about Christ, and in telling them what he conceives to be their fundamental errors, he is plain enough to preclude the possibility of mistake as to his own attitude. But Mr. Arnold has long been the apostle of literary culture; and he has sometimes found that this apostleship has not always been without a certain flavor of martyrizing, whence, in part at least, it comes that the faith which is in him he holds with some aggressiveness and intolerance, and preaches to the Bishop of Gloucester and the Bishop of Winchester his doctrine of sweetness and light at great length and with a polished contemptuousness which perhaps we are to forgive in a semi-martyr. It must be irritating, we will not say to an apostle, but to a poet and a critic endowed with a large share of the poetic and critical power of vision, that when he has made a study of Celtic literature, for example, as Mr. Arnold has done, along comes some worthy and industrious gentleman and sneers because the poet and critic has written poetical criticism while confessedly he had not nearly as much learning in regard to the Brehon laws as the late Professor Eugene O'Curry had. So also, when one has written on the relation of St. Paul to modern dogmatic Calvinism, and is thereupon thrust aside by an Evangelical bishop or other theologian as a writer who has never studied systematic theology, and must therefore take the law in regard to St. Paul from the regular authorized formularies or some one of them—in such a case, which also has been Mr. Arnold's, it is natural to preach sweetness and light and the superiority of the literary spirit to the dogmatic spirit, with some degree of contempt and sarcasm for one's dogmatic opponents; and this Mr. Arnold has done in a degree which to most people will seem fatiguing. As some one has said, for the first thirty or forty times that the Bishops of Gloucester and Winchester are introduced as "wanting to do something for the honor of our Lord's Godhead," it is all rather amusing; they had given provocation, and it is agreeable enough to watch the whip flicking them neatly—a little grimace the while illuminating the features of the gentleman who handles it. But after eighty or ninety times it ceases to amuse; and, what is worse, the impression supervenes that, on the whole, the Bishops are not suffering the most in this operation. Still, we may excuse the iteration of this part of Mr. Arnold's work and his attaching so much importance to this excoriation. In this country, we have no very definite notion as to how much time and labor should be consumed in an assault on opinions backed by episcopal authority, nor how necessary and effective may be an operose expression of contempt for their theological abilities and conclusions. He succeeds at least in bringing clearly before the reader that he thinks the Bishops in error both as regards the object in view and the means by which they could hope to attain it.

Perhaps of no more consequence is Mr. Arnold's other ostensible reason for putting forth his book. He has two. One is his old and favorite one, just adverted to, and for his constantly insisting upon which acknowledgment is due to him. "And thus," he says, "we come back to our old remedy of culture." We must know the best that has been thought and known in the world; we must get the power through reading to estimate the true proportion and relation in what we read; and to do this we must read a great deal and be content to use but little of what we read; the *homo unius libri*, even though his one book were the Bible, almost necessarily reads that one book wrong. Take, for instance, the case of Hooker's 'Ecclesiastical Polity.' Canon Liddon, looking about him for authorities to sustain the Athanasian Creed, finds "the great Hooker" commending it, and accordingly cites him as authority. Yet what is the fact? Hooker is "great" in virtue of his having signally, and above others or before others, and when others had it not, the sense in religion of *history*, of historic development; he gives the true method of criticism for church dogma, the historic method. Church dogmas, says Hooker, are not to be found written in the Scripture in black and white; they are to be deduced or collected from it; or, as we now say, they are a development from it; and the one right criterion he points out for determining whether or not a dogma is scriptural is reason. And surely this is enough for us to expect a sixteenth-century divine to say without expecting him to go aside from his purpose of establishing the true historical method of criticism and take up a side issue with which he had nothing to do. He was establishing the method of judging creeds; he was not passing judgment on them. Therefore Hooker is no real authority in favor of the Athanasian Creed, and "the great Hooker" should not be cited as such: "We might think he was if we read him without discrimination, and to read him with discrimination culture is necessary." So too of the Bible. It is to be read in the light of literary culture, in the light of the best that has been thought and known. All of this well-known theory of culture Mr. Arnold urges forcibly and acutely, and it is not the least interesting part of the book.

Secondly, when we come to enumerate reasons why 'Literature and Dogma' now appears, it appears because among the workingmen of England scepticism in regard to the theological religion which is preached to them has become very widespread; they want to know, not to "believe." "The lapsed masses" some writers call the majority of the lower classes in England. They begin to follow teachers who tell them that the Bible is an exploded superstition. It is not men like Professor Huxley or like the late Mr. Maurice that they follow when the churches lose hold of them, but atheists and men like Mr. Bradlaugh; and all this rejection of the Bible happens despite the efforts of the churches. It will go on happening, for the churches seek to re-enthrone the Bible as explained by our current theology, and to do that is as impossible as to restore the belief in witches or the supremacy of the feudal system. If now these masses which "ask for the reason and authority of things" are to have a belief in Biblical religion, the problem before the churches and other popular teachers is "to find for the Bible a basis in something which can be verified." Thus, then, we come to the real business of Mr. Arnold's book, which—whether or not it duly exalts the gospel of culture, and whether or not it is likely to construct for the English workingman a religion which he and Mr. Bradlaugh will accept—will give us what Mr. Arnold thinks of the Christian religion and its Judaic predecessor.

In brief, then, the Hebrew race, says Mr. Arnold, had a talent or genius for righteousness, for religion, as the Greeks had for art. The master-word of the Old Testament is righteousness, right-doing—conduct, in short. But "conduct" we are to think of as the word of common life (to which "morality" corresponds as the term of philosophical disquisition), and "righteousness" we are to think of as the word of religion, the true meaning of religion being not morality merely, but morality touched by emotion; and this new elevation and inspiration of morality is well marked by the term "righteousness." And as this word righteousness is the burden of the Old Testament, so it is of the New, the difference being that the New Testament teaches how righteousness may be reached by a particular means—the power, however that word is to be understood, of Christ. Of the Old Testament we may take for a characteristic text: "O ye that love the Eternal, see that ye hate the thing that is evil! To him that ordereth his conversation aright shall be shown the salvation of God." And of the New Testament a characteristic text is this: "Let every one that nameth the name of Christ depart from iniquity." The two are the same. Our use of Mr. Arnold's version of the Old Testament text, and the substitution of "the Eternal" for "the Lord," brings us to his notion of Israel's conception of "God"—a term which, he warns us, is excessively difficult of definition, ready as definers have been to give it a determinate meaning and employ it in combinations as if it were a symbol whose value is exactly known. To Israel, he says, "God" was the Eternal something, not ourselves, whose power we recognize as not derived from us, and which, as we see and feel, makes for righteousness. "The Eternal not ourselves that makes for righteousness," that was the Hebrew's idea of God. He was not the "Eternal Cause"; "these poor people were not Archbishops of York"; they had

* 'Literature and Dogma. By Matthew Arnold.' Boston: James R. Osgood & Co. 1873.

not metaphysical heads; but they had the passion of righteousness; they had not only the clear perception that right-doing was well, but they had the habitual yearning after right-doing which belonged to them in a higher degree than to any other race of men, and to them God, the great "I am," was the Eternal something, not themselves, which makes for righteousness: "Thou art my portion, O God, at midnight will I rise to give thanks unto thee": "God" is here really at bottom only a deeply moved way of saying "conduct" or "righteousness." But "man never knows," says Goethe, "how anthropomorphic he is;" and Israel, orator and poet, using the language of oratory and poetry, doubtless personified the Deity, and spoke almost from the first of the Eternal as performing personal acts. Nay, in process of time the Eternal became for the mass of the Hebrews a mere magnified and non-natural man to be ceremoniously served. Prophets and religious men often tried in vain to bring back their brethren to the true apprehension of their God as the Eternal which makes for righteousness, but they tried in vain. Those courses of conduct which Israel's intuition of God had originally touched with emotion and made religion lay chiefly in the line of national and social duties; and these duties are peculiarly capable of a heartless, mechanical, and exterior performance. The misfortunes and vicissitudes of their varying history modified somewhat their ideals, but as to the main thing, as to the apprehension of conduct as religion, and of God as the eternal stream of tendency flowing toward and with the good, this Israel had mostly lost when Christ appeared—Christ, whose central object of concern, goodness, was what had been the central object of Israel's concern also. It was Christ's self-imposed task, it is his title to reverence, that he should seek to restore and to vivify this conception of God. He gave anew the old religion.

The rest of the volume is devoted to showing that popular Christianity has not been the unadulterated doctrine of holiness insisted upon by Christ when he rose up to show how every jot and tittle of the old law should be fulfilled by his followers, but that in place of this teaching we have had the misreporting of unqualified observers of Christ while he went about teaching; the corruptions of tradition; the ineptness of the "popular science" of Christ's mission and work (the Apostles' Creed); the metaphysical acuteness and unreason of the "learned science" of the same subject (the Athanasian Creed); the narrow, if eager and conscientious insistence of Dissent, and the misleading, if less narrow conservative traditionalism of Catholicism. And then, with a candor and courage which, as we at least read the book, does him honor; with a substantial respectfulness and religiousness which show him the true son of his father, if with a too frequent superficial flippancy and seeming irreverence; in the cool, not to say complacent exercise of the genuine Protestant "right of private judgment," which has given to this disquisition great freshness, Mr. Arnold offers us, in place of all this churchly error, in place of the nineteen-century-old beliefs, his own conclusions in regard to the Bible and its principal personage.

PROTECTION AGAINST FIRE.*

FOR five or six years an almost continuous discussion has been going on in the press, in committee-meetings, in boards of underwriters, and in thousands of private families, as to the proper means of preventing the spread of fire in large cities. There has certainly been reason enough for the discussion, since within this period, to say nothing of human lives, many hundreds of millions' worth of property have been destroyed, and most of this destruction has, by common consent, been needless. When we add together the losses of Portland, Chicago, and Boston, we find that the devastation has been as great as would have been caused by a war of no inconsiderable magnitude; and in view of these successive calamities, it is difficult to avoid the belief that to them is due a great deal of the depression in business which we are prone to attribute exclusively to farmers' movements and railroad inflation or government financial mismanagement. This discussion about the prevention of fire is of value, not only for the sake of the practical results to which it must lead, but also as illustrating the utility of popular discussion itself as a means of producing in the public mind a generally sensible conclusion, which may serve as the rational motive power of future reforms. The hearings before the city government of Boston, and the action of the underwriters since the second Boston fire, show that whatever may be true of the average voter or the average alderman, the average property-holder continues to prove himself to be the same cautious and intelligent person with regard to his own interests that he has been since the institution of private property began. This is an encouraging sign; for, as we have often pointed out in these columns, the reforms, both political and social, of which the country now stands most in need are of such a kind that most of them must be introduced by the property-holding class.

The Portland fire did not attract much intelligent attention, though it did in New England attract a great deal of sympathy. The public did not then suspect that there was anything ominous in it, and devoted all their energies to relieving the distress of the inhabitants. The Chicago fire had a quite different effect. It not only attracted public sympathy and attention, but it caused public amazement. The wildest fancies were circulated as to the origin, and the most ridiculous stories told as to the performances of the flames. The fire was attributed to the "electrical condition of the atmosphere," or more generally still to the "state of the air." It was said to have been seen to "leap half a mile at a time in the air," and to have been driven of its own motion against the wind. It was said to have destroyed solid blocks of pavement, when there was no draught to make such a thing possible. To reconcile these strange stories (which carry one back to the wonderful tales we used to hear of military manœuvres in the early days of the war), it was only necessary for the heated imagination of the public to conjure up the mysterious agent of destruction known as the Fire-Fiend, whose metaphysical existence serves to smooth away all difficulties in the path of rational explanation. If, to use the phrase then common, the Fire-Fiend was really "stalking abroad in our midst," human effort, either to understand or prevent fires, could obviously be of little avail.

The Fire-Fiend period, however, did not last very long. The general ruin of insurance companies was of itself enough to make evident the necessity of some rational investigation into the origin of the Chicago fire, and though the official enquiry made by the city amounted to little or nothing, the unofficial enquiries, conducted by private persons and by experts interested in the subject of fire-prevention, resulted in a good deal: it was discovered that Chicago was badly built, that the fire-service was badly managed, and that the fire was to be attributed to a general recklessness pervading the community. Chicago was a Western city, however, and every one knew that the West was the home of haste and recklessness; so at first few inferences were drawn from the fire there as to the danger hanging over other places. Some few people, however, knowing that the condition of Chicago in some respects represented the condition of many Eastern cities, did draw some inferences not very favorable to the safety of the latter, and one gentleman who knew the subject thoroughly went so far as to predict that the city of Boston, or rather the crowded portion of it, would burn down just as Chicago had burnt down, if circumstances should prove favorable. Circumstances did, as every one knows, prove favorable, and almost in a single night the richest and in appearance the most substantial part of Boston was destroyed. This time less was heard about the Fire-Fiend, and more about Mansard roofs, crooked streets, and a badly-managed fire-department. It became evident to most people that the fancied security of Eastern cities was a sham, and that unless something was done, we should soon lose even the poor satisfaction of being insured at low rates by insolvent insurance companies. Nevertheless, it required one more fire in Boston to arouse people to the real magnitude of the danger. Since the last fire, there has been more intelligent discussion of the means of preventing and extinguishing fires than at any previous time, and it is possible now to sum up in a general way the conclusions to which the discussion points.

In the first place, it is no longer doubted by anybody, either insurer or insured, that the fundamental cause of all these disastrous conflagrations, whether the form in which it exhibits itself be the erection of "Mansard" roofs, or the insufficient supply of "steamers," or the blockade in the streets, or the ridiculous rates of insurance, is one and the same, and is that general want of system and plan, that want of organized responsibility, which is the crying evil of the times, and which shows itself in the civil service at home and in the diplomatic service abroad, in the State governments and in the General Government, in small villages and in great cities, in families, churches, and trust companies, as well as in custom-houses or post-offices. It is only necessary to read a single Boston newspaper to see that the main object of the underwriters in petitioning the city government for reform in this matter is to secure a system which shall make the fire-service in that city a really responsible fire-service, with a single head and efficient discipline throughout all its divisions. The testimony of the gentlemen who have been appearing before the city officials on this subject, as well as all the more recent writing in the press, is in refreshing contrast to the swash of sympathetic drivel and the mad screams of panic which seemed at first to be the only result of the Portland and the Chicago fires.

The subject of fire-prevention is one which will probably continue to attract a good deal of attention from the American public for some time to come, and as it is now a practical question in Boston, it is worth while to

* Protection against Fire, and the Best Means of Putting out Fires in Cities, Towns, and Villages, with Practical Suggestions for the Security of Life and Property. By Joseph Bird.' New York: Hurd & Houghton. Cambridge: The Riverside Press. 1873.

notice a singular fact in connection with it of which all fire-reformers ought to take heed. For a generation or more, it has been popularly customary to suppose that the improvements in fire-prevention were to be of one kind only—the manufacture of larger and more powerful engines—engines which can throw large streams of water to enormous heights. Every year or two there have been in all large towns and cities exhibitions of skill in this branch of the fire-service, until it has come to be supposed that any city possessing engines which can throw a stream of water on the tops of its highest buildings is practically safe. So far, however, is this from being the case that the most important improvements of late years in the fire-service have been made in quite a different direction—that of securing an immediate rather than a large supply of water. Of course there must be at hand a water-supply of great capacity, but by the experience of the London Fire Department and of private experimenters on this side of the water, it has been shown that speed is the great source of safety. The large, gaudily painted, and shining steamers which we have been in the habit of priding ourselves upon necessarily arrive on the ground considerably after the beginning of the fire; in the interval, the fire has ample time to gain headway, and being protected in a great measure from the water by the walls and floors, very soon has everything its own way. The building in which the fire begins is usually a complete ruin, and the department is considered to have done wonders if it prevents the spread of the flames to the adjoining structures.

Mr. Bird, however, proves by ample citations from the best authorities on the subject (and he has carefully tested all the advice he gives by thorough experimentation), that half the destruction, if not more, now caused by the delay of the steamers in arriving on the scene of action might be prevented, if only there were within easy reach a few buckets of water, or, better still, a small hand-pump, and a hatchet to cut away woodwork which may protect the flames; and he proves almost to a demonstration that the great Boston fire of last November might have been wholly prevented if the Boston Fire Department had been in the hands of a man who knew this simple fact, or, knowing it, acted upon it. It is unnecessary to go into details, but any one can see that it is much easier to have on the premises or to get to the premises a small hand-pump than to bring into action a large piece of machinery which consists of two different vehicles, and is worked by two horses and several men. A thousand accidents may prevent the arrival of the "machine," and after it has arrived, it may be of little or no use; but it is always easy enough to have Mr. Bird's apparatus (which he thinks, by the way, better than patent extinguishers) in instant use.

In short, Mr. Bird, in his interesting essay, shows that the time has come when, if we wish to save ourselves from a general conflagration, we may as well begin to learn what other countries have done in the way of fire-prevention, and act upon it. His exposure of the management of the Boston Fire Department is complete, and ought to give a quietus to Mr. Damrell's political aspirations. His style, however, is bad, and we fear will do something to spoil the effect of his advice. We may add in conclusion that it was Mr. Bird himself who foretold, from his knowledge of the condition of the Fire Department, and the careless manner in which buildings had been put up, the extreme probability of just such a conflagration as that of last year.

The Tour of the World in Eighty Days. By Jules Verne. (Boston: J. R. Osgood & Co. 1873.)—M. Adrien Marx, a friend of M. Verne's, sums up that gentleman's character by saying that "his biography may be included in these words, 'a Breton, a Catholic, and a sailor.'" We doubt, however, if a biography written in greater detail would not convey a juster notion of M. Verne's peculiar qualities. For instance, it probably was neither as a Breton, a Catholic, nor a sailor that M. Verne constructed his narrative of events occurring in December last on the Pacific Railroad, at a point near Fort Kearney:

"The door of the next car opened, and Colonel Proctor appeared on the platform, attended by a Yankee of his own stamp as his second. But just as the combatants were about to step from the train, the conductor hurried up, and shouted 'You can't get off, gentlemen!'

"'Why not?' asked the Colonel.

"'We are twenty minutes late, and we shall not stop.'

"'But I am going to fight a duel with this gentleman.'

"'I am sorry,' said the conductor, 'but we shall be off at once. There's the bell ringing now.'

"The train started.

"'I'm really very sorry, gentlemen,' said the conductor. 'Under any other circumstances, I should have been happy to oblige you. But, after all, as you have not had time to fight here, why not fight as we go along?'

"'That wouldn't be convenient, perhaps, for this gentleman,' said the Colonel, in a jeering tone.

"'It would be perfectly so,' replied Phileas Fogg.

"'Well, we are really in America,' thought Passepartout, 'and the conductor is a gentleman of the first order.'

"So muttering, he followed his master.

"The two combatants, their seconds, and the conductor passed through the cars to the rear of the train. The last car was only occupied by a dozen passengers, whom the conductor politely asked if they would not be so kind as to leave it vacant for a few moments, as two gentlemen had an affair of honor to settle. The passengers granted the request with alacrity, and straightway disappeared on the platform.

"The car, which was some fifty feet long, was very convenient for their purpose. The adversaries might march on each other in the aisle, and fire at their ease. Never was duel more easily arranged. Mr. Fogg and Colonel Proctor, each provided with two six-barrelled revolvers, entered the car. The seconds, remaining outside, shut them in. They were to begin firing at the first whistle of the locomotive. After an interval of two minutes, what remained of the two gentlemen would be taken from the car."

Before shots have been exchanged, however, this affair is stopped, for a party of Sioux Indians attack the train, jumping upon it, as is their custom, while it is going at full speed, some of them skipping about the roofs of the cars like monkeys and pistolling the passengers, while others throw the baggage out on the roadside. As for the head chief, he takes charge of the engine, which he runs at double the regular rate so that it may pass Fort Kearney too rapidly to permit of interference by the United States garrison. This, however, is not the most remarkable thing that happens to "Train No. 42." Just before reaching a station called Medicine Bow, it came to a dead stop, the station-master at that point having sent on a signalman to say that the suspension bridge over the rapids was shaky, and would not bear the weight of the train. At this the passengers pour out, swearing at the delay, our friend Colonel Stamp Proctor, of course, making himself very conspicuous. There is much grumbling and wrangling, till at last "the engineer, a true Yankee," suggests a plan which he has known to be successful in other instances:

"'Gentlemen, perhaps there is a way, after all, to get over.'

"'On the bridge?' asked a passenger.

"'On the bridge.'

"'With our train?'

"'With our train.'

"Passepartout stopped short, and eagerly listened to the engineer.

"'But the bridge is unsafe,' urged the conductor.

"'No matter,' replied Forster; 'I think that by putting on the very highest speed we might have a chance of getting over.'

"'The devil!' muttered Passepartout.

"But a number of the passengers were at once attracted by the engineer's proposal, and Colonel Proctor was especially delighted, and found the plan a very feasible one. He told stories about engineers leaping their trains over rivers without bridges by putting on full steam; and many of those present avowed themselves of the engineer's mind.

"'We have fifty chances out of a hundred of getting over,' said one.

"'Eighty! ninety!'

"Passepartout was astounded."

The engineer's advice is acted upon, and proves to be the best that could have been given under the circumstances: "And they passed over. It was like a flash. No one saw the bridge. The train leaped, so to speak, from one bank to the other, and the engineer could not stop it till it had gone five miles beyond the station. But scarcely had the train passed the river when the bridge, already dilapidated, fell with a crash into the rapids of Medicine Bow." There is an American joke which treats of a frightened Poor White who is making his first railroad trip; by-and-by the train crosses a river, and the Poor White, looking out of the window and seeing no track, suddenly shuts his eyes tight and braces his feet, grasps the back of the seat in front of him, and in a minute enquires of his seat-mate, "Stranger, has she lit?" This, perhaps, is the American original of which M. Verne's tale appears to be the Breton, Catholic, and seafaring form.

But M. Verne, whatever he is, has succeeded in making the liveliest book of the summer. It is very laughable and readable, and nothing need be cleverer in its way than this little extravaganza. Mr. Phileas Fogg abovementioned is an Englishman who, when at home, lives a bachelor life at No. 7 Saville Row, Burlington Gardens, London. He has no relatives; he apparently has no business, although he is wealthy; he has no friends, but daily he plays whist at the Reform Club with three acquaintances and fellow-clubmen. Everything that he does is done with mathematical accuracy. On the day on which we are introduced to him, the 2d of October, 1872, he has just dismissed James Forster, his valet, because James "brought him shaving water at 84 degrees Fahrenheit instead of 86," and he is now awaiting the arrival of M. Passepartout, young Forster's successor. Mr. Fogg is, in short, the Englishman whom we have learned to know in such books as are written in France by good-natured satirists born in that land. That personage is impassible; he has fixed ideas; he is eccentric; he is at the same time the most methodical of creatures; he is entirely destitute of imagination; when his resources are exhausted, he settles his affairs, and coldly cuts his throat. One day Mr. Fogg listens at his Club to a discussion on the feasibility of a certain thief's getting away safely with fifty-five thousand pounds which he has stolen from the Bank of England, and with

which he has fled the country. Mr. Fogg asserts that the thief may escape, the means of flight are so numerous and rapid, and, incidentally, he remarks that he himself would undertake to go round the world in exactly eighty days. Twenty thousand pounds he offers to bet that he can do this, and, his money being covered, he and his new valet set out on a most remarkable and diversified journey, accompanied for most of the way by a detective, who is convinced that in the so-called Phileas Fogg he has no less a person than our Bank of England robber. We can assure the reader that he can hardly fail to find amusement in this tangle of impossibilities; and if he is above being amused by the chapter of accidents unfolded, why, M. Verne's Americans and Englishmen deserve careful study and encouragement, to say nothing of the real cleverness in imparting information which M. Verne shows whenever he chooses. Take, for example, the serious part of his brief account of the various Pacific railroads. Another book of his, not so good as this, so far as the adult reader is concerned, but which must be fascinating to a boy, and which is not without instructiveness either, is a big illustrated volume called 'In Search of the Castaways.' It is a trifle shaky on the subject of the British peerage and baronetage, perhaps, and one or two other subjects, as the relation of the Scottish nation to the English; but the mystery of Sir Brown and Lord Sir Arthur Wellington is unsolvable by the Celtic mind; and what few shortcomings the story has are swallowed up and lost in a world of merits.

The Harz Mountains: A Tour in the Toy Country. By Henry Blackburn. With forty illustrations. (London: Sampson Low & Co. 1873.)—In this volume Mr. Blackburn proves himself not only a very agreeable companion, but a guide to unfrequented places of rare beauty and interest. Unfrequented, we mean, by English and American tourists as yet; already the "Toy Country" is a favorite resort of the North Germans, and is every year becoming more accessible by rail. Our author at first seems to differ with the guide-books as to the attractiveness of this region, and he so far makes out a case against them that the reader is a little surprised at the close to find him discouraging others from following in his footsteps. That is to say, he warns the traveller that it is not worth while to get a glimpse of the Harz Mountains, or even to ascend the Brocken, under forfeiture of a visit to Switzerland or to the Alps of Southern Germany. This is reasonable enough, and will doubtless be heeded by those whom it concerns. The less hurried class of pleasure-seekers can well afford to yield to the temptation which Mr. Blackburn's pen and pencil constantly hold out to them. The fine old city of Goslar it would almost be an offence to pass by, after his inviting description of it. As a fossil specimen of a mediæval city, it apparently deserves to be ranked with Rothenburg in Bavaria, also an out-of-the-way and neglected curiosity, but still less modernized. In the rural districts, our author is equally felicitous in reporting what he sees, as the following extracts will show. He is speaking of Harzburg:

"It is evening when we stroll up the valley, and the peasants are returning from the mountains; cattle, sheep, pigs, goats, and geese line the roads, and the people all stop to stare as usual. We have only been in the mountains a few days, but these figures and the lines of fir-trees above our heads seem strangely familiar. Where have we seen these grave peasants in long coats, these wooden-faced women with baskets on their backs, these spotted cows, flat-sided pigs, and uniform geese? Where these formal-looking houses, rows of stiff-looking trees, white staring dogs, and grave, fat-faced children? It is the child's box of German toys, suddenly opened and turned out before us. . . . "

"We have called the Harz Mountains the 'Toy Country' of Northern Germany, because it is suggestive at every turn of toys and children. Every mountain we shall ascend is covered with rows of those stiff-looking trees which are carved in wood by children in the Black Forest and the towns of Germany. Every hillside is a plantation, hence their formality; and there are complete forests of fir-trees of all sizes, according to the year of growth. The effect is curious on a mountain walk, when, after threading a pathway with Lilliput footsteps, through a forest of enormous pines, you suddenly come to a nursery of little trees, a miniature forest, on which you look down like Brobdignag, and step at one stride over a mountainette covered with a hundred trees; and so on through the entire tour of the Harz."

A sketch (p. 80) of the house on the summit of the Brocken cleverly conveys the illusion of a stranded Noah's ark, to which it is likened in the text. "There is the host with his three sons coming out to meet us; the people walking two-and-two; the horses, sheep, pigs, and goats all stowed away at the great side doors."

Looking down upon Blankenburg we observe that "its central point of interest is the church spire, with its cluster of houses spreading upwards in graceful curves, like some delicate creeper, to the protecting walls of the castle, with its massive walls and terraces, fringed with trees." And this is the farewell view of Grund—"a characteristic picture, that we shall not have seen equalled for pastoral beauty in all the Harz":

"In a deep cleft in the mountain-side a stream descends, winding in and out between overhanging trees, now disappearing in some crevice, now descending almost perpendicularly, now spreading out right and left, but ever following the form and structure of the mountain down which it pours. It is a stream of red-tiled cottages, with dark gables, sheltering atoms of human life—a mountain village, as bright and glittering as a stream of water winding through green pastures, between gray rocks and waving trees."

We ought to mention, besides the handsome print and partly picturesque, partly humorous illustrations, two very sweet German airs, which every purchaser of the book will thank Mr. Blackburn for inserting.

Queen Loo, and Other Poems. By Gay Narramore. (Philadelphia: J. B. Lippincott & Co. 1873.)—The woman question appears to have taken up a great deal of Mr. Narramore's time—say, thirty-nine eighty-seconds of it. The volume before us is of a very miscellaneous character as regards subject-matter, but nearly one-half of it is occupied wholly with the great question of our age. It is a question towards which Mr. Narramore is in an attitude of conservatism; if, indeed, it would not be more correct to describe him as being in the posture of assault whenever he hears it mentioned, or rather in the act of overt attack. Still he knows how to be liberal and make due concessions. "God bless them all," he says in one place.

> . . . "As mothers
> They are equalled by no others."

And again he says:

> "As the sweetheart she is fine."

But he perceives that after all woman's true sphere is the home, and that modesty and maternity are her chief duties and her highest praise. The women of old Assyrian times, for instance, meet his views very well; they were more like lotus flowers than the women of our day, and less like noisy fighting-cocks:

> "Quiet grew they, not like chicken-sons,
> Woodhull-Claflins, nor yet Dickinsons!"

He can find no language too severe to express his feelings concerning this latter variety of women, who wish to vote:

> "The curled darlings, for whose pleasure
> Men do sacrifice all leisure,
> Wearing out their lives in toil
> That no vulgar care shall soil
> The delicate whiteness of their hands;
> *They* must war against love's bands!
> With their thin voice, cracked with spites,
> They must needs shout 'Equal Rights';
> They, too, have some waxen pinions,
> They would soar to the sun's dominions."

Singular as it may appear, the writer of this sort of matter has, nevertheless, in a few instances made an approach towards poetry. For example, the half-dozen or so of pages following page 56 may be said to contain a poetical thought or two expressed in a poetical way, and reading on after a very unpromising beginning we found ourselves on the whole rewarded. Mr. Narramore's unusual soundness on the main question made us desirous of saying more than this; but candor compels us to admit that we were not a little surprised at being able conscientiously to say so much.

Waubun: the Early Day in the Northwest. By Mrs. John H. Kinzie, of Chicago. "If we but knew the exact meaning of the word 'WAU-BUN,' we should be happy"—*Critic.* "WAU-BUN—the dawn—the break of day"—*Ojibeway Vocabulary.* (Philadelphia: J. B. Lippincott & Co. 1873. 12mo, pp. 390.)—Reminiscences of early times, if genuine, are always welcome and instructive, however dull and out of taste they may be; much more so when, as in this case, they are at once modest and sprightly, written in a good and agreeable style, and relating to subjects of the first importance in their way. The writer was the newly married wife of an Indian agent, stationed at Fort Winnebago from 1830 to 1833—the period of the Black Hawk War; and among the adventures narrated is a winter journey to Chicago. The sufferings of the perilous journey are graphically described—the party lost its way, and was in imminent danger of starvation or death by exposure. The description of Chicago, as she saw it in its infancy, will be interesting to all those who know anything of the localities; so will the digression upon the early fortunes of "Fort Dearborn," with the Indian massacre of 1812. As may be expected, the book contains many interesting bits of Indian manners and customs, with some entertaining anecdotes; and it is worthy of note that Mrs. Kinzie is far from severe upon her red friends, among whom she appears to have faithfully endeavored to deserve the title of mother which her official position gave her. In the account of one of her Indian acquaintances, a noble Winnebago woman, who had married a Fox Indian, she goes on: "According to the custom among all the tribes, the husband came home to his wife's family and lived among the Winnebagoes. It is this custom, so exactly the reverse of civilized ways, that makes the birth of a daughter a subject of peculiar rejoicing in an Indian family. 'She will bring another hunter to our lodge,' is the style of mutual congratula

tion" (p. 269). An incident in paying off the Indians: "Each one brings his little bundle of sticks, and presents it to the agent to register. Sometimes a dialogue like the following occurs: 'How many have you in your lodge?' The Indian carefully, and with great ceremony, counts his bundle of sticks—'Fifteen.' 'How many men?' 'Two.' The agent lays aside two sticks. 'How many women?' 'Three.' Three more sticks are separated. 'How many children?' 'Eight.' Eight sticks are added to the heap. 'What is the meaning of these two sticks that remain?' The culprit, whose arithmetic has not served him to carry out his deception, disappears amid the shouts and jeers of his companions, who are always well pleased at the detection of any roguery in which they have had no share." In view of the recent enquiries into alleged cases of longevity, the appendix, which exposes the fraud of Joseph Crévy, who pretended to be 139, has a certain value. It is a fault in the book, although a slight one, that it begins abruptly with the account of a journey from Detroit to Fort Winnebago, and the reader is left to find out for himself, as best he can, the object of the journey and the relations of the parties.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Ackermann (Prof. Dr.), Die Ursachen epidemischer Krankheiten, swd.	(L. W. Schmidt)	
Blackburn (H.), The Harz Mountains	(Sampson Low & Co.)	
Claus (Prof. C.), Der Bienenstaat, swd.	(L. W. Schmidt)

FREEMAN'S HISTORICAL SERIES.

FISKE'S CLASS-ROOM TAINE.

BAIN'S ENGLISH GRAMMAR.

WHITNEY'S GERMAN COURSE.

OTTO'S GERMAN COURSE.

OTTO'S FRENCH COURSE.

PYLODET'S FRENCH SERIES.

Nearly all the books for modern languages used at Yale, Harvard, and similar institutions. Correspondence invited from educators and students. Catalogues free on application.

HENRY HOLT & CO., PUBLISHERS, New York.

SPECIAL NOTICES.

A LADY qualified to teach English, Mathematics, and elements of French, desires a good situation in a school or private family. Best references given. Address Miss C., Racine, Wis.

A CHURCH CLERGYMAN, who is an honor man of Princeton, a teacher of 13 years' standing, and the proprietor of a large classical day-school near New York, would receive five boys into his family. For terms and reference address Box, *Nation* office.

AN EXPERIENCED TEACHER, a student at Prof. Agassiz's Summer School, and graduate of a New England College, desires a position as teacher of Zoölogy and allied sciences. Address Box 44, *Nation* office.

WANTED. A copy of the "British Association Catalogue of Stars." Apply to PHILP & SOLOMONS, Booksellers, Washington, D. C.

FOR SALE. An $800 Piano for $500. Entirely new and of first-class make. Address "Piano," Box 5, *Nation* Office.

AMENIA SEMINARY, Amenia, N. Y. A family boarding-school on the Harlem Railroad, 85 miles from New York. Full course of seminary instruction, with preparation for college or business. Personal care in study, habits, and health. Terms, $360 per year. Fortieth year begins September 15. S. T. FROST, A.M.

BOARDING AND DAY SCHOOL for Young Ladies, 226 South Broad Street, Philadelphia. Miss CATHARINE DWIGHT LYMAN, Principal. For circulars, address Miss Lyman. References: Rt. Rev. F. D. Huntington, D.D., Syracuse, N. Y.; Rt. Rev. M. A. De Wolfe Howe, D.D., Reading, Pa.; Prof. Louis Agassiz, Cambridge, Mass.; Henry W. Longfellow, Esq., Cambridge, Mass.; Prof. Charles Short, LL.D., New York; Rev. H. A. Boardman, D.D., Philadelphia, Pa.; Alfred Langdon Elwyn, M.D., Philadelphia, Pa.; Hon. J. I. Clarke Hare, Philadelphia, Pa.

DAUGHTERS' COLLEGE, Harrodsburg, Ky., will be ready for the reception of ladies on or before the 15th of September next. Rooms should be engaged at once, as the number admitted will be limited. We desire to receive only those who have the time and inclination to attain to a higher standard of culture and knowledge than is usual for girls. For course of study, terms, and other particulars, address, JNO. AUG. WILLIAMS, President.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS, Franklin Square, New York.

Just Ready. 8vo, cloth, price $6 50.

THE THIRTY-NINE ARTICLES of the Church of England Explained in a Series of Lectures. By the Rev. R. W. Jelf, D.D. Edited by the Rev. J. R. King, M.A.

Sixth Edition of

OUR NEW VICAR; or, Plain Words about Ritualism and Parish Work. By the Rev. J. S. B. Monsell, LL.D. 16mo, cloth, $1 50.

New Edition of

HOUSEHOLD THEOLOGY. A Manual of Religious Information respecting the Holy Bible, the Prayer-Book, the Church, the Ministry, Divine Worship, the Creed, etc., etc. By the Rev. J. H. Blunt. 16mo, cloth, $1 25.

Post free on receipt of price.

POTT, YOUNG & CO., Cooper Union, New York.

*WORKS OF ART AND HOUSE-*hold Decoration. Chas. F. McKim, 57 Broadway, offers for sale and inspection photographs by the first English amateurs and professionals, viz., Gordon's unsurpassed views in England and Wales; Robinson & Cherrill's landscape and sky studies; W. England's prize-medal cabinet Rhine views, etc., etc., together with W. J. Stillman's scenery and architecture of Normandy, Greece, and Crete, and Album of the Acropolis of Athens (26 plates, bound). Also photographs of statuary and other objects in the British Museum, and the Berlin Company's photographs of Old Masters from the principal galleries of Europe. Etchings—autograph and photograph. Fine water-colors.

Orders taken for the above and for similar works, if in sufficient amount.

*** Orders received for old and rare furniture, porcelain, table service, etc., and for commissions to be executed by Morris & Co., London.

Designs and Estimates furnished. P. O Box 2791.

THE WEEK IN TRADE AND FINANCE.

AUGUST 18, 1873.

THE past week has been marked by extreme dulness, and great caution exercised by dealers in stocks. The market has had a downward tendency, which, but for the support given to the so-called Vanderbilt stocks, would have speedily drifted into a "weak panic." As it was, many holders threw their stocks overboard at once, and perhaps acted wisely in so doing. Great fears are entertained as to the operations of the bull pool in gold. Where bulls and bears are equally matched in pecuniary force, the battle must always be won by the former, and as the object of the gold pool, as evinced by their frequent raids on the stock market, is to advance gold and depress stocks, it is only reasonable to suppose that whilst the influence is felt, the stock market will meet little support outside of the combinations now sustaining it.

The Treasury balances at the close of business in Washington for the week were—currency, $10,330,000; coin, $83,000,000; besides $43,500,000 of coin certificates. The internal revenue receipts were $467,268. The exports of specie for the week were $496,762, being a total since January 1 of $38,329,272, against $55,319,499 during the corresponding period of 1872. The total exports of domestic produce for the week ending Tuesday last were $5,276,814, and since January $173,268,934.

Money continues extremely easy on call. During the early part of Saturday, the rate was advanced to 3 and 3½ per cent., but capital at once came in, and the rate dropped to 2½ to 3 per cent., although 5 per cent. was charged when the collateral was gold. In commercial paper, short dates have mostly been absorbed, and that on hand being five to six months, is not readily taken by money-lenders, who are hoping for a renewal of last year's stringency.

The weekly statement of the associated banks was not favorable, showing a decrease in the reserve of $3,071,450, leaving an excess over the legal requirement of $9,664,200, as against $12,735,650 August 9. The banks lost $2,175,900 in specie, and $1,462,200 in legal tenders, while the liabilities were also reduced by a withdrawal of deposits to the amount of $2,265,800 and a contraction in the circulation of $800. The discount line was extended $1,855,900. The following is a comparison of the past two weeks:

	August 9.	August 16.	Differences.
Loans	$290,758,100	$292,614,000	Inc. $1,855,900
Specie	29,820,000	27,644,100	Dec. 2,175,900
Circulation	27,223,500	27,222,700	Dec. 800
Deposits	237,123,100	234,857,300	Dec. 2,265,800
Legal Tenders	49,002,300	47,540,100	Dec. 1,462,200

The following shows the relation between the total reserve and the total liabilities:

	Aug. 9.	August 16.	Differences.
Specie	$29,820,000	$27,644,100	Dec. $2,175,900
Legal tenders	49,002,300	47,540,100	Dec. 1,462,200
Total reserve	$78,822,300	$75,184,200	Dec $3,638,100
Circulation	27,223,500	27,222,700	Dec. 800
Deposits	237,123,100	234,857,300	Dec. 2,265,800
Total liabilities	$264,346,600	$262,080,000	Dec. $2,266,600
25 per cent. reserve	66,086,650	65,520,000	Dec. 566,650
Excess over legal reserve	12,735,650	9,664,200	Dec. 3,071,450

The following table separates the National from the State banks:

	National.	State.	Total.
Loans	$251,607,600	$41,006,400	$292,614,000
Specie	24,698,100	2,946,000	27,644,100
Legal tenders	41,966,100	5,574,000	47,540,100
Deposits	202,108,800	32,748,500	234,857,300
Circulation	27,190,500	32,200	27,222,700
Percentage of reserve to total liabilities	29 7-100 p.c.	25 99-100 p.c.	28 69-100 p.c.

In the stock market persistent efforts, emanating from the board of directors apparently, have been made to depress both the common and preferred stock of Milwaukee and St. Paul, but whilst this has been going on, in the face too of the most extraordinary increase in the business of the road (80 per cent. in earnings over July, 1872), large blocks of the stock, particularly of the common, are being quietly and rapidly purchased and withdrawn from the market. It is even said that, on one or two occasions of late, dealers have met difficulty and delay in obtaining this stock after purchasing it. It seems, therefore, quite likely that a sudden and permanent advance in prices may occur before many months, or when the tactics of these model directors have given to them as many of the shares at low figures as they wish.

The six per cent. construction bonds, gold loan, of the Texas and Pacific Railway have been brought out at 90. The bonds are issued at the rate of $40,000 per mile, and the whole amount will be upwards of $76,000,000. A very remarkable circumstance, evidencing still further the reckless financiering of the times, and calculated to defeat entirely the sale of these bonds if generally known, is that there is another issue of bonds to the amount of it is believed $20,000,000, called the *"first mortgage land-grant 7 per cent. currency."* There are plenty of them for sale in New York, and they are the same in every respect as those issued by Mr. Scott to the syndicate whose money has built and equipped the 209 miles of road which his advertisement of the "construction" bonds states to be now completed!

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending August 16, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales.
N. Y. C. & H. R.	105¼ 105⅝	105¼ 105½	104⅝ 105⅜	105¼ 105¼	105¼ 105⅜	105 105½	16,900

Government bonds are strong, on constant demand from the London and German markets; but the floating surplus is so limited that it is impossible to get any but small amounts, picked up here and there as opportunity presents itself.

In gold but little was done until Thursday, when there was a downward turn, and the bids at the Treasury sale were only slightly over half the amount offered ($765,000 on an offering of $1,500,000), and the price dropped to 114⅝. Subsequently the price advanced to 115, but reacted to 114⅞. The rates for carrying were 2½, 3, 1, and 2 per cent. to flat. Gold loans on time were 1-16 to ⅛ for 30 days, ⅜ to ½ for 60 days, and ⅞ to 1 for 3 to 6 months.

BANKING-HOUSE OF FISK & HATCH,
New York, August 18, 1873.

The SEVEN PER CENT. BONDS OF THE CHESAPEAKE AND OHIO RAILROAD COMPANY are issued in the denominations of $1,000 each, interest payable July and January, both principal and interest payable in United States gold coin, in New York. The price for the present is 90 and accrued interest—that is, a

$1,000 bond would cost to-day.....$909 21

At the present price of gold the income derived is equal to nearly nine per cent. in currency. With the rapidly increasing business of the Road, its commanding importance as another great East and West trunk line, its complete roadway of 420 miles, the princely wealth of iron, coal, salt, and timber along its route, tapping, as it does, at its Western terminus on the Ohio River, over 12,000 miles of water navigation, its Eastern terminus resting on the tide-waters of the Atlantic Ocean, and the fact that the other great parallel trunk lines are being compelled to lay additional tracks to meet the enormous and steadily augmenting traffic between the East and West—all warrant us in our belief that the securities of the Chesapeake and Ohio are destined to attain a high rank in the markets of the world. Government bonds are so high at present, and really desirable permanent investment securities so difficult to be obtained at a reasonable price, that we are glad to have so satisfactory a bond to offer our friends and customers.

We also have a small amount of the OLD SIX PER CENT. GOLD BONDS OF THE CHESAPEAKE AND OHIO; the price of these is 88½ and accrued interest. They are issued in denominations of $100, $500, and $1,000, interest payable May and November. Underlying, as they do, a property that has cost nearly $38,000,000, and which is constantly increasing in value, they need no recommendation. The small remaining balance will soon be absorbed.

$100 bond will cost to-day, ... $90 29
500 bond will cost to-day, ... 451 46
1,000 bond will cost to-day, ... 902 92

We also buy and sell the CENTRAL AND WESTERN PACIFIC GOLD BONDS at the market price.

The Central Pacific Company has now over 1,222 miles of completed road, and its earnings this year will reach upward of $13,000,000. Their securities should rank with those of the Government itself.

We also continue to deal in Government Bonds, execute orders at the Stock Exchange for investment Stocks and Bonds, receive deposits on which we allow interest at the rate of four per cent. per annum, and conduct a general banking business.

FISK & HATCH.

The Nation.

NEW YORK, THURSDAY, AUGUST 28, 1873.

The Week.

WITH the touch of fall weather that has come within the last few days, political affairs begin to be livelier—liveliest of all in Massachusetts, although it is to Ohio that the politicians are looking with the most expectancy. The week has seen the opening of the Republican canvass there by Governor Noyes and Senator Morton, and of the Democratic by Mr. Allen himself, the Democratic candidate. Evidently the State will be sharply contested, and a Democratic victory there would mean much everywhere. Great would be the gathering of the clans in this State, for example, where the party threatens terrible things in November. Senator Morton's speech was not very different from his old ones. Governor Noyes spoke with greater care, and with his accustomed skill. He first reminded the "Liberals" that their organization had been denounced by the Democrats as "a stench in the nostrils of all honest men," and then the Democratic seceders who occupy Mr. Groesbeck's and Mr. Pugh's and General Ewing's ground he reminded of their predictions and assertions, and of the insulting way in which the "Bourbon magnates" had disregarded them. Next came after these remarks, in the interest of the opposition camp, the inevitable railroads and the farmers.

Governor Noyes said he had no doubt that Congress could interfere to regulate rates of transportation on inter-State lines; that he thought Ohio Congressmen should urge this course; and in case Congress would not take proper action, the remedy was to elect other Congressmen who would. But more railroads were necessary; railroads were in themselves good things, and only their abuses need be attacked. This the people could do; it would be absurd to suppose they could not control the corporations; and perhaps it might pay to secure a water communication with the sea by a system of internal improvements. Touching then upon the "back-pay" business, Governor Noyes assumed a rôle which he is very good at playing, and was plain frankness to perfection. It was a piece of stealing, and he thought nothing better could be said of it; but more Democrats in proportion voted for it than Republicans. And as for the Crédit Mobilier business, that was another swindle; but see how the party no sooner heard of it than it took the lash and punished all concerned. More of this same frankness was displayed when the tariff came to be spoken off: the Democracy jeered because there was no tariff plank in the Republican platform; but they were a nice party to sneer on this subject; they had made tariff planks of all kinds, including a plank remanding the whole subject to "the people in the Congressional districts." But the fact is, said the Governor, "tariff planks in the platform of all parties, my friends, are usually mere dodges." He expressed great confidence in the defeat of the Bourbon Democrats.

The colored voters of Ohio met in convention at Chillicothe on Friday, and passed resolutions calling the Republican party to account for omitting to give effect to some of the fine sentiments put forth in the Philadelphia platform of last year. The glittering generalities in question were not those relating to the civil service, but the following: that "complete liberty and exact equality in the enjoyment of all civil, political, and public rights should be established and effectually maintained throughout the Union by efficient and appropriate State and Federal legislation." So little has been accomplished during the past year in this direction, that the chairman expressed the sense of the convention when he said: "We regard ourselves as oppressed politically." The specific grounds of complaint, when the resolutions are sifted, turn out to be (1) the discomforts and indignities to which colored people are still subjected at hotels, theatres, in public conveyances, and in the common schools; and (2) rigid exclusion "from anything which might look like an equality of right in office-holding." The remedy demanded was the passage of a comprehensive civil-rights bill and the making room hereafter for colored office-holders. This demand was accompanied by an intimation that parties in this country are generally short-lived, and that the colored people's obligations to the Republican party were by no means eternal; and the convention's constituents were admonished not to pledge themselves unconditionally to the nominees of their local conventions, but to hold themselves free to cast their votes where they would do most good. An attempt to capture the convention in the interest of the regular party, by introducing resolutions of entire satisfaction "with the result of the splendid Administration of General Grant," and of "unimpaired confidence" in him, was voted down amid some confusion, which was increased when the mover, a Federal office-holder, called the convention "silly sore-heads" and "disappointed office-seekers" and a drop in the Republican bucket. As a whole, however, the meeting was perfectly orderly and respectable, and the oratory shrewd and forcible.

In Massachusetts the call is out for the State Convention, and the election of delegates is now in order. Simultaneously with the publication of the call we have the Hamilton Hall address, prepared no doubt by Judge Hoar, and the speeches made at a Worcester rallying meeting by several Republicans, locally well known, and with them Mr. George Hoar. The last-named gentleman, in his speech, took up a recent open letter which General Butler sent to a gentleman who had attacked him, and in which he referred darkly to a certain Congressman as being in several ways vile. This Congressman appears, however, to have been the same man of whom General Butler said in 1871 that, knowing his purity and integrity, he, Butler, held him in the highest respect. This reminds the irreverent in Massachusetts of the kind of memory which a certain order of persons ought to have if they wish to avoid little exposures of this kind. It will be recollected that the General, in the capacity of a man of veracity, had similar trouble in 1871, when General Hawley tripped him up. Mr. Hoar praised Governor Washburn very heartily; showed that now for many years it had been the custom to give a satisfactory Massachusetts governor a third term; and attacked Butler for seeking to set aside this custom. Butler's mode of working Mr. Hoar denounced. It seems that early in the summer he was ordering small officials to his room in Pemberton Square, and there threatening them with the loss of their offices in case they did not work for him. This is a course of proceeding not yet popular in Massachusetts, when done openly and for a personal end. The Hamilton Hall address describes Mr. Washburn in positive terms, and contrives to describe Butler positively by telling in negative terms what Washburn would not do if elected again; and it appears that what Washburn would not do is bribe, use public power to gratify his hatred and revenge, expect to find among his supporters men who can be bought or frightened, spend his time in plotting for his own advancement, enrich himself by means of public employment, offer himself as the instrument of any portion of the public that may be tempted to anything mean or base, and, finally, a number of other things. The address concludes by calling for attendance at the primaries. These are now expected by Butler's enemies to give him about 400 delegates out of a total of a little more than 1,100.

The Springfield *Republican* very justly says that if the only thing the Anti-Butler Republicans do in the approaching Convention is to renominate Governor Washburn, their victory will be insecure. His defeat would merely leave Butler where he is now, and, we may add, on some accounts in a better position, for by party tradition de-

feated candidates are entitled in their turn to fat offices if they take their defeat well. The *Republican* says, therefore, that the Anti-Butler party must, if it wishes to reap the fruits of its victory, do two things: first, force Butler to bolt by putting into their platform such a deliverance on the subject of the grab and other matters as will make it absolutely impossible for Butler *not* to bolt; second, give Gen. Grant to understand distinctly that Butler has been allowed to dispense the Administration patronage and wield the Administration thunderbolts in Massachusetts quite long enough; that the time has now come when the Administration must definitely choose between the political friendship of "that person" and the support of the Republican party in Massachusetts. This advice is more than sensible. Messrs. Hoar and Dawes, and the rest of their section of the party, owe it to themselves not to permit such a confusion of the public mind on the subject of decency and morality as would be produced by seeing them, immediately after a campaign like this, unite with Butler, and forgive and forget, for the sake of beating the Democrats.

General Butler's title to fame as the inventor of the phrase "contraband of war," as applied to the negroes, seems to be in suspense. A Massachusetts Captain writes to a local newspaper to say that he invented it himself, and that General Butler got it from him in this way. In May, 1861, he was under Butler at Fortress Monroe, and had in his service an escaped slave named Luke, who with a great many others had run away from the rebel fortifications on which they had been working. Luke's master, a Col. Mallory, requested his return, and to this General Butler consented, on condition that the latter should take the oath of allegiance. Hearing this, Luke fled to the Captain for protection, and the Captain, who was a lawyer, convinced him that he was in no danger, and that no one could send him back. The story came to General Butler's ears, and the Captain was ordered to report at headquarters, where he was asked by the General, his staff and some other officers being present, full of fury, "what he meant by telling the slaves they could not be sent back to their masters? On this the Captain, after correcting this exaggerated statement, presented his argument that his own servant Luke could not be returned because he was 'contraband of war.' As soon as he heard the phrase 'contraband of war,' the General's whole manner changed, his arms fell on the table, his head was thrown forward, and he remained buried in profound thought, when he very quietly dismissed the Captain, and next day issued his memorable proclamation, which of his many clever political dodges was by all odds the cleverest." The story certainly can be confirmed or contradicted by the officers who were present. It is told with great detail.

A piece of correspondence in the *Tribune* of the 13th we commend to the attention of persons interested in the movement against the railroads. It is from Central Illinois, and describes the condition of the wheat and stock raisers of that region, as distinguished from that of the corn-raising farmers of the Northwest. The gist of it is simply this, that the wheat-raising farmers, who have not overdone things, have no complaint to make against the railroads. "Wheat is a much more precarious crop than corn, as well as more exacting in the attention it requires at certain seasons of the year, and the farmers are therefore less inclined to raise it." In other words, the Central Illinois farmers are not enabled to glut their market with a crop that raises itself, so to speak, and they are not compelled to ask other people to carry it to a distant market for less than the service is worth.

We ought to have noticed last week the suit brought by Government against Platt & Boyd, of this city, importers of glass, for alleged frauds upon the revenue. It is true that in the circumstances of this action there is, unhappily, nothing new. We are all familiar with Special Agent B. G. Jayne, and the mode in which he makes seizures, and the keen eye he shows for selecting the oldest, most respectable, and richest houses for attack. There is even in the present instance a marked likeness to the case of Phelps, Dodge & Co., the original informers being, as we understand, clerks whom Platt & Boyd had discharged on learning that they were in the habit of furnishing transcripts of their invoices and other papers to rival firms. We are glad to be able to add, however, that the defendants in this suit will not compromise, and that their first step in self-defence has been to sue Mr. Jayne for $50,000 damages, he having carried off a large number of books and papers not specified, as by the express terms of the law they should have been, in the search-warrant, and having no relation to the frauds enumerated in the same instrument. He did this not only against the protest of the firm and their counsel, but against the opinion and advice of District-Attorney Bliss, who happened to be on the scene, and who is only one of many witnesses to the Special Agent's lawless and insolent behavior. As the case is sure to be heard from again, and as there is no reason why it should not go hard with Mr. Jayne, we refrain from further comment upon it, simply remarking that the guilt or innocence of Platt & Boyd, like the guilt or innocence of Phelps, Dodge & Co., ought not to affect public sentiment regarding the demoralizing consequences of our present system of revenue surveillance, and its detriment to the national reputation.

The speculation in gold which has been going on for the last fortnight has given rise to a most extraordinary discussion. The *Tribune*, having published several articles to show that on the 1st of July the actual amount of gold in the Treasury was several millions less than the amount reported in the Treasury, giving at the same time certain evidence (the value of which we do not undertake to determine) in support of its assertions, the *Times* replied that it was now evident enough that the *Tribune* was owned by Jay Gould, the argument being that no articles such as those which had appeared in the *Tribune* could have come from any one but Gould—an argument which strikes us as rather fallacious. The Secretary of the Treasury, on being interrogated by a correspondent on the same subject, replied by asking his interrogator to look in his eyes, and ask himself whether a Secretary of the Treasury could look as calm and unruffled as he then did if there was anything wrong with the Treasury accounts. This is strong, but hardly conclusive, because it is based on the unfounded assumption that the public is as familiar with the relations between the facial expression and the internal emotions of Mr. William A. Richardson as he is himself. One thing, however, is quite certain, that there is as little immediate danger of another Black Friday as there has been any time this two years. Jay Gould is unquestionably a bold, bad man, but he is not invested with superhuman powers, and he would need to have superhuman powers to be able to corner gold with the whole country watching the movement and working against it.

The question whether General Grant shall be renominated for a third term by the Republican Convention which will meet three years hence, is as yet undecided, but a vast amount of interviewing has been going on about it. The drift of public opinion, judging from Liberal Republican and Democratic journals, seems to show that the renomination is already settled, though one Southern journal is not clear as to whether Ulysses S. Grant will in four years from now mount a scaffold or a throne. A throne, it thinks. On the other hand, the Republican journals deny that any meeting has been held or authoritative statement made on the subject. Another interesting point, on which we have noticed a good deal of what lawyers call curious learning, is what will be the effect on the morals of the Government produced by the constitutional accession to the Presidency of Senator Carpenter after the death of General Grant and Mr. Wilson. It will certainly be a sad day for the country when Mr. Carpenter becomes President, and it will cause a great deal of confusion too. It seems to have escaped many journals that if General Grant and his Vice-President are going to die, the question whether, if he had lived, he

would have been nominated for a third term, has a character rather speculative than immediately practical. Still, theoretical problems of politics are often entertaining, and by combining the probabilities as to the health of Carpenter, Wilson, and Grant with the probabilities of a third, fourth, and fifth term, a great deal may still be done to lighten the tedium of the early autumn.

Mr. Jefferson Davis's incendiary remarks at the White Sulphur Springs do not seem to have awakened an audibly responsive echo at the South, where for the most part they have been passed over in silence, or more or less explicitly condemned by the press. Those whom his administration of the Confederacy made personal and bitter enemies have improved the opportunity to rehearse their opinion of him, and none more conspicuously than ex-Senator Foote. This gentleman is contributing to the Washington *Chronicle* a sort of autobiography, interspersed with reminiscences of the public characters of other days, and he for some reason considers this last act of Davis's to have unlocked his (Foote's) mouth on matters which he has heretofore kept carefully guarded in his own breast. The result is a variety of statements and charges which we trust the Southern Historical Society will duly cut out and paste in their scrap-book, considering the good Southern source from which they emanate. As a retort upon Mr. Davis's senseless talk about the cheat practised upon Lee and Johnston in their surrender, it must be pronounced in the main not relevant. That the President of the late Confederacy was lawless, tyrannical, obstinate, and a nepotist beside whom Grant sinks into insignificance; that he was guilty of tampering with the public funds, and of feathering his own nest abroad against the evil day—all this is interesting as material for a veracious and unpartisan history of the Lost Cause, but it has no necessary connection with the allegation of bad faith with which Mr. Davis tries to cover the final defeat of the rebellion.

Mr. Gladstone has suffered two heavy blows in the recent elections in the boroughs of Dundee and Greenwich, the Government candidate being defeated in both places. The Dundee election was the more important of the two on many accounts. The candidates were Mr. Fitzjames Stephen, who, it is generally understood, was selected in advance by the administration for the Solicitor-Generalship; Mr. Jenkins, author of 'Ginx's Baby' and other works of the same sort; and a Mr. Yeaman, an ex-provost and locally popular. The three candidates were all Liberals, but the importance of the election consisted in this, that its result was to show, first, how much political discrimination was possessed by the workingmen newly enfranchised by the Reform Bill of 1867 (Dundee being essentially a workingman's borough); and, second, how far they clearly understood the fact that the parliamentary mode of administration makes it an absolute necessity that the people shall be willing to elect those candidates who are selected by the Government to occupy working positions. To take a very evident case: it is absolutely necessary that the Premier shall be elected to Parliament by some body of electors, or he cannot be Premier at all. As to the candidates, there could not be any doubt that Mr. Stephen was the best; he had had great experience in India as an administrator, and was well known to be a thorough lawyer of the highest type. Mr. Jenkins is a gushing writer of an inferior order even among gushing writers, and Mr. Yeaman had apparently no claims to the honor of an election except respectability, and a perfect knowledge of the wishes of Dundee.

Besides this there was the other reason for electing Mr. Stephen, that he was positively needed in the Government to devise a plan of codification. The electors of Dundee, however, thought differently, and, out of 10,000 votes, cast for Mr. Stephen about 1,000. The other nine thousand divided their votes between Mr. Yeaman and Mr. Jenkins, electing the former by a decisive majority. It may be a new bond between England and America to reflect that Mr. Stephen's failure was probably due to what has been the ruin of many a politician in this country—his heartless and unsympathetic manners. It seems, for example, that, being asked during the canvass by one of the electors whether he was in favor of the repeal of the Game Laws, instead of saying in a hearty way at once, as Mr. Jenkins was in the habit of doing, that he was in favor of the repeal of these or any others, he coldly asked, "Which of them?" This was too much for the endurance of the elector, who probably had not that comprehensive knowledge of the statutes in question which was necessary to enable him to reply, and he at once told Mr. Stephen that "he was too much a lawyer for him," preferring, as the *Economist* naïvely says, "a vague promise to a definite plan of legislation." This is what the average workingman generally prefers, and, we may add, what he succeeds every year more and more in getting.

The scene in the Spanish Cortes on the 31st of July seems to have been one of the most thrilling and at the same time saddest scenes that has ever taken place in a parliamentary body, if the Cortes can be called a parliamentary body. The Intransigentes, who have only a small force in the Cortes, though they apparently make up for this deficiency in noise, had just been defeated by the adoption of a vote of thanks to the people of Almeria, after a fearful uproar, and Señor Prefumo moved a vote of "profound disgust" at the conduct of the rebellious deputies, who had "risen in arms" and "excited the zeal of the judicial authorities to solicit the necessary authority to prosecute at once." On this Señor Diaz Quintero made a speech, in which he declared himself an insurgent, and requested the Cortes to include him in the vote of censure, and continued talking open treason, until he was finally brought to order by "the despotism of the Vice-President." The speechmaking went on, however; most of the speeches being of a highly personal character, and one of the Spanish parliamentary rules allowing every one "personally alluded to" to make a speech. At last two of the Intransigentes having alluded to Castelar, he replied in a speech which, even when translated into English, is full of eloquence—the eloquence of despairing patriotism.

His great ambition, he said, had been that the republic should be consolidated by the Republican party, and, that this might be done, he had hoped that Republicans would display those political gifts which had always distinguished the European Conservatives—those qualities essential to a party of government "as distinct from blind repression as from revolutionary utopianism." He then turned upon the Left and denounced their allies, the rebels, as "an ignominious horde of military adventurers" and "barrack conspirators," and predicted the possibility of a temporary Carlist triumph, brought about by "the insanity and senselessness of the Republicans." In conclusion, he declared that when he looked for the patriot he did not see him in the man "who plants a hated and hateful flag on the masts of the ships of Don Juan of Austria and of the Marquis of Santa Cruz":

> "But I see the patriot and I see the country in the simple-hearted Volunteer of Estella, who, with his wife by his side, was found seated on a hundred quintals of gunpowder, with the lighted torch in his hand, awaiting the entrance of the Carlist faction into the citadel to die like a hero! (Frantic applause.) Yes, in him I see the patriot, in him I see the country of Viriato, and of Pelayo, and of the Cid, and of Daviz and Velarde—the country of the martyr Gerona and of the sainted Zaragoza!"

The English correspondent from whom we make these extracts says that imagination can hardly conceive the effect of this closing sentence. The House shook with applause; the members nearest the orator seized him, hugged him, patted him, and kissed him. The fourteen or fifteen deputies of the Left preserved a stolid silence. Salmeron, President of the Ministry, embraced the orator, so did all the Ministerial bench. This went on for half an hour, after which the motion of Señor Prefumo was carried by 125 to 15. Castelar's vision of the Spanish patriot conveys perhaps a more vivid notion of his unhappy country than volumes of statistics.

AGRICULTURAL EXPOSITION OF CORPORATE LAW.

THE attention of that part of the public which interests itself in politics and in the railroad question has lately been so riveted upon the strictly political bearings of the movements of the Farmers' Associations, that little attention has been given to certain closely-connected considerations, not long ago quite prominent. The progress of the farmers thus far in securing what they want cannot be said to be very encouraging. Mr. F. Wilkinson, "General Deputy for Pennsylvania of the Patrons of Husbandry," while announcing in a letter to the Philadelphia *Press* that thirteen granges have been organized and five more are awaiting organization in that State, is obliged to make the extraordinary but necessary admission that the substantial result of the Illinois freight law is a general increase of rates. The political conventions which have recently been held have generally promised justice and fair treatment to the farmers, but have carefully refrained from the dangerous task of defining what they mean by justice and fair treatment. The farmers have, it is true, organized a great number of granges, with the avowed object of doing away with middlemen's profits. Whether this part of the movement is likely to result in much good is perhaps an open, certainly a difficult, question, which we may discuss at some future time. But except this attempt—purely economical in its character, and having no more to do with politics than with theology—they seem to have achieved nothing as yet except a general intimidation of local politicians. Nothing more can be done in the way of railroad reform before the Western legislatures meet in the winter, and no definite plan of operations is proposed then. The main idea of the Farmers' Associations now seems to be to gain control of the State governments and frighten the railroads; what they will do afterwards remains to be seen.

It is not more than five or six years since a movement was begun in the West, and spread with alarming rapidity through several States, not unlike the present farmers' movement in some of its characteristics. It was a popular movement; it was in the interest of what it is the fashion to call the debtor class (there is probably no class of people in this country except minor children that might not be brought within the general meaning of the term); and it was a movement, though not directly against railroads, indirectly dangerous to them. A very large number of the present agitators in the farmers' movement were, in all probability, engaged in the earlier demonstration—which, indeed, is still going on in some parts of the country. We refer, of course, to the attempt to repudiate the debts contracted by towns in aid of railroads. At the time when the railroad-building fever was at its height in the West, many hundreds of towns, as is well known, bound themselves to levy taxes on the property of the inhabitants in aid of the roads; bonds were issued, based on this pledge—in many cases to an amount out of all proportion to the resources of the towns. The time came, however, when it became inconvenient to pay the interest on these bonds, and town after town refused payment. The matter was at once carried into the courts, where it was argued on the one side that taxation in aid of railroads was unconstitutional, because the taxing power could only be exercised for public purposes; that a railroad charter was a private grant; taxes could not, therefore, be levied in aid of railroads. It will be remembered that Judge Cooley of Michigan rendered an elaborate decision in this sense, in which he maintained in effect that there was no difference between a railroad charter and a charter for the establishment of a corporation for the manufacture of hats or tooth-brushes; that it was just as incorrect to call one as to call the other a "public use"; and that consequently the bonds were illegal. On the other hand, it appeared that several dozen decisions of State courts and the United States Supreme Court, had established it as perfectly settled law that a railroad was, for purposes of taxation, a public use, and that the bonds were legal. Notwithstanding this the war went on, and in one Western State, after being carried through the State courts, was carried into the local United States courts; and what with sheriffs who declined to serve process, and United States courts which willingly issued mandamuses, there seemed at one time a very fair prospect of a good deal of mob violence. It was all quieted, however, and matters stood as before.

We do not propose to enter here into the old discussion whether a railroad is or is not a public use. It is sufficient for our purposes that the men who were then engaged in resisting the levying of the taxes in question stoutly maintained that railroads were not public uses, and that the power of taxation could not be used to aid them. In order to understand exactly how far they went, it is necessary to state that the settled legal doctrine on the subject of taxation is that the Legislature is the sole judge of what is and what is not a public object, except in such cases as would justify a sensible man in saying that the notion of a public use was "absurd on its face." The towns which resisted the tax, therefore, went to the extreme limit. They said that it was absurd to consider a railroad a public object.

It is well known that at the bottom of the present farmers' movement is a great deal of the discontent caused by these old taxes. The people who defended the suits were the town officials; but the people who paid the taxes were, as we just now said, in a number of instances, and probably in most cases, farmers. There are no reliable statistics on this subject that we know of in any State, but even in the interior of New York the thing was carried so far that localities entirely agricultural saddled themselves with debts of which they are now trying to get rid, and which were so large that it seems as if repudiation in many cases were the only resource left. The Constitutional Commission appointed by Governor Hoffman investigated this subject with great care, and we understand are soon to publish a report which will give all the statistics attainable for New York. When this report appears, we have no hesitation in predicting that it will show that the taxing has mainly been done in the agricultural districts. An instance now occurs to us of a railroad, built almost entirely on local bonds, persuading the locality to tax itself to the extent of $115,000, although the district in question is made up entirely of small farms, and there is not within its borders a town of sufficient size to be called more than a hamlet.

It is the men who live in such districts as this who in the Western States are now engaged in the farmers' movement. When we examine the legal theory of the nature of railroads they now propound, we find that a very startling change has come over their minds in the last few years. They say, now, that the legislature must fix the rates of transportation; that the legislature must decide on all questions relating to railroads; that railroads are the mere creatures of the legislature; that a charter is no contract between the people and the roads, making the road private property; but, to sum it all up in two words, railroads are public agents—they are called into being for public purposes, and the power granted by their charters is given for a "public use." They say that this is self-evident; that any man can see that it is true; that it is absurd on the face of the thing to deny it; and they denounce everybody as an unsympathetic cynic or a designing demagogue who declines to agree with them.

We are very far from wishing to imply by these remarks that there is an incompatibility between the co-ordinate existence of public and private uses in the same corporation. The whole law of railroads has been carefully built up by the courts on the supposition that a railroad is at once a public and a private object; that so far as its rights of property go, it is a private person; so far as its public function of transportation goes, it is a public institution. The limits of its two natures have been carefully defined by judges who knew more about law and government than they did about politics, and cared more for justice than for votes. They may have been quite wrong; the modern constitution of American society may demand a new system of railroad management; but one thing is quite clear, that it is impossible to have much respect for the intellects of reformers whose view of the railroad question varies with the changes in the condition of their purses; who tell us now that they

must repudiate debts contracted in aid of railroads, because railroads, notwithstanding thirty or forty decisions to the contrary, are private property, and it is absurd to say that they are anything else; and now that they propose to run the railroads themselves (for this is what fixing the rates of transportation comes to), because they are public highways, notwithstanding that in a multitude of decisions they have been decided to be for these purposes private property. In other words, the recollection of the different attitudes taken by the farmers on this question will tend to convince most people that the railroad question is not one which can be settled by popular agitation of the kind now undertaken—that the exact nature of so peculiar a corporation as a railroad is not to be determined by resolutions of conventions or acts of legislatures. The bond cases were taken into court, though why the brilliant idea of a new political party did not occur to the insolvent towns at the time, we do not know. If it had, we might by this time have had the benefit of a complete exposition in local platforms of the agricultural theory of corporate law.

AMERICAN COLLEGES AND LEGISLATORS.

THE addresses of Dr. McCosh and Professor Atherton at Elmira not only demonstrate the stupendous ignorance of Congress in matters of education, but show that in the last reckless attempt to fling 90,000,000 acres to a few agricultural colleges, "so-called and miscalled," the members really could not have known what they were themselves doing. Agricultural colleges a failure in other countries; a failure, so far as students go, in our own; Cornell receiving $900,000 under the grant of 1862, and giving as a dividend upon it two agricultural graduates a year; twenty out of every hundred of our people above the age of ten years unable to read and write; the illiterate male adults over twenty-one years of age amounting to 1,619,147; the schools and academies of the country so few and defective that the existing colleges cannot be kept supplied with decently-prepared students; and, finally, a ring in Congress trying to give the last of the public lands to the same forty-one institutions that received the avails of the last endowment, without the slightest enquiry or consideration, and with the whole educated intelligence of the country opposed to the reckless act—these are facts which suggest some enquiry as to the amount of educated material which is to be found in Congress.

The 'Congressional Directory' of the last Congress shows that of 317 Senators and Representatives only about 87 were graduates of a college. But this number is not to be taken as absolutely correct; for the biographical notices of the 'Directory' in a few instances say nothing about education, and in others are suspiciously ambiguous. The estimate which the honorable members put upon their education varies a great deal in terms. There is occasionally the "collegiate"; more frequently the "academic"; then the "classical," the "thorough classical," the "liberal," the "English," the "thorough English," and the "plain practical English." As to some of the colleges, it is needless to say that they did not give their graduates so good an education as the Boston High Schools; as to others, we never heard of them till meeting their names in the 'Congressional Directory.' Of the leading colleges of the country, the representation is surprisingly small. Yale leads with ten graduates; the University of North Carolina comes next with six; Union, Dartmouth, and Hamilton have each four; Harvard and Princeton have but three; as have Williams, West Point, Waterville (now Colby University), and Miami; there are two from the University of Virginia, two from Brown and Madison; one from Amherst, Oberlin, and Michigan—all told, about fifty real graduates of real colleges in the two Houses of Congress.

As to States, the most notable is North Carolina, for six of her nine members are college men (which is the highest proportion to be found in Congress), and all of them are graduates of her State university. The three great States, notwithstanding their wealth and the number of their colleges, have about one-fourth each; New York, nine out of thirty-three; Pennsylvania, six out of twenty-six; Ohio, five out of twenty-one; New England is not much better, having less than half; and ten States, extending in age from Maryland and Delaware to Texas and Nevada, have not a single graduate. As between the North and South and the East and West not much can be said, for North Carolina and Nebraska are the only States which come up to the proportion of two-thirds. Remembering the fine array of cultivated statesmen which old Virginia possessed in her day of scanty educational means, it must be deemed sad evidence of her decline that Virginia and West Virginia combined now have but one graduate of a college among their fifteen members.

As to the men themselves, a cultivated life by no means seems to have been the invariable stamp of their collegiate experience. Indeed, if anything could be proved by a few individual instances, it would be easy to prove that a good education in early life is one of the most deleterious influences that can attend the modern statesman. For instance, Mr. Trumbull did not have the advantages of university training; but his esteemed colleague, General Logan, was graduated at Louisville University. Mr. Poland, of Vermont, was as unfortunate as Mr. Trumbull; but our much-respected friend, General Butler, is, classically speaking, an alumnus of Waterville. Some men of whom one would feel sure that they received the benefit of college training and associations did not; and most notably, Messrs. Bayard, Conkling, Sherman, Thurman, and Edmunds. Others again, as to whom one might safely make oath that they had never seen a college save through the windows of a railway car, are recorded as having received a collegiate education; and among them are Mr. Pomeroy of Kansas, Mr. Conner of Texas, and Mr. Voorhees of Indiana.

If Congress be considered from the sentimental point of view as a place of repose for men who have gone through the hard vicissitudes of life—a place of rest and recreation where, doing nothing, they can be liberally supported, and have the amusement of making empty speeches when they feel in the humor for oratory, and the coarse pleasures of hotel lounging and card-playing and theatre-going, for all of which in early life they yearned without having the time or money to indulge, then Congress admirably fulfils its end. The brief biographies of the 'Congressional Directory' are, for the most part, abstracts of struggles in life. A boy reading them all would think that an unfailing recipe for making one's self a member of Congress would be a course of work on a farm and teaching school (or, as one honorable member magnificently says of himself, "being for six years an educator"), followed up vigorously by editing a paper or practising law. To most of them, life has been a continuous toilsome ascent, and the Congressional seat is a plateau on which they can stop and take their ease. One boy, we read, enlisted in his brother's company to go and fight for the independence of Texas; another (Senator Caldwell of Kansas) enlisted at seventeen in his father's to fight against Mexico; a third was "a factory operative at eight years of age"; a fourth, "born in New York," "self-educated," principal of an academy in Kentucky, graduate of a Washington law-school, enters the army as a private, organizes the first regiment of colored troops raised in Kentucky, commands a brigade and then a division, is breveted twice for gallant and meritorious conduct, and at last comes back again to Washington as a "carpet-bagger" from Mississippi. Whoever wants an outline for a tale of real life in America will find about two hundred in the next 'Congressional Directory.' Some of these stories have a somewhat braggart air, as though the subject were rather vain of his want of learning, and others have the tone of genuine regret. Among these we have been impressed with the simplicity and unconscious pathos of the strange life of Senator Morgan Hamilton of Texas, who "was born *in the territory west of Georgia,* near the town of Huntsville, in the State of Alabama, February 25, 1809; received only the simplest rudiments of a country-school education at intervals from labor; removed to the Republic of Texas in 1837"; was Clerk of the War Department, then Comptroller of the State, and at last Senator. "The simplest rudiments of a country-school education at intervals from labor" is a definition that could only have been written by a man

who had analyzed and weighed the exceeding littleness of what the world gave him, and who, by continuous self-culture, had learnt the difficulty of supplying the deficiency in after-life.

To the sentimentalist it undoubtedly appears right that men who have fought their way up in life should obtain an offset of Congressional enjoyment, in utter disregard of their legislative fitness; but if it be desirable to establish prizes for a very small proportion of those citizens who meet and overcome the obstacles of early ignorance and poverty, it would be a great national economy to have a kind of mock Congress, where the winners of such prizes could make empty speeches to each other, and draw their pay, and idle away their time, with a real Congress in the background of earnest, intelligent men to do the legislative business of the country. The records of Congress show that the common boast is true that men of the humblest positions can rise to the honor of governing the country; but they also show that the honor has become very small, and is continually growing less. It is not a question to be discussed that men can rise; it should be a question at what intellectual and moral level they are content to stop. It is not the peculiar attribute of a republic that there are self-made men who take part in the work and honors of government, for the world has always been largely ruled by such men. Washington, who had risen to the highest rank of great men before there was a Republic, had been in his youth a frontiersman and surveyor. Jefferson, whose reputation preceded him in the Continental Congress as an accomplished gentleman, the master of four languages, an observant naturalist, a good mathematician able to calculate eclipses, an erudite lawyer, had been a pioneer and backwoodsman, whose bride could only travel to their log-house on horseback. The papers have lately been filled with notices of Lord Westbury, who died a peer of the realm, and as Lord Chancellor had presided over the entire nobility of Great Britain; but Richard Bethell went to college a poor lad in a jacket, and, as he stated before his death, had supported himself from the time he was seventeen by his own hard work. Or we may go back fifty years, and take as a solitary example the case of Lord Tenterden, the son of a country barber, without friends or influence or those brilliant talents which captivate the popular fancy. When offered the promotion of king's counsel, he declined it, because his modest estimate of his own abilities taught him that he was better fitted for the office work of a junior. Yet he was taken from his unassuming life of hard and patient labor and raised to the bench by his political opponents. With all our claptrap about merit and self-made men, have we one such instance to show of a great judge appointed to office by a party to which he did not adhere? If the next Chief-Justice of the United States should be selected for personal fitness by the President, and chanced to be a Democrat, does anybody believe that our Senate of unaristocratic, self-made men would confirm him?

The truth is that our present political system does not bring into the public service the truly self-educated and self-cultured men of the country, but merely those whose self-making rises no higher than the very low levels of money and party machinery. College diplomas of themselves mean very little, especially of colleges in chronic want of students and on a perpetual brink of starvation; but their absence is significant of the absence of the educated and cultivated intelligence of the people. In all countries there are intelligent and educated classes, and experience shows that when they are brought into the business of legislation they work not only with intelligence but also with zeal. Our own country is deprived of the services of these classes. To make laws, and provide for the necessities, and shape the policy of a country so vast and complicated as this, is a gift of statesmanship which does not come by nature. The modern Congressman is a third or fourth-rate man, uneducated beyond the knowledge of making money, ignorant of the wants of the country, sceptical, as all uneducated men are, of the intelligence of others, and with no definite objects in view beyond pushing the interests of his party. Finding nothing at Washington which he is really fitted to do, he adds idleness to his other political virtues, and becomes an obstructive in the way of the few who are really trying to accomplish something. The legislation of Congress is precisely what might be anticipated from assemblages of such men: illiterate and slovenly in form, defective in substance, and never attempting to be more than a patch for the most pressing of existing evils. The constructive ability which comprehends a system is as wanting in Congress as in a cobbler whose skill never rises above the effort of putting a patch on a broken boot.

Mr. Evarts mourned over the decline of the literary societies in Yale as leading to the decline of the forensic spirit of the country. We are inclined to think they are both effects of a common cause—the turning away of the intelligent classes from public life. To the cultivated and refined there is nothing more distasteful than to be compelled to mingle with undignified, uneducated, self-assuming colleagues. The worse elements in Congress seem to have driven out the better, as a debased currency drives good money out of circulation. How few are the American fathers who have handed down anything of political training to their sons; how few the American legislators who have learned anything of legislation from their fathers' experience! It is with us a new business for new men. Our colleges, which have hitherto discouraged young men from public life, had better begin to teach that there is a science of government, and that true statesmanship requires character, rectitude, trained intelligence, varied knowledge, indefatigable industry, and prolonged study.

HOMBURG REFORMED.

HOMBURG, July 28, 1873.

I HAVE been finding Homburg a very pleasant place, but I have been half ashamed to confess it. People assure me on all sides that its glory is sadly dimmed, and that it can only be rightly enjoyed to the music of *roulette* and of clinking napoleons. It is known by this time, I suppose, even in those virtuously disinterested communities where these lines may circulate, that the day of *roulette* in these regions is over, and that in the matter of *rouge-et-noir* united Germany has taken a new departure. The last unhallowed gains at the green tables were pocketed last summer, and the last hard losses, doubtless, as imperturbably endured as if good-natured chance had still a career to run. Chance, I believe, at Homburg was not amazingly good-natured, and kept her choicest favors for the bank; but now that the reign of Virtue has begun, I have no doubt there are plenty of irregular characters who think that she was much the more amiable creature of the two. What provision has been made for this adventurous multitude I am at loss to conceive, and how life strikes people now for whom, at any time these twenty years, it has been concentrated in the shifting victory of red or black. Some of them have taken to better courses, I suppose; some of them, doubtless, to worse; but I have a notion that many of them have begun to wear away the dull remainder of existence in a kind of melancholy, ghostly hovering around the deserted Kursaals. I have seen many of these blighted survivors sitting about under the trees in the Kurgarten, with the old habit of imperturbability still in their blank, fixed faces—neat, elderly gentlemen, elderly ladies not especially venerable, whose natural attitude seems to be to sit with their elbows on the table and their eyes on the game. They have all, of course, a pack of cards in their pockets, and their only consolation must be to play "patience" for evermore. When I remember, indeed, that I am in legendary Germany, I find it easy to believe that in these mild summer nights, when the stupid people who get up at six o'clock to drink the waters are safely in bed, they assemble in some far-away corner of the park, and make a green table of the moonlit grass. Twice a week the old gaming rooms at the Kursaal are thrown open, the chandeliers are lighted, and people go and stare at the painting and gilding. There is an immense deal of it, all in the elaborate rococo style in which French decorators of late years have become so proficient, and which makes an apartment look half like a throne-room and half like a café; but when you have walked about and looked at the undressed nymphs on the ceilings and the listless crowd in the great mirrors, you have nothing to do but to walk out again. The clever sumptuosity of the rooms makes virtue look rather foolish and dingy, and classes the famous M. Blanc, in the regard of pleasure-loving people, with the late Emperor of the French and other potentates more sinned against than sinning—martyred benefactors to that large portion of the human race who would fain consider the whole world as a watering-place. It is certainly hard to see what thrifty use the old gaming-rooms can be put to; they must

stand there always in their gorgeous emptiness, like the painted tomb chambers of Eastern monarchs.

There was certainly fair entertainment in watching the play—and in playing, according to circumstances; but even in the old days I think I should have got my chief pleasure at the Kursaal in a spectacle which has survived the fall of M. Blanc. As you pass in the front door, you look straight across the breadth of the building through another great door which opens on the gardens. The Kursaal stands on an elevation, and the ground plunges away behind it with a great stretch, which spreads itself in a charming park. Beyond the park it rises again into the gentle slopes of the Taunus mountains, and makes a high wooded horizon. This picture of the green hollow and the blue ridge greets you as you come in, framed by the opposite doorway, and I have sometimes wondered whether in the gaming days an occasional novice with a tender conscience, on his way to the tables, may not have seemed to see in it the pleading face of that mild economist Mother Nature herself. It is, doubtless, thinking too fancifully of human nature to believe that a youth with a napoleon to stake, and the consciousness of no more rigid maternal presence than this, should especially heed the suggestion that it would be better far to take a walk in the woods. The truth is, I imagine, that Nature has no absolute voice, and that she speaks to us very much according to our moods. The view from the terrace at the Kursaal has often had confusion pronounced upon it by players with empty pockets, and has been sentimentally enjoyed by players with a run of luck. We have the advantage now, at least, of finding it always the same, and always extremely pretty. Homburg, indeed, is altogether a very pretty place, and its prettiness is of that pleasing sort which steals gradually on the attention. It is one of nature's own watering-places, and has no need, like so many of the audacious sisterhood, to bully you by force of fashion into thinking it tolerable.

Your half-hour's run from Frankfort across a great sunny expanse of corn-fields and crab-apple trees is indeed not particularly charming; but the sight of the town as you approach it, with its deep-red roofs rising out of thick shade at the base of its blue hills, is a pledge of salubrious repose. Homburg stands on a gentle spur of the highest of these hills, and one of its prettiest features is your seeing the line of level plain across the foot of its long sloping main street and the line of wooded mountain across the top. The main street, which is almost all of Homburg proper, has the look of busy idleness which belongs to watering-places. There are people strolling along and looking into the shop-windows who seem to be on the point of buying something for the sake of something to do. The shops deal chiefly in the lighter luxuries, and the young ladies who wait in them wear a great many ribbons and a great deal of hair. All the houses take lodgers, and every second one is a hotel, and every now and then you hear them chanting defiance at each other to the sound of the dinner-bell. In the middle of the street is the long red stuccoed façade of the Kursaal—the beating heart of the Homburg world, as one might have called it formerly. Its heart beats much slower now, but whatever social entertainment you may still find at Homburg you must look for there. People assemble there in very goodly crowds, if only to talk about the dreadful dulness and to commiserate each other for not having been here before. The place is kept up by a tax, promptly levied on all arriving strangers, and it seems to be prosperously enough maintained. It gives you a reading-room where you may go and practise indifference as you see a sturdy Briton settling down heavily over your coveted *Times*, just as you might of old when you saw the croupier raking in your stakes; music by a very fair band twice a day; a theatre, a café, a restaurant, and a table-d'hôte, and a garden illuminated every three or four evenings in the Vauxhall manner. People differ very much as to the satisfaction they take in sitting about under flaring gas-lamps and watching other people march up and down and pass and repass them by the hour. The pastime pushed to extremes tends, to my own thinking, to breed misanthropy—or an extra relish at least for a good book in one's own room and the path through the woods where one is least likely to meet any one. But if you use the Kursaal sparingly, and reserve it for an hour or two in the evening, it is certainly amusing enough.

I should be very sorry to underestimate the entertainment to be found in observing the comings and goings of a multifarious European crowd, or the number of suggestions and conclusions which, with a desultory logic of its own, the process contributes to one's philosophy of life. Every one who prefers to sit in a chair and look rather than walk up and down and be looked at, may be assumed to possess this intellectual treasure. The observations of the "cultivated American" bear chiefly, I think, upon the great topic of national idiosyncrasies. He is apt to have a keener sense of them than Europeans; it matters more to his imagination that his neighbor is English, French, or German. He often seems to me to be a creature wandering aloof, but half naturalized himself. His neighbors are outlined, defined, imprisoned, if you will, by their respective national moulds, pleasing or otherwise; but his own type has not hardened yet into the Old-World bronze. Superficially, no people carry more signs and tokens of what they are than Americans. I recognize them as they advance by the whole length of the promenade. The signs, however, are all of the negative kind, and seem to assure you, first of all, that the individual belongs to a country in which the social atmosphere, like the material, is extremely thin. American women, for the most part, in compliance with an instinct certainly not ungraceful, fill out the ideal mould with wonderful Paris dresses; but their dresses do little toward completing them, characterizing them, shelving and labelling them socially. The usual English lady, marching heavily about under the weight of her ingenious bad taste, has indescribably more the air of what one may call a social factor—the air of social responsibility, of having a part to play and a battle to fight. Sometimes, when the battle has been hard, the lady's face is very grim and unlovely, and I prefer the listless, rustling personality of my countrywomen; at others, when the cause has been graceful and the victory easy, she has a robust amenity which is one of the most agreeable things in the world. But these are metaphysical depths, though in strictness they ought not to be out of the way as one sits among German pipes and beer. The smokers and drinkers are the solid element at the Kursaal—the dominant tone is the German tone. It comes home very forcibly to the sense of our observant American, and it pervades, naturally enough, all his impressions of Homburg. People have come to feel strongly within the last four years that they must take the German tone into account, and they will find nothing here to lighten the task. If you have not been used to it, if you don't particularly relish it, you doubtless deserve some sympathy; but I advise you not to shirk it, to face it frankly as a superior critic would, and to call if necessary for a pipe and beer also, and build yourself into good humor with it. It is very pleasant, in an unfamiliar country, to collect travellers' evidence on local manners and national character. You are sure to have some vague impressions to be confirmed, some ingenious theory to be illustrated, some favorite prejudice in any case to be revived and improved. Even if your opportunities for observation are of the commonest kind, you find them serving your purpose. The smallest things become significant and eloquent, and demand a place in your note-book. I have learned no especial German secrets, I have penetrated into the bosom of no German families; but somehow I have received—I constantly receive—a weighty impression of Germany. It keeps me company as I walk in the woods and fields, and sits beside me—not precisely as a black care, but with an influence, as it were, which reminds one of the aftertaste of those articles of diet which you eat because they are good for you and not because you like them—when at last, of an evening, I have found the end of a bench on the promenade behind the Kursaal. One's impression of Germany may or may not be agreeable, but there is very little doubt that it is what one may call highly nutritive. In detail, it would take long to say what it consists of. I think that, in general, in such matters attentive observation confirms the common fame, and that you are very likely to find a people on your travels what you found them described to be under the mysterious woodcut in some Peter Parley task-book or play-book of your childhood. The French are a light, pleasure-loving people; ten years of the Boulevards brings no essential amendment to the phrase. The Germans are heavy and fair-haired, deep drinkers and strong thinkers; a fortnight at Homburg doesn't reverse the formula. The only thing to be said is that, as you grow older, French lightness and German weightiness become more complex ideas. A few weeks ago I left Italy in that really demoralized condition into which Italy throws those confiding spirits who give her unlimited leave to please them. Beauty, I had come to believe, was an exclusively Italian possession, the human face was not worth looking at unless redeemed by an Italian smile, nor the human voice worth listening to unless attuned to Italian vowels. A landscape was no landscape without vines festooned to fig-trees swaying in a hot wind—a mountain a hideous excrescence unless melting off into a Tuscan haze. But now that I have absolutely exchanged vines and figs for corn and cabbages, and violet Apennines for the homely plain of Frankfort, and liquids for gutturals, and the Italian smile for the German grin, I am much better contented than I could have ventured to expect. I have shifted my standard of beauty, but it still commands a glimpse of the divine idea.

There is something here, too, which pleases, suggests, and satisfies. Sitting of an evening in the Kurgarten, within ear-shot of the music, you have an almost inspiring feeling that you never have in Italy—a feeling that the substantial influences about you are an element of the mysterious future. They are of that varied order which seems to indicate the large needs of large natures. From its pavilion among the trees ring out the notes of the loud orchestra, playing Mozart, Beethoven, and Weber—such music as no

other people has composed, as no other people can play it. Round about in close groups sit the sturdy, prosperous natives, with their capacious heads, their stout necks, their deep voices, their cigars, their beer, their intelligent applause, their talk on all things—largely enjoying, and yet strongly intending. Far away in the middle starlight stretch the dusky woods whose gentle murmur, we may suppose, unfolds here and there to a fanciful German ear some prophetic legend of a still larger success and a still richer Fatherland. The success of the Fatherland one sees reflected more or less vividly in all true German faces, and the relation between the face and the success seems demonstrated by a logic so unerring as to make envy vain. It is not the German success I envy, but the powerful German temperament and the comprehensive German brain. With these advantages one needn't be restless; one can afford to give a good deal of time to sitting out under the trees over pipes and beer and discussion tinged with metaphysics. But success of course is most forcibly embodied in the soldiers and officers who now form so large a proportion of every German group. You see them at all times lounging soberly about the gardens; you look at them (I do, at least) with a great deal of impartial deference, and you find in them something which seems a sort of pre-established negation of an adversary's chances. Compared with the shabby little unripe conscripts of France and Italy, they are indeed a solid brilliant phalanx. They are generally of excellent stature, and they have faces in which the look of education has not spoiled the look of good-natured simplicity. They are all equipped in bran-new uniforms, and in these warm days they stroll about in spotless white trowsers. Many of them wear their fine blonde beards, and they all look like perfect soldiers and excellent fellows. It doesn't do, of course, for an officer to seem too much like a good fellow, and the young captains and adjutants who ornament the Kurgarten of an evening seldom err in this direction. But they are business-like warriors to a man, and in their dark-blue uniforms and crimson facings, with their swords depending from their unbelted waists through a hole in their plain surtouts, they seem to suggest that war is somehow a better economy than peace.

But with all this, I am giving you Hamlet with Hamlet himself omitted. Though the gaming is stopped, the wells have not dried up, and people still drink them, and find them very good. They are indeed a very palatable dose, and "medical advice" at Homburg flatters one's egotism so unblushingly as rather to try the faith of people addicted to the old-fashioned confusion between the beneficial and the disagreeable. You have indeed to get up at half-past six o'clock—but of a fine summer morning this is no great hardship—and you are rewarded on your arrival at the spring by triumphant strains of music. There is an orchestra perched hard by, which plays operatic selections while you pace the shady walks and wait for your second glass. All the Homburg world is there; it's the fashionable hour; and at first I paid the antique prejudice just mentioned the tribute of thinking it was all too frivolous to be salutary. There are half a dozen springs, scattered through a charming wooded park, where you may find innumerable shady strolls and rustic benches in bosky nooks, where it is pleasant to lounge with a good light book. In the afternoon I drink at a spring with whose luxurious prettiness I still find it hard to associate a doctor's prescription. It reminds me of a back-scene at the theatre, and I feel as if I were drinking some fictitious draught prepared by the property-man; or rather, being a little white temple rising on slim columns among still green shade, it reminds me of some spot in the antique world where the goddess Hygeia was worshipped by thirsty pilgrims; and I am disappointed to find that the respectable young woman who dips my glass is not a ministering nymph in a tunic and sandals. Beyond this valley of healing waters lie the great woods of fir and birch and beech and oak which cover the soft slopes of the Taunus. They are full of pleasant paths and of the frequent benches which testify to the German love of sitting in the open air. I don't know why it is—because, perhaps, we have all read so many Teutonic legends and ballads—but it comes natural in Germany to be in a wood. One need have no very rare culture, indeed, to find a vague old friendship in every feature of the landscape. The villages with their peaked roofs, covered with red scolloped shingles, and the brown beams making figures on the plastered cottage walls, the grape-vine on the wall, the swallows in the eaves, the Hausfrau, sickle in hand, with her yellow hair in a top-knot and her short blue skirt showing her black stockings—what is it all but a background to one of Richter's charming woodcuts? I never see a flock of geese on the roadside, and a little tow-pated maiden driving them with a forked switch, without thinking of Grimm's household tales. I look around for the old crone who is to come and inform her she is a king's daughter. I see nothing but the white Kaiserliche Deutsche sign-post, telling one that this is such and such a district of the Landwehr. But with such easy magic as this I am perhaps right in not especially regretting that the late enchantress of the Kursaal should have been handed over to the police.

Correspondence.

THE NATIONAL EDUCATIONAL CONVENTION AND PRESIDENT ELIOT'S REPORT.

To the Editor of the Nation:

Sir: The reception which President Eliot's able essay on a National University has received from the press and the public must be highly gratifying to every thoughtful American. Yet it is also highly desirable that the relation of the Convention to this report should not be misapprehended. As a constant attendant at the sessions of the Convention, I can safely say that this report, *in extenso*, no more represents the opinion of the Convention than the former work of Professor Hoyt did. President Eliot's paper was simply received by the Department of Higher Instruction as an able exposition of one side of the question; and while nearly every person present was convinced of the impracticability and inexpediency of any such scheme at present, it was also manifest that the majority of college presidents and professors composing the Department did not agree with its arguments in regard to the question of the Government, State or National, contributing to the support of higher education among the people. In the discussion which followed the reading of the paper, the President of the University of Missouri, who was chairman of the Department, Dr. McCosh of Princeton, and others, dissented in strong terms from the position taken by the President of Harvard, both on the main question and the side issues.

In the general meeting of the Convention a resolution was passed, declaring it the sense of the representatives of education assembled from all parts of the country, that the 90,000,000 acres of public land still unsold should be appropriated to assist the cause of education in the States and Territories. Dr. McCosh's able paper on Upper Schools closed with a recommendation that these lands should be devoted to the encouragement of secondary schools—that is, academies preparatory to colleges.

The true merit of President Eliot's paper is that it has opened the eyes of many to the momentous questions really involved in a plausible scheme of enlisting the support of the General Government in behalf of education. The more these questions are discussed, and the more enlightened the views of the public become in regard to them, the better for the cause of education. But so far, the large majority of the educators of the youth of our land are silently or openly opposed to President Eliot's views. Personally, I may say that I endorse President Eliot's arguments in the main, but I think justice requires the foregoing statement to be made. J. P. L.

Philadelphia, August 25, 1873

NOTE ON A PASSAGE IN SHAKESPEARE.

To the Editor of the Nation:

Sir: In 'The Tragedie of Anthony and Cleopatra,' A. v. S. ii. ll. 86–88, Cleopatra says of Antony:

> "For his Bounty,
> There was no winter in 't. An Anthony it was,
> That grew the more by reaping."

This is the reading of the First Folio, 1623, in which the Tragedy, so far as is known, appeared for the first time. The "Cambridge" editors adopt Theobald's "emendation," "an autumn 'twas."

If "An Anthony it was" is not right, "an autumn 'twas" is certainly wrong. It is too tame for the intensely impassioned speech in which it occurs, or rather into which it has been introduced by the editors. Again, if "autumn" could, by metonymy, be wrenched to mean the crops of autumn, it could hardly be said that an autumn *grows* the more by reaping. But this reading of Theobald has been silently adopted by all subsequent editors, without any consideration of its tameness or of the resultant incongruity.

I think the dear old Folio is right, as it is sometimes (though some editors are very loath to admit it, especially if there be a different Quarto reading), and that there is a *quibble* in the speech that has been overlooked. It is a patent fact in regard to the manifold and multiform quibbles in the plays of Shakespeare, that they are often indulged in by his characters while in the highest intensity of mind and feeling. The poet has been blamed for this, especially by the critics of the "correct" school, and his defenders have found some excuse for it in the general quibbling propensity of the writers of his time. But the best excuse for it is that it is true to nature, although I would not explain it on the theory set forth by Bucknill in his 'Psychology of Shakespeare,' namely, that "when the mind is wrought to an excessive pitch of emotion, the instinct of self-preservation indicates some lower mode of mental activity as the one thing needful."

To return now to the passage in question: "An Anthony it was"; "it"

stands, of course, for "Bounty." His Bounty was an *Anthony*, "that grew the more by reaping."

Now, could the "less Greek" which, Ben Jonson tells us, Shakespeare possessed, have enabled him to see in "Anthony" the word *ἄνθος*? His Bounty had no winter in it; it was a mead of perennial luxuriance, affording a *flowering* pasturage (Ἀνθόνομος), and "that grew the more by reaping."

HIRAM CORSON.

CORNELL UNIVERSITY, ITHACA, N.Y., August 22, 1873.

Notes.

IT is stated on the authority of the *Times* that Mr. E. M. Archibald, British Consul at this port, has been requested by his Government to ascertain if there are any libraries or public institutions in this district which wish to receive a set of the publications of the Cobden Club. These the Club is willing to give away, and Mr. Archibald will at once attend to such applications for them as may be addressed to him. Whether other parts of the country are to be made the theatre of the Club's efforts, which are of course put forth in the interest of enlightenment on politico-economical subjects, we do not know. The contradictory or protectionist propaganda is attended to by a Pennsylvania society, which distributes gratuitously works by Mr. Henry C. Carey (four volumes), Dr. William Elder, Sir John Byles, Hon. William D. Kelley, Sir Edward Sullivan, Mr. E. P. Smith, Mr. A. Stuart.——A correspondent who asks for the title of Professor Cairnes's "masterly exposition of the causes of our late civil war," is informed that it is the 'Slave Power: an Attempt to explain the Real Issues involved in the American Contest.' A reprint was published in this city in 1862.——The veteran Dr. S. Wells Williams has, we learn from the Shanghai *Budget* of July 5, "completed the main portion of his new Dictionary of the Chinese Language, which embodies the results of his Chinese studies for forty years." It will fill about 1,150 pages of three-columned quarto, giving explanations of 12,500 Chinese characters. It is the first work of any importance which has been electrotyped or stereotyped in China.

—The sixth annual report of the Peabody Museum of American Archæology and Ethnology (Cambridge) is well worth the attention of students inasmuch as it is a sort of group catalogue of the collections put on exhibition during the past year. The Museum can hardly be said to be richer in American antiquities than in those of other parts of the world, and already it affords the best opportunities for the study of prehistoric remains and of comparative craniology in all the principal fields of modern research. The most important addition made since the last report has been Col. Theodore Lyman's gift of the Nicolucci collection, containing a large number of Italian skulls dating from the first century to the present day, besides 790 stone implements, of which the curator gives some very interesting details. These were chiefly found in the southern half of the Italian peninsula, nearly thirty being from "the alluvial gravel beds of the Tiber at Ponte Molle, near the city of Rome." The existence of these relics of the stone age in Italy had escaped the attention of archæologists till quite recently:

"Only a few years since," says the report, "the eminent German historian, Mommsen, in his 'History of Rome,' while discussing the origin of the early inhabitants of Italy, states that 'nothing has as yet come to light which would justify us in concluding that the existence of man in Italy is of older date than the knowledge of agriculture and the smelting of metals; and if within the boundaries of Italy the human race was at one time in the condition we are in the habit of distinguishing as savage, every trace, at all events, of such a state has disappeared.'"

This passage, which at the time it was written would have been as true (and as mistaken) of Greece, seems to us to have an important bearing on Mommsen's value as an authority in the Pelasgic discussion to which Mr. Stillman returns on another page. Under the employ of the Museum, Mr. Henry Gillman has made some profitable explorations of the mounds on the St. Clair River, Michigan, and his narrative is embodied in this report. In one instance a skeleton was found under a decayed oak stump whose roots had in many cases penetrated the bones, and then burst them, the fragments still surrounding the root and often becoming imbedded in it in its subsequent growth. Specimens of this curious phenomenon were secured and forwarded.

—In speaking of Mr. Eliot's report on the National University scheme the other day, we were unable, for want of space, to allude to one or two extremely interesting details connected with university education. This, as every one knows, is an era of reform, and it is an era of bad and ill-considered as well as of good reform. Some of the gentlemen who have university reform at heart have of late urged upon the attention of the public the advantages of the "fee-system" in colleges. The fee-system is the system of eking out the usually scanty salaries of professors by fees from students, and, like the National University scheme itself, is an importation. The plan is at first sight taking, and in Mr. Howe's bill it is provided that the national professors "shall receive salaries varying from $1,000 to $2,500 a year, and that each professor may also exact a fee of ten dollars a year from each student attending his course." Mr. Eliot says, however, that the plan is a very bad one. Under it "the professors of popular subjects might thrive," but it is greatly to be feared that the gentlemen who occupied the chair of palæontology and the professors of the Coptic language, Oriental philosophy, Sanscrit, and ecclesiastical law would starve to death. Besides this, "neither students nor teachers in this country like the fee-system. It has worked well in Germany, but has never been domesticated here except in medical schools, where it has done a great deal of harm. It creates a disagreeable money relation between teacher and student, and introduces into a faculty illiberal contentio ."

—Besides the fee-system, Mr. Eliot refers to two popular delusions relating to the scientific study of agriculture—one of which is known as that of the model farm, while the other might be called the fallacy of the model farmer. The model farm is an institution established in connection with an agricultural college, on which the scientific agricultural student may, after or before he has devoted some five or six hours to intellectual labor, hoe, dig, plow, sow, reap, thrash, or mow, in application of the instruction conveyed to him by his books. The object of the plan is to unite scientific with practical knowledge in such proportions that the alumnus of a model farm may himself be a model farmer, who will occupy a relation to the previous tribe of farmers very like that which the model editor, who has been educated in a school of journalism, will occupy to the existing race of editors. Mr. Eliot, however, is very sceptical on this subject. He says that "the model farm, like the model machine-shop, is almost universally a model of nothing but misapplied labor, misdirected experimentation, and unprofitable investment. It can be useful to the young agriculturist only as a warning; it can teach him how to spend money, but not how to make money on a farm." He also says that the tuition provided for the model farmer by agricultural colleges is based upon the delusion that a life of hard and paying farm-work can go on side by side with intellectual culture. On the model farm the young man is made to believe that by laboring four hours a day he can pay for his board, lodging, clothing, and tuition. As a matter of fact, however, he is living on charity—a fact which he is likely to discover as soon as he begins work on the actual farm, where he has to sell his own crops to support himself. All model farms are really eleemosynary farms, while they pretend not to be.

"It is this disguise which makes the general method so well fitted to breed shirks. There lurks in all devices of this sort the notion that study and thinking are not physical exertions; so that after prolonged study a man may be just as fit for physical labor as if he had not worked with his brains. This is a profound mistake, which has real danger for conscientious and ambitious youth; such young persons may easily be betrayed by this false opinion into disastrous over-exertion. What is called mental labor is really the most exhausting, continuous physical exertion which men can make, although the sense of fatigue from an excess of what is called brain-work is generally not so irresistible at the moment as the fatigue caused by too much hammering, hoeing, or walking."

—It is a fact not to be lost sight of, says Dr. J. C. Toner, of Washington, that the proportion between the number of American children under fifteen years of age, and the number of American women between the childbearing ages of fifteen and fifty, is declining steadily. In 1830, there were to every 1,000 marriageable women 1,952 children under fifteen years of age. Ten years later, there were 1,863, or 89 less children to every thousand women than in 1830. In 1850, this number had declined to 1,720; in 1860, to 1,666; and, in 1870, to 1,568. The total decline in the forty years was 384, or about 20 per cent. of the whole proportional number in 1830, a generation ago. The United States census of 1870 shows that there is in the city of New York but one child under fifteen years of age to each thousand nubile women, "when there ought to be three"; and the same is true of our other large cities. In view of these facts, and others which have the same bearing and point to a decrease of vital power in American infants, Dr. Toner urges the establishment of "free sanitariums" all over the country to which children may be taken in hot weather. Each of these should be a well-wooded park of two or three thousand acres in extent, at an elevation ensuring the absence of malaria; accessible; abundantly supplied with pure water; governed by proper and fixed rules of admission and for the preservation of order and health; managed by "a recognized sanitarian"; and improved by the erection of cheap tenements and boarding-houses, to be occupied free of rent

by such of the poorer classes of our large cities as have sick or debilitated children. This scheme, Dr. Toner thinks, would secure the approval of the medical profession, and should secure the favor of the legislator and the statesman, and he maintains that it is entirely feasible. How desirable it would be, if it were feasible, a momentary glance at the mortuary statistics of our large cities will show: the number of deaths occurring in these is increased from one-fourth to one-half by the mortality among children of less than five years old. The Health Reports of the City of Providence from 1856 to 1870 show that 35·48 per cent. of the deaths were deaths of children under five years of age; but, while in 1856 this percentage was all but 46 (45·91), in 1870 it was 36·72; and this result was due to the enforcement of good hygienic regulations. In St. Louis the Health Report for 1871 makes the infant mortality of the city no less than 51·10 per cent.; in Cincinnati, in 1868, it was 46·68 per cent.; in Washington, taking the report for 1849, 1852, and 1858, it was 46·44 per cent.; in Baltimore, for the decade from 1850 to 1860, it was 45·54 per cent.; in New York, from the period from 1804 to 1853, it was 48·79 per cent., and in the four years from 1866 to 1870, it was 50·45; in Chicago, from 1843 to 1869, it was 51·24 per cent.; in Philadelphia, from 1858 to 1870, it was 45·54 per cent.; in Boston, in the five years from 1868 to 1872, it was 42·22 per cent., and this was an increase of more than four per cent. (4·35) over the proportion existing in the period from 1807 to 1827, when the number of children who died when less than five years of age constituted 37·87 per cent. of the whole number of persons deceased. Thus, in Boston, Philadelphia, and in New York, we see that the period of the increased proportion of infant mortality to total mortality is coincident with the period of the fast growth of the cities and consequent crowded condition of the poor. Whatever may be the exact value of Dr. Toner's statistics, there is no doubt that we have here a very mournful list, which may well be meditated by the statesman and the philanthropist; and we may feel reasonably sure that the relation between the increasing death-rate of the children and the overcrowding of our cities is to some extent, at least, a relation of cause and effect. One minute of a July day spent in a tenement-house street will convince anybody of that.

—Two years ago (*Nation*, Aug. 3, 1871) we noticed the assertion of a Paris correspondent of one of our city papers in regard to a pretended feudal privilege. "This was the right of the lord on returning from the chase to cut open one serf for the purpose of warming his feet in the entrails." We then suggested that perhaps Mr. Carlyle was responsible for the genesis of this fiction, which had likely grown out of a confusion between *cerf* (a stag) and *serf*. In the July number of the Paris *Polybiblion*, Notes and Queries department, enquiry is anxiously made for the author of this "atroce et absurde calomnie," viz., to quote the writer's own words, that "un seigneur, revenant de la chasse, était autorisé à faire égorger quelques-uns de ses vassaux afin de se réchauffer les pieds dans leur sang tout fumant"—a more liberal version than the one first cited, inasmuch as the lord is not restricted to *one* serf only. Still another and more precise version is pointed out by the writer as to be found on page 32 of the new edition of 'Les Hébertistes' (1871), a work by Citizen C. Tridon, member of the Paris Commune, as follows: "Connais-tu, Fontraille, ce baron breton qui, au retour de chasse, aimait à enfoncer ses pieds dans les entrailles des filles éventrées?" Here we are referred to a particular seigneur, in Brittany, who was in the habit of warming his feet in the entrails of his vassals, and who preferred for that service young girls to any others. Perhaps to Citizen Tridon is due the honor of this invention, and it is just possible that the correspondent of the New York *Times* had more or less consciously derived his feudal lore from a perusal of 'Les Hébertistes.'

—M. Renan's 'L'Antechrist' is the most prominent, though we should hardly call it the most valuable, of recent French publications. We may remark, in passing, the confusion which the French form of his title has caused among English and American reviewers (or printers). "Antichrist" is the proper translation; "Antechrist" the common and erroneous one. Our Paris correspondent has already done justice to this work. M. Louis Blanc's 'Questions d'aujourd'hui et de demain' is really a collection of articles already published, and by no means, in all cases, recently, and is intended for the first of a series covering Louis Blanc's entire career as a political, metaphysical, and literary writer. Of M. Auguste Laugel's 'L'Angleterre politique et sociale' we hope to speak at some length hereafter. Its place is among the serious and solid products of French thought. In connection with it should be mentioned M. Charles Savary's 'Gouvernement constitutionnel.' The author is a youthful deputy from La Manche, and a firm believer in the utility of constitutions. He gives some valuable electoral statistics for France, and describes the composition of the upper chamber in foreign countries. The latter theme absorbs entirely M. Charles Gomel ('Essai historique sur les Chambres hautes françaises et étrangères') and the Marquis de Biencourt ('Des Chambres hautes, leur composition et leur rôle en Europe et en Amérique—D'une Chambre haute en France'). M. Gomel's essay has a permanent historical interest, and might be bound up with M. F. D. Plouard's chronological text of the 'French Constitutions voted by the Chambers from 1788 to 1870.' The Count de Chambord's affection for the white flag is borne out, as far as any sentiment of that kind can be, by M. Marius Sepet's exhaustive history of the 'Drapeau de la France,' in which it is shown that almost from Charlemagne to the "fatal perversion" of the French Revolution, but "one flag, successively blue, blue with a white cross, blue and white, all white, has continued to preside over the destinies of the country." Whether a tricolored marshal-president like MacMahon can be moved by considerations of this sort remains to be seen. His subordinate, General Vinoy, has published a work on the 'French Army in 1873' and the military resources of France, which French critics find in refreshing contrast with General Trochu's "sensational" monograph, with its disagreeable *mots* from père Bugeaud.

—Baron Hübner's 'Promenade autour du Monde' is the only French book of travels which requires mention, and that not on account of its surpassing accuracy in what the author has to say about this country, but rather because he is a lively and witty narrator. The United States finds a more faithful and a more sympathetic observer in M. Malézieux, an engineer sent out by the Government in 1870 to study the public works executed here within the past thirty years ('Travaux publics des Etats-Unis d'Amérique en 1870'). This report makes a quarto volume of nearly 600 pages, and is accompanied by an atlas with sixty-four plates—a work which would cost the importer seventeen or eighteen dollars. It describes our principal suspension bridges, including the one over the East River, our great railroads, river and lake navigation, municipal works, etc., etc., and includes some general reflections, such as on the very lax system by which nominations to West Point are made. In the department of history, besides the special works above-mentioned, we may name the fifth volume of the 'Archives de la Bastille,' edited by François Ravaisson; the sixth and last volume of inedited letters and documents of Louis XVI., Marie Antoinette, and Madame Elizabeth, by M. Feuillet de Conches; the first volume of a 'History of Troyes during the Revolution,' by M. Albert Bareau; and the laborious and very minute work on 'Abraham Du Quesne and the Marine of his Time,' by A. Jal—a twenty years' study, which has been called "a veritable cyclopædic dictionary of the French marine of the seventeenth century." Those who have read and especially owned (for it is a beautiful specimen of typography) M. Charles de Ribbe's 'Une Famille au XVIe siècle," will be glad to know of a similar work which he has just edited: 'Les Familles et la Société en France avant la Révolution,' and of the Marquis de Godefroy-Menilglaise's memoirs of his own family during the sixteenth, seventeenth, and eighteenth centuries ('Les savants Godefroy'). All these belong in the class of materials *pour servir*, though the aim of their editors is a moral and educational one. M. Guizot's 'Child's History of France' has reached a second volume without yet satisfying his adult readers. A fresh batch of M. Henri d'Ideville's indiscreet diplomatic revelations, 'Journal d'un diplomate en Italie,' takes those who follow him from Turin to Rome (1862–1866), but conveys no higher impression of his political insight than did the preceding volume.

—The threadbare ghost of Lamartine has been resuscitated in his 'Correspondance,' in two volumes, comprising his letters from the time of leaving college to his marriage (1807–1820). It will be found a useful corrective of the poet's later review of his youth. His 'Poésies inédites' is not regarded with the same favor, and scarcely as a book with a *raison d'être*. However, to show the difference of opinion of different critics, a French reviewer censures the editor for printing the first draft of the *Lac*, showing numerous variations from the final form become classic, while a writer in the *Academy* is delighted to recover thereby two fine stanzas whose omission had by no means improved the poem—indeed, had left a very perceptible gap. Since we are on the subject of poetry, we may mention Mme. de Witt's 'Recueil de poésies à l'usage des jeunes filles,' though it is rather carelessly edited. Two solid art publications are M. Adolphe Lance's 'Dictionary of French Architects,' with engravings of sixty-nine seals worn by as many members of the profession, and the fourth volume of M. Viollet-le-Duc's 'Dictionnaire raisonné du mobilier français,' being the conclusion of "Civil and Religious Dress." An interesting contribution to the history of glass-making is 'Les Verreries de la Normandie,' by O. Le Vaillant de la Fièffe. It should not be out of place to record here an Italian work of some circumstance, called 'France and Italy,' by Carlo Morbio, which is an account of French MSS. in Italian libraries. Unfortunately, it cannot pretend to completeness, and it lacks a serviceable index; but much may be forgiven to it as the labor of thirty years.

—It has been difficult heretofore to collect statistical information about the progress of literature in Greece, but now quite a fair view can be obtained from a bulletin issued monthly in Athens by the eminent publishing house of Andrew Koromelas. The first year, Jan.-Dec., 1872, is bound into a volume of 16+118 pp. small 8vo. The design of the publisher is not only to record every new book and pamphlet printed in Modern Greek, but also to make known to his countrymen some of the principal foreign books relating to their country or their ancient literature. Of the 352 titles, 96 are of strictly foreign books, and 19 others are only repetitions of the title of periodicals, so that the true number of Greek publications registered for the year is 237. 27 of the whole number were printed out of the kingdom of Greece; namely, 12 in Turkey, and the remaining 15 in the cities of Alexandria, Braïla, Odessa, St. Petersburg, Venice, Trieste, Leipzig, Marseilles, Paris, and London. There are 29 translations, besides revisals from the ancient Greek of Homer, Euripides, etc.; 17 are law-books, 15 theological, and 4 medical; 14 are constitutions and by-laws of banks, mining, and other companies, the year having been prolific of joint-stock enterprises. The questions of the Laurian mines and of the Bulgarian schism called forth several essays. Among the periodicals are an agricultural monthly in its first year, a medical in its second year, two literary monthlies, one bi-monthly, and four published twice a month. As to the completeness of this catalogue, it is not probable that any important book has escaped the notice of the publisher even in his first year's effort; but, from the great number of presses in Greece, it is too much to expect that all the small pamphlets would be recorded. We have seen two or three which are not named in the catalogue, and presume that there have been enough others to make the complete list number at least 300. The bulletin has been issued for three months of 1873, with 86 titles, of which 31 are foreign.

—Among the modern Greek books of 1872 may be mentioned the first and third volumes, together exceeding 1,200 pages, of the 'Mediæval Library' of unpublished Byzantine writers, edited by K. N. Sathas. In Vol. I. are included catalogues of MSS. at Mt. Athos and in Constantinople. Several school-books have the sanction of the active Society for the Dissemination of Greek Letters, established in the spring of 1869. The census of 1870 is published by the Government in a well-digested shape. The annual reports of the university appear as usual, as also the public orations of the retiring prytanis and his successor. The latter is this year accompanied by the stirring poem of A. Balaorites on the unveiling of the statue of the patriarch Gregory V. This poem, one of the chief literary successes of the year, though of only 137 lines, is written in the dialect of the author's Leucadian home. In the 1872 catalogue, too, another noteworthy book is 'Modern Greek Mythology,' by N. G. Polites, which in an incomplete state received a thousand-drachma prize in May, 1871. In archæology, the first volume of the 'Catalogue of the Ancient Coins of the National Museum' is a thorough and scholarly work. Following the usual geographical order, it ends with the kings of Macedonia. It is probably in the subsequent part, including central Greece, that the chief riches of the collection will be described. An independent volume was printed in 1868 of the coins of the seven Ionian Islands. It was expected by some that Prof. K. Paparrhegopulos would have published this year the fifth and last volume of his 'History of the Greek Race.' But last volumes of a history are apt to be delayed, and the Professor's severe family bereavement may have interrupted his labors. He does not claim scientific merits for his work, but his point of view, as a Greek of to-day looking back on 3,000 years of wonderful life in a straight vista behind him, shows a new unity in the story. The captions of his fifteen books are as follows: 1. Mythic times; 2. Early historic times; 3. Median wars and hegemony of Athens; 4. Peloponnesian war and the hegemony of Sparta; 5. Hegemony of Thebes and the decay of the first Hellenism; 6. Macedonian Hellenism—Philip and Alexander; 7. Their successors; 8. Roman dominion; 9. Dishellenizing of the Eastern Empire; 10. Byzantine Hellenism—the iconoclasts; 11. Macedonian dynasty; 12. The Comneni. Yet to be published are: 13. Frank dominion—the Palæologi; 14. Turkish dominion; and 15. Hellenism of our own time.

A FRENCH STUDY OF AMERICAN POLITICS.*

EVENTS move so rapidly nowadays that perhaps the name of the Marquis de Chambrun is already unfamiliar to the public. It was only two years ago, however, that his name was public property—almost as well known as those of the two Senators to whom, in his preface, he acknowledges himself under obligation in the preparation of this *étude*, Mr. Sumner and Mr. Schurz. M. de Chambrun is the gentleman who, at the time of the formal declaration of war between the Administration and the opposition in the Senate, was supposed to have conveyed information to the opposition in regard to the French arms sale, and was usually referred to in Administration speeches as a foreign emissary, and indirectly accused of conspiring with these two Senators in their attack on the conduct of the Government. Having been in this country for several years, during a period of great political activity and excitement, M. de Chambrun has had ample opportunities for observation and enquiry. The spirit of his work is philosophical, and its scope coextensive with an examination of the history, progress, and tendencies of American constitutional government. The present volume on the executive power is to be followed by three others, one of which is to be devoted to the discussion of the national sovereignty, and what is called in France the "pouvoir constituant," another to the legislative, and another to the judicial power. The present volume will thus apparently be the second of the series.

M. de Chambrun has done his work with care and sense. Taking the 'Federalist' for his guide, and supplying himself with current information, both out of his own experience and that of Mr. Sumner, Mr. Schurz, and Mr. Caleb Cushing, he has produced a treatise on the executive power of considerable ability. There is little or no originality in the book, but it may be doubted whether originality in studies of American politics of this kind is either desirable or likely to appear at the present day. There has been no work on politics since the 'Federalist' which can be said to have added much to the science of constitution-making; and the 'Federalist' itself was a purely practical treatise, devoted to the explanation of a scheme of government confessedly a compromise, entirely satisfactory to nobody, and adopted by practical politicians without much hope of permanence. At the present time, both in England and America—the two countries which, if domestic peace be taken as the test, have exhibited in modern times the greatest political sagacity—the attention of thinking people is far more directed to the social changes produced by the "modern movement" than to the political.

M. de Chambrun is of the old school, though not entirely of the old school. Indeed, we may say that his study of American politics has brought him to conclusions with regard to practical questions which are in the main dictated by considerations such as would suggest themselves to an American; but there is in the speculative part of his work sometimes a tendency to treat politics, as if it were an exact science, in the mathematical or perhaps rather mechanical way which would be pursued through a study of the resultant forces of human action—each citizen being considered as a mechanical unit, governed by political laws corresponding to those of matter. For example, in discussing centralization, after referring to Hamilton's plan of a highly centralized government, and comparing his views on the subject of popular sovereignty with those of Jefferson, the author says, evidently having in mind existing political facts, that if the country were moving towards the pit of centralization, it would probably be in the local State organizations that we should see the first indications of it: "It might be that, first at one point, and then at another, corruption would insinuate itself in the local governments; then institutions now vigorous would be exposed to rapid decay. The day when the people were no longer capable of maintaining them in the plenitude of their force, they would naturally turn their eyes to the Federal Government; the local governments having become inadequate to their own needs, would be driven into demanding of the central power the substitution of itself for them." In this way the ideas of Hamilton would justify themselves (p. 349).

This argument, which is for political students a very old and familiar one, is, we believe, founded upon an obscurely imagined analogy between the relations of the States to the United States and the relation between the planets to the sun. The planets revolve autonomically about the sun because of the equilibrium between the centripetal and centrifugal forces; the States revolve about the Federal power because of the nicely balanced forces of the political system devised by the founders of the American government. Local self-government corresponds to the centrifugal force. The centralizing tendency of any Administration corresponds to the centripetal. Not that this analogy was even present to M. de Chambrun's mind in writing his treatise, but that it has always unconsciously presided over the speculations of political writers. It is one of the most natural analogies that can suggest itself to the mind. There is also a good deal of reason for it. If the human beings living in the United States were really material units, the loss of local self-governing force would undoubtedly be accompanied by an increase of the correlative attraction. But the units are human beings, and these human beings are capable of acting in different ways. In the case supposed by M. de Chambrun, these human units may say to themselves, "It is very true that our local governments are not well managed; that there is a great deal of corruption and malad-

* 'Le Pouvoir Executif aux Etats-Unis: Etude de Droit Constitutionnel. Par M. Adolphe de Chambrun.' Rouse's Point, N. Y.: Imprimé et publié par John Lovell. 1873.

ministration; but it does not appear that the central government is much better. The party which governs here governs there also; the money which corrupts here is to be found also there. Of what use would it be to have a more centralized government if it is merely a more distant and by no means a purer government than we have now?" The people may then take one of many courses of action. They may revolt and sever their connection with the central government; they may, through a united action of many States, reverse the direction in which the government has been moving, and compel a dissolution of the centralizing forces. The struggle at Albany a few months since between the "Custom-house ring" and the New York Reform party was a struggle between centralization and local government, carried on for the possession of a city perhaps the most corrupt—it is generally corruption on which the analogy bases itself—in the United States. The Administration party had by no means the sympathy of the friends of good government, who did not, as they ought theoretically to have done, turn their eyes to Washington for help out of the slough. On the contrary, they resented and defeated the interference of the Federal politicians.

There are other considerations connected with this question which are habitually overlooked by political writers. The centralization of one period is not by any means the centralization of the next. To take, as an example, the Post-Office: never since the foundation of the government has there been any serious outcry against the enormous centralizing influence of this department. Looking at the matter in the abstract, one would say that the possession of the Post-Office by the central power was exceedingly dangerous to the liberties of the citizen. That each person should be obliged, when he wishes to communicate rapidly with another, to place his communication in the hands of the Administration, and trust to the honor of those in power that it will be forwarded to its destination—this seems monstrous; and, more monstrous still, there is no remedy against the department for breach of the trust. What is to prevent the minions of power, as the members of the civil service are usually called in discussions of this sort, from making the honest and economical distribution of the mails depend entirely on the political support of those who use them? There is no doubt that the Post-Office, if it had existed in its present form three hundred years ago, would have been systematically used as an engine of oppression, and that what are now scandals would have then been real terrors. There are many reasons for this difference, one of them being that three hundred years ago the same power which would have distributed the mails would also have had an overwhelming military force at its back. In the United States there is no such force. Another reason is to be found in the fact that the existence of the railroad and telegraphic system, combined with the multiplication of newspapers and periodicals, has brought the entire country within such a narrow compass that for many practical purposes the United States is not so large now as the State of New York was a hundred years ago, and a great deal of the old-fashioned talk about centralization is as out of place as it would have been if applied to the relation between Albany and Cattaraugus County. It is remarkable how little these changes are taken into account. Mr. Hare, in his work on representation, is one of the few modern political writers who recognize the new light thrown by them upon all questions of government.

All discussions about such matters as centralization, "co-ordinate and independent" powers, or the machinery of representation, lead to little unless they are preceded by and based upon a study of the actual condition and history of the society with reference to which they are carried on. The truth of this proposition M. de Chambrun thoroughly recognizes, though he at times lapses from its application. As an illustration of his perception of this fundamental truth, we may refer to the wise warning he gives French readers not to be led away into the belief that because a republic has worked well in America, therefore it is suited to all other countries. He insists on the unquestionable fact that the men who founded the government were not aiming at establishing what now goes by the name of "The Republic." They had the Republic as little in their minds as they had the Revolution or the Commune. They desired to arrange a government which would replace the government they had overthrown, and they based their new plan on a lifelong empirical study of the country they meant to govern.

"It is difficult to find in the writings of the times an explanation, of a nature to satisfy the mind, as to the manner in which the 'republican form of government' was adopted by the United States. A few years before his death, Thomas Jefferson took care to prepare for publication memoirs in which he has recounted the part which he took in the struggle of the thirteen colonies, in the declaration of independence, and the events which ensued. The word republic does not once make its appearance in this work" (p. 10).

The truth was that most of the leading men of the time were sentimentally attached to the English monarchy, and with regard to forms of government were probably inclined, like most veteran politicians and statesmen, to look upon them with a sceptical eye, and to doubt whether Pope had not after all been right in allotting to fools discussions about political forms, and to wise men discussions of practical remedies for evils of administration. It had been the corrupt and oppressive administration of England, not the monarchy, for which they had sadly broken with the past. Another illustration of the same good sense may be found in M. de Chambrun's mode of treating the proposition to engraft upon the American system a responsible ministry, after the English fashion. He points out, as we have often done in these columns, that a responsible ministry would, in our system, be utterly incongruous. The English Ministry is a Parliamentary committee which has really absolute administrative power, though it governs in the name of the crown. In America, the executive power being in the hands of an elective and responsible President, the circumstances are totally different. The erection of a responsible ministry would increase the power of Congress, and at the same time diminish that of the President, and it would completely upset the balance of power established by the Constitution. The English system is a gradual growth of the English constitution, and has no more fitness for the American Government than the substitution of French prefects for the governors of States would have.

It is impossible for us to examine in detail all the practical conclusions at which M. de Chambrun arrives in the course of his examination of the executive power. His discussions include such subjects as the election of the President and Vice-President, the constitution of the executive power, the organization of the departments, and the subordinate official system; the relations of the President with Congress; the right of declaring war (a valuable chapter); the relations of the President with the judiciary; the Senate considered as an executive council; the relations of the President with the State; the condition of the Executive Power under Mr. Lincoln; and the impeachment of Mr. Johnson. In case of a new edition, we should advise M. de Chambrun to revise carefully his chapter on Mr. Lincoln's Administration. Although this and the succeeding chapter give on the whole a fair picture of the changes which took place in the executive power between 1860 and the time of the complete defeat by Congress of Mr. Johnson's plan of reconstruction, what is said about the "war power" would be apt to give a foreign reader a very misleading idea of the Constitution. The war was necessarily carried on outside the Constitution, for the reason that the Constitution never contemplated such an intestine tumult as secession produced. It was one of the chief marks of Mr. Lincoln's greatness as a statesman that though the circumstances of the time compelled him to govern himself by other rules than those furnished by the fundamental law, he always succeeded, by instinct, in selecting the most practical of those which offered themselves. The constitutional theories of Mr. Charles Sumner and Mr. William Whiting might serve his turn for the moment, but he was far too wise a man to imagine those theories anything more than makeshifts.

THE MAGAZINES FOR SEPTEMBER.

OF all the vast quantity that has been written about the Patrons of Husbandry and the Farmers' Granges, next to nothing has removed any of the popular ignorance in regard to these subjects. Most of the writers who have handled them have been political editors writing in a sort of political interregnum, and not only that, but in the hot weather and the "silly season," and the result of their labors is that while everybody suspects the "embattled farmers" to be meditating something important, nobody knows exactly what it may be, and nobody feels sure that in point of fact they are meditating anything. Some attention, then, will be attracted to an article in the September *Lippincott's* entitled "The Patrons of Husbandry," in which a Patron, or rather a Patroness, tells what she knows of the character and aims of the new societies. She does not make it clear that there is much to be known, but what she tells is interesting. It was not, she says, "in a community of Scotch farmers in North Carolina that the movement had its origin. Some have said so, but the order is not the outgrowth, directly or indirectly, of any pre-existing organization. So far as is now known, it is the result of a suggestion made by a lady to Mr. O. H. Kelley, at present the Secretary of the National Grange, and the person who has done most to establish the order as it exists to-day. Why, said this lady, cannot the farmers protect themselves by a national organization, as do the other trades and professions?" This seed fell into fertile soil. Mr. Kelley at once began travelling about the country, preaching the new doctrine to the farmers, who, however, were slow to accept it. It was six years ago that Mr. Kelley entered upon his mission, but it is only since 1870 that the growth of the association has been great. Within these three years, however, it has been marvellous— growth "unheard of in the history of secret or other organization,

in this country or the world." "The discussion of party politics," says our author, Miss Marie Howland, "is excluded from the order by common consent as well as by the terms of its constitution." The principal object of the founders was to induce their fellow-farmer to join in "the great strike of labor against drudgery," and raise himself from the condition of an animal to that of a refined and cultivated man. "What we want in agriculture," said Mr. Dudley Adams, Master of the National Grange, in a recent address, "is a new Declaration of Independence. . . . It will doubtless be a matter of surprise to them [editors, lawyers, and politicians] that farmers may possibly have some other object in living besides everlasting hard work and accumulating a few paltry dollars by coining them from their own life-blood and stamping them with the sighs of weary children and worn wives."

"One of the Patrons during a late discussion predicted, from the growing intelligence of the people, and their better understanding of the possibilities of organization, that within a few years we shall see magnificent social palaces, something like the famous one at Guise, in many places in this country; and he went on to show how social and industrial life might be organized so as to secure the most complete liberty of the individual or family, magnificent educational advantages, remunerative occupation and varied amusements for all, with perfect insurance against want for orphans, for the sick and the aged. Each palace was to be the centre of a great agricultural district exploited in the most scientific manner, and through the varied economies resulting from combination all the luxuries of industry and all the conditions for high culture were to be secured to all who were willing to labor even one-half the hours that the farmer now does."

It will be seen that some dreaming is done in the granges. As for substantial accomplishment, we find set down one thing which has a very good look: in 1872, the Iowa granges saved half a million dollars by purchasing farming implements at wholesale and selling them to the members at the cost price. The Missouri granges have just completed a contract with the St. Louis dealers which will have the same effect. Miss Howland seems to be more occupied with the social aspect of the movement than any other, and talks rather less definitely of the farmers' intentions in regard to the railroads than of the initiation rites, the music, and the adornment of halls by the "Maids," "Shepherdesses," "Gleaners," and "Matrons" conjointly with the "Laborers," "Cultivators," "Harvesters," "Husbandmen."

For other articles, the September *Lippincott's* has several worth reading, though it is all light, and no one will miss any important information by failing or refusing to go through the magazine. "A Lotos of the Nile" is as full of love as an egg, or a dozen eggs, are full of meat, and ends with the most miserable death, by poison, of young Victor Clare and Miss Eleanor Milbourne; "Our Home in the Tyrol," by Miss Howitt, tells pleasantly enough of pleasant places; "Rambles among the Fruits and Flowers of the Tropics" is enough to make the reader forget that Divine Providence mercifully made him a carnivorous as well as a graminivorous animal, so rich is it in a bewildering variety of fruits; "A Princess of Thule" goes on, and the heroine, who is very likable, as all Mr. Black's heroines are, attracts more and more compassion; "The Ride of Prince Geraint," by M. J. Griffin, is a wonder; "Colorado and the South Park," in spite of the dreary promise of its title, will reward the reader well; and not to mention half a dozen other articles, there is a rather rude but vulgarly amusing story in the Monthly Gossip, which always is unlike anything else in our monthly periodical literature. This story, for instance, is like a Davy Crockett story of the years before the flood. Two book reviews, which close the magazine, are good, as *Lippincott's* book reviews almost always are.

The *Galaxy* would be rather dry reading this month were it not for what we take to be an excellently truthful and graphic description by Mr. Julian Hawthorne of a German student duel. "A Feast of Blood" it is called. We can commend also to both old and young two most harrowing tales, quite similar to the "Lotos of the Nile" which we have just mentioned. One is "Summer Days at Newport"; the other is "A Broken Lily." To which the preference should be given we do not feel competent to say. Brunettes and bald people will take a personal interest in the latter, but they would not be the first to deny merit to the former, which is a tale of equal passion. A long essay by the late Mr. E. A. Pollard is on the early Southern anti-slavery men, and is to be praised for a certain amount of candor, and an effort, partly successful, to be just to the Northern Abolitionists. However, the article would not be worth speaking about, so little is there in it, were it not for its containing a curious letter addressed by Mr. Pollard to the late Mr. Greeley. It will hardly be believed by persons who did not know it at the time that in 1860 an intelligent gentleman should have conceived that in the revival of the slave-trade lay the hope of the South. Such was Mr. Pollard's opinion. Slavery was bad, he thought; but its worst features would be removed could the poor white class be raised into negro owners, and the feudal pretensions of the slaveholding aristocracy be put down. To do this, it would be necessary to get cheap negroes from Africa, and to the objection that this would be reviving the slave-trade with all its horrors, the reply would be that the negro was not brought over as a slave, but as an apprentice, who would be free after a certain time, and who meanwhile would be so well treated that he would voluntarily remain at the end of his apprenticeship with his master. To do Mr. Pollard justice, we must say that he himself remarks that he later came to see that his scheme was unfeasible.

The September *Atlantic* contains almost nothing that is not worth a perusal. It is like old times to read Mr. Longfellow's "Rhyme of Sir Christopher," in which we note once again the unfailing grace of the poet—an elegance and ease as conspicuous when the subject-matter is important as it is in poems like this where it is slight or of no moment. Mr. Aldrich, also, who is another of the poets of this number, has a pretty, fanciful little stanza:

> "These winter nights, against my window-pane
> Nature with magic pencil draws designs
> Of ferns and blossoms and fine spray of pines,
> Oak-leaf and acorn and fantastic vines,
> Which she will make when summer comes again—
> Weird arabesques in silver, flat and cold
> Like curious Chinese etchings. . . . By-and-by,
> Walking my leafy garden as of old,
> These frosty fantasies shall charm my eye
> In azure, damask, emerald, and gold."

Dr. Holmes, Miss Louisa Bushnell, and Mr. Boyesen furnish the rest of the *Atlantic's* poetry, Mr. Boyesen's coming in as a part of his Norwegian love-tale, which has a great charm. Very agreeable reading will be found in Miss S. O. Jewett's "Shore-House," which is more like talk than reading, and talk of a very fresh, unaffected kind. Much the same thing may be said of Mr. G. W. Pierce's "Week on the Coulonge," which is very unliterary in manner, and perhaps beneath the dignity of a Bostonian publication, but which improper people will read with a good deal of contentment. It is of the chase; of Indian guides; of clear streams in the forest; and it might have been written by a boy of seventeen, so simple and straightforward is it. Mr. Parton's admirers have reason to be satisfied with their favorite biographer's performance in this part of his "Life of Jefferson." Few works are so readable, and we believe we have not observed in this one of the faults which are apt to mar Mr. Parton's work. Professor Shaler ("The Summer's Journey of a Naturalist"); Mr. Robert Dale Owen ("My Experience of Community Life"); Mr. De Forest ("Honest John Vane, Part III."); Mr. W. J. Hoppin ("A Glimpse of Contemporary Art in Europe"), and the writers of the various critical departments, are the other contributors to this *Atlantic*. Mr. De Forest's contribution is the only one of which we have not already spoken. It is a novel, or perhaps a novelette, if that term is permissible, of which the main business is to show the corrupt character of current practical politics. The satire is of the obvious order, but the general truthfulness of the picture will commend it to most readers.

Scribner's opens with an article about the Azores Islands, describing an industry which will be new to most of our readers. It is known as "stealing Portuguese," and consists of shipping a load of the natives who wish to emigrate, and whom the emigration law or anti-emigration law of the islands would prevent. A native, in order to get permission to go abroad, must give surety in the sum of three hundred dollars that in case he is drafted into the army he will return, and of couse he emigrates without permission rather than with it. Waiting at almost inaccessible points on the coast, where no revenue officers venture, little parties of them are picked up here and there by some shipmaster who has previously been engaged for the service, and who is popularly said to steal his Portuguese. Mr. Benjamin, the writer, makes a rather lively article out of his experience on one such trip, when forty or fifty men and women escaped, and the barque *Jehu* of Boston was nearly wrecked.

Following this article, there are twenty-one others, of which we may name Mr. John Burroughs's as the most taking. "The Birds of the Poets" it is called, and it deals incidentally with the nightingale of Milton, Wordsworth, and Coleridge, and the lark of Shakespeare, Wordsworth, Shelley, and Hogg, and then more at length of such of our birds as our American poets have sung. Among these are Emerson's chickadee, Mrs. Celia Thaxter's sandpiper, Mr. Bryant's and Mr. Wilson Flagg's bobolink, and one or two others. But Mr. Lowell's catbird is omitted, which is a pity, the list being so short, and that fit addition to it being so very fit. So, too, is Mr. Longfellow's bluebird left out:

> "And from the stately elms I hear
> The bluebird prophesying spring"—

which surely deserves mention for the early spring there is in it, suggesting all birds, and the successful hitting off of one of this beautiful bird's attributes. Willis's pigeon, too, we miss; but that is perhaps hardly to be called a song-bird, though surely but slight extension of the grace that admitted the sandpiper—or the sandpipér, as Mrs. Thaxter has it—would have let in the belfry pigeon. We feel moved, too, in return for Mr. Burroughs's preferring Wordsworth's skylark to Shelley's, to call his attention to the fact

that Shakespeare's skylark, the lark at heaven's gate singing, came very near being John Lily's:

> "Now at heaven's gate she claps her wings,
> The morn not waking till she sings,"

and that mention of the skylark should hardly be permitted without mention of Jeremy Taylor's. The article is so good that we can only hope there may be omissions enough to justify another like it.

Mr. Bret Harte, in his "Episode of Fiddletown," reminds one of his earlier and better stories; though it has at present something of the perplexed blindness which made some of the early stories and poems unintelligible to some people. The poem of the miner and the Indian, for example, we have never penetrated. The religious reader of this number of *Scribner's* will be pleased—if its outspokenness does not offend him—with the article on "Modern Scepticism," the second of a series of three. And the same reader will perhaps enjoy the discussion on the degree of liberty accorded their members by the various Protestant denominations. An article on Central Park, with portraits of Mr. Olmsted, Mr. Vaux, and Mr. Mould, and with numerous illustrations, will probably be better in its next instalment.

THE RECORDS OF PRIMITIVE CIVILIZATION.

THE inability to complete the collation and translation of the authorities by which I hope to maintain the theory of an Italian centre of civilization, has delayed my following up of this subject, but one or two notices of my letters on the subject have been printed in the *Nation*, which induces me to launch another argument from my still incomplete flotilla. And first, in reply to "F.," I would say that I was careless in my expression, with reference to which he replies, for I take it that the Aryan character of Etruscan has been determined with tolerable certainty, and that therefore my expression should have been qualified, but my intention was simply to convey the idea that the separation of the language was of so early a date that the analogies are insufficient to enable us to translate Etruscan by collation with any understood language. When I returned several years ago from Greece, I set myself to clear up the theory I hold on this subject, and Max Müller, to whom I applied for aid, then said to me, "We *know* nothing about Etruscan"; and the latter part of the expression which "F." quotes, "nor can the inscription, though collated with everything hitherto discovered in ancient or modern language, be deciphered," was substantially a remark made by him alluding to Etruscan inscriptions. A letter from him, received not long ago, confirms what "F." says, on the authority of Mr. Schweizer-Sidler, that Corssen's book will definitely establish the Italic character of Etruscan. But these are, so far as the public, and myself amongst the public, are concerned, conjectures still unproven.

But the advice of Müller, with regard to the pursuit of my study, was to ignore the evidence of language in the matter and follow my own line of investigation, as the coincidence of independent lines of evidence would be far more convincing than if one had been followed by help of another. He was flattering enough to add that the facts I had collected, if sustained, were sufficient to disprove the theory of Greek civilization having been derived from Egypt. The authority and advice of a man whose opinions I so highly respect sufficed to determine me to drop all attempts at philological confirmation, and make my argument purely from what I shall call artistic archæology—the evidence of technical attainment as to historical connections. If therefore Mr. Goodyear, whose letter appears in the *Nation* of July 17, had read my letter of April 17 carefully, he would have seen that his contemptuous attempt to "stifle the theory" I advanced in it, is made under a misapprehension of my essential arguments and evident ignorance of my facts. His attempt is twofold: he denies, on the faith of Otto Jahn and half a dozen more German authorities, that there is any Etruscan art independent of Greek; and, secondly, that the Etruscan and Pelasgic races had anything in common, and this on the authority of other German scholars, amongst whom chiefly Mommsen.

As to the first point, I will say in the frankest manner, that if there is one thing in the range of human intellect for which I have an absolute contempt, founded on many years' study and thorough knowledge in general, it is German art-theories and German opinions on art, so far as plastic art is concerned. I have just come from reading Lübke, the latest result of German cerebral agitation in this direction and the summary of what the German brain has decided, and I can only say that in my experience of art-literature I never came across a more hopeless example of constitutional incompetence, enveloped in such densely-learned ignorance. I have the boldness to avow, without circumlocution, that I prefer the opinion of the British Museum authorities on any art-archæological question, and in default of theirs, my own, to that of all the German speculators I have ever heard or read. I decline, therefore, to admit Otto Jahn, Wilhelm Lübke, etc., etc., as authorities of any weight on this particular question.

It is perfectly true that the vases so-called Etruscan are found under circumstances which make it impossible to say with certainty that they were made in one place, and not in another, as they were articles of commerce, and went wherever shipping went. The constant occurrence of Greek myths and legends in Etruria is explicable on very simple grounds, as I may show at another time; but what Mr. Goodyear quotes, through Jahn, from Winckelmann proves nothing for or against my theory. It is easy to show that certain vases, apparently Etruscan, were *probably* not made in Etruria; but it is impossible to prove that the mass of them, or in fact any of them, were not made there; and what he quotes from Mommsen on this topic is clearly disproved by the facts of the case, and is not confirmed by any historical evidence.

Mr. Goodyear is also mistaken in what he says of my remark, that the earliest types in Cyprus are of Pelasgic or Etruscan origin: "It is evident that he *may* be very much mistaken in supposing that similarity to Etruscan statues implies a date earlier than archaic Greek, which is the latest of the styles in Cyprus"; in which short sentence are two capital errors—first, that I suppose these statues to be early because similar to Etruscan, the antiquity of the style having been by good authority determined, and the similarity to Etruscan work only pointed out as a singular coincidence by Mr. Newton; and, second, that the archaic Greek is the latest style in Cyprus, the fact being that my letter quotes Newton to the effect that "mature Greek art," "introduced at a late period from without," closes the list of changes.

With regard to the identity of the Pelasgic and Etruscan races, Mr. Goodyear is by far too facile in supposing that a "reference to Max Duncker" is going to settle the question "what a Pelasgian is," or another to Mommsen "what a Pelasgian is not." Max Duncker and Mommsen came to their own conclusions some little time ago, and the matter still remains unsettled, because unfortunately neither of these learned gentlemen knew any more than the exceedingly little which is to be found in the Greek historians on the matter, which is indeed so very little as only to enable us to found a conjecture on it, and all these traditions, myths, and allusions are common property. No man, much less Mommsen, who had his own theories to confirm as well as I mine, is "decisive authority" on this question, for no man has more than a conjecture on it based on any historical evidence. Mommsen starts with the notion that the Pelasgic was *the* ancestral race of the Hellenic—an opinion which I hope to be able to show good reason for gravely questioning, and that the relation of the Pelasgi to the Greeks was precisely that of the Normans to the Modern English—and he asserts that "their manners (*i.e.*, those of the Raseni or Etruscans) and customs point to the conclusion that this nation was originally quite distinct from the Greco-Italian stocks," in which I cordially agree; but, leaving out the question of the identity between Greek and Pelasgic stock, there is nothing in Mommsen's historical evidence which conflicts with my theory. As to Duncker's assertion that "these traditions and points of view show that the name Pelasgian in the Greek tradition was a name embracing all Greek tribes," etc., I take direct issue on the traditions themselves, which show nothing of the kind. "The divine Pelasgi" are never mentioned by Homer as Greek; on the contrary, those who fought with the Greeks are spoken of as "from Argos of the Pelasgians," and the Pelasgi as a nation are enumerated amongst the Trojan host, commanded by Hippo-

thoös and Pyleos, "sons of the Pelasgian Lethos, born of Teutamos," a traditional chief of the Cretan Pelasgi. In the *Suppliants*, the fugitive Danaids are received by the Pelasgian king of that part of the Morea which I have shown to be the chief seat of the Pelasgic civilization in Greece. In the early history of Athens, the Pelasgi are shown to have been expelled from the city which they had fortified for the Greeks as foreigners; and, finally, the records of Karnak enumerate the Cretan and Tyrrhenian Pelasgi and the Greeks as having been confederated in an invasion of Egypt. And of all the traditions alluding to them, they are far more often spoken of as strangers and fugitives, than as related in any way to the Greek race. What they were in Greece, and what they did *for* Greece, I propose to show at another time. Suffice it now to deny categorically the assertion of Duncker.

In fact, the world of art and archæology has too long been sat on by the pretensions of German savants. We owe very much to their erudition and patient research into the details of history and philology. We owe them indeed a large part of all those items of evidence which furnish the only safe basis for conclusions, and which have helped on all archæological science; but in all matters where intuitive conclusion or genuine imaginative theory is needed, I decline respectfully to accept their lead or acknowledge their authority, and I hope to be able to show, one of these days, that to the whole tribe of German art-critics, from Winckelmann down, we owe nothing but utter confusion and misconception with regard to Greek art, and thence to every plastic art.

The manner in which I have proposed to myself to investigate this question of the origin of Greek civilization is one independent utterly of language, and only slightly dependent on written history. I have limited myself to the evidences in the technical labors remaining to us of the times and races in question. In this study, the facts which I have been able to note, and which history may or may not confirm, but which as facts cannot be disproved either by history or philology, point to this general conclusion, that the Raseni, *i.e.*, the pure Etruscan race, so-called by us, is a survival of the Pelasgic, or of that race from which the Pelasgian emigrations proceeded (and that, therefore, this name, whether from παλαιός, ancient, or πέλαγος, the sea, from their having come to Greece by sea, was only a Greek name for the race, as Tuscan was a Latin name applied later); that their civilization, art, habitat, and movements were the same, and that such a coincidence makes any other solution than identity improbable; that this race was Italian, and developed its civilization and arts from a centre independent of all others, and that from this centre, in what is now known as Etruria, this civilization spread through the fertile country of Italy, crossed into the Morea, and thence by the islands to the shores of Asia and Egypt, where the Raseni learned new arts, especially the use of edged tools, of which they were until then ignorant, and with which they partially returned to Italy, their ancient home, where they next appear to history as Etruscans. I conclude that this emigration began centuries before the siege of Troy, or before the date of any event indicated by intelligible Greek traditions, and that it ceased before any recorded by authentic history, and I should not look to history, therefore, to furnish any confirmation of the truth of this conclusion, although I believe that it will be found to give more support to this than to any opposing one.

As regards the question of priority of arts, even Winckelmann, with all his ignorant contempt of Etrurian art, admitted it to be the earlier, and while in all probability the so-called Etruscan vases are of a date posterior to the Greek civilization, there is nothing about them which was not easily copied by Greek potters, while in the far more difficult art of gem-cutting, the Greeks, though showing great artistic feeling, have never approached the technical perfection of Etruscan workmanship. I have therefore never attached the least importance to the vases as evidence, the more as the critical point of the history I would maintain is of such a remote antiquity that, except in some extraordinary combination of circumstances, such as the later cemetery in Cyprus having covered and protected a more ancient one, there is little probability of any vase now being found of a period approaching it, and so far General di Cesnola's discovery is unique, and its findings have therefore the inestimable value of things which antedate probably even intelligible traditions of Greek history.

I hope some day to be enabled to go over the ground again more carefully, and, aided by my camera, to prove all the technical points I have made in this discussion.

W. J. STILLMAN.

THE WOOING O'T. A New English Novel. 16mo, Leisure Hour Series, $1 25.

Recently Published.

A PAIR OF BLUE EYES. By Thomas Hardy. 16mo, Leisure Hour Series, $1 25.

"Mr. Hardy has given novel-readers a new sensation, and actually introduced a new style of book, which is a great addition to the pleasure of the world. Every character in the novel is well drawn."—*Springfield Republican.*

"It is not only extremely entertaining, but extremely interesting."—*N. Y. World.*

HENRY HOLT & CO., New York
(LATE HOLT & WILLIAMS).

JUST ISSUED.

A NEW DICTIONARY OF POETICAL QUOTATIONS,

COVERING

THE ENTIRE FIELD OF BRITISH AND AMERICAN POETRY, FROM CHAUCER TO TENNYSON.

With Copious Indices.

Both Authors and Subjects Alphabetically Arranged.

BY S. AUSTIN ALLIBONE, LL.D.,

Author of 'A Critical Dictionary of English Literature and of British and American Authors, Living and Deceased.'

One Volume 8vo, extra cloth, $5; extra cloth, full gilt, $5 50; sheep, $6.

"Mr. Allibone has evinced no less good judgment than industry in the selection of its contents and the arrangement of its subjects. . . . No similar collection presents so great a variety of topics, or is classified with so much intelligence and taste."—*New York Tribune.*

"It is the most valuable work of the kind ever printed, the quotations, 13,600 in number, being taken from 550 different authors, and embracing 435 subjects. The extracts are all short and pithy, and are directly applicable to the subject under which they are classified."—*New York Herald.*

THE WEEK IN TRADE AND FINANCE.

AUGUST 25, 1873.

THE Treasury balances at the close of business on Saturday were:

Currency	$10,500,000
Coin	87,250,000
Outstanding coin certificates	44,000,000

The Internal Revenue receipts for the month were $6,803,841; for the fiscal year, $15,624,858.

The money market continues almost entirely free from disturbance. Efforts have been made to advance the rates by the bull clique in gold, but with little success, as fresh capital at once comes in for employment at any change. Loans on call vary from four to five per cent., in exceptional cases reaching six per cent. There is no change to report on time loans or commercial paper.

The bank statement was unfavorable, showing a decrease in the reserve of $4,507,600, of which $2,499,900 was specie and $2,007,700 legal tenders. The liabilities being reduced, also, to the extent of $7,174,300, leaves a net loss in reserve of only $2,714,025, which, deducted from the surplus reported August 16, shows an excess over the 25 per cent. legal requirement still in the banks of $3,950,175. The discount line was reduced $2,682,200, and currency circulation contracted $8,300. The following is a comparison of the averages for the past two weeks:

	August 16.	August 23.	Differences.
Loans	$292,614,000	$289 931,800	Dec. $2,682 200
Specie	27,644,100	25,144,200	Dec. 2,499,900
Circulation	27,222,700	27,214 400	Dec. 8 300
Deposits	234,857,300	227,691,300	Dec. 7.166.000
Legal Tenders	47,540,100	45,532,400	Dec. 2,007,700

The following shows the relation between the total reserve and the total liabilities:

	August 16.	August 23.	Differences.
Specie	$27,644,100	$25,144 200	Dec. $2,499,900
Legal tenders	47,540,100	45,532,400	Dec. 2,007,700
Total reserve	$75,184,200	$70,676,600	Dec $4,507,600
Circulation	27.222,700	27,214,400	Dec. 8,300
Deposits	234,857,300	227,691,300	Dec. 7,166,000

The past week has been of the stereotyped summer dulness. Some strong under-currents are quite perceptible in the stock market, leading to higher prices, but these have not yet accomplished any general change beyond an occasional advance of one-half or one-quarter per cent., with immediate reaction. There does not seem to be any leader in the bull market of sufficient prominence to give a firm tone to speculation, and it is more than hinted at that a desperate raid on the Vanderbilt stocks will be made shortly, and that during the *mêlée* the "shorts" will cover. In Pacific Mail the short interest is said to be enormous, and its existence is in itself sufficient explanation of an advance of 2½ per cent. in that security. St. Paul has been particularly weak under careful manipulations for such purpose.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending August 23, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales.
N. Y. C. & H. R.	104¼ 104¾	104¼ 105	103⅞ 104¼	104⅛ 104⅜	104¼ 105⅜	104¼ 104½	41,000

Government bonds are strong and in constant demand, but almost impossible to procure in large lots. The bonds of the city of Louisville have been brought permanently on the market by a "syndicate," and some changes have been made very much improving the credit of Jersey City bonds, which are quite likely, under the careful management of the financial agency of the city, at the Continental Bank in New York, to recover their old position when they sold at from 104 to 105, and were considered amongst the best securities in the country. The city property at present is $13,603,408 63. The assessed valuation, including railroad property, is $88,496,885, on which the taxable rate is $2 70 per hundred on $68,496,855, and a tax of 1 per cent. on railroad property, fixed by a State Commission at $11,000,000. The entire indebtedness, floating and bonded, of Jersey City is $12,267,162.

The gold market has been strong and steady, with fluctuations of about one-half per cent., the price on Saturday just touching 116¼ and 115¾ as extremes.

OFFICE OF FISK & HATCH,
No. 5 Nassau Street, New York, August 25, 1873.

☞ The CHESAPEAKE AND OHIO RAILROAD, now completed and in regular operation between the Atlantic tidewater at Richmond and the unfailing navigation of the Western rivers at Huntington, is now carrying passengers and freights with great promptness and on favorable terms between the coast cities and the chief trade centres at the West. Freights can be shipped via the "Clyde" Line of Steamers from Boston, Providence, and Philadelphia; via the "Old Dominion" Line of Steamers from New York; and via the "Chesapeake and Ohio Packets" from Cincinnati, Louisville, and St. Louis, etc. Passengers can also take this route to or from the West, and enjoy the wonderful scenery of the Alleghanies, the Medicinal Springs and Mineral Attractions of Virginia and West Virginia.

To enable the Company to perfect more rapidly its Equipment, Terminal facilities, and Deep-water connections with European Steamship Lines, and to accommodate the heavy Coal and Mineral Traffic, together with the growing Iron and Miscellaneous Local and Through Business now pressing upon the Line, we are selling on behalf of the Company a limited amount of their SEVEN PER CENT. GOLD BONDS, secured by mortgage liens on the whole valuable property, at 90 and accrued interest; $1,000 each, either coupon or registered, payable in gold coin, in New York City, principal and interest; interest Jan. 1 and July 1.

We also have a small amount of the OLD SIX PER CENT. GOLD BONDS OF THE CHESAPEAKE AND OHIO; the price of these is 88½ and accrued interest. They are issued in denominations of $100, $500, and $1,000, interest payable May and November. The property has cost already upwards of $38,000,000, and is constantly increasing in value. We can recommend both classes of bonds, which are selling rapidly, with great confidence.

We also continue to deal in Government and Central Pacific and Western Pacific Bonds, execute orders at the Stock Exchange for investment Stocks and Bonds, receive deposits, on which we allow interest at the rate of four per cent. per annum, and conduct a general banking business.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 4, 1873.

The Week.

THE campaign in Massachusetts is going on with great vigor, the result of the first primary meetings proving, as was anticipated, favorable to Butler. He is stumping the State making speeches, which attract large crowds, though whether the crowd is brought together by curiosity or enthusiasm, is often an open question. His speeches contain exhaustive analyses of the motives of the opposition, which it is evident are of the lowest description. For instance, he accused "Warrington," of the Springfield *Republican*, of receiving pay for his history of "the salary-grab," but this "Warrington" denies, and adds that the General got his advanced copy of the document by means of theft. In the same way, the editor of the Boston *Herald* has been forced to explain that "we never told a friend of General Butler that we abused him because the people liked it, and we sold more papers by doing so"—a statement which it is safe to say only the perverse ingenuity of the Claimant (as he now seems to be generally called) could have put into the mouth of any intelligent editor when engaged in conversation with a political opponent. Butler's defence of himself covers his repudiation "record," but this point is not dwelt upon by his opponents with anything like the stress they lay on his part in the salary-grab. In fact, some of them, and "Warrington" in particular, have their mouths shut on the subject of repudiation. Yet Butler's advocacy of it was a piece of rascality beside which back-pay seems trivial and venial.

There is little doubt that Butler is getting a good deal of help from the Democrats as well as from the employees of the Administration; and as the fight goes on, he gets more and more violent. At North Adams he is reported to have said in his speech, "Call off your dogs, or they will be hurt." Such remarks as these seem to emphasize the fact that the time has come, if it is ever to come, for a break-up of the Republican party in Massachusetts. If Judge Hoar and his friends suppose that patience and long-suffering are going to do them any good, they are greatly mistaken. This canvass for the governorship in Massachusetts has made several things clear: first, that Butler has, through his intrigues with the Administration and his skilful manipulation of the party machinery, made gains in the last two years; second, that if he is defeated in the Republican nomination by a close vote, and the party keeps together, he will be in no worse position than he is now; third, that if he carries the convention, his opponents may as well consider themselves read out of the party at once, for they will get no mercy. It is time for those who have the real interest of Massachusetts at heart to make one effort to rouse the people from the dreadful lethargy in which they have sunk. Governor Washburn has just made an appointment which shows him to be above low considerations of expediency. The chief-justiceship, made vacant by the death of Chief-Justice Chapman, was an office marked by the politicians for their own, as it was supposed that both Washburn and Butler would make use of the vacancy in the usual manner, making vague promises about it for the sake of catching votes and keeping the matter open till after election. Governor Washburn has, however, just appointed Mr. Horace Gray, of the same court, for the place—a learned lawyer and fit man.

A letter of some importance from Mr. J. Wilkinson, General Deputy of the National Grange of the Patrons of Husbandry, has been published. We say important, because Mr. Wilkinson's opinions, considering the influential position he holds, may probably be taken as authoritative. Mr. Wilkinson makes it very clear, if any light were needed upon the subject, that he and several hundred thousand of his fellow-citizens mean to exercise the sacred rights of petition and perambulation this winter very actively. He says that the Constitution contains a clause giving Congress power to regulate commerce among the several States, and that although it is true that the clause is a dead letter so far as railroads are concerned, "we do not intend it shall remain so much longer." "The people," he continues, "are all demanding action, and in a year or two their voice will be heard in thunder-tones at the doors of the National Capitol, and if the Republican party can afford them no relief, the people will find a party that can." Mr. Wilkinson speaks in very disparaging terms not only of the Republican party, but of the Senatorial Transportation Committee, the members of which, he says, are, it is whispered, dabblers in railroad stocks, and also in the employ of railroads as counsel.

It seems from the address published by the Wisconsin grangers that the Patrons of Husbandry is an order which is strictly and absolutely non-political in its character. The order was started in 1867, with the object of elevating the farmers as a class and farming as an occupation. The organization provides for the admission of both sexes to membership, and "it was designed as a medium for more social intercourse, to provide a refuge from overwork, to relieve the occupation from the feature of constant and non-intermitting toil, thus creating within the sphere of the active farming life much-needed sources of rational recreative enjoyment." Furthermore,

"It was designed with a view to general educational and instructive purposes, by establishing within the grange reading-rooms and libraries, and for the delivery of popular lectures. It was designed as a medium for frequent consultations and discussions upon matters pertaining to the occupation its members were engaged in, and upon all business relations connected with it, thus affording opportunities for the same united action commercially constantly practised by other occupations, and which had not heretofore been taken advantage of by the craft, at the same time correcting the abuses of an exclusive territorial agency system, which had grown into proportions felt to be oppressive."

To secure these excellent objects, it was provided by Article 12 of the constitution, that religious and political questions would "not be tolerated as subjects of discussion in the work of the order," and that no political or religious tests for membership should be applied.

Every member of a grange, however, is capable of acting in two capacities—either as a Patron of Husbandry or simply as a man or woman. As a Patron of Husbandry, it is his duty to avoid politics; but as a man, it is equally his duty to attend primary meetings, vote at elections, and in every other respect act as becomes an American citizen. The Wisconsin address points out this distinction, saying that to all movements for the correction of crying political evils the Patrons of Husbandry extend their warmest sympathy, "nay, more, their active participation individually as citizens, as members of those farmers' associations, conventions, unions, any or all organizations which are politically reformatory, but not as members of a grange." The resolutions adopted by the meeting which issued the address were:

First.—That the farmers are in favor of the improvement of the Fox and Wisconsin Rivers, and Mississippi River, and other water-courses that will tend to cheapen transportation.

Second.—That Congress be petitioned at its next session for "better and cheaper means of transportation from the West to the Atlantic and Southern seaboard."

Third.—That the farmers will support no man for office who has ever been guilty of receiving retrospective increase of salary for public service, or received an advance in salary by the Act of March 3, 1873.

Fourth.—That railroads are public highways, and as such must be controlled "by the State and National legislatures."

The distinction between grange and extra-grange action seems also to have been taken by many of the speakers at the meeting, the speakers urging the formation of political clubs, which are to have

no connection with the granges, except that members of the granges may be members of the clubs, though members of the clubs need not necessarily be members of the granges. In what capacity the grangers acted in adopting these resolutions, we do not know, but apparently as individuals.

The sentence of death passed upon the Modoc Indians, tried for the murder of General Canby, and its approval by the President, seem to excite very little notice. The result was expected—indeed, it was hard to see how any other result could be reached—though Captain Jack, when called on for his defence, made a speech which, if he had been tried by an ordinary jury in a State court, would perhaps have got him an acquittal. Few people could guess at once the line of defence set up by him, which was nothing less than that of previous good character. He said that no one but the Klamath Indians ever doubted his virtue, and their motives in giving evidence against him might easily be inferred. Unfortunately, there is no court of appeal to take exceptions to when men are tried before a military commission, and Captain Jack will have to be hanged for his crimes, though he says that he has papers in his possession which will prove the truth of his defence.

The Milwaukee *Journal of Commerce*, speaking of and "heartily endorsing" the recent criticism of the "National University Scheme" which appeared in the columns of the *Nation*, quotes the expression, "Most people take very little interest in schemes for national establishments of this class," and says:

> "We are afraid the people of this country do not interest themselves sufficiently in such schemes. If they did, we should be troubled less often with them. However, we suppose all are acquainted with the wonderful success of Howard University—an institution really intended to be an introduction to the full-grown affair—the prospective national university; and if it were generally known that the moving power behind the throne—or rather before those university establishment bills—is not Dr. Hoyt or Senator Sawyer ostensibly, or Senator Howe 'apologetically,' but is to be found within the official pale of the aforesaid university, the 'scheme' would have even less weight with the thinking public than it now has."

What this means we do not know; but if there is any connection between Howard University and the bills in question, it ought to be made public, as there is every reason to believe that this winter will see some interesting and curious educational movements in Congress looking towards securing everybody a "plain, practical education," free of expense.

The *Herald* has achieved one of its old-time triumphs in striking the key-note of political discussion for a couple of months. We should be disposed to attribute this to the summer season, or the "silly season," as it is the fashion to call it on the other side, except for the apparent seriousness with which "Cæsarism," in reference to this country and to Gen. Grant's fancied ambition, has been discussed in all its length and breadth by the press. What the intelligent American abroad may make of it we do not know, but that foreign observers will gain from it a fresh misconception of our national character, we may be very sure. When the editor of a Washington newspaper, being "interviewed" by a *Herald* reporter, says "it is to be hoped there is not, but it is to be feared there is" danger that Cæsarism may become a welcome resource in the United States; and when another editor revives the evidence of a strong monarchical feeling, not to say party, in the early days of the Republic; and when all the rest of the talk on the subject is of the serious and prophetic kind, your Englishman, Frenchman, or German is excusable for thinking that he is witnessing the commencement of a political reaction of the first magnitude. American humor was surely never so well displayed, or else so well suppressed, as in this discussion based on the supposition that Grant is intent on a third term of office. There are, no doubt, surprises for every one who undertakes to generalize about the American people's thoughts, and beliefs, and probable action; but on the subject of the form of government which they have at heart, and mean to abide by, there is no room for difference of opinion. Thirteen years ago, it might have been, and was, doubtful whether the love for the Union was anything more than a mere sentiment, kept alive by Fourth-of-July oratory, and incapable of sacrifices. But nobody would have doubted, even at that time, that an attack on the Republic—not covert, as the rebellion was, but open—would have produced an uprising adequate to the occasion. In fact, as Mr. Lincoln said at Gettysburg, the civil war settled the question whether the government of the United States should be of the people, by the people, and for the people.

It is a comfort to find the editor of the *Capital*, in the column adjoining that in which he confesses his fears about Cæsarism, devoting considerable space to the Hon. James G. Blaine. Mr. Blaine is declared to be "probably the shrewdest politician in the United States," and from the account of him it is clear that the "man on horseback" will have to get up early if he wants to become Cæsar before the late Speaker of the House gets the office. Mr. Blaine is "strong and fiercely ambitious," is "in the zenith of his physical and intellectual vigor and capacity," and is "a well-armed and thoroughly active competitor." All this makes it extremely unlikely that any one Cæsar will be allowed to monopolize the field, or that any *coup d'état* can befall us for which Mr. Blaine is unprepared with a counter *coup*. Just now, indeed, his reflections are somewhat melancholy. He wants a place in the Senate as a stepping-stone to the Presidency, but it is not at all certain that a foreign mission or a seat on the bench would tempt the Hon. Lot M. Morrill to make way for him. If he must stay in the House, he could never consent to abandon the Speakership and be lost in the common herd of members. Yet to regain a post of so much personal and national influence requires a coalition with Congressmen whose reputations have been fatally damaged by the exposures of the past session; and then good-bye to the hope of being the people's choice for President. So the *Capital* leaves him pondering on the chances of success or of the "threefold misery" of defeat, but in any case a man on whom Cæsar must keep an eye.

The exposure of the condition of the affairs of the Brooklyn Trust Company has been followed by an exposure of the affairs of Mr. M. T. Rodman, Secretary of that Company and Deputy City Treasurer. He is now under arrest on a charge of embezzling some $148,000 of the city's money, which he managed to do by very simple means—taking sums of money from the City Treasury for deposit with the Trust Company, abstracting a part on the way, and then making false entries in the books. The fact of the deficiency was brought out by the investigation of a professional accountant, who it is said is now going to undertake the examination of all the city accounts. The accounts already published and circumstances connected with the appointment of the receiver of the Brooklyn Trust Company, seem to show conclusively that the proceedings of Rodman were connived at, though by whom it will be more difficult to establish. The intimate relations between the City Government and the Trust Company are due to the fact that the principal officers in the latter are in one way or another connected with the former. At the same time, what deficiency has been actually discovered has been made good by the treasurer himself, Mr. Sprague, who was liable for Rodman's acts. At present these facts are all that are absolutely known. All the evidence yet collected seems to show that frauds in Brooklyn are conducted in a mean and timid way, not at all befitting a city of its size and population.

The Canadian scandal has taken a new turn. The enquiry into the alleged bribery and corruption, instead of being left, as the Opposition desired, with the original parliamentary committee, was transferred, some little time since, to a Royal Commission composed of three judges, Parliament meantime being prorogued. This was regarded by those who were moving in the matter as tantamount to quashing the investigation, the expression of opinion in the local press ap-

parently indicating no very profound public respect for the impartiality of the Canadian judiciary. Towards the end of last month, Judge Day, as the senior judge of the three, sent a note to Mr. Lucius Seth Huntington, the mover of the enquiry in Parliament, asking him to appear before the Commission and give his evidence. In reply, Mr. Huntington wrote a long letter, refusing to appear, on the ground that the appointment of the Commission was in reality an unconstitutional attempt to take away from the House of Commons part of its prerogative. The investigation before a parliamentary committee, he says, he is perfectly ready to go on with. To this the supporters of the Government reply that his objection is "unreasonably factious," he knowing very well that a parliamentary committee has no power to examine under oath—a power very necessary in such an investigation. "It is their game to fight the battle out upon McMullenisms, given without the sanctity of an oath." The Commission probably have power, however, to bring Mr. Huntington before them by attachment; so that this reliance on McMullenisms ought to prove a delusion and a snare. The enquiry has now got into a shape quite different from any the Crédit Mobilier investigation ever assumed; but it looks badly for the Government that the only statements that have been published on their side of the quarrel have been unsatisfactory to the public.

Five hundred English Catholics, under the leadership of the Duke of Norfolk, have undertaken a pilgrimage to Paray-le-Monial, to testify to their faith at the shrine of Marie Alacoque. It is suggested that this shrine was selected because the miracle in honor of which it was erected is among the most doubtful on record, and the act of faith in making a pilgrimage to it is all the more consoling and edifying on account of its incredibility. These modern pilgrimages, however, undertaken by rail and steam to places a few days off, at a small expense and little danger to life, limb, or health, cannot really be very edifying or consoling either. It was the fashion in former days for devout men to make long journeys with unboiled peas in their shoes and a rope round their middle. This mode of testifying their faith in modern times may be an anachronism, but if any true Catholic really wished to perform an act of devotion which should be convincing, a great many modern equivalents for the old pilgrimage might be devised. The modern equivalent, for instance, for begging your way, supposing the pilgrimage to take place in America along the high-roads, would probably be an attempt to ride in a Pullman palace-car without previously buying your ticket, relying on the charity of the Company to get you through. No pilgrim has ever tried this, but if it succeeded, it may safely be predicted that the rush of American converts into the bosom of Mother Church would be unprecedented in the history of religious revivals. It seems hardly credible, but it is nevertheless true, that this pilgrimage is arranged by a "pilgrimage committee," which has issued a prospectus, from which it appears that the pilgrims are to travel first-class, and that "board and lodging will be provided for them at an economic rate." It is estimated that if pilgrims go in large numbers, what we might call a pilgrimage return-ticket will not cost more than £5 a head, the railway offering "a reduction on taking a quantity."

In the ordinary course of things, the French Assembly will not come together again before the 5th of November, but it may be convened at an earlier date. Whether it will or not depends chiefly now on the result of the investigation set on foot privately by the leaders of the monarchical parties, to discover whether a majority of the Assembly is in favor of the re-establishment of a monarchy. The Comte de Paris and the Comte de Chambord having visited each other, and the long-delayed fusion having at last been effected on the basis of the supremacy of the Legitimists and the installation of the Comte de Chambord as Henri V., it only remains to be seen whether the Assembly will ratify the arrangement. The Government evidently feels very strong in the position which it has taken, as is shown by a recent incident at a meeting of the Permanent Committee of the Assembly. The Duc de Broglie had been reported as having said at Lyons, at a prefectoral banquet, that a "duel to the death had been going on since the 24th of May, and that either radicalism or society must succumb in the struggle." For this he was called to question, but replied that the Government would answer for its public acts, but not for statements or rumors relating to private conversations. The Ultramontane journals look upon the fusion as a work of divine interposition. It is hardly necessary to say that Henri V. is going as soon as possible on a private pilgrimage of his own to what is already the favorite and soon will be the historic shrine of Marie Alacoque.

The Government troops in Spain have now recaptured from the insurgent Communists, as the Intransigentes are beginning to be called, Cadiz, Seville, Valencia, Granada, and Salamanca. With the exception of Cartagena, which still holds out under General Contreras, the insurgents appear to have no strongholds left. The canton of Murcia, of which Cartagena is the principal town, is carrying on active war, not only against Spain, but the rest of Europe as well. The situation of the city, which is one of the finest ports on the Mediterranean, has been very convenient for Contreras, who has sent out several piratical expeditions to levy contributions from the citizens of other towns along the coast. It was on one of the expeditions that Almeria, an unfortified town, was bombarded, with such success that an attack on Malaga was resolved upon. The corsair fleet consisted of the iron-clads *Almanza* and *Vittoria*, Contreras being on board the former. They were overtaken, however, near Malaga by the English vessel *Swiftsure*, Captain Ward, and the German *Friedrich Karl*, Commodore Werner. During the bombardment of Almeria, the house of the German Consul had been shelled by the Spaniards, and for this reason, as well as many others, the English Captain and the German Commodore entered at once into an offensive and defensive alliance, and proceeded to drive the Spanish vessels back into the harbor of Cartagena. On their way they fell in with the English Mediterranean Squadron, under Admiral Yelverton, and it was arranged that the Spanish crews should be landed at Cartagena, but the vessels detained.

These conditions were discussed with the foreign consuls, all of whom, it is said, but the French came on board the *Friedrich Karl*. Some of the Intransigentes came on board from the town, and made an attempt to get better terms; but Commodore Werner told them that they were nothing but pirates and robbers, and, if they attempted to show fight, he would not only knock the town to pieces, but blow the vessels out of the water, and hang the government of the place at his yard-arm. The English and German fleet lay for some time outside the harbor with the captured vessels, the terms having been finally accepted; the insurgent forces in the town threatening dreadful things in case any foreign vessel came inside. Inside lay the rebel vessel *Mendez Nunez*, with a naval mob on board, and there was at one time considerable reason to anticipate a fight. The Cartagena Junta tried to obtain a promise from the blockading fleet that the *Almanza* and *Vittoria* should be neutralized—that is to say, should be held by the foreigners until the war between Murcia and the Madrid Government was terminated. This promise, however, was not given; but the Admiral undertook to make a recommendation to that effect to the English Government. The Junta then gave orders to prepare for a terrible combat; but at the last accounts the vessels had been taken to Gibraltar. How the conflict was avoided is not yet known. Meanwhile, the operations in the north against the Carlists continue, with how much success it is impossible to say. The Government has captured the English vessel *Deerhound* in an attempt to run in arms for the Carlists—the same *Deerhound* which took Semmes off the *Alabama*. The naval imbroglio at Cartagena is talked about in certain quarters as an international difficulty; but as the independent sovereignty, or even the belligerency, of the canton of Murcia has not been recognized by any of the Great Powers, the opinion of Commodore Werner, that the forces in that city are pirates and robbers, seems to be correct.

THE NEXT DESCENT UPON THE TREASURY.

IN his last Annual Message to Congress, General Grant, who seemed determined once for all to have it understood that he was quite capable of taking broad, comprehensive views, called the attention of Congress to certain very important enterprises. "The attention of Congress," he said, "will be called, during the present session, to various enterprises for the more certain and cheaper transportation of the constantly increasing surplus of Western and Southern products to the Atlantic seaboard." One of these enterprises he described as a "route to connect the Mississippi Valley with the Atlantic at Charleston, S. C., and Savannah, Georgia, by water, by way of the Ohio and Tennessee Rivers and canals and slack-water navigation to the Savannah and Ocmulgee Rivers," and said that it had already been surveyed and reported on by an accomplished officer of the army. Second, another route to secure the same object, "by an extension of the Kanawha and James River Canal to the Ohio"; and third, another, by extension of the Chesapeake and Ohio Canal; and, in addition to these, "a project to facilitate commerce, by the building of a ship-canal around Niagara Falls, on the United States side, which has been agitated for many years," was mentioned.

For the consideration of these plans the President recommended the appointment of a committee, with power to report at some future time. To the support of none of them, however, did he pledge himself, partly, no doubt, from a wise hesitation in matters of which he knew nothing, but partly also for another reason, which he made sufficiently plain in the same Message. "Looking," the Message continues, "to the great future growth of the country and the increasing demands of commerce, it might be well, while on this subject, not only to have examined and reported upon the various practicable routes for connecting the Mississippi with tide-water on the Atlantic, but the feasibility of an almost continuous land-locked navigation from Maine to the Gulf of Mexico. Such a route along our coast would be of great value at all times, and of inestimable value in case of foreign war. Nature has provided the greater part of this route, and the obstacles to overcome are easily within the reach of the engineer." Into the details of this remarkable plan, which is evidently a pet project of the President, he did not enter, perhaps for the same reason that he has not as yet informed the public what are the grounds for his devout expectation that the twentieth century will see all the nations of the earth speaking one and the same language, and united in a federal republic. It seems clear, whatever the details may turn out to be, that the President will favor any plan which may be brought before the next Congress for securing this land-locked navigation from Maine to the Gulf of Mexico. In accordance with the recommendations of the Message, a committee was appointed by the Senate, with Senator Windom, of Minnesota, as chairman, with full power to sit during the summer, and travel about the country for the purpose of investigating the subject of cheaper and more certain transportation. This committee, known as the Senate Transportation Committee, and which has already done a good deal of travelling, is soon to hold a meeting in this city, and give a general hearing to everybody on the subject.

At the close of the last session of Congress, then, immediately after the exposure in the Crédit Mobilier investigation of the way in which the money of the country is spent on national highway schemes, there was in existence a committee charged practically with the duty of reporting to the next Congress on a variety of new schemes of such vast magnitude that, in comparison with them, the Union Pacific Railroad sinks to the level of a local turnpike.

The appointment of a committee of this kind is usually the signal for the immediate development of an enormous amount of enthusiasm on the subject of the committee's investigations, and, naturally enough, the committee had hardly been called together when from all sides there flocked together transporters, shippers, producers, politicians, and yeomen, not, indeed, at first interested in the proceedings of the committee, but interested in the fact that the air was full of signs that a descent might be made upon the next Congress in the cause of cheap transportation. In May a "Producers' Convention" was held at the Astor House in this city, and it was at this meeting that a speech was made by a veteran railroad promoter in favor of a double-steel-track freight railroad, built by the Government from the West to the East for the purpose of moving the crops. One direct result was the formation of the "American Cheap Transportation Association," having for its object this "people's movement," promising "increasing facilities for commerce, cheaper food for the people, a reform in public morals, and a practical step towards civil-service reform," through a Government-built, double-steel-track freight railroad for the purpose of moving the crops to deep water. At the time of this convention, a Congressional excursion party was being carried about by the city of St. Louis for the purpose of examining the means of improving the navigation of the Mississippi, while a convention of Governors had just been held at Atlanta to consider the advisability of a canal through Georgia to the port of Brunswick or Savannah. Besides this there is the Darien Ship Canal, which has been actually surveyed, and which it is estimated will cost $60,000,000. With regard to this canal, it is proposed in a pamphlet we have before us that an association of individuals should obtain from the U. S. Congress a national charter, and upon an expenditure of ten millions on the work, should ask from Congress a guaranteed interest upon $30,000,000, with such safeguards as Congress may see fit to impose.

All these schemes, however, are unimportant in comparison with the designs of the farmers. The local schemes to which we have referred are all promoted by a few interested persons, who have behind them no very large party. The farmers, on the other hand, have not only the design to secure cheap transportation, they have powerful numbers, complete and effective organization, and in several States already hold the balance of power in their hands. Their designs for the winter are of the utmost importance. Hitherto, it has been supposed that their intentions were chiefly to fix the rates of transportation through the local legislatures, and, so far as the movements have been political, they have as yet done little more than secure the passage of a freight law by Illinois. This law, however, as we have often said, is a complete failure. Its general result has been to raise the rates of transportation, and thus apparently to show those engaged in the movement that nothing can be done without going to Washington.

From all these facts, it is certainly not a very rash inference that at the next session these various canal and railroad systems will be urged upon the attention of Congress with much energy. Into the merits of the several schemes we do not propose to enter; but there are certain general considerations connected with them which seem to us of too much importance to be passed over.

In the first place, it is not very long since the land-grant system, as it is called, was formally abandoned by Congress, and the country was congratulating itself that the public lands were not going to be squandered away for the benefit of greedy railroad corporations. There is, however, no difference in principle between the granting of subsidies in the shape of moneys to a ship-canal, or to a scheme for "land-locked" navigation from Maine to Mexico, and the granting of land for the purpose of building a great national highway. There is, indeed, much less immediate apparent objection to the latter, because the gift of the lands apparently involves no immediate increase of taxation, while a gift of money does. As a matter of fact, of course, the subtraction of either land from the public domain or money from the public treasury is so much out of the pockets of the people. What are the reasons why Congress has put a stop to land-grants? It has done so under the pressure of a very strong public opinion, and the only solid foundation for that opinion is that Congress is not to be trusted any longer with so dangerous a function as special legislation for the purpose of subsidizing private enterprises, however much they might, if properly carried out, benefit the public. In every State in the country in which the State constitutions are undergoing revision, one of the principal objects

of the revisers is to take away from the State legislatures this power. The Crédit Mobilier investigation showed how the power is used.

There is another consideration connected with this subject which seems to have escaped general attention. A year ago, we were assured by everybody that the great desire of the farmers of the West was for free-trade. They were the real anti-monopolists, who were to break down the protectionists' strongholds. It did indeed seem at the time as if this were so. Since the beginning of the farmers' movement, however, it has become every day clearer that free-trade makes no part of their programme, which is in reality a descent upon the Treasury at Washington for a sufficient sum of money to enable them to carry their crops to the ocean whether they are wanted there or not. The farmers have, in short, well learnt the only lesson which the politics of the last twenty years has taught, that the true remedy for all economical difficulties was not free-trade, but protection. It is protection in transportation which the farmers are going to seek next winter at Washington. The Illinois farmer has seen every one but himself go to Washington for money to assist him in his business with success. He has seen the salt and coal and iron miner, the cotton and woollen mill-owner, the wool-grower, and every one engaged in the business of manufactures, when trade was dull, seek his remedy at Washington by change of the tariff. Thus far these others have managed to do it pretty much at his expense. It was the farmer who was taxed on his blankets, his shoes, his stove, his shirt, his coat, his hat, his stockings, his hoes, rakes, spades, shovels, harness; who was taxed, while he remained a healthy and laborious producer, on everything by which he supported life; if he lost his health, on the medicine which was to restore him to his productive condition again; and if he died, on the very grave-stone which covered his body. He has endured this long enough; he has naturally enough determined to see whether the agricultural interest is to be the only non-protected interest in the country. He knows a far simpler way of finding out than by studying the works of Adam Smith. He takes the same means he has seen his neighbors take. He goes to Washington, and there to his surprise finds a vast number of people interested in the question of cheap transportation. One man wishes to have cheap transportation by way of Niagara, another by way of Darien, another by way of the Kanawha Valley, another through the heart of Georgia. The President himself, even, is interested in the subject, having recommended "land-locked navigation" in his last Annual Message. The way is obvious. A judicious system of log-rolling is organized, and the result is, not that any one of the various schemes succeeds, but that all do; and the farmer goes back to his constituents protected against the market for six months.

THE DEFECTS OF THE POSTAL SERVICE.

THE English postal service has recently been subjected to some criticism both in Parliament and in the newspapers. The Postmaster-General is invested with much more discretionary power in England than is given to him in this country, and in the exercise of this power he established a regulation to the effect that no package which appeared to contain money or stamps should go through the mails except as a registered letter. This wide latitude of executive discretion, we may remark, is one of the characteristics of the English system, for the reason that the head of an executive department can be so readily and effectively called to account in Parliament for any abuse of his powers. Accordingly, in this instance, the regulation had hardly gone into operation before the Government was questioned in Parliament as to the reason for a rule which appeared onerous and inconvenient. It appeared in the discussion that the use of postage-stamps is now a common method of remitting small amounts in England, some dealers stating that they received on an average as many as one hundred such enclosures a day, and that the Post-office Department cashed these stamps at a trifling discount. To require such letters to be registered, it was said, would be, to say the least, an inconvenience; and if a man chose to risk his bank-bills or postal stamps in the ordinary way, had he not a right to do so? And was it not arbitrary in the Post-office to subject him to the additional expense and trouble of registering a letter when he preferred to subject himself to the additional risk instead? To this the Government answered that the Post-office had not the right to prohibit absolutely the sending of valuable packages through the mails, and that the regulation in question was merely intended to exclude such as palpably invited the agents of the Department to dishonest practices; that ample facilities are given for sending money or valuables in a safe way; and that the sending of money in ordinary letters is a kind of bounty on peculation which impairs the general usefulness of the mail service. The answer was not altogether satisfactory to the objectors; but it was cheerfully admitted, both in Parliament and by the press, that in England there is no department of the public service which has so carefully studied public convenience, and which gives such universal satisfaction, as the Post-office.

To our own mail service, with its extended routes and loose, political administration, such a regulation would be peculiarly applicable. The post-office, primarily, is neither a common carrier for carrying packages nor a banker for transmitting funds. Its original function is simply that of a public agency for the universal transmission of intelligence. Hence it is that post-offices and mail routes are and ought to be established which, in a business sense, will never pay. The complete transmission of intelligence between the most distant points, and to the most secluded hamlets, is one of the conditions of civilization. It is also a condition, if not of free government, certainly of intelligent government. One can hardly imagine what would be the condition of national affairs if the greater part of our population, cut off from letters and newspapers, knew little more of affairs in Washington than the returning members chose to tell them. It is for these reasons that the post-office rises above money-making contrivances into the region of public necessities. Whatever its cost on the one hand, or its defects on the other, it can never be dispensed with; and as it is the one agency of Government that comes impartially to every man's door—even to the poor freedman or emigrant who cannot read the missive which it delivers—it is not surprising that it is the one which most studies public convenience.

As a consequence of this study, the European post-offices have devised, and our own has copied, the money-order and registered-letter systems; the one being neither more nor less than a banking business by means of bills of exchange, and the other a common carrier, for the transportation of valuable packages. Both are of very great public convenience, but neither comes within the fundamental principle, that the post-office is a means for the general transmission of intelligence. Nevertheless, though not established for the primary object, they have become necessary auxiliaries of it, and, properly used by the public, enable the post-office to attend to its real business of transmitting intelligence with greatly augmented certainty and despatch. If all the money now sent through these systems were inclosed in ordinary letters, one of two things would be inevitable—either that the temptation to mail robberies would be immense, or that the post-office must resort to certain checks in the way of records and receipts. Such checks are not compatible with either economy or despatch. Two things we must have for ordinary letters—the utmost cheapness and the utmost speed. To delay a mail while the clerks are counting and registering the letters, or to double the postage for the purpose of having a great array of clerks, would not accord with either our convenience or necessities. Hence everything approaching the registration of ordinary letters has disappeared from the post-office routine, and the system has come down to absolute, primitive simplicity. We drop a letter into a city box; it is taken by a carrier to the post-office, assorted, and sent with others to the mail-car, there reassorted as it travels and put up for some "distributing office"; at which it is a third time assorted, and sent to the village to which it is addressed. From first to last there is

nothing to show that such a letter was received or carried or delivered. In its transmission it passes through at least five different hands, and if it were to be purloined there would not be the slightest direct evidence to show which of the five agencies was responsible for its loss. It is evident with a system so loose in its business methods that it in effect says to every clerk, "You may help yourself until suspicion be aroused and the eye of the detective be upon you." One cannot afford to freight it with matter that does not belong to it. Every man who puts money in an ordinary letter not only runs a direct and needless risk himself, but he impairs the usefulness of the service for every other man who uses it for its legitimate purpose. Therefore it is that the money-order and registered-letter systems have become necessary auxiliaries of the post-office in its primary and proper work of disseminating intelligence; and if men wish to go beyond this primary work (as to which cheapness and speed are the chief essentials), and avail themselves of its business facilities (as to which care and safety are additional elements), then it would not be unreasonable to compel them by law to resort to its appointed business machinery, and leave its general usefulness unimpaired.

To this end, we call attention to the peculiar advantages of the registered-letter system; and we note the singular fact that a large majority of people have not the slightest practical knowledge of its existence. In the first place, it is in operation in every post-office, and is not, like the money-order system, confined to those which do a considerable amount of mail business. So far as the sender is concerned, the cost is trivial (fifteen cents), and there is not the double operation of sending to the post-office for a money-order and then enclosing it in a letter. On the contrary, he can enclose his money in his letter as he writes it, affix six stamps instead of one, and sending it to the post-office by any messenger receive back the postmaster's receipt. On the part of the receiver there is also the same advantage of a single operation, for he finds the money in the letter when he opens it, and is not obliged to present his money-order at the post-office for payment. But there is also this peculiar advantage, although the registered letter be sent from New York to the remotest prairie post-office in Texas, there comes back to the sender, in course of time, the receipt of the party to whom it is addressed, and this the Post-office brings to him without an additional charge. Thus it saves the receiver the trouble and cost of acknowledging its receipt, and assures the sender that his remittance was actually delivered. So far as safety is involved, the system is subject to the usual casualties, such as fire and shipwreck, but apart from those may be said to be nearly perfect. Every mail agent, from the first postmaster to the last, receipts for the package when he receives it, so that if a loss occurs the Department can put its hand upon the responsible party. As a matter of fact, we believe that no loss has occurred under the present revised system, except such as would come under the head of actual casualties.

But while these conveniences are certainly such as should be appreciated, there are others which are most needlessly withheld from the public. The old-time carrier's cart has, in this country, passed into the hands of great corporations called express companies. These companies have ingeniously arranged their routes, so that a package going from one point to another shall be transferred from one company to another, or, in other words, shall pay double or treble expressage. If, now, a bookseller in New York has to send a handsomely bound book to a country correspondent, it is practically excluded from the registered-letter system by the requirement of letter postage. It would cost the Government no more to transport it in one mail-bag than in another, and the registration fee would indeed yield the Government a handsome profit; but the system is now restricted to letter matter. If the bookseller would send it as printed matter, he must leave one end exposed, so as to tempt every clerk who handles it, and with a tolerable certainty that the binding will be injured before the book arrives. Consequently, he is driven to the express, and his customer pays the double expressage. Again, many small articles which it would be a great convenience to send by mail, cannot be left exposed without the certainty of their loss. In Europe, a package of samples can be sent from London to Brussels, carefully enclosed and sealed up, at printed-matter rates. But the fact that cheap postage has done away with the old tricks and expedients for evading letter postage is a fact not yet perceived by the Congressional mind; and our postal laws still cautiously retain the provisions which in other countries have become obsolete. At least, in such cases, the examination might be deferred till the package is delivered, and the final postmaster be authorized then to open it and see whether it be subject to letter postage.

So long as our Government is managed by politicians, for the benefit of themselves and their party, it is idle to hope that any large amount of brain-work will be given to any branch of the public service. The utmost that we can expect from the Postal Department is that it will borrow, with reasonable rapidity, the improvements which European governments devise. It has taken four years to transport postal cards from Berlin to Washington; which, considering that the journey can be made in a fortnight, certainly seems an unreasonable length of time. The only American improvement which we have to show is the postal car, and it did not come until sleeping cars and restaurant cars had fairly forced the idea into the official mind. Our extended routes on the one hand, and our intelligent, reading, migratory population on the other, furnish a magnificent field for official ingenuity; and instead of a system which is content to drag along tardily in the rear, we ought now to have one decidedly in advance of every other.

THE LIONS OF DIJON.

MARTIGNY, August 8, 1873.

I WOULD advise every traveller who runs over from Paris to Geneva to stop for a day at Dijon, once the capital of the famous Duchy of Burgundy. No province of France has played a more important part in history. The Dukes of Burgundy were for a long time among the most formidable rivals of the kings. Bourgogne and Armagnac were the warcries for a long period; and the quiet capital of a French Department, now administered by a prefect, was in those times a city as important as Paris. Its walls have been demolished, but the numerous spires of the churches, even at a great distance, bear witness to the past magnificence of the town. It must always perplex the traveller to find in a place like Dijon, which, by reason of the wine-trade, is still a centre of great wealth, hotels which would be a dishonor to the remotest town in the far West. I was taken, on a recent visit, by a landlord in his shirt sleeves, up a dark and dingy staircase to a room which was furnished only with a bed, a cane chair, and dirty curtains. But the bed was clean and good, as is almost invariably the case in a French inn, and the landlord, after having asked the news from Paris and given me at full length his opinion on the situation, ordered for me an excellent meal, better than I could have procured in a Paris restaurant. Too much respect and an old tail-coat have never seemed to me as agreeable as an affable landlord who does the honors *à la française*. My new friend would readily have told me the history of his life, of his family, of his neighbors, but I found him as ignorant of the antiquities of Dijon as if he had been born in Brittany. Fortunately, I did not need his services. The *lions* of Dijon are well-known to every scholar. They are the tombs of the Dukes of Burgundy and the famous Puits de Moïse (well of Moses).

Among many religious establishments, the favorite of the dukes was a *Chartreuse*, built a mile from the town. It had become the St. Denis of Dijon. The order of the Chartreux was founded in the XIth century by St. Bruno, and for seven centuries the rules laid down by the saint were strictly obeyed. Philip the Bold built the Chartreuse, and employed the most famous artists of the fourteenth century. A large church was erected in five years. Nothing now remains of it except the portal, with a large statue of the Virgin and two kneeling statues of Philip and his wife. This portal is now the entrance of a new chapel, which no longer receives either monks or dukes, but the poor creatures who live in the Chartreuse, which has been turned into the lunatic asylum of the Department. The tombs of the dukes which adorned the church have been transported to the palace of the dukes, which had become afterwards the palace of the States-General of Burgundy, and which serves now as a museum. Of this palace, which is truly splendid in its proportions, nothing remains of the old building except a strange Gothic tower, very

irregular in its form, and the guard-room, which was saved from the fire which destroyed all the rest. This guard-room is of magnificent size. In its chimney a whole deer could be roasted, and sixty knights could sit round it. The top of the chimney is a huge framework in the Gothic style, which extends to the roof. Opposite the chimney is the tomb of Philip the Bold. His painted statue is lying over the great rectangular tomb, built of black marble. Over his head two kneeling angels with gilded wings hold his helmet. His head rests on a pillow painted half red and half blue. His crown has not the form of a modern crown; it is a simple band of gold covered with large jewels. The duke holds his two hands as if he were praying, and his rings are not, as it is now the fashion, on the third phalanx of the fingers, but on the second. His long gown and his mantle lie in noble folds, and his pointed iron shoes emerging at the end rest on a lion. There is a strange majesty in the attitude of this giant-warrior, wrapt in a sort of sacerdotal robe. But the most curious part of the monument is a kind of miniature cloister which runs all round the tomb, and which is built in alabaster, cut in the most delicate manner. Under the arches of this cloister are the mourners of the duke—monks, priests, dependants of all sorts, in every attitude of grief. It is like a people of pigmies mourning over a giant. The carving of them is exquisite, and all the details of their costume carry the mind back to past ages.

A second tomb of equal size, which was made on the model of the first, bears the statues of Jean-sans-peur and Margaret of Bavaria, his wife. Two winged angels bear the helmet of the duke, and two the arms of the princess. I will remark here that the escutcheon of Burgundy is always supported by winged angels, and that it bears the fleur-de-lis, as King John, who was a prisoner in England, gave the Duchy of Burgundy to his younger brother Philip, who had at the age of fourteen fought by his side at Poitiers. All round this second tomb also is an alabaster cloister, under which are a number of monks, weeping, praying, moving in every direction. Nothing can well give an impression of these extraordinary monuments; their preservation is perfect, though one sees in the black marble top fissures which run across. At the time of the Terror, in '93, an order was sent to destroy the tombs of the tyrants; but this order was executed intelligently—the black marble was simply fissured and not broken. A few of the little alabaster monks were stolen, but have since been replaced.

Some idea of the magnificence of the old St. Denis of the Dukes of Burgundy may be formed from inspection of the two movable altar-pieces (in French called *retables*), which are in carved wood, completely gilt, and which represent various scenes of the Passion, the sides being covered with lovely statues of saints and martyrs. St. George is particularly noticeable, as he is in the exact costume of a knight of the fifteenth century. The temptation of St. Anthony is also one of the subjects of this fanciful decoration; a black devil offers him a purse of gold, a form of temptation which will always be well understood. A young woman also comes before the saint, but she is completely covered with one of those long gowns without folds and without any visible *ceinture*, which were the fashion at the time of Margaret of Bavaria. The artistic ideal of the Middle Ages was chaste, and did not allow in a church such representations as are so common in the "Temptations of St. Anthony" painted afterwards by the Flemish masters. The young princess who tempts the saint would not be distinguishable from a saint, except that she wears on her long flowing hair two small horns. Over the altar hangs an old piece of tapestry, which is very well preserved, and is almost as interesting as the tapestry of Bayeux. It represents the siege of Dijon (1513). The bear of Berne is still visible on one of the standards. The Swiss were secretly bribed by a large sum of gold, suddenly left their allies, and Dijon was saved by their retreat. The profile of the town, with its numerous spires and churches, was very much then what it is now at a distance. Burgundy, it must be remembered, was one of the centres of early Christianity in Gaul. St. Stephen is the oldest church, and St. Bénigne the oldest abbey. Round them is a congregation of secondary churches—St. Vincent, Notre Dame, St. Médard, St. Michel, the Holy Chapel. In other parts of the town are St. John, St. Philbert, St. Nicholas, St. Peter. St. Stephen, the mother-church as it were, was built in the fourth century, but became a cathedral only long afterwards. The abbots enjoyed many privileges and coined their own money. Since 1178, Notre Dame has been the first parish church of the town; its façade, though built in the Gothic style, has a very unusual form. It is rectangular, and has two stories of columns over the porch, without any windows. This shape is not very pleasing to the eye.

The church of St. Bénigne was the centre of a part of the town which was outside the old *castrum romanum*, and enjoyed peculiar privileges. It was the first refuge of the Christians at the time when the Roman *prætores* still inhabited the *castrum*. It was in this church, which had received the remains of the apostle of Burgundy, that the dukes afterwards swore solemnly to respect the ancient rights of the town and of the Duchy. Little remains of the oldest part of the church, built in the circular Roman style over the tomb of St. Bénigne. The legends connected with this tomb are innumerable, and it is enough to say that for centuries it was one of the holy places of Gaul. The abbot was in direct dependence on the Pope, and it was probably in this capacity that he received the oath of the dukes, and gave, as their superior lord, the ducal ring, the mantle, and the crown.

I must now attempt to describe the well of Moses. Imagine a large well full of water; in the centre rises a huge column, whose capital is of enormous size, and is divided into six parts. In each part is a statue of a size larger than life. First, you see Moses, with the tables of the law in his hand, a long flowing beard, and two short horns, like the Moses of Michael Angelo; if we turn a little on the circular platform which has been built round the monument, we come to King David, with a harp in his hand and a crown on his head, not a single band like the crown of the dukes, but a high crown formed of separate branches. The other statues represent Jeremiah (the expression of anguish and pain on his face is truly wonderful), then Zacharias, in the vestments of a high-priest; Daniel, with a curious Asiatic cap; and Isaiah, with a book under his arm. Each of these statues is admirable; they are not stiff and meagre; they are full of life and of majesty. They were all painted in the fashion of the time (the date of the monument is 1399), and many traces of the gilding and of the colors are still visible. Over these huge figures is a line of winged angels, which support the upper part of the capital, on which was built a Calvary, Jesus on the cross, with the holy women and St. John at his feet. This part of the monument has been unfortunately destroyed. The statues of the capital, in the conception of the artist, represent the precursors of Christ, David his ancestor, and the prophets who had beforehand had a vision of the Passion; they hold in their hands long rolls, on which are inscribed, in Gothic characters, the verses of the Old Testament which relate to the death of the Messiah. Moses represents the old Law, considered as the fountain of the new Law. Many pages have been written in explanation of this monument; to my mind, the idea is very simple, and this very simplicity adds much to the effect. The cross of Christ, which was on the top, was the central idea; all the details of the capital were simply grouped round it, as additional ideas. The absence of John the Baptist has been much commented upon. I leave it to the exegetists to explain it; I will only say that Saint John the Baptist seldom appears in the monuments of the Middle Ages; his importance, as an artistic element, does not even begin with the early schools of painting, and is only very noticeable at the time when art had made great progress in Italy (with Perugino, Donatello, etc.) It is probably because the scene of the baptism requires a great familiarity with the naked form of man, and the early artists avoided the nude as much as they could.

The traveller will find much more to see in Dijon: the old palace of its parliament, which serves now for the law courts, and many private houses of interest, among which is one which was once inhabited by the ambassadors of England, for the Dukes of Burgundy were at one time the allies of England; but in our day we live somewhat in a hurry, and an æsthetic mind will be quite satisfied with the contemplation of the guard-room of the palace, of the tombs of the dukes, and of the well of Moses. We keep only a few features of the past, and we must try to choose the purest of all.

MORLEY'S ROUSSEAU.*

PARIS, July 30, 1873.

MR. MORLEY has done for Rousseau what he had done already for Voltaire. He has not simply written his biography—he has made this biography the ground, the first plan of a philosophical and political picture of the eighteenth century. Judged at this long distance of a century, these two men, Voltaire and Rousseau, assume now very different proportions. Voltaire had more practical effect in his own age, and Rousseau in the age which followed him. Voltaire, though he advocated so many changes, appears to us as a conservative, and Rousseau as the very genius of revolution and of socialism. Voltaire is more really humane and philanthropic, though he wrote for the great; and Rousseau, who wrote, so to speak, against the great, was at heart a despot, a hater of mankind. Voltaire was wanting in sentiment, but he had an exquisite urbanity, and he hated cruelty with a sort of noble fervor; Rousseau was always in tears, overflowing with sensibility, but his sensibility belonged to the nervous temperament, and his soul was really tuned and formed like the souls of the Terrorists of the French Revolution.

* 'Rousseau. By John Morley.' New York: Scribner, Welford & Armstrong. 2 volumes. 1873.

The secret of all his political and philosophical work must be sought for in his life, and it is with much reason that Mr. Morley devotes so many chapters to his youth, and to his wandering life in Savoy and Switzerland. One can hardly read a few pages in the two volumes of Mr. Morley without being referred to the 'Confessions.' The 'Confessions' is in fact Rousseau's great work, his enduring work; for his 'Essays,' his 'Contrat Social,' his 'Emile,' his 'Nouvelle Héloise,' can hardly be read now from beginning to end without tedium. There is in them something so utterly false, so unreal, that one wonders how the French society of the eighteenth century could have been fed so long on such unsubstantial nourishment. These books, notwithstanding their magnificent style, strike us as do the fashions of another age. It seems as if the dresses of the Empire or the Directory could never have been really worn. Is the 'Nouvelle Héloise' really a love-story —this perpetual preaching on love—this eternal confusion and distinction of virtuous vice and vicious virtue? Give me rather the letters of Héloise and Abélard, or the pastoral of Daphne and Chloe, or the short ode of Sappho. Is 'Emile' a treatise on education? Take me to the wild Indians or to any tribe of savages rather than to a people of Emiles. I would rather die at once than be so *ennuyé*. Is the 'Contrat Social' the gospel of a new political faith? What could be more unreal, more fantastic than a theory founded on the supposition that men in the woods, troglodytes, formed a compact, invented the ballot and universal suffrage? What we call "the state" is not, and never was, an initial cause. It is an effect, the ever-changing effect, of long centuries of culture and civilization.

But the errors which were proved so dangerous, during the Terror, of the 'Contrat Social,' as well as the errors of the 'Emile,' can all be traced to the same cause, which must be found in the 'Confessions.' What a distance there is between the 'Confessions' of St. Augustine and those of Rousseau! Both represent themselves as great sinners, but one is almost as proud of his sins as the other is ashamed of them. St. Augustine is the founder of the doctrine of grace and of election; in his eyes, man deserves nothing from the hands of God; he owes everything to the generosity, to the goodness, of the Almighty. All the doctrines of Calvin, of Jansen, of Pascal, are in germ in the 'Confessions' of St. Augustine. Rousseau's 'Confessions' are conceived in a totally different spirit; he uses his sins simply as weapons against society; instead of believing in the total depravity of man, he believes in the perfection of the individual, isolated man; he endows his ideal *natural* man with all the virtues; his vices, his faults are only forced upon him by a forced state of society. Rousseau himself is, so to speak, this *natural* man, moving among a corrupt people, in conflict with civilization. He is a *solitaire* among millions; he cannot dress like anybody else; he invents a style, and speaks of the sublimities of nature in a manner quite unknown in an age of small verses, of well-cut French parterres, like the parterres of Versailles and of St. Cloud. He teaches mothers to nurse their own children; his Emile must learn a trade; and such is the influence of the new teacher that we see even now, in the palace of Versailles, traces of the handicraftsmanship of Louis XVI. This revolution can be compared, to a certain extent, to what has been called in our time in England muscular Christianity, and so far had some good effects; but the naturalism of Rousseau had much wider consequences in the moral order. Open any book you like written in the latter part of the eighteenth century, read any speech you may choose of the Constituent Assembly or the Convention, and you will find marks of the deep impression produced by the teachings of Rousseau. The whole of society seems pervaded with the poisonous doctrine, which exonerates the individual man and throws all responsibilities on the ideal, unknowable, invisible "state." At least, when Louis XIV. proudly said, "l'état c'est moi," he assumed a responsibility, he undertook to make France great, glorious, and prosperous. But what will become of a state in which every man considers himself as perfect, will attempt no struggle with his own passions, spend his days in glorified selfishness, and expects from the "state" the gratification of all his wishes, desires, and even caprices?

Rousseau tells us how he was walking from Paris to Vincennes, on a visit to Diderot, and felt suddenly inspired, entranced, by seeing in a newspaper the announcement of the following theme propounded by the Academy of Dijon: "Has the revival of science contributed to purify or to corrupt manners?" Of course Rousseau pleaded the cause of ignorance against science. This paradoxical essay, written, as Rousseau himself confesses, without conviction, determined however the direction of his entire intellectual career. He entered the lists as an enemy of civilization, of all conventions, of all historical forces. He was not a charlatan; he constructed for himself a sort of belief in the wickedness of society and the intrinsic virtue and perfection of man. He was a visionary; every eye can perceive the defects of society, but every eye cannot see the ideal Emile. His brain was certainly somewhat diseased, for he had all his life that strange delirium of persecution which is a common symptom of impending madness. Rousseau lived in a land of dreams, he was essentially anti-scientific, anti-positivist. Mr. Morley justly remarks that the 'Spirit of Laws' of Montesquieu had initiated a true method for the study of history and legislation, of a method founded upon facts: "The *Discours*," says he, "was the beginning of a movement in an exactly opposite direction; that is, away from patient collection of wide multitudes of facts relating to the conditions of society, towards the promulgation of arbitrary systems of absolute social dogmas."

This dogmatism culminated in the French Revolution and the various constitutions which were presented to the French people by political dictators amidst thunder and lightning, as a revelation from God; but, long before the Revolution, the national mind had been permeated by it. It is so much easier to drift into theories and dreams, to talk of sensibility, to shed tears over humanity, than to get possession of hard facts, of statistics, to make calculations, to enter into the details of administration! The old régime, nursed with the 'Nouvelle Héloise' and the impracticable 'Contrat Social,' became quite imbecile, unable to solve the smallest problems. What produced the French Revolution?—the inability to pay a debt of six hundred millions, a sum which seems to us a mere trifle. The system of taxation was ridiculous, and nobody knew how to change it. What is less known is the incapacity of the revolutionists as administrators and financiers. This incapacity was not the result of a subjective defect; it arose from the false method which Rousseau had originated, from the mania of big words and the contempt of small facts. Tocqueville has well proved that the whole system of centralization, which is generally considered as the work of the Convention and of Napoleon, is really the work of Richelieu, of Louis XIV., and of the ministers of Louis XV. Even at this time we have many of the taxes of the old régime. There was little administrative originality in the Revolutionary school, because it was always in a sphere of abstract dogma. To this day the Republican and Socialist parties have remained faithful to the doctrines of the 'Social Contract'; and this is the reason why the germ of Cæsarism is concealed in the French ideal of a republic. Gambetta would make no objection to these words: "As nature gives to each man an absolute power over all his members, so the social pact gives to the body politic an absolute power over all its members." Can we not find the theory of what is called by the modern Jacobins the imperative mandate in these words: "Sovereignty, being only the exercise of the general will, can never be alienated; and the sovereign, who is only a collective being, can only be represented by himself; the power may be transmitted, but not the will. Sovereignty is indivisible, not only in principle, but in object." The sections of the Parisian populace held no other doctrines when they dictated their will, amidst glittering bayonets, to the frightened Convention; and Robespierre, in his Declaration of Rights, only echoed Rousseau when he wrote: "The sovereignty resides in the people; it is one and indivisible, imprescriptible and inalienable." Rousseau himself dimly foresaw the dangers of a theory which considers all men as detached atoms of the same weight; and in his constitutional scheme for Poland he insisted upon the advantages of federal governments. In a large country like France—without any federal states, any distinct provinces—ten millions of electors, with unbounded equal and inalienable rights, forbidden to delegate their sovereignty for a limited number of years to any representatives, must either destroy each other or abdicate into the hands of a dictator. He felt at times that perfect equality was a dream, and spoke of elective aristocracy. But on the whole the Anglo-Saxon idea of government was distasteful to him; and he went so far as to say that there was no liberty at all in England. He was democratic and despotic, and considered even the separation of church and state as an abomination.

As Mr. Morley often justly observes, Rousseau ignored history; he drew all his conceptions from his imagination; he ignored the influences of race, of accumulated forces, of habit, of education, of nationality. He was a destroyer, an iconoclast, a hater of the past; but he was at the same time a prophet. His dangerous catechism is easily understood by the masses. He says to every man who suffers: "You suffer not by your own fault, but by the fault of the state, of the kings, of the priests, of the laws, of the rich, of the nobles. Christianity has promised to all men the blessings of eternal life. I offer to you this visible world; it is all your own. You can, by legislation, make yourself king, priest, lord, dictator."

I have not been able to do sufficient justice to the work of Mr. Morley. He has shown in these new volumes the qualities he had already shown in his 'Voltaire'—a perfect knowledge of his subject, a catholic sympathy for all the manifestations of thought. His feelings as a gentleman have often been revolted by the actions of Rousseau, but his respect for genius has always given dignity to his most severe criticisms.

Correspondence.

FREIGHT CHARGES AND WATERED STOCK.

To the Editor of the Nation:

Sir: The grievance of the farmers is, that the charge for transportation absorbs the profit of raising grain.

The alleged excessive charge for transportation is attributed to the fact that some railroads have "watered" their stock.

The conclusion from this statement is that the larger the nominal capital of a railroad, the more power it has to charge and collect high rates for the service it renders.

In other words, it would appear that if there were but two railroad lines from the seaboard to Iowa, the charge for the transportation of wheat on each line might be in proportion to the nominal capital, and that the line on which stock should be issued without a cash payment thereon would have the power to charge the highest rate. Of course, nothing can be more absurd than this notion.

In considering this question, a definition should be given to the term "watered stock." This term is applied indiscriminately to all stock that is issued in the form of a dividend, or on which no actual assessment in money has been levied and paid, but there are two or three very different kinds of "watered stock."

1. There are many successful roads that have earned an excess of profits above their dividends on the capital actually paid in, or that have forborne to make cash dividends, and have invested their surplus or their earnings in new track or additional equipment, and, having thus furnished themselves with additional power to perform service, have issued stock as a dividend to represent such actual machinery and apparatus.

2. There are roads which, having secured the best route between given points, and having fully equipped their lines, have yet found it possible to earn a fair dividend upon a larger capital than has been actually paid in in cash, and have thereupon issued additional stock, such stock representing no additional equipment or track on which to perform service.

3. There are roads that have been built with the proceeds of bonds, and upon which the stock has been issued as a bonus without any cash payment whatever.

From this definition of three classes of "watered stock," it must be obvious that there can be no connection between the nominal amount of capital, or the nominal cost of a railroad, and the charge made by the road for transportation.

In the first case, the "watered stock" is itself evidence of the power of the road to perform service more effectively and at less rates of charge than would have been possible had not the road earned the equipment of which such watered stock is an evidence.

In the second case, the watered stock is evidence of the existence of traffic between given points that will be certain to attract capital to the construction of another road between those points, or that will cause railroads to be built from the chief market supplied by such a road to other points where products of like character can be obtained.

In the third case, the issue of stock may be, or may not be, a wrong method, but it does not indicate any special power on the part of the road to charge excessive rates, or any different power than would have existed had the payments of cash for the bonds been represented by stock and not by bonds. The fraud, if any, in such case is perpetrated upon those who may afterwards buy the stock on the supposition that it represents a cash payment, and not upon those who send merchandise over the road.

The facts are, that, inasmuch as all our railroads may be classed into the above three classes, with a fourth, in which the stock and bonds would substantially agree with the cash paid in, the nominal amounts of stock and bonds existing upon any given line are no criterion whatever of the rates of transportation that are or may be charged over that line.

So far from the truth is it that the roads most honestly built, and on which the stock and bonds outstanding represent actual cost, can and do perform their work at less charge than any other, that it may appear that roads upon which the stock has been excessively watered, either upon the first or second methods, are worked at less cost for transportation, and at a less charge to the community, than any other roads in the country.

The writer has not the data to prove this point, but it is suggested that a comparison should be made by railroad experts of the comparative rates of charge made by railroads. It would not be difficult to classify roads into the four classes named, and to compare their charges per mile. It is safe to predict that the roads in the first class would prove to be the most serviceable to the community, and thus to prove that there is a substantial identity of interests between the railroad corporation and the community served by it, and that a war of one class upon the other can result only in harm to both.

New Englander.

Notes.

Little, Brown & Co. will publish in the fall two volumes completing the 'Life of Timothy Pickering,' interrupted by the untimely death of Mr. Octavius Pickering. The continuation is the work of Mr. Charles W. Upham.——'Womanhood, its Sanctities and Fidelities,' by Mrs. Isabella B. Hooker, is among the forthcoming publications of Lee & Shepard.——General Lew Wallace is the author of an historical Mexican romance entitled 'The Fair God,' which will make a plump volume of nearly six hundred pages, and will be published by J. R. Osgood & Co. The same house have in press 'Oldport Days,' by Mr. T. W. Higginson.

—If we make in these Notes rather frequent allusions to the Boston Public Library, it is not from any motive of partiality, but in order that as much currency as possible may be given to the examples it is constantly furnishing of how such an institution should be managed for its greatest usefulness. 'The Twenty-first Annual Report of the Trustees' and the new 'Catalogue of Books in the Lower Hall' (History, Biography, and Travel) invite remark in this sense. The Library now consists of a central hall and three ward or district branches, comprising a collection of more than 220,000 volumes, or double the number possessed ten years ago. Of these, 92,333 are recorded as gifts; a fact which needs no comment. The most important acquisition of the year has been the Barton Library, of which we made mention at the time of the purchase. The present Report gives no particular statement of its composition. The most novel experiment, and one hotly contested, has been the Sunday opening of the Periodical Reading-room. The result of it, say the Trustees, "has probably disappointed the expectations of those who took extreme views on one side or the other," but that it has brought in a class of readers not reached before, and that it is worth the outlay, seems to be conceded. "The use has been from one-half to three-quarters of the average week-day use," and the attendance uniformly decorous. The feature of the above-named Catalogue which is new and striking, is the liberal insertion of notes designed to facilitate further reading or study of any given topic. They do not consist of a bare list of authorities, but aim at discriminating among them intelligently and without bias. They are found under general articles like Slavery, Indians, Mohammedanism, Art, and under the names of individuals like Washington, Luther, Webster, Napoleon, etc., etc., while the historical notes under England, France, India, United States, and the like are elaborately subdivided into heads of enquiry which greatly lighten the task of consulting them. When reference is made to a work in the Library itself (and this is of course almost always the case), the hall, shelf, and number are added, permitting instant examination without further trouble. The nature of this work, we need scarcely add, adapts it for general use in all libraries, and in almost every study, and it ought to find a place beside the regular catalogue of every institution of the kind in the country.

—Evidence of a supermundane circulation of the N. Y. *World* would appear to have been afforded by an occurrence last winter at a spiritual *séance* in London. Mr. Holmes, described as "a celebrated physical medium from America," officiated, and he and another gentleman held a clean slate in a darkened cabinet, with the usual guaranty against trickery. When it was withdrawn, the following "sentiment" was found written on it:

"The same process of philosophy that materializes spirit also spiritualizes matter. We lose nothing in giving up the old ideas of immateriality if we still hold that matter is cunning enough to produce consciousness, thought, affection, and will. Names are of no consequence. If the latest thinkers choose to call the thing that manifests these phenomena nervous fluid, or ether, or force, or tissue under the play and vibration of a combination of forces, I do not see in this language any danger of our shocking our old-fashioned souls. Matter or dynamical machinery that is capable of personality, is very likely to have also the faculty of immortality. Good-night, dear friends. Doctor."

All this was duly published in a London spiritual journal called *Human Nature*, but only lately fell under the eyes of Mr. J. H. Noyes, the patriarch of the Oneida Community, who at once recognized part of an article on "Positivism" which he contributed to the *World* in January, 1869, with one or two verbal errors in the transcription ("process" for *progress*, "shocking" for *losing*), and the addition, "Good-night," etc. Mr. Noyes is now trying to decide whether he or the "Doctor" was the original author of the passage, and whether, if it was merely a quotation on the Doctor's part, and more quotations are likely to be made by the same irresponsible plagiarist, there is any way by which he (Mr. Noyes) can correct proof before delivery.

—A late number of the *Pall Mall Gazette* contains an interesting notice of the French artist Gavarni, the biography of the brothers De Goncourt "suggesting," but not "furnishing, the materials" for the article. It is curious enough that he was first privately known as an admirable designer of fashion plates. An engineer by profession, he "seems to have forsaken his original calling at the earliest opportunity, merely for the sake of drawing gentlemen and ladies in irreproachable attire." He always kept up his mathematical studies, and ended by putting aside art "to occupy himself with a sort of transcendental engineering." "For some years before his death, almost the only designs he made were in connection with flying machines and aerial navigation generally." In politics, he was of the school of Mr. Fitzjames Stephen. You could judge of the men, he said, by the mere phraseology of their political cries. What, for instance, was the meaning of "Droit au travail" (what Judge Bradley in the New Orleans butchers' case calls the "sacred right to labor")? Would it, he said, be a particle more ridiculous to talk of the right to breed rabbits, which no one had ever contested? His personal sympathies were with the Orleans family. Gavarni's object in going to England was to make a number of drawings illustrative of English society and of English life. This work proving a failure, he returned, after a trip to Scotland, to London, where he took rooms, resolved to study the national character thoroughly. His life there seems to have been as original as from his sketches one would suppose everything about Gavarni to have been. It was his practice to sally out of his rooms in Salisbury Square, Fleet Street, in the evening, or, whenever he felt inclined to be idle, walk across the Square in dressing-gown and slippers, enter a tavern called the Barley Mow, and sit there smoking cigarettes, drinking bottled ales, "coupé avec de l'eau"—in other words, diluted with water—ruminating or conversing, as the case might be. "British bottled ale was at that time almost as strange to Frenchmen as cigarettes were to Englishmen. Gavarni entertained a high opinion of it, especially of the Scotch variety; and, perhaps from having met with it in Paris only at such places as Tortoni's and the Café Anglais, fancied that it was a particularly fashionable beverage."

—He grew so fond of bottled ale that an idea occurred to him, which the writer of the notice cites as an illustration of the difficulties in the way of his getting completely to the bottom of England and Englishmen. It was that of producing a work illustrative of English life in every class, and in every place, town as well as country, to be called 'A Pot of Beer.' Hop-picking, the interior of a large brewery, a village public-house, with laborers and artisans drinking porter, and finally a banquet, with gentlemen and ladies drinking ale, were among the scenes he proposed to represent. It was pointed out to him that ale was not the characteristic drink of people of fashion, nor porter the drink of our working-classes alone; and, moreover, that the title 'A Pot of Beer' would be thought vulgar. On this he abandoned his hastily considered project. One curious thing is mentioned about Balzac, which we have never seen noticed before. Gavarni had a great admiration for Balzac, but he declared that in private conversation he was "stupid," repeating, in answer to a request for an explanation of so surprising a statement, that he was "simplement bête." He added that Balzac found it very difficult to set to work, and that he would cover his paper with numbers of little words and phrases, which he scribbled in all sorts of ways, before he began; though, once having got his faculties into play, it is known that he would continue writing for prodigious and almost alarming periods.

—The slighting French phrase, "he didn't invent gunpowder," must, it seems, be applied to the Chinese, who have so long been credited with this as with other discoveries which they never learned to put to their highest use. In Trübner's *Literary Record* for August, we find an abstract of a paper on this subject which appeared last year in the *Journal* of the Royal Asiatic Society. The author is Mr. Wm. Frederick Mayers, Chinese Secretary of the British Legation at Peking. He asserts that the Chinese invented gunpowder only in the encyclopædias, and that every native writer who treats seriously of the subject disclaims the honor. "Probably the first disquisition relating to gunpowder that exists in Chinese literature is that which occurs in the work entitled '*Wuh-li-siao-she*, by Fang I-che, who flourished during the last reign of the Ming dynasty, or, therefore, between 1600–1644 A.D." This esteemed author says expressly that "gunpowder (*huo-yao*) came from the outer barbarians," and places the first instance of its use in China in the second year of K'ai Pao of the Sung dynasty (969 A.D.) Chao Yi, a modern writer, also of high repute for learning and research, admits that ancient Chinese literature (or that preceding the T'ang dynasty, seventh to tenth century A.D.) contains not a syllable in reference to gunpowder or any analogous compound. He says that "Chinese antiquarians are agreed that the fire-crackers of the present day merely imitate the crepitating sound of bamboos, which were formerly burnt as a charm for exorcising evil spirits," a practice first recorded in two famous works assigned to the middle of the sixth century; and gunpowder was first employed in manufacturing the fire-cracker (called to this day *p'ao-chu*, or "crackling bamboo"). Mr. Mayers seeks to prove that gunpowder was known for centuries in India before it came to be employed in China, where it was probably introduced about the fifth or sixth century from India or Central Asia, in connection with the manufacture of fireworks for purposes of diversion. His competency to discuss Chinese antiquities may be judged from the announcement, in the same number of the *Record*, that he has been engaged for some time on a 'Biographical, Historical, and Mythological Dictionary of Chinese Literature,' similar to Dr. Smith's well-known classical series.

—Doubtless we shall soon get track of the original inventor of what we may call the feudal *right of entrail*, alluded to in our last issue. The August number of the *Polybiblion* has two responses to its previous enquiry. M. Louis Veuillot, in his 'Droit du Seigneur au moyen âge,' remarking on the falsifications of history with respect to feudal institutions, cites a case of "imbecile credulity" from an 'Encyclopédie des jeunes étudiants et des gens du monde, par une société de gens de lettres et de savants' (Paris: Hachette, 1833). It is under the rubric 'Droits Seigneuriaux' that, as he says, after the usual defamation of seigneurs, bishops, and monks, one is treated to what the cyclopædist calls the abominable right which the seigneurs of Montjoie arrogated to themselves: "When in winter the counts of Montjoie and of Mèches went hunting, they had the right to disembowel *two* of their serfs for the sake of warming their feet in their smoking entrails." The *Polybiblion's* correspondent who sends this information obtained from M. Veuillot, adds that he has somewhere read that this pretended right was first heard of in the tribune of the Constituent Assembly, and intimates that it was taken up and repeated by the historian Dulaure and others of his kidney. Still another correspondent would fasten the honor of the invention on M. Duvernoy, inasmuch as in this author's 'Ephémérides du Comte de Montbéliard' (1832) occurs the following passage:

"The inhabitants who groaned under the weight of feudal burdens, feared to find in the Baron of Montjoie a suzerain more jealous of his rights than the Prince of Montbéliard. Among these rights was one calculated to excite horror in the highest degree. When in winter the counts of Roche and the lords of Maîche went hunting, they could cause to be disembowelled two of their serfs for the sake of warming their feet in their smoking entrails."

This version is identical with that copied from the Encyclopædia, as our translation shows, with the single difference in the proper names and in the alternative construction: *pour réchauffer leurs pieds, pour se réchauffer les pieds.* M. Duvernoy assigns as late a date as 1704 to the exercise of the right in question. The correspondent points out the similarity of *servus* and *cervus* as perhaps having given rise, through a clerical or printer's error, to the misconception. Apparently the only part of the transaction for which our Communist author Tridon was responsible, was the introduction of the barbarous custom into Brittany from the South of France.

—At one of the ordinary general meetings of the Royal Institute of British Architects, in London, during the last spring session, a paper on the "Art of Sgraffito Decoration" was read by Mr. Alan S. Cole, son of Mr. Henry Cole, the late Superintendent and Director of South Kensington Museum. Of the young gentleman himself, it is enough to say that he seems to be worthily treading in the steps of his father, who, as Mr. C. Barry remarked at the meeting, has rendered himself conspicuous for many years, among the art-teachers of Europe, in making experiments and failures which he has not been afraid of, because they teach more than anything else. The method of employing *sgraffito*, which has been experimented upon by Mr. Moody and certain students at South Kensington, for some ten years, was narrated at some length by Mr. Alan Cole, and led to a very interesting discussion by some of the leading architects of the English metropolis, who were present to welcome the début of the young lecturer. *Sgraffito* is the scratching of an ornament upon an *intonaco* layer, or upper layer, applied to a black (or colored) ground, leaving the white of the intonaco to represent the white forms and the black to represent the black. To fix this preparation of plasters to a wall it is necessary that the wall should be well wetted; in fact, as Ceninni has said, "you cannot wet the wall too much." An ordinary "floating" coat of plaster three-quarters of an inch thick is first laid; when this is sufficiently dry—say in three or four days—a layer of black plaster not more than a quarter of an inch thick is then applied; when this layer has settled and is still damp, the finishing coat of light-colored plaster one-eighth of an inch, or less, is then laid, according to the delicacy of the work, or the distance at which the *sgraffito* may be ultimately placed from the eye. When the surface is prepared for being worked upon, and before the plaster hardens, the *sgraffito* or hatching should be executed. In this respect, it will be observed that this method

resembles fresco painting, since no more of the surface should be prepared than the artist is able to finish in one day. Mr. Moody's own report of his experience as to the transfer of a design, and its subsequent execution on the plaster, gives very interesting details:

"Having made a full-sized drawing of the proposed ornament, it can be transferred to the wall by tracing the lines through the paper on to the wet and yielding plaster, or if the drawing is executed in charcoal, it may be printed on the wall by turning its face toward the plaster and rubbing it firmly at the back; then, with an ordinary desk penknife, which was found to be the best tool, the artist firmly incises the outline, cutting through the upper layer into but not through the black layer below; he then scrapes away the upper layer and exposes the black wherever black is wanted, leaving the upper layer wherever white is wanted, and in this way any design in two tints can be executed with rapidity and effect. Where large spaces of black occur, it is as well to use a broad tool with a square end, which not only removes the upper layer easily and quickly, but gives a tolerably even surface to the layer below. Although designs are very generally executed in black and white, any colors which are permanent, when mixed with plaster, can of course be used."

For the experiments at South Kensington there were, of course, the precedents which exist for the various uses of stucco supplied by Italian artists of the sixteenth and seventeenth centuries, and by the Tuscan architects and decorators especially. Yet a successful modification of *sgraffito* which was tried certainly deserves remark. It is Mr. Moody who is recording his essay:

"Having prepared a maroon ground instead of a finishing coat, scarcely more than one-sixteenth of an inch thick, a layer was laid of light cement one-half of an inch thick, and having traced the drawing upon it, the outline of the figure was cut straight down to the ground; after clearing away the waste, a projecting slab of the exact figure wished for remained. The face was then carved after the manner of cameo-cutting; and in this way a relief was obtained, in some respects better, perhaps, than if it had been modelled; for the degree of relief in this experiment is more uniform and sculpturesque, while the figures come more satisfactorily off the ground than they would if they were painted upon it."

—Mr. Alan Cole hesitates to speak with any exactness of the origin of *sgraffito*. The Italian artists employed stucco considerably in the decoration of the Vatican, both for modelling and painting upon. Hence, from this latter use of plaster were revived the various methods, more or less similar, which went by the names of "painting in fresco," "intonaco," "terrata," etc., which, as the earliest examples of wall decoration indicate—the wall-paintings of Pompeii, for instance—were known to artists practising thousands of years ago. It is not unlikely that *sgraffito* is an offspring of cameo-cutting. They both are arts having limits analogous one to the other. The artist who designed and executed a cameo limited himself in materials and colors. He depended solely upon the variations of layer which a stone possessed. In the same way the *sgraffito* worker, relieved certainly of the trouble of finding a suitable combination of layers, since each combination is under his control, limits himself to the variations he can obtain from the two layers of oppositely colored plasters. In the subsequent portions of his communication, altogether a graceful performance, Mr. Cole gave other interesting details as to the practice of the art, enumerating some of the principal Italian artists who employed it since the XVth century. The ensuing discussion called up Mr. F. P. Cockerell, Mr. Gambier Patty, Professor Kerr, Mr. C. Barry, and Sir Digby Wyatt as the principal professional speakers; and the architects of New York, with their unrivalled opportunities of a rising and growing metropolis, an area practically inexhaustible, a wealthy and liberal clientèle, and the brightest and cleanest climate possessed by any modern capital, would do well to study the report of it.

—Karl Blind has an interesting article in *Die Gegenwart* on a recent incident in the Belgian Chamber, when for the first time, on taking a vote, a German *ja* was heard instead of the usual French *oui* of assent. It was a very appropriate response under the circumstances. The bill before the House proposed to authorize the use of the Low German (*niederdeutsch*) language in judicial proceedings. That this should be necessary when Low German is the native tongue of a large majority of the Belgian people, is a paradox which gives Herr Blind an opportunity of narrating the history of the imposition of the French language against the wishes of the Flemish population, but with the countenance and aid of the Walloon (Celto-romanic) minority inhabiting the southeastern territory. The fact that French is the official language and the language of cultivated society, and has been so for more than half a century, does not prevent Low German from still being the common speech, not only in the rural districts but also among the lower classes in the cities, and even in the familiar domestic intercourse of the upper classes. Charles V. was the first ruler of the Netherlands to favor the substitution of French, and under him it came to be used in the dealings between the Flemish States and the Government, in spite of the resistance of Flanders, and especially of Brabant, next neighbor to the Walloon influence. But during the XVIth, XVIIth, and XVIIIth centuries, it was pretty strictly confined to this use, and even then the publication of laws and other ordinances was, for the Low-German-speaking communities, made in their language. By-and-by, under Maria Theresa especially, this practice gave way to publication in both languages, with the French for the original, and the nobility yielded a ready support to the innovation. The expulsion of the Austrians only confirmed the French yoke; French was everywhere officially installed, and Flemish driven even from the schools. Bonaparte's censorship scarcely permitted a Flemish book to see the light, and Flemish newspapers were at last forbidden to be published, unless accompanied with a French translation. Twenty years of this rule proved too much for the suppressed language even when the new United Netherlands seemed to promise for it a glorious resurrection. Religious and party differences came in to separate the two countries, and the revolution of September, 1830, left the Low-German majority in a worse plight (linguistically) than ever before. They first made themselves heard by petitions in 1840, but their prayers were neglected or only nominally granted. In 1858, a Society for the Elevation of the Flemish People came to their rescue, and has ever since been striving not for the supremacy but the equality of the Flemish tongue. Their efforts have been crowned with very partial success, but it can hardly be doubted that the victory at Sedan was an assurance of their final triumph.

WHIG THEOLOGY.*

LORD RUSSELL writes of Dr. Samuel Clarke that "his Christian faith is the doctrine of an enlightened man well read in the Holy Scriptures." The terms of this eulogy sound odd and old-fashioned to modern ears. They are not the words in which any one would naturally describe a religious divine or statesman of the nineteenth century. No one would describe, for example, Dr. Liddon as a person well read in the Holy Scriptures, or talk of Mr. Gladstone's religion as the "doctrine of an enlightened man." Yet the phrase runs naturally from Earl Russell's pen. It is the language of all the men among whom he moved in his youth. Neither Sydney Smith nor Jeffrey nor Sir Walter Scott would have seen anything to wonder at in expressions which sound strange to the present generation. They would have felt that Lord Russell was conferring the highest praise on a revered teacher, and was describing a man who, while (to use the language of that day) he avoided the follies of enthusiasm, was pre-eminently distinguished by rational piety. The sentence, in short, which we have quoted, and many others which might be collected from the 'Essays on the Christian Religion,' reminds us that Lord Russell has clung no less in his theology than in his politics to the traditions of his youth. We do not, however, bring any charge of narrow-mindedness against him. No one can read his references either to Matthew Arnold, whose view of St. Paul is "far more in accordance with the real doctrine of St. Paul than that which persons who have failed to comprehend his real intentions have attributed to him," or to Dr. Newman, whose "latest work requires to be deeply studied," without perceiving how candidly he has studied the latest writers, and how little either for good or bad he has imbibed their spirit. We dwell on the tenacity with which he has clung to former modes of thought, because it makes him a representative of men whose theological views and assumptions deserve, even as a mere matter of history, careful consideration, and because it gives his work its only valid claim to interest.

Looked at as a compendium of ecclesiastical history, the book is as poor a manual as any man of ability ever published. If we were bound to criticise it simply with regard to its literary merits, the respect which every friend of free government must feel for Lord Russell would make us refuse to play the part of critics. Happily, the essays, though valueless as a contribution to ecclesiastical history, have a worth of their own, from the light which they indirectly throw on the theological doctrines derived by Lord Russell from the statesmen and teachers by whom he was trained, and by the party of which he was long the leader, and is now nearly the last survivor. The religious views of these men certainly deserve consideration. The Whigs, whatever their defects, have been as patriotic and as successful a body of politicians as has ever existed. If we take down the early numbers of the *Edinburgh Review*, or read Sydney Smith's remarks, we shall see what were the objects which the Whig writers desired to obtain as the result of their political efforts. Then, if we reflect upon the history of England during the last fifty years, we shall be compelled to admit that the Whigs carried out nearly every reform which they intended to achieve; and, further, that in substance the course of English politics has until recently run very much in the line marked out for it by the Whig statesmen. The Whigs may have been right, or may have been mistaken in their views, but these views they

* 'Essays on the History of the Christian Religion. By John, Earl Russell.' London: Longmans, Green & Co. 1873.

have most successfully impressed upon the English nation, and the history of the last forty years is essentially the history—in politics, at any rate—of the triumph of Whig ideas. There is another side to the picture; but still, if we look at the matter in a broad point of view, we must admit that Lord Russell has a right, on looking back over a long and well-spent life, to feel that he and his associates have struggled both manfully and successfully for what he terms "the cause of civil and religious liberty."

In no field have the Whig ideas achieved in some respects a more complete triumph than in the province of religious politics. They never aimed at establishing religious equality, as that expression is understood by modern Nonconformists, and the time is still probably distant when religious equality will be established in England. Their aim was to establish complete toleration and unlimited religious liberty, and their end has been completely attained. There exists hardly an office in England from which any man can be excluded on account of his creed. We have seen a Roman Catholic Chancellor of Ireland, and within a few weeks a Jew made Master of the Rolls in England. Social sentiment may still put some limits (though what the limits are is hard to say) on the expression of opinion. But, as far as law goes, there is at this moment more unlimited freedom of discussion in England than there has ever existed in any country in the world, except our own. When Lord Russell exclaims, "Let Mr. Darwin and Professor Huxley explain their opinions as freely as the Archbishop of Canterbury or Mr. Spurgeon," he expresses a wish which the fates have long ago granted, for we cannot believe that these eminent men can be hindered from expressing any doctrine which they wish to make public. It is, therefore, as a mere matter of political history, well worth examining what have been the religious views of the Whigs and the effect of these views on their policy. Lord Russell's book, while it inevitably suggests these enquiries, to a great extent supplies the answers to them. His views are, no doubt, like those of every thoughtful and religious man, his own individual opinions, and probably would not represent precisely the religious doctrines of any one of his friends or teachers. But he has unconsciously, if not in his specific opinions, yet in his general treatment of religious questions, clung so closely to the traditions of his party, that we shall scarcely do his friends an essential injustice if we take Lord Russell as the exponent of their creed.

The first point to be noted is, that Lord Russell occupies a distinctly Christian position. No doubt, some of the Whig writers had a tendency to scepticism, and Sydney Smith in his letters expresses considerable alarm at the free tone of the earlier reviews. But to consider the Whigs as a body of infidels or sceptics is entirely to misunderstand their position. Any one who reads, for example, Sydney Smith's life will, if he reads it with any candor, see that the Canon of St. Paul's was, according to his own ideas, an orthodox clergyman of the Church of England. Nature certainly did not mean him for a priest, but nature certainly made him an honest man, and one cannot trace throughout the whole of his letters or conversation the least suspicion that he could not fairly and honestly hold the situation and perform the duties of an English parson. Take, again, Lord Russell himself. He was never under any temptation to avow any religious feeling he did not entertain. He has certainly now nothing to gain by affecting an unreal piety. Yet every page of his last work is written in the tone of serious, if not fervent, religious belief. Modern critics of the Whigs are constantly misled by confounding a want of religious sentiment with want of religious belief, and by the idea that men necessarily disbelieve dogmas to which as a matter of fact they attached but little importance. Another point which Lord Russell's work brings into marked prominence is the extent to which he, in common with all the orthodox persons of his generation, grounded his religious views directly upon the Bible. He places as a motto to his essays the following sentence from Dr. Jortin: "The Scriptures, say the Protestants, are the only rule of faith in matters pertaining to revealed religion, and they say well. There is no other Christianity than this, no other centre of union than this. Whatsoever is not clearly delivered there may be true, but cannot be important." He takes care to insist upon the error of believing in verbal inspiration; nevertheless, practically, if not in theory, he regards the Bible, not as a collection of many books written by many authors, at different times and under different circumstances, but as one consecutive work, containing a complete scheme of religion, which can be discovered from the book itself, and neither derives nor needs any additional support from church authority.

The religion to be derived from the Bible he thus sums up in a creed, which is at any rate clear and succinct: "The religion of Christ has three main foundations. 1. God is a spirit, the maker of heaven and earth. 2. Christ was sent from God, and revealed to men the message of God. 3. Christ died for mankind. The miracles of Christ were performed by him and ended with his life. The gift of miracles was continued to his apostles, as we are informed in the Acts of the Apostles." These are the essentials of Christianity. The subsequent history of the Church is the record of the mode in which these essential truths were overlaid and corrupted by the growth of dogma. The Council of Nice left "the beaten roads of the early Christians to wander through the pathless forests of controversy and ascend the heights of a new heaven." In the struggle between Athanasius and his opponents, "the spirit of Christianity was lost, and man was taught to hate his neighbor and to exalt himself." In perfect consistency with his general view of religion, Lord Russell, while sympathizing with the Reformation, denounces with the utmost vehemence the "rancor, the treachery, and the persecuting spirit of Calvin." "It appears to me," he writes of Calvinistic theology, "that, like the adherents of the so-called Athanasian Creed, the followers of Calvin, in their attempts to magnify the glory of Christ, neglect to extend their researches into the entire history of the life, the teaching, the declarations, the promises, the character of their divine Master." Now, to the expressions in which Lord Russell clothes his belief, few Christians of whatever school could, as far as the mere words go, take exception. But every intelligent reader can see at once that the creed in which Lord Russell was educated does not exactly correspond with any of the prevailing forms of belief or of unbelief. His position and that of the party to which he belonged may pretty fairly be thus summed up:

> Christianity is a divinely-revealed system of morals to be found in the pages of the Bible. It is a system revealed from heaven, and proved to be true, both by its intrinsic character and by the miracles of its founder. It is further a system perfectly in harmony with natural good sense. The dogmas which have grown up around this system are, comparatively speaking, of minor importance. Those of them which can be proved from the Bible, or, in other words, which are admitted by orthodox Protestant bodies, are true. Those doctrines which cannot be proved from the Bible, or, in other words, which are not admitted by orthodox Protestant sects, are untrue, and may be treated as superstition. In any case, metaphysical dogmas, true or untrue, are matters of slight moment, equally foreign to the instincts of sound piety and of plain common sense. The perverted ingenuity of logicians, the rash enthusiasm of the multitude, have constantly tended to give an undue prominence to speculative theology. Men of enlightenment and education, to whatever communion they nominally belong, are gradually learning to neglect rather than reject the study of dogmas, and to confine their attention to the practical side of religion.

We do not think that any one who studies Lord Russell's book will hold that this is an unfair summary of his religious views, and few persons at all versed in the literature of the last century will dispute that it represents roughly the tone of thought prevalent among educated persons, whether Whigs or Tories, at the time when Lord Russell imbibed the ideas which have influenced his whole political career. The theology of that period could not, in England at least, be called sceptical. It might be fairly described as the Christianity of common sense.

It is easy enough to see the weak points of this common-sense creed. Like most of the speculations of the last century, it is marred by erroneous views of history. No modern thinker, of whatever school, would admit that the dogmatic and the practical teaching of Christianity could be severed in that easy, off-hand manner which Lord Russell's favorite theologians naturally enough adopted. Another point on which this creed would indubitably be assailed by most English Churchmen, is that it involves the assumption that the whole history of the church is the history of a long deviation from the path of truth, to which, under the guidance of rational piety, we are at last returning. No Calvinist, again, would for a moment admit that Lord Russell gave anything like an adequate account of Calvinism, and Anglicans would maintain that he struggled in vain to make the theology of the Church of England square with Whig latitudinarianism. The main objection, however, to this view of religion is one which at once strikes any modern critic, whatever may happen to be his individual convictions. It makes the assumption that the influence both of theological dogmas and of religious enthusiasm is yielding to the progress of general enlightenment. This assumption was almost universally made by the politicians of the last and preceding generation. We find it in the works of Burke, in the speeches of Erskine, in the writings of the Edinburgh Reviewers, and in the books of a man so little given to scepticism as Sir Walter Scott. The present generation know from experience that this assumption was to a great extent unsound. At this moment, religious differences are convulsing the continent of Europe, and underlie half, at least, of the most important questions which agitate English politics. It would be a less arduous undertaking to change the English monarchy into a republic than seriously to modify the creed of the Church of England. Theological dogmas may be untrue, but no practical politician can treat them as unimportant.

The defects of Whig theology are easy enough to perceive. It is of more importance to appreciate its real merits. The predominant characteristics of Lord Russell's own religious speculations and of the religious views of his party are common sense, honesty, and fearlessness. It may be quite true that he and they underrated the influence of theology; but he and they after all

placed themselves on very firm ground when they asserted the importance of religious morality, and boldly denied that you can divorce religion from sound sense. It is this conviction, that true religion is conformable to reason, which gives Lord Russell's theology at once its honesty and its fearlessness. It is refreshing, at a time when a religious politician like Mr. Gladstone finds it impossible to answer straight off the very simple question, Are you a Roman Catholic? and when a host of Protestant writers are occupied in showing up sympathetically the good side of Roman Catholic errors, to find a statesman who can roundly denounce Popery on the simple ground that its doctrines are untrue, and can feel that the claims of the Pope are disposed of by simply stating in their nakedness the propositions of the Syllabus. At a time, again, when we are told by all kinds of writers that no political economist can be a Christian, one feels a respect for the teacher who dwells on the obvious but apparently forgotten truth that it is absurd to presume that "a man who has learned political economy, and has adopted the policy of modern days, disregards or disbelieves the Christian religion," and that "it is not because a man is so far a free-trader as to admit that corn and cotton and wool and silk may pass freely from one country to another that he loses sight of religious obligations." When, again, one sees a prime minister showing at once his terror and his ignorance by feeble invectives against German free-thinkers, it is impossible not to sympathize with a writer who feels "sure the truth will ultimately be the gainer from freedom of discussion," and not to perceive that modern religion has still something to learn from the rational theology of the last century.

MASSON'S LIFE OF MILTON.—VOL. III.*

THE faults of Mr. Masson's 'Life of Milton'—the elaborate and ungraceful efforts at ease of style, and the lack of due proportion between history and biography—are already so familiar to the reading public that it is necessary to say nothing more about them here than that the latter of them is far less apparent in this volume than in either of the two preceding. Whether from the nature of the facts, or from deference to criticism, it contains more of Milton than the others, in proportion to the entire bulk. Moreover, Milton's life and labors during the period here treated were far more interesting and valuable than during the previous one. He wrote little poetry, but several of his most famous prose works belong here—his Divorce tracts, the treatise on Education, and, above all, the 'Areopagitica.' Here also belongs the first collected edition of his works, as well prose as poetry. He still lived in comparative retirement, teaching for a livelihood, and preparing himself for that public career which will come within the scope of the next volume.

The history of the times, too, which after all occupies considerably more space than the biography proper, is on the whole more interesting than that of the previous volume; it covers in general the period from Marston Moor to the death of Charles. Military events are told rather cursorily, but the political history with great minuteness. These chapters embody the results of an immense amount of conscientious labor, and are marked by industry, sagacity, and impartiality. It is certain that Milton's literary career cannot be understood except in the light of these events; and if Mr. Masson has erred in an excess of fulness, better this than the opposite fault. He might very well have passed over the military history of the time with only an incidental mention, and we see no reason for a detailed account of the king's trial and execution; but the great battle between Presbyterianism and Independency, in Parliament, Westminster Assembly, army and literature, deserved all the study he has given to it and nearly all the space it occupies in the book. The history of Milton's own mind is, in truth, a type of that of the nation. We saw him in the last volume a Presbyterian, laboring in the establishment of the Presbyterian organization in England; here he appears as a radical Independent, and an efficient worker in the triumph of Independency. Most of his writings during these years have a more or less direct bearing upon this controversy.

The subject made most prominent in this volume is therefore the contest between two systems of church government, one of which was an organization, while the other embodied the extreme principle of individualism—a contest not inferior in significance to that between the Presbyterian organism and the hierarchical one which it had overthrown. And no less than in the painstaking analysis of the struggle in its successive phases, Mr. Masson deserves our thanks for bringing out the prominent share which the principle of toleration exercised in it. All the more so, as the public mind is beginning to be a little befogged as to the grounds on which this great principle rests. At a time when one writer clamors for "Catholicism in its strength"—that is, the Spanish Inquisition—as a panacea for all social diseases; when a vigorous upholder of the Church of England declares that there is no difference, in point of principle, between the Spanish Inquisition and the assessment of a penny tax for the support of a national church—that is, that logically a religious organization demands absolute unanimity in matters of faith; and when it is beginning to be commonly assumed that any sincere and earnest religious faith, Catholic or Protestant, can have no choice but to persecute, it is time to go back to the foundation, and see whether it is true that toleration means indifference. Doubtless there have been men who persecuted out of pure mercy, and who lighted the fagots with a heart full of love; perhaps we ought in charity to believe that it is so as a rule. Our charity does not extend so far, however. It is hard to get at real motives, and motives are at any rate seldom unmixed; but we fully believe that for one who persecutes out of pure love for his victim, there are ten with whom the leading motive is intellectual pride or offended conceit, or some lower motive still. It is hatred, not love. After all, Mr. Mill hit the nail on the head when he declared that the spirit of persecution was, at bottom, nothing more nor less than a personal claim of infallibility. In these pages of Mr. Masson's relating to the early history of toleration, it is refreshing to find men who were heartily in earnest in their own convictions, and yet broadly tolerant of those of others; still more satisfactory to find in how large a degree the controversy was waged on this very issue of toleration. No doubt, as he says, it was in most cases the personal experience of intolerance that taught the beauty of tolerance; there are not many, on any subject, who have the capacity to arrive at just abstract principles, except from very concrete examples. "Every persecuted cause claimed at least a toleration for itself from the established power; and so, by a kind of accumulation, the cause that had been last persecuted had more of a tendency to toleration in it, and became practically more tolerant than the others" (p. 100). None the less credit to them for this, if the tolerance was real; and the reader heartily accepts the writer's eulogy upon Roger Williams as the apostle, in the seventeenth century, of this great principle, and as one of whom Americans may well be proud.

Nevertheless, true as it is that toleration is historically the child of persecution, it is none the less true that "the principle of religious liberty is almost logically [he might have omitted the 'almost'] bound up with the theory of the independency of particular churches." Protestantism is not in theory favorable to free thought; it pretends to be the authoritative substitution of a true system of dogmas for a false one. The Protestant organizations, therefore, did not differ in principle from the Catholic organization in respect to the right of controlling private thought; if they were more tolerant, it was simply because their circumstances required it, and especially because their very existence, whether they acknowledged it or not, was a recognition of the right of freedom of thought. But Independency necessarily implied withdrawal from all religious organizations; that is, its very essence was the voluntary grouping of individuals into loose organizations of a purely voluntary character, as opposed to the great, compact, coercive organizations of Episcopacy and Presbyterianism. This voluntary grouping was inconsistent with anything but complete freedom of thought. The character of the Independency which thus fought the battle of toleration in the seventeenth century is graphically described in one of Mr. Masson's best paragraphs. It is in relation to Cromwell's army:

"The common conception of an army of fanatics is that of an army mad for one set of tenets. Now the Parliamentary army was really, as the Presbyterians called it, an Army of Sectaries. It was a miscellany of all the forms of Puritan belief known in England, with forms of belief included that were not Puritan. The much largest proportion, after Presbyterians, of whom there were many, and ordinary Independents, of whom there were more, were Sectaries of the fervid and devout sorts, such as Baptists, Old Brownists, and Antinomians, with mystical Millenaries and Seekers, all passionately Scriptural, saturated with the language and history of the Old Testament, and zealously Anti-Romanist and Anti-Prelatic; and these, on the whole, were the men after Cromwell's heart. . . . But there were also in the army Sectaries of a cooler or easier order—Arminians, Anti-Sabbatarians, Anti-Scripturists, Familists, and Sceptics. Hardly a form of odd opinion mentioned in our conspectus of English Sects in a former chapter but had representatives in the army; nay, new speculative oddities had broken out in some regiments; and it may be doubted whether, even in the English mind of our own time, there is any form of speculation so peculiar as not to have had its prototype or lineal progenitor in that mass of steel-clad theorists contemporary with the Westminster Assembly. Nor did each man keep his theory to himself. There were constant prayer-meetings in companies and regiments, and meetings for theological debate; troopers or foot-soldiers off duty would expound or harangue to their fellows in camp, or even from the pulpits of parish churches when such were convenient; whenever the army halted, there was a hum of holding-forth. There were army chaplains, it is true, and some of them, such as Peters, Dell, and Saltmarsh, great favorites; but, on the whole, the regular cloth was in disrepute; those who belonged to it were spoken of as the *Levites*, or priests by profession. The need of such a profession was voted obsolete, and every man was held to be as good for the preaching office as any other, if he had the preaching gift. .

* 'The Life of John Milton: Narrated in Connection with the Political, Ecclesiastical, and Literary History of his Time. By David Masson, M.A., LL.D., Professor of Rhetoric and English Literature in the University of Edinburgh.' Vol. III. 1643-1649. London and New York: Macmillan & Co. 1873. 8vo, pp. 729.

. . . That extreme kind of Independency had become common which repudiated a National Church of any kind whatsoever, nay, denied that there was any church on earth at all, any system of spiritual ordinances visibly from God, anything but a great invisible brotherhood of saints walking in this life's darkness, passionately using meanwhile this symbol and that to feature forth the unimaginable, glad above all in the great glow of the present Bible, but expecting also each soul for itself rays and shafts from the Light beyond. . . . . That absolute doctrine of toleration which Roger Williams had propounded, and which was logically inseparable in his mind from Independency at its purest, had found its largest discipleship in the Parliamentary army. Toleration to some extent was the universal army tenet; even the Presbyterians of the army, with some exceptions, had learnt to be Tolerationists in some degree. But a very full principle of toleration had possessed most, and the most absolute possible principle was avowed by many" (p. 522).

When this was the prevailing temper of the time, the leading principle of that body of men which conquered the kingdom for itself, it is easy to see how closely Milton's thoughts, during these years, followed with the community. His doctrine of divorce was the most daring of the heresies of the day; his 'Areopagitica' was the noblest expression of the theory of toleration in one of its chief aspects, and his plan of education was novel and radical. The few poems of this period, too, bore for the most part in the same direction.

This volume, like the earlier ones, has a feature of great value, in the sketches of literary men with whom Milton came in some way in contact—names of moment in their own day, but now almost forgotten. Even where these sketches exaggerate the general want of proportion by reason of their length and the slight direct bearing upon the life of the poet, we should be sorry to spare them. The long sketch of John Amos Comenius, for example, whom Milton does not seem even to have seen, is warranted by the fact that Milton's tract on Education appears to have been in part suggested by the speculations of Comenius on the same subject. Other interesting sketches are those of Samuel Hartlib, to whom this tract is dedicated, and of Humphrey Moseley the bookseller, who published the first collected edition of Milton's works; not to mention the abstract, p. 446, of literary publications between 1640 and 1646. The long delay in the publication of this volume, which was promised two years ago, is a proof of the careful labor of the author. No intimation is given when another instalment of the work may be expected.

Columbus, Ohio: Its History, Resources, and Progress. By Jacob H. Studer. (Cincinnati: Robert Clarke & Co. 1873.)—Columbus is only about sixty years old, having been founded in 1812, and at the time it was laid out its site was covered with a dense forest, so that for several years afterwards "its streets were so obstructed by stumps, brush, and logs that teams were obliged to move in zigzag directions in order to get around these obstacles." The history of such a town naturally consists of little else than an unexciting narrative of material progress and growth in population. The only antiquities of which Columbus can boast are the Indian mound which has given a name to one of its streets, and to which the chronicler alludes as "noted," without troubling himself to go into particulars. Another opportunity for an entertaining episode is equally neglected. The city was located on what were called the "refugee lands," from the fact that they had been "appropriated by Congress for the benefit of persons from Canada and Nova Scotia, who, in our Revolutionary War, espoused the cause of the revolted colonies"; and, more precisely, located, in part at least, on a certain half-section of which the title subsequently came into dispute, but which Congress had granted originally to "one Allen, a refugee from the British North American Provinces in the time of the Revolution." Very inadequate mention is here made of a remarkable character, Col. John Allan, who was a refugee only in the sense that he left Nova Scotia and repaired to Maine with a view either to conquer and annex the province (which then included New Brunswick) to the colonies, or, failing in that, to hold the extreme eastern boundary of the latter against British invasion. Many circumstances favored the bolder enterprise, and it was honestly attempted, but success was reserved for its alternative—no common undertaking either, nor without its risks and difficulties. Until the appearance of Kidder's 'Eastern Maine and Nova Scotia in the Revolution' (Albany, 1867), this brave frontier-work was scarcely known, much less appreciated. As the Ohio land was the nation's acknowledgment of its indebtedness to Col. Allan, the main facts in his career were worthy of a note in Mr. Studer's 'History,' more especially as this is the only historical name with which Columbus has anything more than an accidental association.

The laying-out of the State capital was a real-estate speculation which proved legitimately profitable to the four proprietors who united in it, but the fortunes acquired were soon lost in the case of all but one. A part of their engagement was the construction of a State-house. Over the west door was inserted in the wall a stone slab bearing an inscription from Barlow, in which these two lines occur:

> "Equality your first firm-grounded stand,
> Then free elections, then your federal band."

They had been already engraved when brought to the attention of Mr. Ludlow, the State superintendent in the construction of public buildings. "He was a staunch Democrat of the old school, with a rooted dislike to the use of the word 'federal,' except as the name of the opposing political party." "Federal band" of course could only refer to the Union, but Mr. Ludlow would leave nothing to interpretation. He had the word "federal" plastered over, and the word "union" cut in its place. Time, with a due regard to poetic justice, crumbled away the cement, and allowed Barlow's verse to shine out in all its integrity. Mr. Ludlow put his own ideas in the form of verse on another stone, placed over the east door. They will hardly be immortal as poetry, but as political doctrine they are better than anything the Democratic party has professed or practised since they were written:

> "General good, the object of legislation,
> Perfected by a knowledge of man's wants
> And nature's abounding means applied,
> Establishing principles opposed to monopoly."

In the anti-slavery struggle there was an incident which will always reflect credit on Columbus and on the State. A colored man, Jerry Finney, long a resident of the city and known to everybody, was kidnapped in March, 1846, and carried back to his professed owner in Kentucky, on the peremptory order of a wretched justice of the peace in a neighboring town. Those engaged in the seizure were promptly indicted in the county court, and one of them was convicted; but he afterwards escaped, on account of an informality in the trial. The State Legislature, moreover, authorized an eminent lawyer to institute legal proceedings in Kentucky calculated to result in the liberation of Jerry. The result was what might have been anticipated, except that the Ohio advocate did not meet with the fate of Mr. Hoar in South Carolina. Finally, money was raised to ransom the victim, who died of consumption shortly after he was restored to his family.

Columbus owed its existence to the need of a central position for the capital, but it has long since ceased to depend for its importance on the fact of its being the seat of government. Already it asserts itself the third city in Ohio, outranking Toledo; and its proximity to the great mineral deposits of the State, the rapid development of its manufactures, and its multiplying railroad connections, all justify its expectations of a still more striking increase than in the past. Its population, which in 1815 was 700, and in 1860 18,554, had become in 1870 31,274. Though considered a healthy city and well policed, it has had several severe visitations of the cholera, one of them making frightful havoc with the inmates of the penitentiary. The public schools of Columbus appear to be handsomely maintained, but its public library is as yet feeble enough.

Mr. Studer's 'History' is composed with method and intelligence, and is accompanied by a good map; but it is much in need of an index, especially of names.

Earnest Words on True Success in Life, addressed to Young Men and Women. By Ray Palmer. (New York and Chicago: A. S. Barnes & Co. 1873.)—This small volume contains essays, or rather letters, for they were all first addressed to young men and women *viva voce*, on such subjects as characteristics of youth, causes of failure in life, self-culture, false views of life, the law of habit, the danger of indulgence in little sins, the choice of a life-work, moral courage, true greatness according to Christ, and Christian character as an aid to success. While we do not entirely sympathize with Dr. Palmer in all his views on what may be called the discipline of life, we are glad to be able to say a good word for his book, as being free from the more offensive faults with which books of the morally suasive order are generally stuffed. We do not find, for instance, in looking through the pages, the dreadful warning addressed in one of Dr. Eddy's works to young men, in which they were informed, in the most startling kind of rhetoric, that the line which divided the once-tasted wine-cup from the gallows was a narrow hair's-breadth, almost invisible to the naked eye—a warning which would certainly have a tendency to incline the youth who had been so unfortunate as to have once tasted the cup to believe that it was in all probability up with him in any event, and that as he was already marked as prey for the common hangman, he might as well in the interval enjoy life in the most iniquitous manner he could. There is little or none of this exaggeration in Mr. Palmer's lectures; but we find on page 68 an instance of a minor fault almost as frequent, that of weak illustration. In speaking of the importance of prescribing for one's conduct fixed rules, he selects as a proof of it the supposed case of a person travelling abroad who finds himself on a

fine Sabbath morning in Paris—a bad city, as somebody once said, for deacons. A servant takes an early opportunity to inform him that there will be a full exhibition of the "splendid water-works at Versailles," and, as they are exhibited on Sundays and the greater holidays only, he will have no other opportunity to see them. The servant adds, apparently with a deep malice, that "the Americans generally in the hotel are going." Mr. Palmer then asks triumphantly, whether if you have not fixed principles on the subject you will not probably go. Probably you will; and perhaps the most devout Sabbatarian would hardly think it worth while to have principles firmly established beforehand on the subject of going to see the Versailles water-works on such an occasion as this. If he does, we hardly know how he will be able to get through life at all, either in Paris or out of it.

Franklin Square, New York.

JAMES R. OSGOOD & CO.'S

NEW BOOKS.

CHURCH AND STATE IN THE United States. By Joseph P. Thompson, D.D. 1 vol. 16mo, $1 50.

This important work was originally prepared by request of an eminent civil officer in Prussia for the use of Prince Bismarck, who sent Dr. Thompson "his warmest thanks for the very valuable information, which he had read with great interest." It treats of the fundamental principles of Religious Liberty; sketches the early religious history of Virginia, New York, Plymouth, and Massachusetts Colonies; gives the laws for Churches in the States, modes of organization and action, the financial and moral results, and special information concerning Mormons, the Chinese in this country, Roman Catholics, etc.

Dr. Thompson's eminent ability, his familiar acquaintance with the religious history of America, and his loyal belief in the American type of religious liberty, render his work peculiarly valuable. It has already been published in Germany, where it has excited a profound interest. The *Volks-Zeitung*, of Berlin, says:

"We emphatically give it as our opinion that for a long period of years we have met with no publication on this subject which has so entirely aroused and gratified us as this clear and well-considered work, supported and elucidated as it is throughout by facts and leading principles."

WHITE ROSE AND RED. A Love Story in Verse. By the Author of 'Saint Abe and his Seven Wives.' 1 vol. 16mo, $1 50.

This charming story in verse, rumored to be the work of Mr. Robert Buchanan, relates how Eureka Hart, of Maine, a rover, tiring of civilization at Drowsieville, wandered into the wilderness, and found the "Red Rose," a beautiful Indian girl. After wearying of her and wilderness life, he returned to Drowsieville, where he found the "White Rose," pretty Phœbe Cattison, whom he married. The *Literary World* says: "While in effect a lively narrative, enlivened by touches of fine humor, it contains many passages of remarkable vigor, and some scenes of exquisite pathos. The freshness of its theme, its robustly-imaginative treatment, and the charm of its movement, will probably secure for it a wide reading and great popularity."

WHITTIER'S POEMS. One vol. Merrimack Edition. Uniform with the one-volume Farringford Tennyson. 12mo, beautifully printed, tastefully bound, full gilt, $4.

A very desirable edition for public or private libraries.

CHRISTUS. Comprising 'The Divine Tragedy,' 'The Golden Legend,' and 'New England Tragedies.' By H. W. Longfellow. Diamond Edition. 1 vol., $1.

Uniform with the popular Diamond Longfellow, Tennyson, Whittier, Lowell, Scott. An edition for the million, of a work unique in character and of enduring interest.

BRYANT'S HOMER'S ILIAD. One volume, Roslyn Edition. Uniform with the Farringford Tennyson. 12mo, bevelled boards, full gilt, $4.

An excellent library edition of this incomparable translation of the greatest poem of antiquity.

THE WEEK IN TRADE AND FINANCE.

SEPTEMBER 1, 1873.

THE demand for money has been rather more active, and there is a noticeable hardening of rates. The demand has been supplied during the week at 4 and 5 per cent., with the bulk of business at the last-named figure. At times money loaned higher than at the rates above quoted—Tuesday, 7 per cent. gold being paid in some instances; but 5 per cent. was about the ruling rate on stock collaterals.

Foreign advices are favorable. The bank rate in London remains standing at 3 per cent. The Bank of England lost £100,000 in bullion last week, while the Bank of France gained 1,000,000 francs.

The bank statement for the week ending August 30 is again unfavorable, showing a considerable loss in the total reserve, made up of both specie and legal tenders. By the figures published below, it will be seen that the total reserve has fallen off $2,852,100, and the total liabilities have decreased $7,233,500. The surplus reserve now stands at $5,906,450, against $6,950,175 last week—a falling off of $1,043,725. The following are the statements of the past two weeks:

	August 23.	August 30.	Differences.
Loans	$289 931,800	$288,883,000	Dec. $1,048 800
Specie	25.144 400	23,095,200	Dec. 2,049,000
Circulation	27,214 400	27 281,900	Inc. 67,500
Deposits	227,691,300	220,390,300	Dec. 7.301.000
Legal Tenders	45,532,400	44,729,300	Dec. 803 100

The following shows the relation between the total reserve and the total liabilities:

	August 23.	August 30.	Differences.
Specie	$25,144 200	$23,095,200	Dec. $2,049,000
Legal tenders	45,532,400	44,729,300	Dec. 803,100
Total reserve	$70,676,600	$67,824,500	Dec $2,852,100
Circulation	27,214,400	27.281,900	Inc. 67.500
Deposits	227,691,300	220,390,300	Dec. 7,301,000
Total liabilities	$254,905,700	$247,672,200	Dec. $7,233,500
25 per cent. reserve	63,726,425	61,918,050	
Excess over legal reserve	6,950,175	5,906,450	Dec. 1,043,725

The following table separates the National from the State banks:

	National.	State.	Total.
Loans	$248,667,200	$40,215,800	$288.883,000
Specie	20,823,400	2,271.800	23 095,200
Legal tenders	39,988.000	4,741,300	44,729,300
Deposits	190.467,500	29,922 800	220.390,300
Circulation	27,249,700	32,200	27 281,900
Percentage of reserve to total liabilities	31 15-100 p.c.	23 41-100 p.c.	27 38-100 p.c.

The stock market at times showed considerable activity in a few speculative stocks, such as Western Union Telegraph and Pacific Mail, but beyond these, the sales for the week were light, and very little interest has been shown in the future course of prices outside of the few professional operators and speculative brokers who have remained in town. The Pacific Mail S. S. Co. have at last succeeded in borrowing some money, which will undoubtedly be of great assistance to the Company. The amount borrowed was $500,000, the lender being the Panama R. R. Co., which takes a bill of sale of six of the steamers, with the understanding that the Steamship Company has the right to take the steamers back upon payment of the loan, interest, and insurance.

Western Union Telegraph improved from the low quotations made during the early part of the week, and sold at 92¼ on Friday. At the close on Saturday, it again fell off, as did the quotations of almost everything else on the list. The negotiation of the loan for the Pacific Mail did not seem to help the market for the stock at all, as the price declined to 43⅜ on Saturday, after having been 45½ on Wednesday. The balance of the list has been very dull, and reference to the figures given in the following statement will show that no important changes have taken place.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending August 30, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales.
N. Y. C. & H. R.	104¼ 104⅝	104¼ 104¼	104¼ 104⅝	104⅝ 104⅞	104⅝ 105	104⅛ 104⅝	15,800

Business at the exchange in State bonds has been limited, only a few sales of Virginias and Tennessees being recorded. Railroad bonds of the better class have remained firm and in good demand.

Government securities have fluctuated in sympathy with the change in the gold premium, but the general tone of the market has been firm. European orders to buy continue to flow in, but the same difficulty in executing them is experienced which we have had occasion to notice for a long time past.

The gold market has taken up the great part of the attention of the Street. The fight between the bulls and bears is very warm, and the former, so far as the quotations indicate, have got the worst of it—the price on Monday, 116⅛, not being maintained. The closing price on Saturday was 115⅜; the lowest point reached was 115¼, Wednesday, and the highest 116⅛, Monday. Nearly $9,000,000 gold was bid for at the Treasury sale Thursday, and the $1,500,000 was awarded at 115.40 to one party. The Treasury programme for September includes a sale of $6,000,000 gold; $1,500,000 on each Thursday, and a purchase of $500,000 bonds on Wednesday, 17th inst.

OFFICE OF FISK & HATCH,
No. 5 Nassau Street, New York, Sept. 1, 1873.

☞ The CHESAPEAKE AND OHIO RAILROAD, now completed and in regular operation. To increase its Equipment, and perfect its Terminal facilities and Deep-water connections with European Steamship Lines, and to accommodate the heavy Coal and Mineral Traffic, together with the growing Iron and Miscellaneous Local and Through Business now pressing upon the Line, we are selling on behalf of the Company a limited amount of their SEVEN PER CENT. GOLD BONDS, secured by mortgage liens on the whole valuable property, at 90 and accrued interest; $1,000 each, either coupon or registered, payable in gold coin, in New York City, principal and interest; interest Jan. 1 and July 1.

We also have a small amount of the OLD SIX PER CENT. GOLD BONDS OF THE CHESAPEAKE AND OHIO; the price of these is 88¼ and accrued interest. They are issued in denominations of $100, $500, and $1,000, interest payable May and November. The property has cost already upwards of $38,000,000, and is constantly increasing in value. We can recommend both classes of bonds, which are selling rapidly, with great confidence.

We also continue to deal in Government and Central Pacific and Western Pacific Bonds, execute orders at the Stock Exchange for investment Stocks and Bonds, receive deposits, on which we allow interest at the rate of four per cent. per annum, and conduct a general banking business.

NEW YORK, THURSDAY, SEPTEMBER 11, 1873.

The Week.

THE election in Maine took place on Monday, with a light vote and with the usual result. It was without significance unless for the Democratic party, but the lesson of repeated and overwhelming defeat has long since been lost on them in Maine as in Massachusetts and other Republican strongholds. We ought to except Iowa, where the party has made a sort of formal abdication this year. By-and-by, we suppose, Democrats will learn that their old name and their old organization are about as useful to them as a convict's striped clothing would be in an application for a bank clerkship. The Butler canvass in Massachusetts is at an end as we write, and its fate is in the hands of the Convention at Worcester, to which, with his usual effrontery, General Butler has had himself elected as a delegate. The last days of the struggle have been signalized by Mr. Dawes's taking the stump in opposition to Butler, and by some very plain talk addressed to the Administration by the Boston *Daily Advertiser*. Mr. Dawes, with characteristic want of backbone, declared himself prepared to support the nominee of the Convention, whoever he might be, on the ground that the "party" was more than any man—one of those glittering generalities which imply a want of principle in the person who utters them, and a want of intelligence in the persons addressed. The bold and decisive tone of the *Advertiser* was in striking contrast with that which it has usually maintained towards the Administration and the more unscrupulous leaders of the Republican party, and was certainly very refreshing to those to whom Boston journalism has seemed only tame and timid, and without a mind of its own in political discussion. California politics are a good deal mixed, and for the present at least party lines are obliterated. The late election was for members of the Legislature, and as the Central Pacific Railroad is believed to have had altogether too great an influence on that body, and to have secured by means of it a devoted servant in the Senate of the United States, there was a strenuous effort made to choose anti-railroad representatives. This the party opposed to monopoly, which seems to have been largely composed of Republicans, succeeded in doing; and we believe the returns leave it not doubtful that Senator Casserly's place will be filled by some one not suspected or not capable of favoring the railroad interest. Governor Booth is named as a probable candidate.

Mr. S. M. Smith, Secretary of the Farmers' State Association of Illinois, has made a speech at Carollton, which is one of the saddest products of a great political revolution that we have seen for a long time. Early in August, Mr. Smith made a speech at Winchester, which he says was misinterpreted, and he wishes to have this Carollton address taken as a studied and deliberate expression of his and his fellow-farmers' views. In the first place, he says that threats of "blood and anarchy" did not make part of his Carollton speech; that he did not say that he "would take his boys and go to the State capital and help ride the villains out on a rail"; if he had mentioned the subject, he would merely have said that they deserved such treatment, and what he did say was that "he was very much inclined" to adopt some such punishment for the members as rail and tar and feathers; what he said to his boys was, that "when he was a boy we used to shoot crows and hang them upon a pole in the corn-field as a terror to evil-doers," and that "perhaps the time might come when, if every other remedy failed, we might hang some men about the country in that same way as a terror to evil-doers"; but he believed the true remedy was the ballot-box. This is what he, Smith, considers a peaceful method of expression of his preference for the ballot-box, and his enemies have tortured it into threats of blood and anarchy. The rest of the speech is very wild, the speaker going to the extraordinary length of asserting that the farmers of the United States have been obliged to pay (in interest on mortgages) ten per cent. on an aggregate sum of $1,500,000,000, while only getting three and a half per cent. from their farms. On what they have supported themselves and their families, he does not explain.

The most curious part of his address, however, is that in which he attacks the "ploughmen"—not the ploughmen who follow, but those who make, the plough. These men, it seems, have an annual convention, in which they fix the price of ploughs, not according to the state of the market, but just as the railroad men fix the rates of transportation, and, moreover, just as the pork-packers fix the price of pork. Col. Coleman, Mr. Smith says, "called these pork men scoundrels," and he believes it to be "a good word." It is not only the railroads, the "ploughmen," and the pork-packers, however, who are imposing on the farmers, but the circuit judges are also in the ring. "Did you ever stop to think," Mr. Smith asks, "that it takes the product of a whole township to feed a judge? One circuit judge eats up all we earn in a township in a year. Is he not a monstrous eater? Is it not time we tried to look into this matter, and see if we could not get some man who would eat less? It costs too much to board that kind of cattle." The only thing for the farmers to do is to form a combination, and then it will be combination against combination; and then the farmers must charge half a dollar a bushel without regard to the market, just as the ploughmen and pork-packers charge, and if the poorer farmers feel that they are forced to sell, they must be enabled to "hold on" by a supply of money from the richer farmers; and if the worst comes to the worst, "we can be self-supporting on a farm," as farmers were when Mr. Smith was a boy, when they made their own linen and muslin, and everything they used, and when there were no railroads or pork men, or ploughmen either. Mr. Smith also demands that the farmers be allowed to fix the price of the products of their own labor. Unhappily, this yearning of the farmers is as old as the race. This is what all men in all trades would like to do, but no trade has ever yet succeeded in doing it for any great length of time.

Those who are not themselves within the profession have little knowledge of the difficulties under which journalists labor who make a sincere endeavor to keep the stockholders of large corporations informed of the real value of their property. The Erie Railroad having recently declared a dividend on its preferred and common stock, the *Times* at once published figures showing that the dividend was fraudulent, owing to the fact that the company had no money with which to declare it. In order to give this statement greater authority, the *Times* added that the figures were taken from the company's own books, and that it was of no consequence how they were obtained—the imagination of the reader being by these hints carried back to those other accounts which the *Times* obtained in an equally mysterious manner, and which, if we remember right, enabled it to trample in the dust the power of a corrupt ring composed of Tweed, Sweeny, Hall, and Connolly, who formerly ruled this city. The *Times* then went on to point out that this dividend (declared on a deficit of $1,691,506) showed Erie to be "rotten to the core," and in conclusion offered to pay over $10,000 to any charity in this city if they could not, from the books of the company, prove to the satisfaction of a committee of experts that the dividend even on the preferred stock alone was fraudulent.

This liberal offer on the part of the *Times* seemed to bring the matter to a direct issue, and we fully expected to see the next morning in the *World* that a meeting of the Erie directors had been held over-night for the purpose of nominating Messrs. Vanderbilt, Tracy, and Sloane (these names having been suggested by the *Times*) to serve on the committee. It therefore surprised and interested us

to learn from the columns of the *World* the next day that the figures of the *Times* had been published before in the *Tribune*, and that this attack on Erie was no mere isolated assault, but was part of a concerted movement headed by Jay Gould for the purpose of raising the price of gold, and making a corner in the market. From the statements of the *World*, it seems that while the financial editor of the *Times* is "a gentleman whose unflinching hostility to Jay Gould is well known," the rest of the paper is controlled by "a living jumble of slow perceptions, narrow intelligence, and petty malignity," whose deficiencies have made him fall an easy prey to Jay Gould's malignant schemes, one of which is to throw discredit on all public-spirited journalists who are engaged in preventing a further depreciation of the currency. Putting all these things together, we infer that Gould is really a dangerous man. The *Times* says he owns the *Tribune*, and, according to the *World*, he controls pretty much all the *Times*; and, wielding as he does so large a part of the power of the press, it is certainly singular that he should ever have any difficulty in carrying out his schemes. But the *World* and the *Evening Mail* have beaten him, and between them have forced gold down to 112. Gould is raging impotently in his lair, but there is little reason for him to expect quarter, for the sympathies of the public are wholly with these two journals.

"H. B. B.," in an editorial in the *Woman's Journal* criticising our remarks recently made on the "Condition of Parties," denies that the woman-suffrage movement is dying out, and requests us to give to our readers several facts. The first of these is that "H. B. B." "does not know a single suffragist who has lost faith in the feasibility or efficacy of the reform." The second is that within a year the question has been "under discussion" in the legislatures of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, Delaware, Ohio, Indiana, Illinois, Missouri, Michigan, Iowa, Kansas, California and Oregon, Kentucky and South Carolina; possibly in other States also; that it has been the subject of two bills offered in Congress, and Senator Frelinghuysen's attempt to repeal it in Utah has been defeated; that the Republican party everywhere is pledged to its "respectful consideration," and, in Massachusetts, has declared itself in its favor; that in Iowa and Michigan it obtained a majority of votes in one branch of the legislature, and in Michigan it failed in the other branch only for lack of a quorum. Besides this, "H. B. B." wishes to have it stated that Mrs. Woodhull has never held office in either the American or the National Woman Suffrage Societies. In reply to this, we have to say, first, that we ourselves know of a great many once ardent suffragists who have in these latter days abandoned the movement completely, some having been caught in the meshes of matrimony, while others have fallen by the way in sheer weariness of the flesh; secondly, that a subject being "under discussion" in a State legislature proves little, inasmuch as there is no subject, from the existence of God down to the inspection of tooth-brushes, which cannot be brought under discussion in a State legislature if some member chooses to bring it up. In the third place, the "respectful consideration" of the Republican party is and will be at the disposal of any one who thinks it worth while to ask it as long as the Republican party continues to exist. The Woman Suffrage party certainly have reason to congratulate themselves on the repudiation of Woodhull, but this alone, in the minds of most men, will hardly entitle them to the suffrage.

Judge Colvin, of the St. Louis Court of Criminal Correction, has rendered a decision declaring the "social evil" law of that city invalid, on several grounds: 1st, that the law virtually permits in St. Louis acts which the general laws of the State make criminal; 2d, that the ordinance is unconstitutional, being *contra bonos mores* and the spirit of Christianity; 3d, that it is unconstitutional as being a special law, whereas the end in view could have been effected by a general law. The case, it is said, will be taken up to the Supreme Court. Apart from all questions of morality and decency, it seems obvious that any efficient regulation of the social evil is very unlikely to prove possible in any American State, for the same reason that the liquor-law system has never proved effective—that the inspection of houses is certain to fall into the hands of careless or corrupt men. The object of the inspection in both cases is to prevent the spread of vice; and the alternative seems to be whether, in the long run, we shall do better to put our trust in such bodies as the State Constabulary of Massachusetts, headed by such men as Major Jones, or in the laws of nature. In France, too, the only country where the social evil has for years been subject to efficient police regulation, it may fairly be doubted whether the health of the population has been improved. It still remains to be proved that medical examination affords any reasonable guaranty of impunity.

The sessions of the Canadian Royal Investigation Commission have begun, but as the witnesses examined are all Government witnesses, there is little hope of anybody but the Administration being satisfied by the result. The newspapers are conducting an investigation of their own, which is much more fruitful. Though they have not the power to examine under oath, they have means which are even more effectual of arriving at the truth. The Montreal *Herald* of the 4th instant published a letter from Sir John A. Macdonald, dated the 1st, to one J. H. Pope, who is implicated in the scandal, in which the former says that he wishes Pope "to see about the election of our candidate for West Montreal," and, "before we take any steps about John Young's appointment," suggests one William Workman as a candidate, and tells Pope to hint to the latter that if he carries West Montreal "we will consider that he has a claim to an early seat in the Senate," and adds that "this is the great object of his [Workman's] ambition." Mr. Pope having written to the Montreal *Witness* to say that he has never received the letter, the *Herald* replies that it has possession of the original, and is ready to exhibit it. On the whole, it seems as if the annexation of Canada, so anxiously desired by certain politicians not long ago, would not have been such an universal blessing as it was painted. Canadian politics and Canadian journalism seem to be wonderfully like American politics and American journalism; if Canada were now an American State, instead of having the satisfaction of gloating over its corrupt condition as we now can, we should be receiving assurances from all sides that its scandalous state was the result of republican institutions introduced by annexation.

The inherent difficulties connected with the education of princes were illustrated in an interesting manner in a speech made by the Prince Imperial at Chiselhurst on the 15th of August—the late Emperor's fête-day. The greatest pains, it will be remembered, have been taken with the education of the Prince, who was surrounded with instructors in every branch of art and science, and taught at the same time to look upon life from the point of view of a prospective emperor. Notwithstanding, or perhaps in consequence of, all this labor, the young man's mind seems to be thoroughly under the influence of modern ideas; for in making his speech on the occasion of this fête, he promised to be faithful to the principle summed up by the founder of the Napoleonic dynasty in these words: "Everything for the people and by the people." The enemies of the dynasty say that the First Emperor never "summed up" anything in these words; that his principle was "everything for the people, but nothing by the people." The Prince Imperial's phrase is evidently derived from a surreptitious reading of Mr. Lincoln's address at Gettysburg. The whole matter seems at this distance unimportant, but in the excited condition of French politics nothing is unimportant, and a phrase from any of the leaders of any one of the four parties in the field is pounced upon by the press as a subject for discussion. More really important than the speech of the Prince Imperial is the article in the *Débats* of John Lemoinne, which is supposed to foreshadow the adhesion of a part of the Left Centre to the Royalists. The Imperialists, who joined the movement for the suppression of Thiers in the hope of

being able to make use of the Right for their own purposes, seem thus far to have been completely outwitted.

M. John Lemoinne enjoys an exceptional position as a journalist, and his article in the *Débats* taunting the Radicals with their mistake in not helping the Conservative Republicans to defend the Republic against the Monarchists, has produced impression enough to draw forth a reply from Gambetta, in which he maintains that the course of the Radicals in the Paris election was rendered expedient, even necessary, by events; that they defeated Rémusat as a rebuke to the Assembly for assuming constituent power, and elected Barodet as a rebuke to the Government for seeking to deprive Lyons of municipal rights. In the meantime, however, most close observers are of opinion that the question of monarchy or republic is practically settled already, and that the monarchy will come before long in one shape or another. Most probably, it will be a rickety affair, not destined to last beyond the customary twenty years; but then this is nothing against any form of government in France. There is a curious change of opinion going on about the Duc d'Aumale. His abstinence from all active participation in affairs during the first two years after his return was treated as a proof of feebleness, or want of energy and enterprise; but those who thought this now begin to accuse him of having lain low and kept dark, waiting for the republican fever to die out, and of now playing a deep game for the restoration of the monarchy. There is still much uncertainty about the "Fusion"; but the probable opinion is that the Count de Chambord's curious devotion to the white flag stops the way.

No little perturbation is manifest in Italy over the reported fusion of Orleanists and Legitimists, and the possible accession of the Comte de Chambord to the throne of France. It is not simply what Henri V. might do to interfere with the affairs of the Peninsula that causes alarm, but the certain effect on the Clerical party in Italy itself of his mere elevation to power, unaccompanied by menaces, or even attended with protestations of innocence of any hostile design. Between their distrust of any such declarations from a bigoted papist like Chambord, and their knowledge of the lengths to which their own Clericals will go with even the shadow of support from abroad, the Italians promise themselves anything but a quiet time in case the French Republic goes down. Estrangement from France, too, leaves Italy no resource but to ally herself once more, and more closely than ever, with Germany; and this in itself is a grief to many minds, such as cherish the obligation to the Second Empire for its part in the unification of the kingdom, and such as desire to see the Latin races hold together. It is noticeable that the Pope is making no sign of great expectations from France, and that he even remains the most moderate of all the priesthood at the Vatican.

The Salmeron Ministry in Spain has fallen after a protracted existence of several weeks, and another has taken its place, with Castelar as President without a portfolio. But the Cortes has virtually resigned its power by making Castelar dictator; and he, it is reported, intends making Espartero or Serrano generalissimo, so that the Republic has at last "swung round the circle," and got back to "the place of beginning"—that is, has attained to the normal condition of Latin republics, in which parliamentary forms are upheld and order maintained by martial law. A better illustration of the embarrassment of the Cortes could hardly be offered than the choice of Castelar as dictator, as he is a man whose reputation is wholly rhetorical, and who has had no administrative experience, and has never given any proof whatever of administrative ability. He announces his intention of calling out an enormous military force; but as he has neither officers nor money nor credit, the troops will probably never appear anywhere but on paper. If they do, and Espartero or Serrano uses them with effect, some great change must have come over the nature of Spanish generals if Castelar does not disappear from the scene in a flood of indignant eloquence. The Carlists are being steadily reinforced by the property-holders and lovers of a quiet life, as the one force in Spain which is held together by an idea or conviction, and, indeed, are only kept back by want of arms. The story that there is an alliance between them and the Intransigentes is on its face improbable. The private accounts of the condition of the country are distressing, and paint a scene of all but complete social dissolution.

The German Government has begun, after a short respite, to enforce the new church laws, and is now fairly at loggerheads with the Catholic bishops. The most obnoxious of these laws was that which required Government approval for the curriculum of all Catholic divinity schools. The bishops having declined to comply, the Government has begun promptly to use the arm of flesh against them. The Bishop of Ermeland has had the Government contribution to the salaries of his chapter cut off. The Bishop of Paderborn no longer receives the Government subsidy in aid of his seminary, and notice has been given to his pupils that they will not be allowed to take charge of any parish. The Bishop of Fulda has had his school closed by the police (which a German correspondent in this country assured us some weeks ago could not be done), and the Bishop of Posen's young men have been informed that the exemption they have hitherto enjoyed from the conscription is at an end, and that they will be required to serve in the ranks. Different penalties are dealt out in different districts, but they are stern and relentless in all. The Archbishop of Cologne is undergoing prosecution for excommunicating some priests without the authority of the civil functionaries, and in one place, where the tolling of the parish bell for a Protestant funeral was forbidden by the bishop, the police had it tolled in spite of him, and in the best manner. Thus far, Bismarck has undoubtedly the best of the fight, and it is now rumored that the bishops will bring up their reserves and close all churches and chapels, which is the nearest approach that can be made in our time to an "interdict." But this would be a dangerous experiment, and will probably not be tried.

The "audience question" in China has been settled in a way not altogether satisfactory to foreign residents. The Emperor, it is true, received the foreign ministers, but he paid them very little attention, reserving that for the Japanese ambassador, Soyeshima; and the Peking *Gazette* studiously referred to the audience in terms which left it to be inferred by the Chinese that the ministers were received with the ancient ceremonial as "tribute-bearers." However, the immediate public of Peking was not likely to be deceived, being well aware of the stand taken on this question by the foreigners, and having gathered in flocks to witness the procession, in which the *green* sedan-chairs of the ministers, and the number of their bearers, were palpable evidences that they did not attend the Emperor in the guise of tributaries. The Emperor himself, too, is said to have been much impressed by the appearance and demeanor of the foreign ministers, and evidently surprised that they were gentlemen and not barbarians. Still, the chief figure in the reception was, as we have intimated, the Japanese Soyeshima, to whom is ascribed the credit of cutting the knot of delay and tergiversation on the part of the Emperor's advisers, and of reducing the issue to "audience or war." When that point was reached, the Chinese succumbed, and the Japanese embassy was only in its rightful position at the head of the foreign ministers at the reception, although this served to mitigate the humiliation of the Government. Soyeshima is a personage of great influence in his own country, and in perfect sympathy with the revolution now in progress there. Should the perilous experiment of imposing almost in a day European customs, forms of government, and modes of thought upon an Asiatic people succeed, it would appear that in Japan the civilized world will have the most efficient helper in breaking down the Chinese exclusiveness and altering the destiny of the Flowery Kingdom.

THE MASSACHUSETTS BUGBEAR.

THE attempt of Mr. B. F. Butler to become Governor of Massachusetts is, of course, mainly the concern of the people of that State, and it is quite true, as we are often told, that "if the people want him they will have him." But his enterprise has, both as a symptom and an illustration, a good deal of interest for the people of other States also, which makes it worth discussing, even though the question of his nomination will have been decided before this reaches our readers. That he will be nominated seems at this writing very unlikely; but if he were nominated, it would have some advantage in furnishing a more complete illustration than his career has yet afforded of the working of the system which has raised him into prominence.

In the meantime, there is all over the country a certain mischievous enjoyment of the perplexity into which his performances have been plunging Republican voters in Massachusetts, partly because he is, as we see him, the work of their own hands—the Republican party in Massachusetts, and especially that portion of it which is now opposing him, having made him what he is; and partly because the Administration, which Massachusetts Republicans have served with unusual fidelity, is doing most to force him on the Convention. The truth is, that at the bottom of the Butler enterprise there lies the belief, which even the best Massachusetts people have cherished, that it was possible to use him as long as they pleased and then cast him aside; that he was, in short, an isolated phenomenon, without incidents or consequences; and that, whenever he got too bad for endurance, all they had to do was to drop him. His character before the war was nearly as well known as it is now. Governor Andrew painted him as accurately as anybody has done since. But during the war he managed to make himself useful in some small ways, and he was accordingly taken up with effusion by his own State. He rendered one service, too, which, as men's minds then were, people were not disposed to consider trifling, in irritating the enemy. The more Jefferson Davis and the British denounced him, the more tenderly Massachusetts people hugged him, and the more lavishly they honored him. The votes of thanks and other tokens of recognition which he has of late been parading at his meetings, were really given him in the main for having, as the Portuguese drill-sergeants say, "made ferocious faces at the enemy." He turned out a delightful, saucy old blackguard, who annoyed the rebels horribly, and kept himself so effectually out of harm's way that they never could lay hands on him. When the war was over, everybody was satisfied he could do no mischief, and as a brassy, audacious creature was needed in Congress, the respectable folks looked on and smiled when the Essex District sent him to Washington. He was accordingly furnished with just the kind of field he needed—a recognized place in politics, with a party organization at his back, and complete freedom from the responsibilities of character. Nobody expected Butler to be honest, decent, or sensible, and Butler revelled in the knowledge of the fact.

He then rapidly began to get control of the bad political elements thrown to the surface by the war. He was the head of the first of the organized attempts made by the jobbers in the Senate to secure the Executive patronage by deposing Johnson through impeachment, and then setting up simple old Mr. Wade as a figure-head, behind whose back, or in whose name, they could divide the spoil. After the failure of that attempt, he determined that if he could not control the Executive, he would keep on good terms with it. He accordingly pocketed the slur cast on him as a military man by General Grant, and became the fast friend and supporter of the new President in and out of Congress. He was thus enabled to acquire very speedily the reputation at least of being a powerful disposer of Federal patronage, and he was soon enabled to support it by putting his creatures in several prominent offices. He strengthened himself still further by spreading in every direction the report that he was a terrible enemy, and this reputation he endeavored to support by systematic falsehood and abuse on the stump and in interviews with reporters. Having thus secured a large following of the needy and unscrupulous adventurers and waiters on Providence, and frightened the timid, refined, and fastidious into letting him alone, he began to play the part of the friend of the "poor and lowly," to use his own cant phrase, and to make speeches throughout Massachusetts such as the lowest class of European demagogues address to peasants. It was while cultivating this field that he began the attack on the bondholders in 1870, and so little was his real character perceived or feared at that period, that he actually enjoyed the support and connivance of some of those who are now holding him up to odium as a public enemy. When Mr. Dana gallantly undertook to face him at the polls, too, the contest seemed to afford nothing but amusement to the respectable gentlemen who are now sounding the tocsin in Boston and Worcester. He has consequently been growing steadily in influence, and even in honor.

For the last two years, his hold on the President and on Congress has been increasing. He has become the mouthpiece of the President in the House; he was deputed—he, the great American Rascal, naturally as it seemed—to the office of deciding one of the most delicate questions of ethics and jurisprudence ever submitted to Congress, the proper rule for the distribution of the *Alabama* damages; and, as might have been expected, he made a report which had knavery in every line. Subsequently, emboldened by success, he "engineered the salary grab," thus putting $100,000 in the President's pocket and attaching to himself, as a leader and confederate, all that was base, unscrupulous, and greedy in both the House and the Senate. After all this, it was not wonderful that he should have gone up to Massachusetts, flushed with confidence, to carry off the Governorship by main force, and should have been able to set the Federal machine at work to aid him almost immediately on his arrival, and should have in a few weeks shown the decent people of the State that it would be at least difficult to defeat him. What is wonderful is, that the decent people should not long ago have foreseen what was coming, and that what is called "the revolt of the *Advertiser*"—a sharp intimation by that paper that the Government was forfeiting the support of Massachusetts—should have been reserved until he had nearly packed the nominating convention with his own tools.

Another thing in the canvass that is surprising many people outside the State is the fact that Massachusetts Republicans should be so very indignant just now over Federal interference in their State election. There is nothing novel or unforeseen about this. The President and his advisers are only doing in Massachusetts what they have long been doing in other States with the connivance or approval of Massachusetts. The meddling in support of Butler is a perfectly natural sequence of the support of Casey and Packard. Butler is in some respects, doubtless, a more objectionable man than Casey, but he is also more useful, and we do not see in principle any difference between the control of Louisiana by Long Branch and Washington politicians and that of Massachusetts. It is sad, doubtless, that Federal patronage in Massachusetts should be in the hands of such worthless busybodies as are now trying to elect Butler; but then, are they not as respectable advisers as our own Murphy, and Bliss, and Davenport? The fact is that our Massachusetts brethren must give up regarding themselves as a peculiar people, who can afford to make light of their neighbors' calamity, and must learn the great lesson that what they wink at in other parts of the country may any day have to be encountered within their own borders. They must learn, too, that men like Butler are living organisms, and grow in all directions—on their bad side just as well as on their useful side. They cannot be dismissed at the convenience of their employers, after having done all the dirty work of the establishment, but have to be provided for to avoid public scandal and barn-burning.

THE CHANGE IN ENGLISH POLITICS.

THE recent changes in the English Ministry, and the events which preceded and led to those changes, as well as the discussion which has since sprung up as to the meaning and probable effect of them, throw a very strong light upon the general alteration in the tone of political discussion in England which the years since the close of our civil war have produced. Liberals and Conservatives, it is true, still stand facing each other as they did seven years ago. Mr. Gladstone is the acknowledged leader of the former, standing in the place of Earl Russell; Mr. Disraeli is the recognized chief of the latter, as Lord Derby was before him. The Liberal party is always spoken of as the party of progress and new ideas, we hear the Conservatives still denounced as obstructive and reactionary. They are even occasionally spoken of in this country as Tories, though it is some time since their opponents lost the name of Whigs. On the surface, everything seems to be in *statu quo*.

Beneath the surface, however, nothing has remained, as nothing ever does remain in politics, stationary. A striking instance of the change occurred the other day in Parliament. A Conservative member, Mr. Trevelyan, rose and gave notice of a movement looking to an extension of the franchise in the counties which would increase the voting population by some 900,000 votes. Mr. Forster immediately read in reply to this attack a note from Mr. Gladstone, declaring that such a measure was "wise and politic, and could not long be avoided." This, of course, took the wind out of the Conservative sails, and saved the Government from a dangerous risk. The measure for the extension of the franchise was understood to have the sanction of Conservative leaders, and it was treated by all concerned as a natural move in the game, the merits of which were to be judged by its success. When we consider, however, what English Conservatism has been supposed to mean, and what kind of support it was accustomed thirty years ago to give to measures for the extension of the franchise, this piece of strategy on their part certainly deserves attention.

For some five years Mr. Gladstone has been in office, and he cannot be said to have proved a popular prime minister. He has exposed his Government to all sorts of attacks, and has witnessed a gradual decline in the House of Commons of the power he wielded when he took possession of the Government. The Conservatives for months now have seen the spoils of office almost within their grasp, and for five years have had an opportunity of explaining to the public what they would do with the power if they had it. It seems now that what they would do with it would be to add nine hundred thousand votes to the voting population; these nine hundred thousand votes, too, not being like the borough householders of the Reform Bill of '66, presumably active-minded and intelligent men, but agricultural laborers of dull, sluggish intellect, and presumably incompetent to do anything intelligent with their votes but sell them. The proposition, however, excites no comment, except a promise from Mr. Gladstone to his own party that if he is kept in power, he will do the same thing. Mr. Disraeli's proposal is looked upon as perfectly natural. No more articles appear in *Blackwood's* or in the *Quarterly* ridiculing and scarifying him. That the party which used to be called Tory shall prove its title to respect by shamelessly bidding for the votes of the very classes which in times past it has insulted and oppressed, and its title to power by relying on the support to be derived from the ignorance of the very classes it has itself kept in ignorance, seems in 1873 a natural and logical conclusion in English politics. If, in the anti-slavery agitation which preceded the rebellion, the Southern leaders had suddenly resolved to defeat the designs of the Abolitionists by freeing their slaves themselves, their action would hardly have been more theoretically inconsistent than this movement of the English Conservatives.

In order to understand the process by which their change of heart has been effected, we must go back a few years, to the time when the Earl of Derby succeeded, after the defeat of Mr. Gladstone on the Reform Bill of 1866, in forming a ministry. The language used by the Conservatives was of the most reactionary and Tory kind. The working-classes were insulted right and left, and Mr. Gladstone himself was denounced as a "plebeian." Early in the next year, however, the scene began to change. *Blackwood's Magazine*, always supposed to be the organ of the party, suddenly announced that under certain circumstances Lord Derby had better himself bring in a reform bill. Disraeli, who was then Chancellor of the Exchequer, and heir-expectant to the ministerial succession, was understood to desire it, and shortly afterwards, on the opening of Parliament, the Queen's speech finally committed the Government of Lord Derby to a "free extension of the elective franchise." There was still, however, a feeling in the Conservative party of the necessity of being consistent, so that, when Mr. Disraeli introduced in the House of Commons his resolutions on the subject, although he acknowledged the necessity of an extension of the franchise, he coupled with his promises of reform a scheme for a redistribution of seats and the creation of fresh boroughs, in order to prevent the ascendancy of the working-classes, and he protested at the same time against making the fate of ministries dependent on the success or failure of their reform measures. But Conservative public opinion was by no means ripe for such measures as these. Mr. Disraeli's resolutions were withdrawn, and the Earl of Derby's Cabinet broken up. Three members of it retiring in disgust, a compromise bill was introduced, which provided a shield for the upper classes in what was called the "dual vote"; this dual vote was itself abandoned, and at last, after a series of humiliations, which made the ministers, for the time being, the laughing-stock of England, the bill was passed. Speaking of it at the time in the *Nation*, we described the history of the bill, in language which we certainly now see no reason for changing, as "perhaps one of the most extraordinary bits of political history in existence." It consisted, indeed, in nothing less than the introduction of a radical change in the constitution of one of the most conservative countries in the world, under the leadership of a Jewish adventurer with whom no portion of the population had a particle of sympathy, and by means of tactics which involved not merely baseness but the total repudiation of party government in a country in which there was no other kind of government to fall back upon. This was the view generally taken by the Conservatives outside of the House of Commons. Mr. Disraeli was openly denounced by such members of his own party as Lord Cranborne, and there was a general feeling in England that such things could not be repeated. However, the depth of Mr. Disraeli's character, and the depth of the change in the general situation, had by no means been sounded, for not only did he manage to keep the reins of government during all the trying scenes attending the passage of the Reform Bill, but afterwards, when the Irish Church question came up, he had the audacity, in the teeth of English constitutional usage, to keep his ministry together after an adverse vote had been carried in the House of Commons. It is not difficult to remember the excitement and indignation which this occasioned, and the amused disgust with which Disraeli's charlatanry was regarded by all true Conservatives when at length he went out of office.

Meantime, what have the Liberals been doing? Certainly, they have played as a party no such shameless tricks as their opponents. They have not made bids for their opponents' votes, and, by the extinction of Fenianism, the abolition of the Irish Church, the abuses connected with Irish land-ownership and the purchase system in the army, they have certainly relieved the British Empire of very serious burdens. They have no doubt labored under the disadvantage of having unpopular men in some of the Cabinet offices, and they have committed many errors of administration; but these errors are not of that flagrant kind which shows a party to be rotten, nor is there any reason for supposing that the Conservative party, if it came into power, would not commit errors quite as grave.

There is, however, one very serious defect about the Liberal Administration, which seems to show that, whether 900,000

more voters are enfranchised by it or not, its day is almost over. The fact is, that there is very little more for it to do. The Liberals came into power as the successors of the Whigs, for the purpose of giving the masses the power to which they were justly entitled in political affairs, and this they have done. They have (the Conservatives helping them) extended the franchise until it must be obvious to any dispassionate observer that it has lost its value. There is no one in England who is clamoring for a vote. Even the agricultural laborers take far more interest in emigration than they do in voting, and their leader, Mr. Joseph Arch, instead of showing a desire to be sent to Parliament, is crossing the Atlantic for the purpose of finding out whether it is a feasible thing to transport a million or so of them to new homes and a new life.

The change, then, which has taken place in English politics in the last five years is very analogous to the change which has taken place in American politics in the same time. In both countries there are two parties which divide the power between them; in both, they shout the same battle-cries which they have always shouted; in both, they have accomplished the ends which were the "final causes" of their existence. In both countries the people—the masses—hold the balance of political power in their hands; in neither country do they know very well what to do with it; and consequently, in both they are, for the time being, the *corpus vile* on which the expert politicians of either party experiment. In each country the wide extension of the suffrage has cheapened votes, until they are a drug in the market. In America, the changes are so well understood and so thoroughly admitted by practical people, that a complete severance has been effected between the political class and the public—intelligent people looking on at the manœuvres of the politicians with a contemptuous disgust, while in England the bids of the leaders for further leases of power are beginning to be looked upon with a feeling of cynical amusement, in strange contrast with the vivid interest which only ten years ago party struggles engendered. In short, the Americanization of England, of which we used to hear so much a few years ago, is already an accomplished fact. England is Americanized or democratized already. Her aristocracy has been broken down, the suffrage has been diffused, the power of the crown reduced to a nullity, and, above all, the popular representative body, the legislature, made at the same time by the system of a responsible ministry absolutely omnipotent—for there is no written constitution in England to check its extravagances. If the Farmers' movement were taking place in England instead of at the West, there would be absolutely nothing in the way of constitutional or judicial intervention to prevent the immediate destruction of every railroad charter in the kingdom by act of Parliament.

THE ANDERSON SCHOOL OF NATURAL HISTORY.

THE island of Penikese embraces about 100 acres; ten of these constituting a northern peninsula, reserved by the donor as a future building spot. The rest forms an irregular circle; the northern shore rises gradually, the southern one is precipitous; and near the southern border is "Flagstaff Hill," about 100 feet above the sea. The island, like the neighboring Cuttyhunk, Nashawena, and Naushon, which, with smaller ones, constitute the Elizabeth group, is drift plentifully sprinkled with boulders representing nearly all kinds of rocks, amongst these a splendid specimen of conglomerate or "pudding-stone."

The buildings given by Mr. Anderson stand near the water, upon the southwest shore of the little bay between "Great" and "Little Penikese." The house faces the south, and has been occupied by the instructors with their families; a projecting ell accommodates the servants. The proposed buildings were two, each 100 feet by 25, running parallel, east and west, and connected by a lecture-room 25 by 40 feet; all these are now completed; but upon the 5th of July, when Professor Agassiz reached the island, the utmost efforts of the architect and builders had only succeeded in roofing in the more southerly of the two buildings. Yet on Tuesday, the 8th, at least fifty persons would arrive for permanent occupation, and others to witness the opening exercises. How the carpenters worked all Sunday, upon the ground that the Anderson School was no money speculation, but an institution for teaching God's truth; how Mrs. Agassiz and other ladies not only directed the willing labors of the employees, but themselves unpacked crockery and furniture and made the beds, so that by Tuesday noon the south building was floored, and the furniture arranged at the east end for the ladies and the west end for the gentlemen, need not be described in detail; nor how the steward and his assistants provided then and thereafter the equally essential materials for the subsistence of the 70 to 80 persons who occupied an island fifteen miles from New Bedford. Suffice it to say that this was accomplished at a cost of $8 40 per week for each student, with an additional charge of $10 for the use of furniture during the summer. These figures are given to show at what expense living and instruction were furnished the first year, when all was new and necessarily more costly than it is likely to be hereafter. Within a fortnight, the eighteen women students had each a room upon the second floor of the south hall; the remaining rooms were occupied by as many men, and by such of the instructors as could not be accommodated in the house; the remaining male students occupied the western third of the lower floor, the other two-thirds forming the general laboratory and lecture-room. It will be understood that next year each of the fifty students will have a sleeping-room on the second and a working-room on the first floor.

Communication with New Bedford was had almost daily either by sloops chartered by the institution, by the *Sprite*, of which hereafter, or the steamer which visited Cuttyhunk twice a week. The burden of business was assumed by a friend of Professor Agassiz's, and an account was kept with each student in respect to board and the alcohol and other supplies required for their private collections. Fifty aquariums, each 30 inches long by 20 inches wide and deep, had been ordered as early in the spring as plans could be made. The frames and glass arrived during the first week; but, in spite of the exertions of all concerned, they were not fully completed before the close of the school, and so one great feature of seaside instruction was wanting. Yet not entirely either; for bowls, pails, and jars were in constant use as small aquariums, and so much was learned and enjoyed even from these simple contrivances, and so fully was the time occupied, that more than once it was said that the aquariums would this first year have been almost an *embarras de richesses*.

The materials for aquarium study and for dissection were obtained in part by the students themselves, wading over the flats or in excursions to and among the neighboring islands, and in part by the almost daily dredging from the *Sprite*. This is a beautiful yacht of about forty tons, presented to Prof. Agassiz by Mr. Galloupe, and under the charge of Count Pourtalès, of the Coast Survey, whose deep-sea investigations during the past ten years have not only changed our views of life at great depth, but suggested similar researches upon the other side of the Atlantic. The dredging party consisted of eight ladies and gentlemen, and always brought in valuable material, although the limits within which it was thought best to confine the excursions precluded the results obtainable in deeper waters. A neighboring "pound" afforded a constant supply of the sharks and skates which were needed both for instruction and for the prosecution of researches which Prof. Agassiz has been for many years carrying on respecting selachians. Very valuable acquisitions were also made through the fishermen of New Bedford and vicinity. From these various sources came, among radiates, plenty of star-fishes and holothurians (or sea-cucumbers), also sea-anemones and corals enough to give all an opportunity to study them. Sea-urchins (*echini*) were not found, but a supply arrived from Prof. Baird, at Peak's Island, near Portland, Maine. Of mollusks, the island shores afforded the *litorinas* in plenty, and larger univalves as well as bivalves were found by wading, or brought up by the dredge. Of the cuttle-fish, only a few squids were found. Articulates were obtained in great abundance; the gigantic and tufted marine worms were a revelation to those from the interior, whose knowledge of this class was confined to earth-worms. Sand-fleas and little shrimp-like crustaceans abounded upon the flats and among the sea-weed, while the larger crabs and lobsters were occasionally procured in quantity for general examination. An almost treeless island would not be expected to furnish many insects, yet representatives of all the sub-orders were found; garden-spiders and house-flies abounded, the latter multiplying to a troublesome degree toward the end of the summer.

Naturally, the marine vertebrates occupied most attention. Fishes of several kinds were sometimes had in large number, so as to be examined by all; or the rarer species were prepared as permanent specimens, either by the students or by those who collected for the Museum at Cambridge, of which the Anderson School is practically a summer branch. And here it should be stated that so far from laying claim to what was obtained, Prof. Agassiz urged the students to make collections to take home, and provided for the purpose cans and alcohol at cost. The only exception was in the case of a skate brought in by a dredging party, which proved to contain in each oviduct an egg in its case or shell, apparently just formed and ready to

be laid; and the finder gladly placed at the Professor's disposal a specimen of which he could make the best use. Among other prizes were the sharks with eggs bearing young in different stages of growth (for many sharks bring forth living young), and a skate five feet across, with a tail of still greater length, and so heavy as to require two men to carry it into the laboratory; a "file-fish" (*monacanthus*), several "globe-fishes" (*diodon* and *tetrodon*), two specimens of *tetrapterurus* allied to the sword-fish, an *elacate*, and three species of *echineis*. A few pipe-fishes were found, but no lampreys or sturgeons; but some specimens of *amphioxus* and lampreys, gar-pike, and other ganoids, had been brought by Prof. Wilder to illustrate the lectures.

The batrachians were plentifully represented by hosts of toads, which are said to have been introduced only five years ago, but now cover the island, making holes two to five inches deep, apparently for protection against the salt spray, and eating little crustaceans (*gammarus*) as well as insects. No reptiles were found upon the island, but a number of turtle have been introduced as a supply in future years. Several kinds of birds were obtained, but the most abundant were three species of tern, whose eggs and young were in some localities not easy to avoid treading upon. None of these were killed for sport, and the means for embryological study will therefore continue. The sheep constituted the sole mammalian inhabitants, until the arrival of the rabbits and guinea-pigs sent by Dr. Brown-Séquard. Notwithstanding the unpromising aspect of the island from a botanical point of view, one of the students made a list of about seventy-five plants; the sea-weeds were objects of great interest, and beautiful specimens were prepared. Fossils were obtained at Martha's Vineyard; but Penikese afforded no geological material beyond the drift and boulders already mentioned.

The means of study at Penikese consisted of dissecting instruments supplied at cost, and of trays, jars, dishes, etc., which all were free to use. Several students had microscopes, and the institution supplied nearly a dozen of different kinds, which were constantly in use. A stereopticon furnished several instructive exhibitions. The instructors brought works upon their special subjects, and the students soon learned that Professor Agassiz's denunciation of books referred mainly to compilations and text-books; while even in respect to them, it could be fairly interpreted as was the Scriptural declaration against rich men; and all soon learned that only those who trusted too much in books were likely to be excluded from the ranks of true naturalists. The key-note was given when Professor Agassiz, in his opening address, stated that he was less anxious to impart actual information than to lead the students to observe for themselves, and to become as far as possible original investigators; and that, if they could learn the best *methods of study*, the results would be sure.

It was evident that the applications for admission would far exceed the number (fifty) which could be received; and Professor Agassiz established a rule which is to be even more rigidly adhered to hereafter, namely, to admit only those actually engaged in teaching natural history. The admission of women could hardly form a question with one who, though not a believer in coeducation in general, has always received them both as students and assistants in the Museum; and the earnestness, industry, and skill with which they availed themselves of all the privileges at their disposal, proved the justice of their admission. The students, most of whom were themselves teachers, even superintendents of schools, all worked with great zeal both in taking notes and in dissection; indeed, all needed cautioning more than urging. Not content with their regular work, they organized an Agassiz Natural History Club, whose weekly meetings proved of great interest.

It will be remembered that the first announcement of the school included the names of about twenty scientists who had made specialties of the various branches in which instruction was to be given; and it is one of the pleasantest features of the whole affair, that although, almost without exception, hard-worked in their regular duties, these gentlemen volunteered their services. From various causes, enforced absence, other duties, and in several cases the need of absolute rest, many of these free-will promises could not be fulfilled; but their offers themselves remain on record as evidence of their wish to assist in an effort to advance natural-history education, and of their faith in the leader of the enterprise. Instruction was actually given by the following: 1. Louis Agassiz, Harvard University. 2. Arnold Guyot, Princeton College. 3. Count Pourtalès, Coast Survey. 4. A. S. Packard, Peabody Academy, Salem, Mass. 5. B. G. Wilder, Cornell University. 6. T. I. F. Brewer, Boston. 7. B. Waterhouse Hawkins, England. 8. Edwin Bicknell, Cambridge. 9. Paulus Roetter, Cambridge. Professor N. S. Shaler, to whom the school is so largely indebted for its existence, and Dr. Brown-Séquard were detained in Europe till too late to join their colleagues.

Mr. Roetter gave several practical outdoor lessons in drawing from nature, and Mr. Hawkins delivered three lectures upon the principles of art and the method of natural-history drawing. He also illustrated two of Dr. Wilder's anatomical lectures upon the board; but most of his and Mr. Roetter's time was spent in transferring to paper the aspects in life and action of the new and interesting animals constantly brought in. Mr. Bicknell gave constant instruction in microscopic manipulation, and prepared specimens for the microscope or by injection for various investigations; he also on several occasions employed the stereopticon for illustration of microscopic structure and even of living animals while moving and devouring each other. Dr. Brewer delivered three lectures upon birds, the first of which was a most instructive demonstration of their usefulness as insect devourers, and a vigorous protest against their destruction. All hoped that his radical views would be published and heeded. Count Pourtalès superintended the dredging, and gave instruction in the use of the various instruments required for observation upon land and sea. It must not be forgotten that a timely storm delayed Prof. Peirce, the eminent chief of the Coast Survey, sufficiently long upon the island to enable the school to hear his views upon the nebular theory. Prof. Guyot, the former fellow-student and always warmly-attached friend of Prof. Agassiz, was able to remain only a week, but he lectured nearly every day, and succeeded in imparting an amount of information upon physical geography and meteorology which, as is well known, could not have been obtained from any other source.

Dr. Packard and Dr. Wilder took charge of the instruction upon articulates and vertebrates respectively, and were at all times in the laboratory superintending the students' dissections, pursuing their own investigations, or preparing for their lectures, which generally came upon alternate days. Dr. Packard began with the lower forms of life, and then followed a regular course with the worms and crustacea, illustrating them with diagrams, or, when possible, with actual specimens. A most interesting and instructive account was given of the structure and embryology of the horseshoe crab (*limulus*), mainly from his own researches. The closing lectures were on the general structure and metamorphoses of insects, but there was not time for a detailed account of the sub-orders; the students were advised to form "biological collections" to illustrate the life-history, the foes and friends and food of single species, as a most interesting study and an aid to agriculture. After some preliminary lectures upon methods of study, upon the habits of spiders, and upon general anatomy and physiology, including a demonstration of the viscera and muscles of a large dog, Dr. Wilder began with *amphioxus*, and treated successively the several groups, the last lectures being upon the brains of mammalia, and especially of dogs; all were illustrated by diagrams and by specimens.

Prof. Agassiz himself worked, as he always does, hard and almost uninterruptedly; in fact, too hard for his health. He was almost constantly in the laboratory, encouraging and aiding alike the students and the other teachers, or spending hours in elucidating new points in the structure of animals which he has studied all his life; and he lectured nearly every day, at times even twice in a day, for he attended every lecture by others, and at its close, or even in its course, would rise to add a word of confirmation or doubt, and, as upon several occasions, would continue for half an hour upon matters suggested by the lecture. On one occasion, some general remarks before a lecture led to a spirited discussion upon some important subjects, to the exclusion of the lecture itself, but to the greater satisfaction of all concerned. In fact, nothing could be less formal and more genial than the intercourse between the respected chief and all connected with the school. From what has been said, it will be seen that an enumeration of Agassiz's subjects would not be easy. A series of admirable lectures on glaciers, embodying much that has never been published, and a course upon radiates, and a third upon the egg, formed nuclei around which were grouped discourses upon general topics and special questions, such as were never before brought within the same time. And when it is remembered that the school opened July 8, and the last students departed August 28, and that during these seven weeks Prof. Agassiz was absent less than one (and that upon urgent business), it will be evident that when he asked the co-operation of others he did not mean to content himself with directing their labors; but it is to be hoped that another year he may be willing to give himself more of the rest he so sadly needs.

Correspondence.

A CARD FROM MR. WILLIAM BLACK.

To the Editor of the Nation:

Sir: My experience of American publishers has been so favorable—their dealings with me have been so equitable and even generous—that I hope you will allow me to express in your columns the surprise with which I find myself made the victim of a somewhat shabby trick on the part of one of

their number. I find in the columns of the *Scottish American Journal*, along with a series of wild and uncalled-for compliments addressed to myself, an announcement of a "new story" from my pen, the first portion of which is placed before the readers of the *Journal*. The "new story" was written when I was of the mature age of twenty-one; and I had fondly hoped that it had died a natural death, for there are few of us as wise at twenty-one as we then consider ourselves to be. I think that it is very hard that the wretched little tale should have been unearthed at all; but the audacity—to call it by no other name—which invites attention to this precious production as a "new story" is beyond a joke.

I am, sir, your obedient servant, WILLIAM BLACK,
Author of 'A Daughter of Heth,' etc.

PALL MALL CLUB, LONDON, August 27, 1873.

PROGRESSIVE DECLINE IN RAILROAD FREIGHTS.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, "New Englander," makes it very clear that the farmers, in their controversy with the railroads, must use more conclusive arguments than the stale charge of "watered stocks." It is quite probable, as your correspondent supposes, that the so-called watered-stock roads carry farm produce at as low rates as make the tariff of transportation lines whose stock and bonds represent actual cash payment for their full amount.

The practical question is, *What are reasonable charges per ton per mile?* Further, how do these charges compare with those of former years, when farmers had not made the discovery that they were robbed by the railroads? Comparatively, are they moderate or excessive? And do our railroads now pay their stock and bondholders an exorbitant profit? On these points I have just found some most instructive reading in the recent report of the Michigan Central Railroad. This road is one of the leading arteries to and from the West. At Chicago it has close connections with those powerful corporations, the Illinois Central and Chicago, Burlington, and Quincy Roads; and at the East it connects with the Great Western of Canada, leading to the New York Central at Suspension Bridge. Its stock and bonds are largely owned, and the road is wholly controlled, by such "bloated bondholders" as the Thayers, Forbeses, and Hunnewells of Boston, and Moses Taylor and John Jacob Astor of this city, and the road has probably been diluted by the watering process as little as any Eastern or Western road. In construction, equipment, and in the talent of its executive and subordinate officers, it is in every respect a first-class road. The stock of this Company during the ten or twelve years previous to the last has ranged from 110 to 125, and, until a year past, has uniformly paid ten per cent. annual dividends; and any merchant, manufacturer, or artisan may be challenged in vain to assert that such a return for a precarious investment was unreasonable. Now, this powerful Company has paid nothing in cash to its stockholders for more than twelve months, its entire earnings having been expended on the road. Further, under the pressure of the absolute requirements of the road for new rails, double-track equipment, etc., more than five millions of dollars have, during the past year, been raised by the sale of bonds, and expended to keep the road up to the highest point of efficiency for its future service, for which end the directors (who are the largest stockholders) consider that stockholders should forego without murmuring their present reduced profits. The result of passing dividends and further bonding of the road has depreciated the stock to the neighborhood of 90. It is quite probable that the indignant farmers who had accumulated a few earnings before the robbery began of what they had not accumulated, may have opportunity to invest in this first-class railroad at even a less price than 90 before good dividends are resumed. What has caused these meagre earnings and this depreciation of stock, and afforded clamorous farmers and others opportunity to buy good railroad stocks at a bargain? Let one of the ablest men of the West tell us. The President of the Michigan Central Road writes from Detroit in June last in an apologetic tone, giving as the cause of their disappointment, among other reasons, the following:

"Allusion has been made in the reports of this Company for two or three years past to the rapid construction of railroads which might affect its local traffic by competition at its local points. The effect of the intense competition for through business is probably understood by all stockholders. At Kalamazoo the road is crossed by a branch of the Pennsylvania system of roads running far north into the State; also by a branch of the Lake Shore and Michigan Southern to Grand Rapids. At Battle Creek it is intersected by the Peninsular Road, connecting with the Pittsburg and Fort Wayne, and also with the Detroit, Lansing, and Lake Michigan, at Lansing. At Albion and at Jackson it is intersected or reached by two other branches of the Lake Shore and Michigan Southern Road. At Wayne it is crossed by the Flint and Père Marquette. At all the important points on the main line, and at several points on the other division lines, full competition is established, *and substantially the rates at all local points are as fully fixed by competition as are the through rates. The result has been everywhere a reduction of rates*, and, for the information of stockholders, we place before them the earnings from freight, both local and through, for the years running from 1865 to 1873, inclusive of both years, stating the number of tons carried in each year, and the number of tons carried one mile in each year, and the gross earnings therefrom, and the rate of freight per ton per mile which has ruled each year:

	Tons of Freight Moved.	Tons Moved One Mile.	Freight Earnings.	Earnings per Ton per Mile.
1865	485,275	72,937,319	$2,233,529 47	$.3\frac{6}{100}$
1866	533,451	84,897,713	2,208,591 82	$.2\frac{60}{100}$
1867	578,177	91,950,418	2,285,521 69	$.2\frac{49}{100}$
1868	638,586	101,264,251	2,480,974 16	$.2\frac{45}{100}$
1869	802,835	131,827,774	2,775,200 48	$.2\frac{9}{100}$
1870	822,770	132,903,174	2,634,438 87	$.1\frac{98}{100}$
1871	1,105,875	190,606,687	3,072,557 58	$.1\frac{61}{100}$
1872	1,238,313	216,739,727	3,379,625 54	$.1\frac{56}{100}$
1873	1,416,792	246,078,512	3,852,933 41	$.1\frac{57}{100}$

"It will be noticed how gradually but certainly rates have been sinking from $.3\frac{6}{100}$ per ton per mile in 1865 to $.1\frac{56}{100}$ in 1872, with slight increase in 1873. It follows that we are doing all freight business, *including local* as well as through, on an average, *at very nearly half what the rates were eight years ago.* To illustrate the effect of this, take the year 1868 as an example. This is only five years ago, and then the rates had declined from $.3\frac{6}{100}$ per ton per mile in 1865 to $.2\frac{45}{100}$ in that year.

"The gross earnings from freight in that year were $2,480,974. In that year the surplus to be divided among stockholders, after paying expenses and interest, was $944,328.

"Now, had the Company been compelled to do that business that year at the rates of last year, viz., $.1\frac{56}{100}$ per ton per mile, the gross receipts from freights would have been $1,579,722, instead of $2,480,974, and the difference would have been $901,251, *which is very nearly the total surplus of that year credited to income account.* If we had also been compelled to do the through passenger business of that year at present rates, which is about four-fifths of the then rate, there would have been a deficit in earnings even to pay interest on the then debt of the Company.

"Now, reverse the case, and take the business of 1872. The freight earnings of that year were $3,379,625, with the rate per ton per mile of $.1\frac{56}{100}$. Had we been able to realize the sum of $.2\frac{45}{100}$ per ton per mile, the rate of 1868, the earnings from that business would have been $5,310,123, or $1,930,497 more than was realized at present rates.

"On the business of the present year, which is a large increase over that of last year, the difference is still more striking. In the last year the gross earnings from freight were $3,852,933 41. The rate per ton per mile was $.1\frac{57}{100}$. At the same rate as in 1868, the earnings would have been $6,028,923 54, which is $2,175,990 13 more than was actually realized. *That amount has been saved to the producer in a single year by the competition which has sprung up only within the last five years.* The only comfort there is in it to railway managers is in the fact that the rate per mile was not reduced during the last year—indicating that competition for the present has done its worst. In fact, it is difficult to conceive that business can be done cheaper with any reasonably adequate profit to the railroad companies."

Assuming that the experience of the Michigan Central as regards competition for freights is representative in a large measure, and that the above statements and tables are trustworthy, directors and stockholders must look elsewhere for cheerful summer reading, or be philosophical under a double misery—the loss of dividends and the violent abuse of gentlemen engaged in an occupation which Washington said was "the noblest employment of mankind."

The writer is in the employ of no railroad, and neither himself nor family has a present or prospective interest in any railroad stock or bonds; but in this controversy he is of opinion that the item of facts which Lord Bacon and the late Mr. Gradgrind prized so highly ought to weigh against mere theories of railroad profits or railroad despotism. A. L. W.

Notes.

MACMILLAN & CO.'S list of fall publications is of the usual excellence. Omitting new editions of standard works, we select for mention 'The Schools and Universities of Germany,' by Matthew Arnold; 'Comparative Politics,' by Edward A. Freeman; 'An Art Tour through the Northern Capitals of Europe,' by J. Beavington Atkinson; 'Plutarch: his Life, his Lives, and his Morals,' a series of lectures by Archbishop Trench; 'A New Biographical Dictionary,' especially for natives of Great Britain and Ireland,

by Thomas Cooper, editor of *Men of the Time*; 'A New French-English and English-French Dictionary,' by Gustave Masson—a handy volume, by the way; some fresh fairy stories, 'Queer Customers,' by Mr. Knatchbull-Hugessen; and the following scientific works: 'The Principles of Science,' by W. Stanley Jevons; 'The Origin and Metamorphoses of Insects,' by Sir John Lubbock; and 'Contributions to Solar Physics,' by J. Norman Lockyer. Among the holiday publications of this house, the most notable are Mrs. Charles Heaton's 'Leonardo da Vinci and his Works,' and Eliza Meteyard's 'Wedgwood and his Works'—both illustrated with permanent photographs. ——J. B. Ford & Co. publish immediately a second series of Mr. Beecher's 'Yale Lectures on Preaching'; 'Winning Souls,' by Rev. S. B. Halliday; 'Silver and Gold,' by Rossiter W. Raymond, author of 'Mines and Mining,' and several novels.——'Through the Air,' by Mr. John Wise, the aeronaut, is announced as a subscription work by the *To-Day* Publishing Company, Philadelphia. It is a history of air navigation from the earliest times.——J. B. Lippincott & Co. are to publish in one volume a popular edition of the 'Life of John Adams,' begun by John Quincy Adams, and completed by Charles Francis Adams.

—It is of small consequence whether Gen. Butler invented or borrowed the convenient phrase "contraband of war" to cover the case of fugitives from rebel masters. As he has offered only a technical denial to the circumstantial charge of plagiarism, it is quite likely he has been taking praise which did not fairly belong to him; but the fact that he was "cute" enough to appropriate the good thing of another, will atone with his admirers for the want of originality. There can be no doubt that the application of the term was entirely novel. We have received several communications seeking to prove the contrary, but the cases are not parallel. In one we are reminded that "the term 'contraband' was familiarly used, long before the late war, in the Island of Cuba and elsewhere, to designate those negroes who were taken from slave-ships, in contradistinction to those who were born in slavery. An illustration of the word being so used may be found in 'Captain Canot; or, Twenty Years of an African Slaver,' p. 108." This work was published by the Appletons in 1854. More interesting is the following instance of an early use of the word in the same sense:

"In 1790, Benj. Franklin, a few weeks previous to his death, presented a petition to Congress calling the attention of that body to the wrongs of slavery and the African slave-trade. (I have the memorial before me.) After the reading of this petition, and on motion of its commitment, a furious debate arose, in which the Southern members dealt out the severest invectives against the memorialists and Quakers generally. It was finally referred to a special committee of seven, who, after a month's delay, brought in a report consisting of seven resolutions. It was on the discussion of the sixth resolution, relating to the foreign slave-trade carried on from ports of the United States, that Scott of Pennsylvania made an elaborate speech. After alluding to the fact that Congress was prohibited, for a limited period, from interfering with the importation of slaves, he added: 'By another clause of the Constitution, Congress has power to regulate trade. Under that head, not only the proposition now under consideration, but any other or further regulation which to Congress may seem expedient, is fully in their power. Nay, sir, if these wretched Africans are to be considered as property, as some gentlemen would have it, and consequently as *subjects of trade and commerce*, they and their masters so far lose the benefit of their personality, that Congress may at pleasure declare them *contraband goods*, and so prohibit the trade altogether."

—The Portland meeting of the American Association for the Advancement of Science was noteworthy for the large attendance—two hundred members being present; and also for the large number of papers read—156. Twenty-two States were represented, Minnesota and Missouri being the extreme Western, and Louisiana the extreme Southern. Massachusetts furnished the largest number of members, 46; New York, 28. It is curious to note that while Maine, which entertained the Association, sent 16 members, distant Illinois furnished exactly the same number. This meeting was also remarkable as completing the first quarter-century of the Association's existence, although but twenty-two meetings have actually been held, a suspension of several years having occurred during the rebellion. No previous session has been so fully reported by the daily press. This one, like its predecessors, illustrated the different ideas of the object of the Association entertained by its members. Some evidently regard it simply as a means of publishing and placing on record their investigations and discoveries, forgetting that there are scientific journals in abundance which would perform this service with greater exactness. Others regard the meetings of the Association as an occasion for bringing their theories and work to the severe but impartial ordeal of discussion by experts, their errors to be detected and their weak points ascertained for subsequent re-examination. This we take to be the highest and most useful function the Association can exercise, as it ensures, what is pre-eminently important, the training of scientific minds to habits of unassailable accuracy in their methods of investigation. Throughout this meeting the criticisms, often severe, and sometimes destructive, were, with scarcely an exception, given and received in a spirit of the utmost candor and kindness. The best results of such discussion, we think, can be attained only by a more concise and explicit mode of statement, in order to which all papers should be required to be presented in writing. It is true there are a few men, such as Professor Peirce, whose extempore speech always has the precision and finish of the most careful composition, but such cases are extremely rare. If the Association would then advance only one step further, and require not only the abstract but the whole paper to be written, much time would be saved for discussion. An incidental value of this Association, which seems not fully appreciated by its members, is the opportunity it affords for the cultivation of intimate acquaintance and friendship among a class of persons who need such fellowship at least as much as any other class, and yet whose vocation often isolates them. A promising movement was made in this direction by the chemists, who devoted an evening expressly to social purposes, and resolved to hold a similar meeting next year. Other specialists would follow their example with great advantage.

—For working purposes, the Association is divided into two principal sections, A and B—the former embracing mathematics, astronomy, physics, and chemistry; the latter, zoölogy, botany, geology, and ethnology. Section B is always the more popular; it has more members, it attracts the larger audience. Section A is marked by the greater decorum and order in its proceedings and the greater personal deference of its members in debate. This is said to be characteristic of these sections generally. A keen observer—himself a member of Section B—asserted that the lack of this courtesy in his own section was so marked that it actually discouraged some of the older members from attending the meetings at all, and that a change in this respect was imperative. The reason assigned for the acknowledged difference between the two sections—and which, if correct, justifies this statement of an unpalatable fact—is this: It is possible for a young man possessed of little intellectual training or culture to go out into the fields, observe a few phenomena, collect a few specimens, and fancy himself a botanist, zoölogist, or geologist, while he lacks all qualifications to generalize the facts he may have observed. Such men are usually arrogant, intolerant of criticism, and generally disagreeable. On the other hand, no man can even pretend to reach a respectable standing in the sciences embraced in Section A without a measure of intellectual discipline which shows itself collectively in the general tone of the whole body. Principal Dawson, of Montreal, also a member of Section B, declared very delicately, yet most emphatically, his opinion that our young naturalists need a much better acquaintance with mental philosophy and logic than most of them possess. The Association's entrance on its quarter-century was fitly marked not only by a cordiality of feeling among its members such as has perhaps never before existed, but especially by the establishment of a fund "for the advancement of science," by affording pecuniary aid to those engaged in original research. The foundation of this fund was laid by Mrs. Elizabeth Thompson, of this city, by the gift of $1,000, with the intimation that it would be repeated whenever the Association should have use for more.

—More light on the feudal practice of disembowelling has reached us from an unexpected source. A German, temporarily residiug in this country, has courteously called our attention to a paper by S. Sugenheim which appeared in No. 50 of *Im neuen Reich* (1872), and was entitled 'Aus der Vergangenheit der kleinen Herren.' The writer, says our informant, quoting some examples from a larger essay of his, to which a prize was awarded by the Imperial Academy at St. Petersburg ('Geschichte der Aufhebung der Leibeigenschaft und Hörigkeit in Europa bis um die Mitte des 19ten Jahrhunderts'—'History of the Abolition of Serfdom,' etc.), quotes the following from Rougebief, "one of the best historians of the free county of Burgundy":

"Even to this day (1851) the peasants of this neighborhood never pass the ruins of Château Maîche without angry words and looks of hatred. They remember that the lords of this castle possessed the right on returning from the chase to cut open two of their serfs for the purpose of warming their feet in the entrails. One would fain believe this barbarous ferocity a fiction, but a famous lawsuit caused by this privilege has proved the truth of this fact, which seems to us so utterly incredible."

This certainly has an authentic look, but we must confess that we hear for the first time of the historian Rougebief, and could wish he had referred to his authority both for the tradition and the lawsuit.

—Dr. Kenealy's opening argument in the Tichborne case was enlivened, toward the end of the third or the beginning of the fourth week, by a curious psycho-physiological discussion between himself and the bench. One of the most important difficulties with the theory that the defendant is the real Sir Roger Tichborne, is that he has forgotten many things which Sir Roger Tichborne must necessarily have remembered. Latin, for instance, was one of Sir Roger's acquisitions, but the Claimant's familiarity with that

tongue may be inferred from his translation of "laus Deo semper" as "the laws of God for ever." So many of these mistakes had been made that Dr. Kenealy could not avoid the subject, especially as the Claimant's want of memory extends not only to languages but to very important events of his own life. Dr. Kenealy's theory on this subject was as follows: Memory depends a great deal on the power of perception, and this varies greatly in different persons. His client was a man of dull perceptions, who had passed his life in sensual animal pursuits, and in this way had dulled his mind. Besides this, "slight circumstances," as Locke says in his work on the Human Understanding, "leave no more impression on the mind than shadows flying over fields of corn." So of Roger's life. In truth, Dr. Kenealy said, Roger never became a man until he "threw off the shackles of civilization in South America and Australia." "The pictures drawn on the mind," as Locke says, "are laid in fading colors, and if not sometimes refreshed they vanish and disappear." It is part of the evidence of the case that the Claimant has no recollection of his great-aunt Lady Clanricarde, by whom, before he threw off the shackles of civilization, he had been repeatedly entertained and introduced to the best Dublin society. In the same way, he cannot identify the photograph of the country-seat called Knoyle where he had often stayed weeks at a time. But what was there in the wilderness of Australia to recall and refresh such incidents as those? "Some impressions on the mind," Locke says, "are made as in marble; others as if in sand."

—Besides this, Dr. Kenealy continued, fatness, when extreme, is a species of disease, the load of flesh tending to weaken the mind and impair the brain. On this the Lord Chief-Justice asked whether he had any authority for this, on which Dr. Kenealy replied that he had not, but neither had he expected to be asked for any. The Chief-Justice then intimated that it was his own opinion that he could adduce many remarkable instances to the contrary. Dr. Kenealy replied that though the Chief-Justice no doubt might be able to do so, still fatness was generally supposed to be indicative of dulness, and for himself, the only clever fat man he ever remembered to have read of was Falstaff—certainly not a fortunate instance, considering Falstaff's reputation on the score of truth and veracity. The discussion continued; the names of Sydney Smith, Lord Justice James, Sir James Scarlett, and other gifted men who were known to have been very stout, were mentioned at the bar, the Lord Chief-Justice mentioning one or two of them. Dr. Kenealy, however, still insisted that, on the whole, thin men were the ablest, but Mr. Justice Mellor remarked that there would be a division of opinion upon that point, and Mr. Justice Lush observed, "We shall all become lean if this trial lasts much longer," and at this sally, the report continues, "every one laughed, though with a certain sense of bitterness." It seems strange that the very apposite case of Hamlet did not occur to Dr. Kenealy. A very large number of critics have decided that he was insane, and everybody admits that his mind was in a very queer condition—so queer that he declares his prospective father-in-law (a character who stands to him in almost as near a relation as Lady Clanricarde to Sir Roger Tichborne) to be a fishmonger; and, most remarkable of all, the line:

"O that this too, too solid flesh would melt,"

would seem to point to a very immediate connection between the condition of the mind and the size of the body. Besides this striking coincidence it should be remembered that Hamlet was himself a Claimant.

—A work which we may safely attribute to the events of 1870-71 in Europe, is that on which Professor Seeley is said to be engaged, a 'Life of Stein'—the third German, as he has been called, since Luther and Frederic the Great. Stein's works have lately been translated by Colonel Ouvry. Pertz's 'Life of Stein' still awaits a translator, we believe. Other English announcements promise a 'Life of Samuel Lover,' by Bayle Bernard; a 'Life of Thomas Wentworth, Earl of Strafford,' by Miss Cooper; and a work to be entitled 'Wilkes, Sheridan, Fox—Popular Leaders under George III.,' by W. F. Rae, whose book on this country, 'Westward by Rail,' will be remembered. Some new facts will be brought out in it concerning the Government prosecutions of Wilkes. We are to have also a "popularization of the chief results of the Early English Text Society's work on our language," by a member of the Society, whose name the *Athenæum* does not give. Lord Houghton is to re-edit 'Keats's Life and Poems,' and William Rossetti the 'Poetical Works of William Blake,' for the Aldine Series. We may look, too, for a 'History of Greece, from the Earliest Period to the Present Time,' by Rev. G. W. Cox; a 'History of Persia,' by Clements R. Markham, and a 'Grammar of the Persian Language,' by J. A. Vullers; 'Incidents in the Sepoy War of 1857-8,' from the private journal of Sir Hope Grant; 'The Geography of India, Ancient and Modern,' by Colonel Yule, whose work is always of the best; 'The Slaves: their Ethnology, Early History, and Popular Traditions,' by W. R. Morfill; a 'Smaller History of France,' by Rev. H. W. Jervis; a 'Dictionary of English History,' in one volume; and a 'Volume of Vocabularies, illustrating the Condition and Manners of our Forefathers,' by Thomas Wright. Still another dictionary of importance will be E. A. Dayman's 'Mediæval Latin Dictionary,' based on Ducange. 'Personal Recollections from Early Life to Old Age,' by the late Mary Somerville; 'The Minor Works of George Grote,' which will include several unpublished pieces; and a translation of Comte's 'Politique Positive,' by Dr. T. H. Bridges, F. Harrison, Professor Beesley, Dr. Congreve, and H. Dix Hutton, are all works that will command attention; and the following will probably prove worth examining: 'Our Judicial System as Compared with those of other Nations,' by W. F. Finlayson; M. D. Conway's 'Sacred Anthology: a Book of Ethical Scriptures'; 'The Naturalist in Nicaragua,' by Thomas Belt; 'Etchings of the Moselle,' with short descriptions, by Ernest George; and 'Principles of Decorative Design,' by Christopher Dresser.

—Actual English publications since our last summary hardly call for notice. Among books of travel a peculiar interest attaches to William Davies's prettily illustrated 'Pilgrimage of the Tiber, from its Mouth to its Source,' with some account of its tributaries; and good reading should be John C. Wells's 'Gateway to the Polynia,' as he calls his narrative of a voyage to Spitzbergen; and 'Peeps into the Haunts and Homes of the Rural Population of Cornwall,' by J. J. Tregellas. More solid works are Goudsmidt's treatise on Roman law and its connection with modern legislation—'The Pandects,' translated from the Dutch by R. de Tracy Gould; and Dr. Max von Pettenkofer's popular lectures on 'The Relations of the Air to the Clothes we wear, the Houses we live in, and the Soil we dwell on,' a subject on which travellers are agreed that the Germans stand in special need of enlightenment, though it is not too well understood anywhere. Edward Smith's 'Handbook for Inspectors of Nuisances' has a useful-sounding title, as has also F. W. Burbridge's 'Art of Botanical Drawing.' The 'Life of Moscheles,' by his wife, has been "adapted" from the German by A. D. Coleridge.

—The Cable despatches as to Spanish affairs we have not in general found to be absolutely reliable. Their untrustworthiness is due partly no doubt to the fact that the news they contain is all derived from Spanish sources, but, even when allowance is made for this obstacle, there is still a great deal to be accounted for. We were obliged to wait a month to get any intelligible account of the proceedings with regard to the *Almanza* and *Vittoria*, and then the account came from the columns of the London *Times*, and even now, we fancy, it would puzzle most American readers of newspapers to say what has become of so important a figure in the southern campaign as General Contreras, who, after being last heard from as a captured pirate in the hands of the combined English and German fleet off Cartagena, suddenly turned up again as the leader of the insurgent forces inside the town. Within the last few days despatches have been sent over the Cable announcing a sort of understanding between the Carlists and the Communists or Intransigentes. It is difficult to guess what this means, but the news was telegraphed as if the sender of the despatches desired to produce the impression that the causes of Socialism and Carlism were become identified with one another—an important change if the inference were correct. How little probability there really is in the suggestion of this alliance (apart from the fact that the Carlists are at one end of Spain, and the Intransigentes at the other, separated by hostile forces), is made very evident in the letter of an English correspondent, who describes himself as "in search of Don Carlos," and writes from Navarre, under date of August 17. He says that the assertions of the journalistic supporters of the Madrid Government, that the Royalist army is commanded "by the dregs of the nation," is utterly untrue, and that, "as a rule," the "captains and subalterns of the King's forces are socially, as well as intellectually, superior to the mass of the Government officers, who were often only corporals and sergeants in the time of Amadeo and Isabella." The most important part of the letter, however, is that in which the correspondent describes the "deeply religious" character of the men who compose the rank and file of the Carlist forces. He says that he had an opportunity of seeing the 5th Battalion of Navarre paraded for mass. The regiment had not as yet been provided with uniforms, and officers and soldiers dressed according to their fancy. "Sashes of different colors and hues; caps of every shape and form, with long tassels, sometimes reaching half-way to the waist; daggers and pistols of old-fashioned workmanship, even before the date of percussion locks; some men with shoes, others with *alpargatas* or sandals; and here and there an officer in jack-boots and an attire which reminded me of one of Poole's smoking suits—such was the scene which presented itself to my view." But the most striking thing was the devout attention with which these soldiers followed the services, and repeated "like one man the guttural, deep-toned responses"—gray-haired men and women and young children stand about; kneeling wives and *fiancées* praying for the safety of their husbands and lovers, mothers taking

perhaps the last look of their sons, while these receive the priest's benediction and exhortation to serve well their God, country, and king. At last the service is over, and the men come out of the church, a stern grim look on their countenances, "such as would well have become one of Cromwell's Ironsides, in the days when to kill a Cavalier was reckoned a saintly deed in the eyes of the Almighty." It is to the last degree improbable that any very entangling alliance will be made between the leaders of such troops as these and the gentlemen who have declared for war upon property, war upon religion, war upon God.

—The late ex-Duke of Brunswick ceased so long ago to have any connection with European politics, that his death chiefly attracts notice to his career as that of a remarkably eccentric and thoroughly bad, and probably mad, millionaire. His life was more ignominously irrational than that of the once celebrated Beckford, who, in a different class of life, and amid different surroundings, inherited equally fabulous wealth, and did nearly as little good with it. The father of the late Duke was the leader of the Black Brunswickers, familiar to readers of English literature from his appearance in 'Childe Harold,' who fell in the fight which preceded the battle of Waterloo, and his son, Charles Frederick Augustus William, succeeded to the government, being at first under the guardianship of the English Prince-Regent, afterwards George IV. He did not become his own or his subjects' absolute master, however, until 1823; and when he did, he soon ran through his patrimony, so far as it consisted of his right to govern the Duchy of Brunswick; in 1830, his subjects expelled him with ignominy so well merited that his expulsion was approved by the Germanic Diet, and his brother, the present Duke, succeeded to the government. From this time forward he wandered about Europe, living first for a long time in London, where he earned a social reputation quite as unenviable as his political. He had, however, a million pounds a year, and at first the doors of every court in Europe were open to him, although his startling immoralities led to his exclusion both from the English Court and (what must have been harder still) from the Tuileries, where the intimate friend of his youth, Prince Louis Bonaparte, was installed as Napoleon III. Still nobody could take away his money except those whom he permitted, and he was soon fastened upon as the legitimate prey of the whole circle of impostors. He grew suspicious, and at last hypochondriacal, imagining his steps to be dogged by burglars and by murderers who intended to compass his death by poison; he insisted even on his dinner being served in locked dishes, and on this account as well as others his denunciations of the popular movement, and of the storm by which he had been expelled from Brunswick, did not attract that degree of attention which he felt they deserved. He had one taste—an interest in ballooning, was an accomplished epicure, and had the finest jewels in Europe. He managed during his vagabond career to build up a reputation for shameless vice that was colossal in its proportions, and now has died at Geneva, leaving his huge fortune to strangers.

THE STUDY OF ROMAN LAW.*

SIR WILLIAM BLACKSTONE, who represented the common average culture, learning, habits of thought, and science—or rather, want of science—of the English Bar at the time when he wrote, repeatedly expresses his contempt for the Roman or Civil Law, which was known to him only in the *Corpus Juris* and not in its early and ruder form, and exhibits alike his ignorance of its principles and the blindness of his prejudices by drawing unfavorable contrasts between it and the common law of England, often in particulars and instances where his assumption of superiority is so absurd that it is hard to believe he is speaking seriously. The school of which Blackstone was the fit representative has, however, passed away, or is at least rapidly passing away in England. The teachings of Bentham, although laughed at by his contemporaries, have produced their effects in our own times, and among his disciples were some who excelled their master in knowledge, in science, and in judgment, if not in boldness and in power of denunciation. Chief among these was Austin; and there can be no doubt that his lectures, originally delivered before a small though rare audience, which included many of the present judges and leading barristers and most of the writers upon politics who have since educated the public thought and moulded the public opinion, have revolutionized the study of jurisprudence both as a science and as an art in England. These lectures, afterwards published in an incomplete form, and the 'Ancient Law' of Prof. Maine, one of Austin's audience, are perhaps more original, thoughtful, and suggestive than any other works upon juridical science that have appeared for several years, even from the scholars of Germany or France; and they are in part an illustration and proof of a statement which we here make—but which the limits of this essay do not permit us to demonstrate in full—that jurists educated in England and under the influence of the English institutions are better fitted by their national experience and special learning than are the Continental jurists to comprehend the Roman law as a whole, to appreciate its earlier methods, and to catch and express both the spirit and the form of its development. This statement would doubtless excite a smile in the lecture-room of a German university professor of law, but the single consideration we have time and space to offer will prove its truth.

Although the two systems, the Roman and the English, have generally been regarded as antagonistic, and although there are, from certain historical causes, broad marks of difference and even contrast which distinguish them, and which at once strike the attention of the superficial observer—notably the two classes of things and of property therein, real and personal, according to the English law—yet, in fact, no other systems have or can have so many analogies and even so many absolute identities of thought, fundamental conception, spirit, form, method, progress, and results of development as they. For this reason, as the Roman is necessary to explain by comparison the English, so in the same manner and perhaps to a greater extent is the English necessary to explain the Roman and to clear up many obscurities in it which, to the Continental jurists educated in practical ignorance of the English method, have appeared inexplicable, or for which they have offered wrong solutions. Of course we do not mean that in all the details of positive practical rules there was any identity; but we mean that there was this identity in the essential conditions of the two systems in the earliest period of each, in their gradual working out from that period, in their manner and form of creating new law and of throwing off the old, and in their method of keeping abreast with the progressing civilization, so that the law should be at once the principal motive power and the most accurate index of that progress. The one central point of this identity is the fact that in both systems, in the Roman and the English alike, the great law-creating function for a long period of time resided, not in the legislative bodies, technically so-called, but in the courts. For centuries among the Romans as among the English, the chief work of legislation, the immense progress made in building up the structure of positive jurisprudence, and in fashioning it to meet the wants of society, was done by the judicial magistrates, by the Roman Pretors, and by the English courts; while the function of the legislation, technically so-called, of the *leges* and the *plebiscita* at Rome, and the statutes in England, was to supplement this judicial creation by occasional additions, and sometimes by sudden and sharp changes when the slower and gradual method of the magistrates was not equal to the emergency. This truth the Continental jurists, familiar only with courts whose sole power is expository and administrative, have found it difficult to comprehend and impossible to appreciate fully with all its wealth of results. Some of them have denied that any creative authority ever existed in the Roman magistrates, and have even declared that the Pretorian edict, which in the interval between the Twelve Tables and the Emperors had changed the practical character of the national system, was an usurpation, and utterly illegal. Even those better-informed writers among the Germans and the French who have perceived and admitted the legislative authority of the Pretors have failed to comprehend it in its fulness, and to understand the form and condition of a national jurisprudence which must of necessity flow from such a source. If we turn to England, we find that Blackstone and many others who blindly copied him invented the fiction that the law had always existed as it is, and that the judges, in some unexplained manner, knowing or discovering it, have simply announced it as occasion demanded to the expectant suitors and to the world; and this theory long prevailed among a class of writers upon the English Constitution and Government. Bentham, with his keen vision for shams, exposed the absurdity of this conception. He saw, what is a historical fact which admits of no denial, that the vast mass of English jurisprudence was the law of judicial decision; and opposing that jurisprudence as he did, and wrongly attributing all its faults to the nature of its origin, he condemned what he contemptuously termed "judge-made law" as essentially vicious. His more profoundly learned disciple, Austin, with better knowledge, broader views, and more scientific insight, saw that the law of judicial decision was absolutely necessary in every free and progressive society—necessary to any full and free development. The Romans, even during the period of the Republic, and while the arbitrary and aristocratic ideas of the Patriciate still influenced the private as well as the public law, understood that the judicial function in a progressive state necessarily involved that of creating as well as that of expounding and applying the law. They first, perhaps, of any peoples, and certainly more clearly than any other, conceived of the state as an organic unit possessed of an absolute power and authority, to which they gave the high and comprehensive name of *imperium*. Imperium represented to them

* 'Introduction to Roman Law. In Twelve Academical Lectures. By James Hadley, LL.D., late Professor of Greek Literature in Yale College.' New York: D. Appleton & Co. 1873.

the absolute political and governmental power, of which the highest exercise was the creation of law. With this conception, they always spoke of the Pretors as possessing this *imperium*, and as thus having an equally absolute legislative function with the assemblies of the people, although, for certain reasons peculiar to their original theory of the entire national organization, they give different names to the products of the two law-making sources, the one being *lex*, or *leges*, and the other *jus*. Starting from this central point of identity, we might show the identity of form and method of development running through centuries of the Roman and the English legal history; the early *legis actiones* and subsequent *formulæ* of the one, and the actions at law of the other; the use of fictions to evade and gradually to break down positive rules that were arbitrary and unjust; the invention of new remedies, and the admission of new defences; the extraordinary jurisdiction of the Pretor, and the equitable jurisdiction of the Court of Chancery; the pretorian edict, and the reported judgments of the courts, each building up a continuous and connective body of law, until finally in Rome the work of further development was taken up by the Imperial constitutions, as in England it has been during the present generation taken up by Parliamentary statutes. To explain and establish this parallelism would be interesting and we think instructive, but would far exceed the limits of a single review.

We have said that Austin's teachings had revolutionized the study of jurisprudence in England. This is partly shown by the attention now paid to the Roman law. Instead of being neglected and unknown, it has become a favorite subject of investigation, and forms a considerable element in the system of legal education now pursued by candidates for admission to the bar. A number of valuable works have recently appeared, translations with notes of the 'Institutes,' an annotated edition of Gaius, and general treatises intended to furnish, in a comprehensive form, the results of German thought and research. In fact, a sort of excitement, perhaps feverish, and perhaps healthy in respect to a broader and more scientific preparatory training, seems to have seized the legal profession. This excitement has certainly not reached across the Atlantic and disturbed the quiet or interfered with the business of American lawyers. To most of them the Roman law exists only as a name. They once read Blackstone's sneers; they afterwards glowed in sympathy with Chancellor Kent's and Judge Story's general eulogiums; they probably have sometimes looked with curiosity, ungratified, however, at the latter's long quotations in Latin from the writings of ancient commentators; and there their knowledge of the subject ended. The condition of those who are preparing to enter the bar is not different. We have many law-schools, some with able faculties and crowded with students; at none of them is the Roman law taught as a part of the regular and required course, and we doubt whether it is *taught* at any of them as an optional or elective study. The statement must be made broader and stronger still. At no American law-school is jurisprudence taught as a science in the prescribed order of instruction—taught, we mean, as in the German universities and in the schools lately established in the English Inns of Court. Previous to these lectures of Prof. Hadley, we are not aware of any other work by an American author relating solely to the Roman law, except an essay upon 'Bracton and his Relations to the Roman Law,' excellently translated from the German, with valuable notes by Mr. Brinton Coxe, of Philadelphia. It may be that the awakened interest and new zeal of the English Bar will excite emulation among their brethren in the United States, and that Prof. Hadley and a few other professors like him will be imitated in all the American colleges. There are reasons to us very cogent and convincing why the Roman law should be made, not only a necessary part of the higher professional education, but also, in connection with a group of kindred subjects which may receive the common designation of politics, a part of the higher general education furnished by the college or university.

The law of England, of the United States, and, in fact, of any civilized country possessing a continuous history, is so much a growth that the existing practical rules of to-day cannot be fully understood, even from a purely business point of view, without a knowledge of their origin and of the successive changes which have ended in their present forms. It is possible, perhaps, to conceive of a code enacted and imposed upon a people *uno flatu*, which should have no connection with the history of that people; but it is not possible to conceive of such a code which should not have a connection with the history of *some* people. A moral philosopher may imagine a system of jurisprudence based upon and embodying only the principles of pure ethics, which, abstractly considered, must be the same in all times and all places; but there is not, and never was, and never can be such a system. Two other elements besides the ethical must of necessity enter into every national jurisprudence, and these are, first, matters referable solely to the national institutions, to the tribal and ethnic customs of the people; and, secondly, matters referable solely to considerations of expediency. The first of these elements is, in the earliest stages of the development, invariably the predominant one; it differentiates the system from all others, and it is marked by arbitrariness, formality, and want of *moral* character. The subsequent development largely consists in the gradual restriction and removal of this element, but it can never be wholly eradicated; its influence will continue to be felt amidst all the equitable reforms, as long as the people retains its own race, life, and vigor. This inevitable condition of growth is illustrated throughout the whole history of the English and of the Roman law, and these two systems, above all others, exhibit a continuous individuality, a natural and necessary succession, from their primitive and rudest period to the consummation of the one under Justinian, and to the present epoch in the vigorous life of the other. It is impossible to understand the rules contained in the *Corpus Juris* without a knowledge of the methods by which they became established, and of the changes through which they passed—methods and changes which operated from the decemviral legislation of the Twelve Tables to the imperial legislation of Justinian. In the same manner and for the same reason, it is impossible to understand the practical rules of the English law to-day without a similar study which shall extend back to the Saxon period.

The object of such a study is twofold. It may be, in the most popular sense of the word, practical, with the sole design of promoting success in the lawyer's professional business. On the other hand, it may have a higher and nobler design. The lawyer is in a direct manner answerable for the present and future condition of the national jurisprudence; as advocate, he gives a direction to the legal development wrought out by the judges, and he may create and guide the public opinion which shall control the legislature. If the bar of a state have a philosophical conception and scientific knowledge of jurisprudence, then the jurisprudence of that state will inevitably assume a philosophical and scientific, and therefore in the highest degree a practical, form and character. If the study of the English law is pursued with either of these objects in view, it involves, in order to be thorough and complete, a study of the Roman law. The American lawyer, merely from the lower grade of motives alluded to, becomes familiar as a matter of course with the writings of Coke and Blackstone; but, in fact, the elements which were at an early day derived from the Roman law have remained more permanent, and now form a more considerable part of our living system than the doctrines and rules discussed and set forth by Coke, which, although termed by him "the perfection of human reason," were in the highest degree arbitrary, and have long been abandoned. The reason of this is obvious. The portions borrowed from the *Corpus Juris* were the results of a thousand years' experience, and were based upon unchanging foundations of right and equity, while most of the practical rules elaborated by Coke were based upon customs which have disappeared in an advancing civilization. The 'Institutes' of Justinian contain more which is now obligatory as a part of the law of New York than is to be found in all the voluminous writings of Lord Coke. It is universally conceded that in modern times the English Chancellor, while developing the doctrine of trusts, and Lord Mansfield and his successors, while enlarging the scope of the mercantile and maritime law, made large draughts from the inexhaustible supplies of the *Corpus Juris;* but it is not generally known how important a Roman element was grafted upon the rough English stock under the early Norman kings. The earliest compendium of the English law was the treatise of Bracton, 'De Legibus et Consuetudinibus Angliæ,' written probably between the years 1256 and 1259. The work of Glanville, about seventy years earlier (1190), made no attempt to give the whole law as a system; it was simply a book of forms and of procedure, and its references to the substantial rules of right were meagre and incidental. In Bracton, however, we find the entire body of the private law arranged in an independent, and, for the times, a highly scientific order and method. The antecedent influence of the Roman law is shown in many ways; partly in the classification which was suggested by, though not blindly copied from, the 'Institutes,' and partly by the use of the Roman technical terms. It should be noticed, also, that this early incorporation was made into the common law as distinguished from equity; for there is not the slightest trace in Bracton of the peculiar equitable jurisdiction of the Chancellor, which was developed at a later day, and was so plainly copied from a Roman model that the Continental writers see in him alone the English analogue of the Roman Pretor.

The scientific effects, however, of a general study of the Roman law upon the legal profession in the United States would at present be far more valuable than its immediate practical benefit to individuals. The private jurisprudence of the several States has lamentably degenerated during the past twenty years—a result due, without doubt, to a weakening of the courts in ability and character. There are, of course, noble exceptions, but on the whole the American judiciary has declined in scientific legal culture and in commanding personal force since the method of popular elections became so widely prevalent. It is very evident also that we have arrived at

an epoch when the further work of legal development must be taken up and carried forward by the legislatures rather than by the courts. The attention of the ablest and most thoughtful jurists and statesmen has for the last twenty years been directed to this subject in England, and Parliament has already made changes that leave very little of that old common law which was described by Blackstone. During the past summer, a bill has been perfected in Parliament which consolidates all the superior courts, and goes far to abolish the distinction between law and equity. It is very apparent that in a few years England will follow the example of the great Continental nations, and will reduce its private jurisprudence to a codified form. The work of legal reform, which is as much needed in this country as in England, is one which demands the highest and broadest culture—a culture which cannot be obtained by any new professional experience, however varied and successful, but comes from the thoughtful study of what may be called comparative jurisprudence. In the Roman law is to be found an example of completed scientific methods and perfected scientific results. It would not be possible to borrow largely from its positive rules, but any legislator who would be fitted for the task of reshaping the jurisprudence of a state must be imbued with its spirit. For this reason, any attempt to awaken an interest in its study either as a part of professional or general education, and any opportunity given for that study either in law-schools or colleges, must be welcomed as an additional element of a high scientific culture.

The little work of Prof. Hadley affords such an opportunity, and may awaken such an interest. It consists of lectures regularly given for several years before his death to the senior class of Yale College, and is therefore primarily designed rather for general than for professional students. Assuming no previous knowledge of the law, hardly taking it for granted that the reader is acquainted with even the leading facts of Roman history or the leading features of the Roman polity, it gives an outline or sketch of the Roman juridical system in a manner remarkably clear and simple. The first lecture describes the *Corpus Juris*, its compilation under the direction of Justinian, its parts, contents, and external character. In the second, the position of the Roman law after Justinian and during the middle ages, and its influence upon modern nations, are briefly told. The third and fourth lectures contain a history of its growth from the Twelve Tables to the codifications of Justinian, with a somewhat minute explanation of the earlier procedure and the curious and arbitrary forms which prevailed in the ruder periods of the Republic. Passing then from this external and internal history, the author takes up the substantial rules of private rights, and assigns two lectures to each of the following subjects: Personal Status and the Family Relations, Property, Obligations, and Inheritance. In this statement of substantial rights, Prof. Hadley does not restrict himself to the law as it finally appeared in the *Corpus Juris*, but attempts rather to sketch each of these four divisions in its historical entirety extending through a space of a thousand years.

Admirable an introduction to the Roman law as these lectures are, it was inevitable from their plan that they should convey to the students who heard them or who may read them an exceedingly erroneous impression upon many important points, and that without any actual errors of statement. We say this was inevitable, for in such an outline covering so much ground the element of time is practically left out. The reader, unless he has knowledge from other sources, will not separate the period of the early Republic from the period of Adrian or of Alexander Severus, and will confound the rude and arbitrary doctrines and procedure of the one with the culture and equity of the other. If we were disposed to criticise the author's method, we should say that he has occupied himself too much with minute details, and has failed to seize and expose to the student great principles, and especially the great principles of a national legal development which are shown so clearly in the Roman law, and to draw the large comparisons between it and our own jurisprudence which would be so instructive to the educated American citizen. In thus occupying his time and space with details and somewhat minute rules, he has been forced to omit many of the most striking features which present the strongest analogies between the Roman system and our own. Thus not a word is said of equity or of the Pretor's extraordinary jurisdiction, in which, as in England, side by side with what we may call the common law, he built up an overshadowing structure of equitable doctrines, until finally both were united, and the law and the procedure became wholly equitable. We think also that he fails to assign to the Pretor throughout the whole history of the legal development his proper function and work of creating the law, and unduly subordinates him to the jurisconsults. But with all of these defects, or rather omissions, the book is most admirable, and we would gladly place it in the hands of every law student and college senior. If Prof. Hadley had lived, he would doubtless have referred to the authorities and contemporaneous writers, American and foreign, from whom he evidently took some of his views.

FORNEY'S 'ANECDOTES.'*

THE reader of this volume will probably lay it down with the opinion, first, that there is exceedingly little in it, and, secondly, that whatever else Mr. Forney is, he is an exceedingly good-natured person. Except some familiar and not very scorching indignation, which reads much like "copy" as old as 1863, against the most notorious and universally condemned of the secessionist leaders, Mr. Forney is highly civil to every distinguished gentleman and scholar in the whole book except the late Mr. Buchanan and the still living Mr. Simon Cameron; and to these two statesmen he is by no means immitigably severe. If Mr. Buchanan is false to his pledges and his party on one page, on another he is at all events a man of polished manners, and one who knows how to keep a secret. On page 183 he is weak and timid, and on page 182 he has a slight cast in his eye; but we need only turn to page 319 for an opportunity of contemplating him as an honest, an estimable man, "of exact business habits." Or we can go back, if we like, to page 62, and praise his excellent dinners and those anecdotes which he used to tell with such effect. Not very exciting anecdotes they were, we may remark, if we are to take for a sample of them the one with which Mr. Forney favors us. He last heard it, he says, at the Sunday-evening dinner-table of Mr. John T. Sullivan, "one of the most interesting and genial of gentlemen, known and beloved alike at the nation's capital and in Philadelphia." It is as follows: In 1834, Mr. Buchanan, then just home from his ministerial residence at St. Petersburg, called upon General Jackson for the purpose of introducing to him a fair English lady who wished to see the President. Arrived at the White House, Mr. Buchanan, not without wisdom in his generation, left the fair English lady in a downstairs reception-room, and cautiously slipped up to General Jackson's private room, where he found that gentleman sitting before the fire smoking a corn-cob pipe. Of all the courts in Europe, the Imperial Court of St. Petersburg is perhaps the stateliest; and Mr. Buchanan, fresh from that school of politeness, was no little alarmed at the unshaven, dirty-faced, and generally unkempt appearance of the chief magistrate. In his perturbation of mind, he ventured to ask the Old Warrior if he did not intend to change his attire before giving audience to the stranger. He was briefly informed that the President knew his own business, and that the lady could see him presently. Upon this hint, "the man who became President in 1856"—which certainly is one way of calling a man Buchanan—had the presence of mind to walk downstairs and rejoin his lovely charge. In a very few minutes President Jackson entered, cleanly shaved, his hair brushed, his coat, pantaloons, and waistcoat all of black cloth, and, "advancing to the beautiful Britisher, he saluted her with almost kingly grace." English as she was, she exclaimed to Mr. Buchanan, as she left the White House, "Your Republican President is the royal model of a gentleman," and, as Mr. Buchanan confessed, he never after forgot the lesson then taught him of the superiority of democratic dignity to the false dignity of European courts. Reading this history—and the book is filled with similar things, related with the same "foolish face of praise"—we see again the dinner-table of the late interesting and genial Mr. John T. Sullivan; we see the late Sullivan himself; the polished Buchanan tells us about the corn-cob pipe, and we all admire; we see Mr. Forney listening; perhaps we see Mr. Forney's friend, "the popular and witty Dr. W. P. Reyburn of New Orleans, his broad face aglow and his large mouth streaming with tobacco"; and next to him, "winning and magnetic Jack Ogle," with his song of "Jeannette and Jeannot," or Edwin Forrest, who is waiting to recite after dinner "The Idiot Boy" for the gratification of the company, and who generally leaves not a dry eye in the room. It is the social and political Washington of a quarter of a century ago—assuredly, of all the inhabited cities of men the dreariest, and assuredly losing nothing of its depressing capacity in a chronicle like this.

If "the man who became President in 1856" is certainly let off easily by Mr. Forney, Mr. Cameron fares still better, as, indeed, some ought to have expected. For there is rather more than a possibility that our author's curious paraphrastical way of mentioning Mr. Buchanan may not be merely a rhetorical adornment. It may refer dimly to a gentleman unnamed, who, seventeen years ago, by falsifying the vote of Pennsylvania in the October election, fraudulently secured the Presidency for a candidate who otherwise would have been defeated. Still, the politeness with which Mr. Cameron is treated is noticeable. We are not denied a glimpse of him as he

* 'Anecdotes of Public Men. By John W. Forney.' New York: Harper & Brothers. 1873.

appears when engaged in the subdolous practices in which common fame makes him an expert; but it is only a glimpse that we get, and a distant one. To appreciate fully the malleability and kindness of Mr. Forney's disposition, the reader of this portion of the 'Anecdotes' ought to have access to the files of the Philadelphia *Press* of thirteen or fourteen months ago, in the days when Mr. Forney had just been "crying halt," to use Mr. Greeley's description of his friend's conduct at that juncture, and was telling the Administration the true character of Mr. Cameron. In the book itself that gentleman is not precisely an Israelite in whom there is no guile; but in the newspaper the entire ten lost tribes were not more lost than the abandoned and corrupt Winnebago chief; and it comes on the reader with the effect of perplexed surprise to learn that Mr. Cameron is only a friend with whom, in the early summer of 1841, Mr. Forney took a delightful drive from Middletown to Reading, by way of Pottsville, and who afterwards in 1861 urged that the slaves of rebels should be enlisted as Federal soldiers. No one would suppose from the 'Anecdotes' that Mr. Forney knew any anecdotes about a gentleman who, on an occasion when Mr. Forney felt certain of going to the Senate, effected some little transactions which resulted in Mr. Cameron's going instead, and whose whole long political career is generally asserted to have had for its object, not power, nor reputation, nor pleasure in political activity, but for the most part money. Mr. Forney says in his dedicatory preface that Mr. Daniel Dougherty of Philadelphia knows the motive which led Mr. Forney to speak "generously and impartially" of all the public men of whom his volume was to speak, but it must be a puzzle to most people outside of the circle of Mr. Dougherty's intimate acquaintance. Or is it that a somewhat amiable, somewhat profligate easiness of disposition, unbraced by convictions of any kind, has allowed the whole being to sink into the pool of practical politics, and the practical politics of Pennsylvania and Washington at that, and to become subdued to what it works? The book seems to us to illustrate this condition of the American man. More of force, either of honesty or of ill-temper, would have made it highly readable. What the author's opportunities have been we all know. From the time of Franklin Pierce to the time of Hartranft and Yerkes, he has for many years been, if not a leader in the host, a door-keeper at least in the tents of Kedar, and has been allowed to know much of the secret history of parties. He has, however, preferred to make an almost utterly vapid register of nothings, and he has done it in such a way as to convince one that he has taken the correct measure of his abilities as an observer.

An Historical Account of the Expedition against Sandusky under Col. William Crawford, in 1782. By C. W. Butterfield. (Cincinnati: Robert Clarke & Co. 1873.)—This expedition technically took place during the Revolution, but Cornwallis had surrendered more than seven months before it set out, the British Government had determined to abandon the struggle, and hostilities between the opposing regular armies were virtually at an end. On the western frontier, on the contrary, the Indian allies of the British were never more menacing, partly because they were studiously deceived as to the successes of the Americans, partly as the result of direct instigation. It suited the British calculations to maintain by terror a boundary which should limit as much as possible the territory whose independence would have to be acknowledged. The same policy prevailed at Detroit as on the Penobscot, and the same savage instruments were employed. Crawford's expedition was the latest of several whose object was to punish the Indians in their chief settlements under British protection, and so cause them to retire beyond easy striking distance of the scattered white settlements in Western Pennsylvania and Virginia, and here and there in Kentucky and Ohio. It lasted but twenty days (May 25–July 14). Its commander, who had the highest reputation for humanity and probity, as well as for skill in Indian warfare, was captured and tormented to death at the stake, and several of his associates either shared like torture or escaped miraculously the doom for which they were marked. The survivors retreated with difficulty, and their return not only brought widespread grief to all the border, but inspired the most dismal anticipations, which happily were not fulfilled, though many years were to elapse before the victory and treaty by which General Wayne removed from the Northwest of that day all dread of savage incursions. Mr. Butterfield's account is based upon one or two printed narratives of the survivors of Crawford's expedition, and upon the original papers of General William Irvine, the contemporary commander of the Western Department, whose aide, a Russian nobleman incognito, was detailed to accompany Crawford, and proved extremely useful on the retreat. It is demonstrated past doubt that the expedition was a legitimate piece of aggressive defence, duly organized and authorized as a part of the regular service, and having the approval of General Irvine and of Washington, who were in constant correspondence. Probably there never would have been any other character assigned to it but for the unfortunate circumstance that the second in command was Col. David Williamson, who had been concerned some months before in a massacre of Moravian Indians on the Muskingum (the Gnadenhütten affair); and as Crawford's line of march took him through the villages which an Indian raid from Sandusky and subsequently the Williamson massacre had made deserted, it was assumed by the missionaries that the chief if not the sole object of the expedition was to destroy the small remainder of Christian Indians who had been forcibly transplanted to the Sandusky. Not a shadow of any such motive appears in the official correspondence and orders pertaining to the expedition, and still less do they countenance the language which the Moravian historians employ in designating Crawford and his company as a "gang of murderers" and "banditti," identical with that which had perpetrated the previous massacre. Mr. Butterfield is extremely candid in combating this partisan view, quoting in full the passages in which the missionaries give their version of the design and providential fate of the expedition, and leaving the reader to form his own judgment with the help of the facts set forth on the other side. He succeeds perfectly in confuting the Moravian theory, and exposes errors of every degree of importance in the Moravian record of the incidents of the defeat and rout. The latest work which has adopted both the theory and (to some extent) the errors, is De Schweinitz's 'Life and Times of David Zeisberger,' a work which in general is only deserving of praise. As it is not necessary to paint our forefathers, in their dealings with the Indians, blacker than they were, the reading of Mr. Butterfield's account may be recommended to those who have received the Moravian view from De Schweinitz or from Heckewelder direct.

Mr. Butterfield's history is straightforward in manner, and apparently exhausts the subject, except for biography, into which, however, he goes largely and always entertainingly. We think he would have left a more distinct impression on the reader's mind if he had first given a graphic relation of the military movement, and then followed it with the illustrative matter which now appears as digressions rather injurious to the main effect. The book is handsomely printed, as Mr. Clarke's publications are sure to be, and has an excellent index.

Outlines of Men, Women, and Things. By Mary Clemmer Ames. (New York: Hurd and Houghton; Cambridge: The Riverside Press. 1873.)—The 'Men and Women' some of whose outlines are given by Mrs. Ames are Charles Sumner, the Grand Duke Alexis, Margaret Fuller, Fanny Fern, Horace Greeley, Edwin Forrest, Lola Montez, and Madame Guizot. The 'Things' are of all kinds, from Woman Suffrage and the Fallen Man to Indian Summer in Virginia and a Rainy Morning in the Country. The title of the book is an instance of what Mr. Browning, in his recent poem, 'Red Cotton Night-Cap Country,' calls "happy nomenclature." It is not a collection of serious labored essays. When Mrs. Ames outlines a man or a woman or a thing, she does it with a light touch, her mastery of which indicates, to be sure, that she can see if she chooses as far below the surface as any one; now and then, indeed, she takes us below the surface with her, as in the chapter called the "Fallen Man," but even after a descent into the depths of this disagreeable but nevertheless magnetic subject, we come up smiling, for though it seems that "Fallen Man" is a pretty low character, man himself is noble, Mrs. Ames declaring that "neither the history of polygamy or of monogamy, Campbell's 'Philosophy of Marriage' or Lecky's 'History of European Morals,' or the history of the whole life of man in every race and through every age from the beginning of the world till now, can make her believe that man created in the image of God, man immortal as his sire, man the head of all human intelligence, through all his earthly life is at best but little more than a bundle of blind instincts and of lawless appetites, at whose mercy he is, which he is as powerless to control as the beast at his feet." As Mrs. Ames is apparently a believer in woman suffrage, this is a concession for which the "unfair sex" ought to be grateful. Of her lighter style "Northern Vermont in August" is a good specimen. In Northern Vermont in August "it is heavenly to 'loaf,'" and though, as Mrs. Ames says, "it is not much to tell about," still "all the Aunt Jemimas in creation might croak around me about my waste of time, all the same I'd cultivate my bugs [*i.e.*, bugs and 'things']—pretty field bugs that live in the grass are such delightful society compared with tedious people." In this suggestion of the sensations produced by lying in the grass, and making the acquaintance of the field bugs and "things," Mrs. Ames has certainly struck a new vein, which, considering the great variety of sensations which it would be possible to produce, and the zest given to it by the extreme danger of the occupation in some latitudes, might be worked with great advantage as long as the essayist survived. On the whole, we may say that Mrs. Ames not merely disarms criticism, but defies perusal as well.

RECENT PUBLICATIONS

OF

HENRY HOLT & CO.

(Late Holt & Williams),

25 BOND STREET, NEW YORK.

"Everybody who wants to see all the recent attempts to set things right analyzed by a master-hand, and in English which stirs the blood, will have a great treat in reading him."—*Nation.*

TURGENIEFF'S DIMITRI ROUDINE. Translated from the author's French and German versions. 16mo (Leisure-Hour Series), $1 25.

"In our opinion he is equal to any living novelist; or, if that estimate be disputed, he is at any rate one of the greatest, and on that account his writings demand attentive consideration."—*Nation.*

"Two or three of his characters would be sufficient stock in trade for the entire professional career of an ordinary novelist."—*London Spectator.*

THE WOOING O'T. A Novel. 16mo (Leisure-Hour Series), $1 25.

An English society novel by a new anonymous writer of exceptional promise.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

NEW BOOKS.

AFTERMATH. A new volume of Poems. By H. W. Longfellow. 16mo, bevelled boards, $1 50.

This book contains a third and concluding series of "Tales of a Wayside Inn," no less varied and charming than the preceding series; and a third flight of "Birds of Passage." Only three or four of the poems in this volume have ever appeared in print. The book will confirm the great fame of the author, and increase the obligation which the multitude of his loyal readers in both hemispheres gladly acknowledge.

THE FAIR GOD; or, The Last of the 'Tzins. A Tale of the Conquest of Mexico. By Maj.-Gen. Lew. Wallace. 1 vol. 12mo, 600 pages, $2.

"It is one of those rare books that cast over the reader a spell which benumbs his critical faculties and surrenders him, bound but enraptured, to the will of the magician-author. . . . The book will be classed, we suppose, with historical novels; but it really deserves a distinct place. For ordinary historical novels, like Scott's, materials abound; but Gen. Wallace has penetrated to a time hardly less obscure than that of primitive man, and has not reproduced, but created, a picture of its stormy life, whose power and beauty need no proof, and whose fidelity is amply established by internal evidence that no intelligent reader can refuse to accept.

"We think the public need wait no longer for 'the great American Novel.' If we have it not in 'The Fair God,' our expectations are raised too high for human realization."—*The Literary World.*

THE PERFECT HORSE. How to Know Him. How to Train Him. How to Breed Him. How to Shoe to Him. How to Drive Him. By William H. H. Murray, author of 'Adirondack Adventures,' etc., etc. With an Introduction by Rev. Henry Ward Beecher; and a Treatise on "Agriculture and the Horse," by Hon. George B. Loring. Containing Illustrations, from Life, of the best Trotting Stock-Horses in the United States, with their Pedigrees, Records, and full Descriptions. 1 vol. 8vo, $4.

This book is beyond comparison the best and most thoroughly practical work upon the Horse ever produced in America, and is far better adapted to improve the methods of horse-culture in this country than any other work ever published.

LONGFELLOW'S POEMS. Two-volume Cambridge Edition. Uniform with the one-volume Merrimack Edition of Whittier. 12mo, full gilt, $8.

Admirably suited to library use.

*TEACHERS' MANUAL OF FREE-*Hand Drawing and Designing, and Guide to Self-Instruction. By Walter Smith, Art Master, and State Director of Art Education for Massachusetts. 1 vol. 8vo, $2 50.

This important work is intended to accompany the American Text-books of Free-hand Drawing and Designing prepared by Professor Walter Smith.

ANNOUNCEMENT.

Messrs. J. B. Lippincott & Co. have the pleasure of announcing that on the 10th of September they will publish Vol. I. of the

HISTORY OF FERDINAND AND Isabella, being the first volume of an entirely new edition of the works of

WILLIAM H. PRESCOTT,

with the author's latest corrections and additions.

EDITED BY

JOHN FOSTER KIRK,

Author of the 'History of Charles the Bold.' To be completed in 15 monthly volumes, 12mo Illustrated with Maps, Plates, and Portraits. Price per volume, in fine English cloth, with black and gold ornamentation, $2 25; library sheep, $2 75; half calf, gilt back, $4 50.

This edition is being elegantly printed from entirely new plates on fine-toned paper, and is intended by the publishers to be in mechanical execution every way worthy of the works of the distinguished author.

During the last years of his life, Mr. Prescott devoted much time to the revision of his works, making numerous corrections and additions, some of which were inserted in the later English editions published in his lifetime, while a larger number have hitherto remained in manuscript. The whole, in accordance with his intention, are incorporated in the present edition, which the editor has endeavored to render still more valuable and complete by verifying doubtful references, adding occasional notes where statements in the text, based on insufficient authority, or called in question by recent investigators, needed to be substantiated or corrected, and aiding, by a careful supervision of the press, in securing that high degree of typographical accuracy which is especially desirable in standard works.

*** For sale by Booksellers generally, or will be sent by mail, post-paid, upon receipt of the price by

J. B. LIPPINCOTT & CO., Publishers,

715 and 717 Market Street, Philadelphia.

Designs and Estimates furnished. P. O Box 2791.

THE WEEK IN TRADE AND FINANCE.

SEPTEMBER 8.

THE week in Wall Street has been quite eventful, the principal features having been the collapse of the "gold corner"; the numerous rumors of trouble among speculators in the Gold-room; the activity in money; and, finally, the very unfavorable bank statement on Saturday.

The money market became active towards the close of the week. The rates kept down to 7 per cent. coin until Friday, when one-sixteenth and interest was paid in a few cases. The demand of the gold clique for money with which to carry their gold was the reason for the advance in the rate to a premium, and this demand continued for a time on Saturday. The increased demand for money in the form of loans upon stock collaterals had the effect of "stiffening" rates upon commercial paper, which we quote 9 to 12 per cent., having from sixty days to four months to run. On Saturday there was very little sale for paper, in consequence of the bad outlook for money, as reflected by the bank statement published early in the afternoon.

Cable advices report a decrease of £18,000 in bullion in the Bank of England for the week. The bank rate remains unchanged at 3 per cent. The Bank of France loses 1,000,000 francs in specie.

The bank statement for the week ending September 5 is very unfavorable. It is hard to account for the large loss of legal tenders, unless the greater part of them are "locked up." The shipments to the West "to move the crops" have undoubtedly been large, but not sufficiently so as to cause a loss of $6,049,400 legal tenders in one week. By the statement which we publish below, it will be seen that the total loss in reserve is $7,377,600, while the total liabilities have only decreased $7,544,000. The loss in surplus reserve to the banks is $5,491,600, and leaves it now standing $414,850, against $5,906,450 last week. The National banks, however, are stronger than the statement causes them to appear, as it is made up to include several large State banks. Separating the National from the State banks, we find that the former hold a surplus of $1,400,750, and that the latter are $989,900 short of the 25 per cent. reserve which the National banks are required to keep in legal tenders and specie against their liabilities.

The following are the statements for the past two weeks:

	August 30.	September 6.	Differences.
Loans	$288,883,000	$288 374,200	Dec. $508 800
Specie	23,095,200	21,767.000	Dec. 1,328 200
Circulation	27.281.900	27,355.500	Inc. 73 600
Deposits	220,390,300	212,772,700	Dec. 7.617.600
Legal Tenders	44,729,300	38,679,900	Dec. 6,049,400

The following shows the relation between the total reserve and the total liabilities:

	August 30.	September 6.	Differences.
Specie	$23,095,200	$21,767.000	Dec. $1,328,200
Legal tenders	44,729,300	38,679,900	Dec. 6,049,400
Total reserve	$67,824,500	$60,446,900	Dec $7,377.600

The stock market early in the week gave signs of yielding, and a very unsettled feeling existed. The market fell off towards the close of the week, and on Saturday prices had settled down from 1 to 5 per cent. on the entire list of speculative stocks. The greatest decline took place in Wabash, which, after leading at a premium of one per cent. for its use, and selling at 70¼ on Wednesday, dropped to 65½ Saturday. The leading "bear" in the market is Mr. Jay Gould, who, when out of his troubles in the Gold-room, turned his attention to stock, and apparently with better effect than he has had in gold. He is said to be more deeply interested in, and his efforts have been chiefly directed in trying to depress, the price of Western Union Telegraph, which at the close of the week shows a falling off of nearly 3 per cent. from the highest quotations on Monday.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending September 6, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales.
N. Y. C. & H. R.	104½ 105¼	104⅝ 105	104⅝ 105¼	104½ 104⅝	104¼ 104½	103⅜ 104⅜	33,700

The threatened gold corner has suddenly come to a termination, and the clique are understood to have sold out their gold and acknowledged themselves whipped. It was evident from the first that Gould was having uphill work in trying to advance the premium against the natural tendency towards a lower price, in consequence of the favorable state of our foreign exchanges and the prosperous outlook in trade generally for this country. The market opened on Monday at 115½, and advanced shortly afterwards to 116 and 116⅛. The price remained steady during Tuesday and Wednesday at 115¾ to 116⅛. The quotations of Thursday were lower, which was probably due to Gould's selling out. On Friday the realizing sales of the clique carried the premium down to 114½, and the market closed at 114⅝. On Saturday the price fell to 112⅞, and closed at 3 P.M. at 113⅛, with the market weak and drooping. There seems to be no doubt that the attempt to bull gold for the present is abandoned, that Gould has sold out, and that the losses of those engaged in the disreputable effort to ruin trade and cause disaster have been enormous.

OFFICE OF FISK & HATCH,
No. 5 Nassau Street, New York, Sept. 8, 1873.

☞ The CHESAPEAKE AND OHIO RAILROAD is now completed and in regular operation. To increase its Equipment, and perfect its Terminal facilities and Deep-water connections with European Steamship Lines, and to accommodate the heavy Coal and Mineral Traffic, together with the growing Iron and Miscellaneous Local and Through Business now pressing upon the Line, we are selling on behalf of the Company a limited amount of their SEVEN PER CENT. GOLD BONDS, secured by mortgage liens on the whole valuable property, at 90 and accrued interest; $1,000 each, either coupon or registered, payable in gold coin, in New York City, principal and interest; interest January and July.

We also have a small amount of the OLD SIX PER CENT. GOLD BONDS OF THE CHESAPEAKE AND OHIO; price, 88½ and accrued interest; denominations, $100, $500, and $1,000, interest payable in New York, May and November. The property has cost already upwards of $38,000,000: it is worth to-day a much larger sum, and is constantly increasing in value. We can recommend both classes of bonds, which are selling rapidly, with great confidence.

We also continue to deal in Government and Central Pacific and Western Pacific Bonds, execute orders at the Stock Exchange for investment Stocks and Bonds, receive deposits, on which we allow interest at the rate of four per cent. per annum, and conduct a general banking business.

FISK & HATCH.

MORTGAGE BONDS UPON A
COMPLETED ROAD PAYING
10 *Per Cent. Gold Interest.*

With probable advance of 25 per cent. on the investment in a short period.

For particulars, apply to
JONES & SCHUYLER,
12 Pine Street, New York.

Liverpool & London & Globe Insurance Co.,
45 *William St.*

NEW ENGLAND SECURITIES
SAFE AND PROFITABLE.

By the purchase of the First Mortgage Sinking Fund
GOLD BONDS
OF THE
VERMONT DIVISION OF THE PORTLAND AND OGDENSBURG R. R. TRUNK LINE,
A
TEN PER CENT. NEW ENGLAND INVESTMENT
may, at present rate of gold, be secured.

The very large sales of the past few months leave but a limited amount to be offered, and the rapid pushing of the road to completion ensures an early and a large advance on their market value.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 18, 1873.

The Week.

THE *Alabama* Claims were finally settled on Tuesday week, after twelve years of eventful controversy, by the payment to Mr. Fish by Sir Edward Thornton and Mr. Archibald of a certificate for $15,500,000 in gold, which was immediately converted into a United States bond of a similar amount, to await the action of Congress with regard to the distribution. On this point it is to be hoped something manly and straightforward will be done next session, under the influence of the purer breezes which seem to have begun to blow in politics. The transfer of the money has been effected very skilfully, and with little or no disturbance to the market.

The most singular delusion of the past year, and it has witnessed a good many, came to an end on Wednesday. The proprietors of the *Daily Graphic*, a new illustrated paper, partly comic and partly artistic, published in this city, have been for some months announcing the despatch of an enormous balloon, constructed at their own expense, across the Atlantic, on a "current" of air supposed by Professor Wise, the aeronaut, to flow constantly to the eastward at a certain altitude. The Professor himself was to command it, and it was to have a wonderful car, with a sailing-boat slung below it to provide for accidents in mid-ocean. That it was an advertising device, was patent from the beginning; that the balloon would never start, or, if it did, would descend at Nantucket or in New Jersey, was what the experience of mankind justified us all in believing. Nevertheless, the farce of preparation was kept up with great energy. Persons of distinction were invited in considerable numbers to cross the ocean in the car, but all declined, and, when the machine was ready, it was duly exhibited to paying visitors. It was then discovered that it had been improperly constructed; that the material was cheap and poor; that the aeronaut's advice had been disregarded in the manufacture; and that, in fact, there was no strong evidence whatever that it had ever been meant to quit the earth. It accordingly duly burst when it was about half full of gas, and after some thousands of dollars had been made by showing it. The whole performance was worthy of Barnum, and as the final collapse took place in the presence of a great crowd of spectators, it must rejoice Barnum to see how deep and strong the public gullibility continues to be. It is worth notice that a mock prospectus of a projected newspaper, published by *Punch* nearly twenty years ago, promised a weekly balloon ascent from the door of the office as one of the attractions of the new journal.

A meeting, rather thinly attended, of the merchants and others interested in the transportation problem, was held in this city on Wednesday week. A good many speeches were made, and a long string of resolutions passed. The speeches were mainly devoted to an exposition of the injury inflicted on the commerce of New York by the want of sufficient means of communication with the West, and by the bad management of the existing railroads and canals. There was a good deal of denunciation of "rings," "monopolists," and politicians of the kind now so common at the farmers' meetings in the West, but the most interesting feature in the proceedings of such a meeting was, of course, the remedy suggested for the evils so freely exposed. This, we regret to say, was not what one might have expected from a meeting of business-men. The resolutions are in the main composed of the well-known generalities of the political platform, and the sole suggestion having a practical air about it was an assertion that the production of the country requires the construction of double-track railways, exclusively for freight, across the continent. We now suggest that another meeting be held, at which the speakers be directed to answer the following questions fairly and squarely. Whence is the money to come to construct this railroad? If supplied by a joint-stock corporation, is it to own and manage the road? If so, will it be allowed to fix its own charges? If not, who will fix them? If fixed by Government, by what rule? Will they have to be such as always to enable the farmer to sell his products in New York at the market price, no matter how low that price may be? If the company loses by this, who will compensate the stockholders and assure them a fair interest on their capital? If the Government does so, will it not be by taxation for the benefit of a class? Why should we pay taxes to enable the Illinois farmer to get his corn cheaply to market any more than to enable him to buy crack ploughs or reapers, or cart it to the barn? In short, what *is* "the transportation problem" about which you talk so much? As you describe it thus far, does it not bear strong marks of being a branch of the ancient and larger problem, how to get money without working for it, or, in other words, how to live at other people's expense?

The *Tribune* has had another striking letter from its correspondent in the West, this time from St. Louis, expounding the farmers' grievances. In Missouri, he finds there is no complaint against the railroads at all; there, the cause of the farmers' woes, the reason why they have to work so hard and to mortgage their farms, is the existence of the national banks. In Iowa, on the other hand, it is not so much the railroads who trouble them as the middlemen, who buy up their produce, and into whose hands they say the railroads play. It begins to be very clear that if Congress protects the farmers against all their enemies—the railroads, the banks, the judges, the makers of agricultural implements, the carriage-makers and piano-makers, and the peddlers, who are now "devouring their substance"—the executive department of the Government will be kept pretty busy. Every farmer will have to have an official guardian to see that he sells his corn and pork dear, and buys his clothes and furniture and tools and justice cheap, and gets his money at low rates on poor security. It is a terrible pity that the cause of real and practical railroad reform should run the risk, which it now appears to run, of being smothered up and lost sight of in vague and visionary discontent. But we cannot help believing that after the first froth of the agitation has subsided, the limits of the practicable will become more clearly visible, and we shall have a rational attempt, not to carry people's goods at the public expense or the expense of their neighbors, but to reform the management of corporations.

It seems to be acknowledged on all hands that Boston and Philadelphia and Baltimore are drawing to them a larger and larger proportion of the Western produce, owing in part to cheaper or, what is the same thing, more rapid transportation, and in part to the want of better facilities for unloading and shipping at New York. In fact, the railroad men who have been examined by the Senatorial Committee ascribe the whole of the disadvantages of New York to this cause. It would seem, if all this be true, that competition between the Atlantic ports does something at least to solve the transportation problem, so far as the people of the West are concerned. In his recent speech at Dayton, Ohio, Senator Morton, in speaking of the cheap transportation question, made a statement of considerable importance. He says that he has in his possession a proposal submitted by Dutch capitalists to build a railroad with four tracks from the West to the seabord, without asking any aid, either State or national. All they ask is a charter. We trust this proposal will not be forgotten when Congress meets, for it will contrast very strangely with certain other propositions which will be submitted to the authorities.

Two years ago Congress created a reform government for the District of Columbia, consisting practically of a Board of Works, at the head of which was nominally the President of the Board and Governor of the District, but really the Vice-President, Mr. A. R. Shepherd. The Board, on assuming control, undertook a comprehensive scheme of public improvement, which resulted in the creation of a debt of some $17,000,000. This debt made the District bankrupt, and two months since the Board was reduced to paying its employees in small bonds of the denomination of $50, being unable to find any ready money. There has always been a good deal of doubt as to what had become of this $17,000,000, and the person chiefly suspected of knowing where it is is Mr. A. R. Shepherd, who is commonly spoken of as "Boss" Shepherd, and who is accused of having made large sums of money by what used to be called in New York, in the time of Tweed, "speculations in real estate." The Governor of the District and President of the Board, Mr. H. D. Cooke, has resigned, on account of the conflicting claims upon his time and attention of his public and private duties, and General Grant, in accepting his resignation, has written him a letter congratulating him on his able and zealous performance of his duties, which has caused the national capital to advance towards what it should be "with a rapidity that astonishes and pleases every one who has been away from it for a few years and returns," and saying that if Governor Cooke's successors give the property-holders of the District the same satisfaction that he has, the people of the whole country "will have reason to congratulate themselves on the new form of government given them." The President has appointed as Governor Cooke's successor Mr. A. R. Shepherd.

The practice of levying assessments for political purposes on the employees of the Post-office has hitherto been generally supposed to be confined to the period just preceding important elections. From this, however, to the practice of creating a party treasury, with a permanent fund, there is but one step, and that step seems to have been taken by Postmaster Filley of St. Louis. Mr. Filley lately sent round among the St. Louis Post-office clerks a circular calling attention to the "necessity which frequently arises for the disbursement of money in securing political ends," and the consequent propriety of contributions from those who hold places of profit dependent upon the supremacy of the party, and respectfully advising the clerk addressed that a donation of so many dollars would be gratefully received, and at the same time handsomely acknowledging the receipt of the money. Persons who have not studied the subject may suppose this to be a violation of the civil-service rules, but it is not; for these donations are voluntary, and the clerks who contributed have since been engaged in signing a blank form, as follows:

"We, the undersigned, clerks in the St. Louis Post-office, signed the assessment of five per cent. of our salaries upon us without fear of discharge or other consequences in case of refusal to do so, and of our own free will; and we commend the Hon. Chauncey I. Filley for the silence he has observed in view of the comments made by newspapers and citizens in regard to such assessment."

General Butler was not nominated for the governorship of Massachusetts at the Worcester Convention, a result which was generally anticipated. The Washburn men proved to be in a majority—a small one, but still a majority—and accordingly, after some preliminary sparring and grimacing, the General withdrew his name, a step which apparently took his followers by surprise, and led them to expect and hope for something in the nature of a compromise. There was hardly a trace of this, however, in the platform, in which Butler's enemies had it all their own way. The resolutions condemned the "salary grab" in the strongest terms; rebuked the interference of Federal office-holders, *as such*, in local politics, and called on the President to dismiss those of them who had been guilty of "working" for Butler; affirmed the right of Congress to regulate railroad traffic, and called for the exercise of it; took credit to the Republican party for all the more important reformatory legislation of the present generation, and protested against "cheating and bullying" at caucuses and conventions; demanded the ten-hour system for women and minors employed in Massachusetts factories; approved of laws for the suppression of crime, intemperance, and disorder, and declared that "the character and details" of such laws must be fixed by the legislature, and that the laws ought to be obeyed until repealed; and, finally, approved of Governor Washburn.

Butler and his followers declined to bolt, and he took the castigation bestowed on him in the first resolution with his accustomed cheerful impudence. In fact, those who understand his character are of opinion that he extracted a great deal of comfort from the proceedings. He had a large and enthusiastic following among the delegates, to whom the badness of his reputation seemed to afford great delight and amusement, and he was the most conspicuous figure at the Convention by far, and thus had his love of notoriety fed to the full. It must be admitted, too, that on the question of bolting he got the better of his opponents. Mr. Dawes's avowal, previous to the Convention, that even if Butler were nominated he would vote for him, and the shrinking of the anti-Butler men, with the honorable exception of Dr. Freeman Clarke, at the Convention, from the avowal that they would not vote for him under any circumstances, were to him triumphs of considerable value, because the game he is playing in Massachusetts rests wholly on the presumption that whoever can get possession of the Convention can make sure of the obedience of the party. As long as this stands, Butler has only to do his peculiar and hidden work at the caucuses and primary meetings to increase his chances next year. A frank declaration at Worcester that his nomination would not be submitted to would have brought his enterprise to a termination and caused the desertion of a large proportion of his followers. As matters are, he has every inducement to begin over again next year; and this we have little doubt he will do. The Convention produced two speeches of an order rarely heard in such bodies—Mr. Bullock's and Dr. Freeman Clarke's. If they made the impression they ought to have made, Butlerism would rapidly disappear from the State.

The Virginia campaign seems already to be decided in favor of the Conservative candidate for Governor, who stands on a "white man's platform," a state of things to be regretted, but apparently the inevitable result of Federal interference and carpet-bagging. In New York, five State conventions are to be held this fall. The Republicans meet at Utica on the 24th of this month; the Democrats at the same place on the 1st of October; the Liberal Republicans at Elmira one week later; and the regular and irregular Prohibitionists will also hold conventions. There are two Supreme Court, two Superior Court, and two Marine Court judges to be nominated, as well as the usual political vacancies to be filled. Whoever should pretend at this moment that he knew anything about the chances of the next candidates would be guilty of a gross attempt at imposition; but there are one or two considerations that ought not to be overlooked by the managers. The Republicans and Democrats are pretty nearly evenly balanced, if not in actual strength, certainly in voting power; the popular interest in politics is at a low ebb; and the citizens of this city will not turn out in any force unless something turns up of an exceptionally interesting kind. Under these circumstances, the election can either be determined by bargaining or by the character of the nominations, and if one of the two chief parties should take "politics" for their cue and put up a poor ticket, and the other should nominate a strong ticket of unexceptionable names, the latter would stand a very good chance of bringing out a heavy vote, whether they happened to be in the Republican or Democratic fold. In Brooklyn, the chief event of the week has been the arrest of Sprague, City Treasurer, and Rodman's principal, for embezzlement.

Intelligence from the *Tigress* has been received during the week. The search for Buddington and his company had been rewarded by finding their winter camp on the mainland near Littleton's Island, which Captain Tyson is supposed to have mistaken for Northumber-

land Island, thus transferring the scene of the separation some sixty miles to the north. In the camp were six Esquimaux, with whom communication proved difficult, owing to their dialect; but from them and the manuscript journals left behind, it was ascertained that the white men had passed a comfortable winter under shelter, and having constructed two whaleboats from the badly-damaged *Polaris*, embarked in them for the south about the middle of June. A month later, and only three weeks before the arrival of the *Tigress*, the vessel went down. As no trace of human beings was discovered in the voyage to and from Disco, it is inferred that the Buddington party purposely made for the west coast of Baffin's Bay, and are now safe on board some one of the whalers which frequent it. The *Tigress* has crossed over to ascertain if this be the fact. The recovery of the papers of the unfortunate expedition is no inconsiderable result of the *Tigress's* mission.

The Tichborne trial begins to have a very strange look. Dr. Kenealy complains of the non-interference of the Court on an occasion when he says Mr. Hawkins "called him" a liar in "open court." The Court explained this non-interference by hinting that the abuse of Hawkins by Kenealy quite equalled that of Kenealy by Hawkins. There is some hard swearing going on for the defence; but if it were not for the squabbles between the lawyers and the Bench, the trial would begin to grow uninteresting. The conviction of the American bill-forgers, and their sentence to penal servitude for life, has attracted a good deal of attention, one correspondent observing that there is a belief among certain classes in London —the same classes, by the way, who are in the habit of cheering the Claimant whenever he appears in public—that the severity of the sentence comes from the fact that the convicts are Americans, the recent payment of the *Alabama* money having irritated the minds of the British aristocracy. While in Newgate, it is said, the prisoners nearly effected an escape by bribing three of the warders—giving them £100 apiece. There is a story, also, that a plan was concocted for a rescue from the dock while the trial was proceeding. These facts were probably taken into account by the Court in imposing sentence.

The Internationals have held their annual meeting, and it seems from their proceedings that communistic societies, like ordinary individuals, as they grow older become more conservative. The first question which came before the convention was the admission of an Italian delegate, sent by the Spanish Intransigentes. Notwithstanding all that has been said of the sympathy between the Spanish revolutionists and the followers of Karl Marx, the deputy was unanimously refused admission, partly because of his not being in good and regular standing, but partly on account of the bad reputation of his Spanish principals.

The visit of the Comte de Paris to the Comte de Chambord is now generally taken to be an abandonment on his part of all claim to the throne through Louis Philippe, and an acknowledgment of the principle of hereditary monarchy in the person of the latter. This has so far cleared the ground for the Monarchists that they are apparently of opinion that there is now nothing to be done but bring the Comte de Chambord to reason on the subject of the white flag. On this point he has always been obdurate, but he is now said to show some signs of willingness to compromise by confining the display of the flag to his residences as a sort of family ensign, and leaving the tricolor for the army and the nation. Things have gone so far that M. John Lemoinne, who occupies a position in the press somewhat similar to that of the late Prévost-Paradol, and is now acting as the monarchical fugleman, has come out openly for the monarchy in the *Débats*, on the condition, of course, that the Comte de Chambord makes a fair bargain with the nation and gives up divine right. There is little doubt that the majority in the Assembly is all ready for a decisive move in this direction, and only hesitates through doubts about MacMahon. Whether he would allow anything new to be set up is still questioned.

All this is frightening the Italians badly. If there is anything on which Henri V. is obstinate and unrelenting, it is his devotion to the Church, and his more ardent adherents make no secret of his belief that he would think it due to himself and to France, but especially to himself, to set the Pope up again in the enjoyment of his temporal rights; and that an interference in Italy to please the army would be set on foot, in imitation of the interference in Spain undertaken by the Restoration in 1822. There is, so far as known, no class of French politicians, except the despised Reds, who would object to a crusade of this sort. Even the liberal Thiers could hardly oppose it; and to thousands of infidels it would have the sovereign advantage of restoring the self-respect of the army. When one thinks of these things, one likes to look back to Gravelotte and Sedan. The Italians are, however, growing crusty, and may have an opportunity of showing in the controversy what the last ten years have done for them.

In order to get any reliable news from Spain, it is generally necessary to go back about a month and make a comparison of the various contradictory telegrams which have been published. Last month's defeat of the Carlists at Estella turns out to have been instead the capture of the citadel by the Carlists, who took 600 prisoners. A special correspondent of the *Times* confirms this version. Don Carlos gave the garrison their liberty and an escort to Pampeluna. The Carlist officers seem to be mainly occupied in disciplining their raw levies in the North for a descent in force upon Madrid. Castelar, on his election as President of the Cortes, made one of his usual speeches, in which he extolled the ideal, made very disheartening allusions to the actual, and assured his hearers that the only hope for republicanism in Spain was the immediate establishment of a dictatorship.

A correspondent of the *Tribune* has succeeded in getting into Cartagena, and writes a very entertaining description of his adventures. He walked round the walls, "interviewing" the sentries, until he was arrested, and was then taken first before Citizen Gutierrez, the cobbler, President of the Junta, and then before Contreras, who received him in half-naked state, but with great politeness, which the correspondent repaid with interest, assuring the General that though his canton and its institutions were still young, they would no doubt improve with time. Just before the arrival of the correspondent, the *Vittoria* and *Almanza* had been captured by the English and Prussians, and the Spanish Admiral, Lobo, had arrived off Cartagena with three wooden sloops, and demanded the surrender of those iron-clads. It was suggested to him that without extra hands he could not man them—an argument which struck the Admiral so forcibly that he immediately determined to put to sea, giving at the same time official notice that he established the blockade of the harbor from that day. As soon as Lobo had begun to make his preparations for departure, the insurgent vessels, *Mendez Nuñez* and *Numancia*, began to make things ready for a terrific naval fight, and the English Admiral sent word to Lobo that his enemies were getting up steam. Lobo replied, "Then I know my duty, and will do it," and got up steam and went off as fast as possible to Algeciras. He returned no more by daylight, but frequently came in under cover of the night, and sent messages to the English Admiral; but at dawn of day he was off. There are in Cartagena some 1,500 mutinied soldiers and some 4,000 volunteers. The soldiers are unpaid, but provisions are plenty. The besiegers under General Campos are half a mile out of range, but Contreras keeps up a continual cannonade, and the correspondent, illustrating the desperate character of the conflict, mentions the fact that on going outside the walls a day or two before to see what was going on, the Castle of Atalaya opened such a fire upon him that he barely escaped with his life; and he intimates the opinion that unless the war is brought to a speedy termination, there will not be a vine-field left intact in the range of the guns.

THE LOST OPPORTUNITY.

THE Massachusetts Convention last week contained all needful elements for a great and decisive and peculiarly useful victory. The canvass had been prolonged and animated; the enemy had brought up all of his forces, swelled by irregular and illegal artifices, and was believed to be stronger than he could ever be again. Notwithstanding his extraordinary combinations of personal resources with Executive patronage and influence, there was a powerful majority against him, unquestionably representing, both in sentiment and the manner of choosing the delegates, the best part of the Republican party of Massachusetts; and there was a presiding officer whose impartiality and ability could be relied upon, and whose inaugural address had done all that such an address could do to raise the Convention out of the stratum of political intrigue, and bring a really intelligent body of American citizens face to face with the greater dangers and evils of the political hour. The day before the Convention assembled, General Butler was morally defeated, occupying the position of a man who, without mishap, had done his utmost and failed, and was about to receive the decisive blow that would effectually dispose of him. But when the Convention closed its sittings, General Butler was really the only person to be seen—patronizing the resolutions, claiming this, that, and the other as embodying *his* principles, for which *he* had long labored, and, by a clever piece of effrontery, turning the back-pay resolution, which was intended to crush himself, into a shaft against his opponent, and hoping, with illustrative political fidelity, that, if the resolution were adopted, nobody would vote against Governor Washburn because of it. Whatever may be wished, no one can say that an enemy has been very badly routed when he is allowed to retain his position as long as he pleases, and to fire at his ease unanswered the very last guns of the battle.

The issue that has been tried (or attempted to be tried) in Massachusetts during the canvass, is whether our political conventions shall be the expression of the opinions of those citizens who make up a party, or whether they shall continue to be a piece of party machinery, handled by professed politicians and controlled by the interference of the executive officers of the General Government. It is a vital issue, and nowhere could it have been fought out better than in Massachusetts; or rather, on no other battle-ground and at no other time could there have been so little to excuse a retreat. For it is an "off-year" in politics; no other vital question was to be sacrificed for this, or required this to be sacrificed for it. Massachusetts is the strongest Republican State in the Union, with the best-informed population, and with the largest proportion of trained intelligence, and she is one of the few States where the educated and wealthy classes continue to take an active part in political affairs. On what other field could a battle so well have been fought which would teach our political adventurers that the American people are reaching a condition of mind in which they will no longer be trifled with?

"Dividing the party" was apparently the bugbear which frightened the leaders of the Convention into the policy of assuring General Butler a safe and orderly retreat. Dividing the party with a tolerable certainty of dividing its obnoxious elements out of it, is precisely what Massachusetts needs to have done, and what the large and respectable majority of her citizens really desired to do. Dividing the party is precisely what General Butler and politicians of his kind dare not do. Their political trade consists in capturing conventions, and relying upon party obligations to compel men to accept their nominations. Now, it would have been difficult, and perhaps improper, for the leaders at Worcester to have gone directly out of their way to eject from the party General Butler and the Federal office-holders who have been conspiring to use their official positions to thwart the views and wishes of the people of Massachusetts, but General Butler himself brought in and laid before the Convention the golden opportunity. The address of Governor Bullock had for the moment raised the Convention upon plane where it could do something for the regeneration of American politics. The resolution of Butler was nothing less than a proposition to bring the Convention down to the usual low level of a contest between two office-seekers, with the usual blind fidelity to the nomination, whether it be good or infamous. Considered by the light of its subsequent success, it must be acknowledged that the proposition seems a shrewd forecast, on General Butler's part, of the timidity of the men who were opposing him; estimated by the use to which it might have been put, it seems one of the most patent blunders into which any politician ever fell. It was the very last gage of battle that General Butler would have been willing to throw down, if there had been courage and earnestness enough among his opponents to take it up. He virtually snapped his fingers at the majority, and dared them to drive him out of the party. If they had dared, and struck the blow which he for the moment invited, and boldly said, "Mr. Green was right; we approve of what he said and agree with him in holding you a dishonorable aspirant, who shall never under any pretext receive our support," Butler would have been routed and compelled to leave the Convention, with the responsibility on his own shoulders of dividing the party, and with no excuse for doing so except the party's openly expressed contempt for himself; and it would have been written down on the party record in very plain characters, that neither this year nor next can General Butler be the representative of the Republican citizens of Massachusetts. Instead of trying to smother the resolution in a committee, and timidly meeting it with subterfuges and evasions, Mr. Hoar and his friends should have thanked Butler from their inmost souls for an opportunity which could hardly be hoped for in a lifetime spent in conventions. As it was, they allowed Butler to throw himself into the attitude of a courageous, straightforward, honest man, who alone dared to speak out truthfully against the quibbles and evasions of those who were in an underhand way trying to put him down. Indeed, the majority of the Convention who had come up honestly prepared to do battle for the right, were made to appear like men who, having climbed up into a better position, are then afraid either to go up higher or to come down, but stand meekly on the defensive, dodging as well as they can the missiles which their bolder and more active enemy audaciously chooses to fling at them. It cannot be said that they were defeated, but it must be acknowledged that they declined to fight a decisive battle, and thereby threw away the certainty of winning a great victory. The battle which they condescended to engage in was that of an ordinary contest between two candidates, with nothing of record against the one except his lack of votes, and with the certainty behind it that he will again come up to vex and harass Massachusetts, and renew the struggle to debauch and buy up the requisite number of political committees as unblushingly as before.

The person to whom Massachusetts and General Butler are most indebted for this unexpected turn of affairs is Mr. Dawes. At the beginning of the campaign, Mr. Dawes took care to announce that he would only be a private in this war, which now seems to mean that he would not be responsible for any battles beyond those of words, and that when it came to blows he would put himself as completely as possible out of General Butler's and harm's way. When the contest was growing serious, and delegates were openly avowing their intention to bolt or divide rather than support Gen. Butler, and not one of the leaders had intimated that he would prefer party discipline to the integrity of the party and the welfare of the State, Mr. Dawes, apparently thinking that it was time for him to interfere, stepped out of his retirement in the ranks to make to his constituents the most fatally important speech of the campaign. In this speech, after describing Butler as a man without a merit or a virtue—whose unprincipled conduct is now costing the General Government $20,000,000 a year in salaries alone, and who is the most dangerous man who could be selected for any responsible office—he suddenly read his own self-condemnation by saying that he would nevertheless support him if he should be successful in the Convention. The speech meant more than it said, for it was an

intimation to the Congressional following in his own district, and in others which were opposing Butler, that they were in no event to proceed to extremities; and it was still more fatal in disclosing to Butler what the policy of the leaders would be—in effect patting him on the back and telling him that he might play as bold a game in the Convention as he pleased.

There are, as we have hitherto had occasion to say in the columns of the *Nation*, two theories of what a political party is: the one holds that it consists simply of a number of citizens who co-operate to accomplish some definite thing which they believe will be for the public good; the other, that a party is a kind of army in which men enlist, and in which they are to be kept marching without question as to where they may be going, though (according to General Butler) with the privilege of deserting and going over to the enemy if they please; and that it is to be managed primarily for its own ends, and to be kept agoing, so long as "the people" can stand it, for the sake of its leaders and its followers and its traditions and the good it has done. It is this latter doctrine which depends upon "discipline" and "fealty," and regards a nomination to a high office as a prize for which two or more men play and one wins, and accounts the loser's "support" as something akin to a gambler's debt of honor. Mr. Dawes came into politics in 1848, and he was elected to Congress as long ago as 1856, and uninterrupted political life has evidently brought him into the strict party school. So far as we can perceive, the recent contest in Massachusetts is now chiefly remarkable for enabling him and General Butler to place themselves side by side on precisely the same platform.

THE CATHOLIC REVIVAL.

THERE have not been within the present century so many signs of activity in the Catholic Church as are to be witnessed this year. A movement having for its object, as our own revivals have, the outward display of intense religious feeling, and embodying itself in ostentatious excursions by large bodies of persons to the shrine of some saint or the scene of some miracle, has begun in France and spread to England, and is beginning to show itself in this country, in which an American "pilgrimage," on a scale and with accompaniments that will throw the European pilgrimages into the shade, is already talked of. The *Catholic Review*, in discussing it, makes suggestions which show indeed that the American Catholics will bring to the work of pilgrimage that practical, labor-saving, and inventive spirit which has already achieved so many wonders in the field of material progress. It points out that the American pilgrim, while promoting his soul's health and fostering in his breast the flame of holy zeal, by visiting spots which church history has made famous, or visible interpositions of the Unseen Power have sanctified, will at the same time, and by the same outlay of money, gratify that longing for European travel by which every right-minded American is more or less possessed. We doubt very much whether any such economy of time and cost has been held out to any of the devout Europeans who are hastening from England and various parts of France to Lourdes and Paray-le-Monial.

But then it must be admitted that the European pilgrim has reasons for seriousness and singleness of purpose which do not press on his American brother. The Catholic revival in France, and in a minor degree in England, is not altogether the result of a quickening of religious zeal simply. One occasionally sees the religious demonstrations in France ascribed to the fanatical promptings of the reactionary majority in the Assembly. That this majority is intensely ecclesiastical in its taste and temper there is no denying, and in fact it takes no pains to disguise it. More striking proofs of its leanings and of its indifference to the traditions of French liberalism it could not have afforded than its passage of a law, before its late adjournment, restoring mortmain for the benefit of the Archbishop of Paris, and of a resolution declaring the construction of a Catholic cathedral on the heights of Montmartre a work of public utility. But then this disposition on the part of the class which makes up the majority of the Assembly was exhibited in the same strength when it was last in power, after the Restoration of 1815. One of the first things the dukes and marquises and counts have always done when they got a chance, ever since the Revolution, is to try to restore the Catholic Church to its ante-Revolutionary power and splendor, and this not more because it is the true church, through whose gates only people go to heaven, than because it is the only church to which a gentleman can belong, and the only one that gives gentlemen their due. The little corps of "Pontifical Zouaves" who did so much splendid fighting during the Franco-Prussian war, is not by any means composed of pious youths, in the ordinary sense of the word, but of men who felt that in defending the church and its visible head, they were defending their own order, and the ideas which made the order worth belonging to.

But all these phenomena were witnessed in as great perfection between 1815 and 1830 as now. What distinguishes the present revival of ecclesiastical influence in France from that which took place when the reactionary party last had the upper hand, is that it is shared by the *bourgeoisie*, and that the religious sensibilities of a large class, which, after the Restoration, could not be said to have any religious sensibilities at all, are now touched; and the French *épicier*, after fifty years of complacent infidelity, begins to say his prayers, take the communion, and visit distant shrines, and finds himself once more coming into sympathetic relations with the Catholics of other countries. The explanation of this change—and something corresponding to it to be witnessed in other countries—is not so much that defeat and invasion have softened his heart and loosened his hold on the things of this life, as that he feels, as the middle and upper classes throughout Europe, except perhaps in Italy, feel, that the very foundations of society are being shaken by the discontents, aims, and aspirations of the working-classes. These discontents are too fierce and bitter, and too completely separated from the facts of life, to be capable, as far as appears at present, of being allayed by any process of discussion, or any redistribution of political power. The watchword of the Socialistic party on the Continent is everywhere, "Your money or your life," and their accession to power has everywhere thus far been marked by confiscation and slaughter. The result is therefore an unmistakable loss of respect on the part of the middle classes for the machinery of constitutional government, and an unmistakable growth of respect for the soldier and the priest as the two great defenders of the existing social order. The disposition to seek religious consolation in the present crisis is strengthened by the fierce hostility of the Radical party not to the Church only, but to all forms of belief in an unseen world. God is now generally denounced by the Radical leaders as a middle-class fetish, set up partly to feed their own selfishness and partly to keep the poor quiet; and even the most materialistic owners of property are thus driven into refurbishing their early faith and placing their fortunes under the divine care. God, they reason, would hardly be so fiercely assailed by the enemies of order if the worship of men were not closely connected with its maintenance. There is a passage in the recent work of one of the frankest of contemporary Positivists, Mr. John Morley, on Voltaire, which well expresses the feeling which, in a coarser form, fills the breasts of the Irreconcilables of the European continent: that the Christian religion, even in its most theistic form, is essentially the religion of the happy and comfortable, that only those with whom, on the whole, the world goes well can feel that trust in the rightfulness of the decrees of Providence, that confidence that even adversity is parental chastisement and that come what will all things are ordered for the best, which lie at the basis of all real piety.

The attacks which are occasionally made on the pilgrims in the French towns, and the hissing and singing of the *Marseillaise* with which the hymns are greeted by the bystanders, are so many illustrations of the depth of the gulf which now separates the church and the world in many parts of Christendom. It is not a gulf of opinion about doctrines, but a gulf of feeling on the whole cluster of rights and duties of which social life is made up. The German barbarian who watched a Christian procession in a Gaulish city in the third or fourth century was not a sympathetic spectator, and may

have been a hostile one, but there was a good deal of awe and curiosity in his hostility at worst, and he was by no means inaccessible to sacerdotal persuasion. The modern barbarian feels neither awe nor curiosity, and is apparently past conversion. To him the clergy and faithful are a band of impostors, whose goods he would like to spoil, and whose throats he would not mind cutting. When we consider these things, we understand the comfort which, according to all the best accounts, was diffused through property-holding France when the news came that the Conservatives had thrown the Parliamentarians overboard, and put the reins of authority in the hands of a soldier. The game of debate, said the shopkeeper to himself, is pretty, and government carried on in that way may be a pleasing sight for doctrinaires and Englishmen and Americans, but I am more anxious to live and enjoy my gains, and leave them to my children, than to afford those gentlemen the spectacle of the successful working of constitutional government. It might turn out all well if I kept on marching in that direction, but when the Radicals tell me, as one of them did during the Commune, that the proper thing to do with me, and the like of me, was to take us out on a fine May day, when the air was clear, and the sun shone bright, and life seemed sweet, to the nearest square, "and plant twelve rifle-balls apiece in our bellies," I prefer to stay as I am. The Radicals and I cannot work together in comfort on this globe. I may have to kill them in order to prevent them from killing me, and I therefore wish to keep the means of doing it in my hands.

It must be added, too, that the ferocity of the Conservatives is by no means defensive simply. They hate the Radicals as the Radicals hate them, are not sorry to get a chance of killing them, and, when there is no other way of demonstrating against them, enjoy building churches and making pilgrimages under their noses, and doing everything else which liberal France is known to despise or to abhor. The situation is not one which either the religious man or the politician can contemplate with much pleasure, but it would be a mistake to suppose that an increase of faith in the Catholic Church on purely religious grounds forms an important feature in it; on the contrary, it is three-fourths political.

THE WORCESTER CONVENTION.

BOSTON, September 13, 1873.

IN spite of the enormous uproar made by the Butler men, and in spite of the aggrandizing of General Butler's chances of success done by persons outside of Massachusetts, it appears to be true that Governor Washburn's friends were right enough in their original estimate of the number of delegates that Butler would be able to secure. From the beginning they conceded to him about four hundred out of the eleven hundred members who were to make up the Convention; and, although the Convention adjourned without having by a definite vote determined exactly how many delegates were for Washburn and how many for his opponent, and although such votes as were taken were vitiated by cheating, and were at the best ill counted, it is reasonably clear that not very far from four hundred is the mark at which to set the fulness of the Butler strength. How they secured so much strength as that it would be an old story to tell you. Such persons as can get any comfort from it may have the assurance of the best-informed political observers on the Washburn side, that what success the Butler men obtained they obtained at the cost of a small fortune expended by their leader. For example, a thousand dollars is put down as the amount that went into the little town of Greenfield, Governor Washburn's home, for the purpose of showing the State at large how unpopular the Governor was among his neighbors. I may add that, in this instance, it was money lost. In another town, an Irish Democrat turns over to the Washburn managers a five-dollar bill, sent to him enclosed in a package of Butler ballots, which he was to use in the impending caucus. Dozens of similar stories—scores of them, rather—are everywhere to be heard. Indeed, the facts are so well known that only a bill of items, giving a list of the towns in which caucuses were bought, and the names of the men employed as disbursing agents, could command any interest in this community. It is no more news here than the shining of the sun that Butler's canvass has been marked by the purchase of some caucuses, the packing of others with Democratic voters, and the active management of others by the Federal officials of the eastern end of the State. To-day one would hear of Supervisor Simmons—a young man of the Davenport order, to judge him by his looks and his reputation—as being busy at Taunton say "fixing things"; to-morrow he might be heard of in Worcester County; next week he might, as committeeman, be calling ward caucuses in Boston at a moment's notice, so that not even special trains could bring up Washburn men from the seaside, or down from the mountains. Collector Russell, too, was another of whom one was always hearing; now, as advising with the Eighth Ward negroes in the interest of General Butler—whom, by the way, this class of voters almost to a man ignorantly worship, as the Scripture says—and again, when General Butler's defeat had become a thing certain, one heard of the Collector as treating the Washburn managers in his ward with the greatest courtesy, conceding everything, agreeing that So-and-so, their nominee, would be a fit person for chairman of the caucus, and consenting even to "the use of the check-list."

The check-list, by the way, has been the subject of much bitter dispute in all this struggle. The demand of the Butler men has everywhere been that it should be discarded, and this demand, said their opponents, was on its face proof positive of a deliberate intention to commit fraud. Why, they asked, object to the use of a document which was no more than an authentic register of those citizens who at the last election were legal voters in the ward where the caucus was now to be held? To this question the reply of the others was that, although the rich seldom change their places of residence from ward to ward, the poor are compelled to do so often, and that to insist on a man's name being on the check-list before letting him vote in caucus was in many cases to disfranchise him for poverty. To this the rejoinder was, that more likely it was to withhold from a Charlestown Navy Yard hand the right to come over, at the order of his boss, and vote in a Boston Republican ward meeting; or it was to deprive Democrats of the right to come in and elect delegates to a Republican convention. Whatever the arguments were, in most places where the Butler men had their way the check-lists were, as a matter of fact, dispensed with. But the Convention, I observe, directed on Wednesday that hereafter they should be used, and stated that, if they were not, all delegates elected at primary meetings which should disregard the order would be refused admission to the nominating convention. No doubt this is fair, and inflicts no hardship on anybody. Lazarus no more than Dives need find difficulty in going to the ward-room of the ward into which he has just moved and having himself registered. In fact, the outcry on this subject was but one illustration of the rascality and the astonishing, patent, undisguised impudence of Butler and the Butler men. I know of no way of describing it. Perhaps as good a measure of this impudence as any is the utter hatred of Butler with which it inspires spectators. I myself believe that it would be not an easy task to apportion with precision the amount of General Butler's ill-luck in Massachusetts which is due to the disgust and contempt which his pachydermatous cynical impudence creates, and the amount which is due to the reasonable disapproval of his works and ways. To a dim perception of this cause of his failure he owes, I imagine, the sympathy given him by many well-meaning, if not very wise, men of whom, now that his character is well known, better things might be expected.

On the morning of the 10th, when the Convention was to meet, it was perfectly well known to both sides that Butler was beaten, and that no effort of his could prevent the nomination of Washburn. Beyond that fixed fact, there was room for conjecture, and the guesses were as to whether Butler would find or make a pretext for bolting; whether the Washburn men would dare to put into the platform a resolution condemning the "back-pay grab"; whether they would dare to leave that measure unmentioned; whether if they denounced that, and then permitted interference of Federal officials in local politics, Butler would make a long fight and a fight with a successful result—for who could tell how many Washburn men there might be who would feel hesitancy in making an attack on the Administration? Six or seven hours decided that what was to happen was an exhibition of himself by General Butler; an acknowledgment at the end of it that he had known from the beginning that he was beaten; and, finally, on the part of the Washburn leaders, although they very handsomely thrashed him before the people, and took very good care of him in the Convention itself, a failure to read their enemy out of the party. This many hoped for, but perhaps unreasonably.

From the opening of the Convention—indeed, from the opening of the doors of the hall—General Butler made it evident that he had determined to be the chief performer of the day. Dressed in a suit of black, and holding in his hand a portentous felt hat, he rolled his bulk about for a few minutes at the right hand of the Chairman's platform, speaking to but few persons, for he was on the Washburn side of the house, and not much noticed by anybody. By-and-by, however, he stepped forward a yard or two, and became visible to a friend of his, a Mr. Meehan of Boston, who, although a Democrat, I believe, roared out from his seat in the galleries as soon as he caught sight of the General, "Three cheers for

old Ben Butler." They were given with a will, the galleries being evidently for Butler on the whole, and were listened to by the Washburn captains with a sort of smile, which they interchanged, and which smile might be interpreted as saying, "If that does you any good, you are entirely welcome to it." General Butler was not at all bashful or coy, but at once mounted the platform amid a renewal of the stamping and cheering, and made his bow to the audience upstairs and to the Butler delegates seated on the left hand of the platform, who joined in the applause. From that time on he was constantly conspicuous. He must have been on his feet and talking rather more than half of the whole time during which the Convention was in session, and talked at least six times as much as any other man in it. Apparently, his object was to impress his followers with a sense of his abilities as a tactician, and of his general importance; and this he must, I should think, have succeeded in doing.

For what other reason he made his first motion, which he made while the Convention was as yet only temporarily organized and was doing the regular routine business incident to that stage of its existence, no one seemed then at least to know, though afterwards a possible reason appeared. Mr. W. W. Rice, of Worcester, who, with Mr. G. F. Hoar, was the anti-Butler manager on the floor, moved that all resolutions offered in the Convention should be referred, without debate, to the committee on resolutions. At once the raucous voice of the gentleman from Gloucester, thickened and muffled, as it were, by the flesh of his cheeks, was heard moving an amendment. All resolutions, he suggested, should be referred without debate, except resolutions "concerning the ordinary organization and business of the Convention." Mr. Rice thought he had offered the usual resolution; the Convention organized itself by votes, not by resolutions; of course he did not intend that it should be organized by the committee on resolutions. After some more words from Mr. Butler, and some more again by Mr. Rice, who from time to time gave ear to a hint from Mr. W. S. Robinson, or some other parliamentarian, Mr. Rice accepted the amendment of the gentleman from Gloucester. Just at this moment, however, the gentleman from Gloucester had a paper passed to him from some gentleman behind him, who had taken the pains to write down what in his view should be the exact words of the amendment proposed, and this document Mr. Butler sent up to the chair, with the remark that it had been handed to him by a friend. The seemingly casual character of this transaction had an effect the reverse of soporific on the Washburn men near where I was sitting, and when the amendment was read by the chair, a word or two passed between the leaders of the right side of the house, and Mr. Rice promptly said that the amendment as read he did *not* accept. At last the matter was arranged, and everybody wondered why so many words had been spent on so small a matter, and why there was need of reducing to writing a resolution which was so much a resolution of course. In the afternoon, the reason of the solicitude seemed to appear; for when the Convention assembled after dinner Butler was on his feet—he was the last man up before dinner, too, moving a recess—reading the resolution, which, from that time out, occupied the time of the Convention, on which the whole battle was fought, and which Butler described as a resolution "concerning the ordinary organization and business of the Convention." It was, in brief, a resolution declaring that whereas a Mr. Green of Franklin, a delegate, had been heard to say that, whatever the Convention might do, he himself would in no case vote for General Butler, it was therefore resolved that the said Mr. Green be debarred from acting as a delegate in that Convention. This resolution General Butler buttressed by an affidavit, and word went round among the dismayed members that his private secretary had some forty or fifty, more or less, similar affidavits, and that each was to be brought up singly and supported by a speech until such time as numerous Washburn delegates had gone home tired, and then Butler was to be nominated.

I may say here that, unless I am misinformed, the truth of the matter, as regards Mr. Green, is that when his fellow-citizens, assembled in caucus, wished to send him to Worcester, he informed them that if they sent him they must do so with the full knowledge that he would in no case vote for Butler, whether the Convention nominated him or not. You may judge from this that had Butler succeeded in getting the nomination, the "bolt" from him would not have been composed of delegates merely. In some instances, at least, it would have been composed of the large majority of the rank and file. And so Mr. James Freeman Clarke indicated when it came his turn to speak on Mr. Green's case. Mr. Clarke's story of the gentleman who did not believe Gen. Butler to be an "honest man" made a decided sensation in the Convention, and the face of the gentleman from Gloucester himself was not proof against this sort of comment, but changed visibly; and a few minutes afterwards, in his reply to his antagonist, Mr. Clarke figured equally with Mr. George Hoar in the witticisms and sarcasms lavished on Mr. Green's friends. While speaking on this subject of the inveteracy of the opposition to Butler, I may say that when General Butler's speech-makers were insisting on the cowardice of men like Mr. Green, in not openly avowing to the Convention their determination to bolt should General Butler be nominated, one of the anti-Butler leaders, and perhaps the most prominent and influential of them all, said in my hearing, "I wish he had asked me when I was up if I intended to bolt." His tone left no doubt of what would have been his answer; and it is my opinion that the bolt, had one been necessary, would have been a bolt indeed. Many Republicans, while asserting their ability "to take care of Butler every time," more than half wish that there had been a bolt, even if made by their own friends; and as for a bolt by Butler, they were fervently praying for it "so as to finish him once for all." But the prudent man foreseeth evil and hideth himself, and General Butler, although, as Mr. Wendell Phillips says, he is the iron man of New Orleans, had no notion of going of his own accord out of the party. On the contrary, with characteristic adroitness and with characteristic profligacy and indecency—a spectacle to gods and men—he no sooner saw that he was to be beaten in the Convention, and rebuked and abused in the resolutions, than he was ready for prompt submission.

A recess for tea followed the final vote (586 to 406) referring the resolution concerning Mr. Green to the committee. On the reassembling of the delegates, General Butler made his last speech but one, announcing that he was no longer a candidate. Whispers now went round that, in payment for this surrender, there was to be a compromise in regard to the resolutions, and prominent Butler men asseverated this, even with oaths, with the effect of frightening a good many Washburn men, who turned anxious eyes on the door of the ante-room where the committee on resolutions was in session, and into which, every now and then, some absent member would be sent by the chairman of the Convention. There is no doubt that a large majority of Governor Washburn's supporters were disposed to sanction extreme measures against his adversary, and the tidings, circulated the night before, that the platform, as then agreed upon, would censure specifically the Massachusetts representatives who voted for the salary swindle, and generally be "up to the *Advertiser* mark," had been received with universal satisfaction. It did not seem to occur, however, even to those who most bitterly deprecated a compromise, that any appeal from the committee would be possible, however inadequate an expression their report might prove of the true feeling of the Convention. In the scene which followed the committee's appearance upon the platform, the dramatic interest of the occas on reached its culmination. As the voice of the reader, incisive and emphatic in the profound silence that prevailed, pronounced the verdict of the party upon the measure in defence of which all Butler's sophistry had for weeks been expended, all eyes were fixed upon the defeated candidate, who still occupied his elevated position on the platform; and, from the signs of agitation which he could not wholly suppress, it was plain to see that the shafts directed against him had taken effect. And certainly, whoever else may find the resolutions too mild or too platitudinarian, General Butler will not. Clearly, Massachusetts is not ready for him yet. Next year, perhaps, she may be; but I imagine if she gets him it will not be at the hands of the Republican party, but, if at all, at the hands of the "independent organization" with which he had the grace to threaten the Convention, and which the Convention, in its satisfaction at having baffled him, was vouchsafed the grace to receive without resentment.

THE CATHOLIC DISSENSIONS IN SWITZERLAND.

LUCERNE, August 22, 1873.

GENEVA has always been one of the great religious centres of Europe. It has in this respect become lately very prominent since Father Hyacinthe established himself in it as an apostle of the so-called Old Catholics, and since the Government of Geneva began war against Monsignor Mermillod, a native of the Canton of Vaud, whom the Papal Government suddenly proclaimed Bishop of Geneva. I have been collecting information on the spot concerning these various movements, and the position of the Old Catholics and of the Roman Catholics. The question increases in magnitude, if you reflect that all sorts of hidden forces are working round it and under it—the rival influences of France, of Germany, and of Italy, since Switzerland lies as it were like a knot between three nationalities.

The relations of the Church of Rome and of the Government of Geneva were officially settled by the treaties of Vienna made after the downfall of the first Bonaparte. The *République helvétique* had been cut up into departments by the great conqueror, and proud Geneva had merely become the capital of the Department of the Leman. When the Empire fell, Geneva recovered her independence, and Savoy was given back to the King of Piedmont; but it was agreed that twenty-two townships of Savoy, form-

ing a circle round Geneva, should belong to her territory. As these communes were Catholic, the treaty specified that the Catholics should enjoy in them for ever the same privileges which then belonged to their brethren in Savoy. The last protocol was only signed in 1819, and, curiously enough, there was no liberty of conscience in Savoy for Protestants at that time. Piedmont, in fact, was then a very reactionary government, and freedom of worship for Protestants was only established in the kingdom of Piedmont by the *Statuto* of Charles Albert. Before that time, it was impossible to build a Protestant chapel in the territory of Geneva, outside of the town, in places which Rousseau and probably Calvin had often visited.

We come now to the question of the government of the church. This government was determined by a treaty of the confederacy with Rome, by a concordat under which the Pope had the right to name a bishop for Lausanne, who served at the same time as the spiritual guide for the Catholics of the Canton of Geneva. There was also a bishop in Soleure, in Coire, etc. The relations of the bishops with their own clergy followed the old customs: some curés were elected by the communes directly; some others by chapters; some by individuals, heirs of a founder; many by the bishops; but there was no absolute rule giving the government of the church completely over to the episcopacy. Some years ago, Monsignor Mermillod became very influential in Geneva. A very active man, he made himself the ally of the Radicals, gave the Catholic vote to the enemies of the old Conservative party, built chapels, and succeeded in procuring for his flock all the advantages of many rich foundations, originally founded for the exclusive use of the Protestants. But this was not enough; the Court of Rome thought that the time had come to strike a blow at Geneva, and saw a fit instrument in Mermillod. Had Rome opened negotiations with Geneva, my friends assure me that courteous approaches would have been met in a courteous spirit, and that even the objection to the establishment of a Catholic bishopric in Geneva might have been waived. But the Government of Geneva was never consulted; Mermillod was first named apostolic vicar of the Bishop of Lausanne in Geneva, and afterwards raised to the dignity of bishop, and the see of Geneva was created without any negotiation, as if the see of Rome simply exercised an uncontested right.

You may well imagine what agitation these proceedings produced. The Catholics themselves divided. There is in Geneva a large colony of Catholic foreigners, attracted by the beauty of the scenery, by the neutrality of Switzerland. This party is very ultramontane—some of its chiefs belong to exiled princely families; but the Swiss Catholics, who, however religious they may be, are very patriotic, did not eagerly take up the cause of Rome against their own country. Some curés fought on one side, some on the other; and Father Hyacinthe understood at once that here was a favorable field for his own views. His great eloquence attracted large crowds, already prepared for a schism, and there is now in Geneva a congregation of about two thousand Catholics who have adopted the doctrines of Father Hyacinthe. You probably know what these doctrines are. Father Hyacinthe protests that he is not a Protestant; he will, till he dies, so he says, belong to the Catholic Church, but to the church such as it was established and understood by the great fathers of old, and by the first Councils. He allows the marriage of priests; he does not consider auricular confession a necessity, though he recommends it; he rejects wholly the dogmas of the Immaculate Conception and of the personal infallibility of the Pope.

The war became so intense between Mermillod and the Council of Geneva that finally Mermillod was exiled from the Canton. His friends made an appeal to the Federal Council, the discussion before which was very interesting, and quite worthy of a great parliament. M. Segesser, the mouthpiece of the Catholics, strongly protested against any foreign intervention in this question; it was for the Swiss themselves to decide it. He should no more go for help to France than the Protestants of Switzerland should go to Bismarck. Putting then aside these foreign considerations, the deputies must ask themselves if the Council of Geneva had any right to exile a Genevan citizen for an act which fell under no law, which was not even foreseen by the law, which could not be called a crime, a felony, or a misdemeanor. The Genevese councillors were guilty of persecution, and were sowing the seed of future discords. The President of the Republic, Cérésole, answered M. Segesser in the Upper House. He is a man of forty, of great intelligence. He protested in very strong terms against the accusation of being the tool of Germany and of Bismarck, and offered to lay his whole diplomatic correspondence before the Chamber. Some gentlemen, to be sure, had gone to the French Government and maintained that France, as representing in Savoy the old rights of Piedmont, since the war in Italy, had a right to remonstrate against the conduct of the Government of Geneva. But neither M. Thiers nor the Duc de Broglie had been willing to lend an ear to these advisers. As for Prince Bismarck, he had always maintained the most reserved attitude in the whole matter. The President said little more, and did not attempt to defend in itself the expulsion of Bishop Mermillod. The vote was taken after an animated discussion, and 26 votes against 13 rejected the appeal in the Council of the States. For the present, the question is settled, but the Mermillod affair is only an incident. The relations of the curés with the bishop have been completely altered. As the Genevese will not give to Mermillod the right to appoint curés, they have voted a law which gives the choice of the curés to the members of the congregation. The parishioners in some towns of the Canton of Soleure are claiming the same right; and there is, at the present moment, complete anarchy in the Catholic Church of Switzerland.

M. Cérésole may technically be right in saying that Germany and Bismarck have nothing to do with this result. M. Segesser said with truth: "I think that nobody has a right to speak of Prince Bismarck's diplomatic interference in this affair. I believe that he has laughed at it. But if in a great country a certain political tendency becomes predominant, when this tendency is personified in an eminent representative of the state, call him prince or call him emperor, this intellectual current will be felt in other countries. You cannot stop at the political frontier of a country a storm which comes from the east or from the west, and it would be folly to maintain that we do not feel this storm because it arose outside of our country." These remarks are very profound. Many people have wondered how Prince Bismarck has been bold enough to raise, without any apparent necessity, the storm against Rome; but he is probably convinced of the necessity of giving a constant nourishment to the combativeness of the German mind, of hindering it from feeding upon itself. The invisible power of Rome can only be met with invisible arms; and thus it is that Father Hyacinthe is an unconscious ally of Germany, in the same manner that Italy is an ally of Germany, though there is probably no offensive or defensive treaty actually signed between them.

The Catholic forces of Europe are now perforce drawing round France, and France is again becoming the eldest daughter of the church. If the most advanced Republicans were in power to-morrow, they probably could not stop this natural attraction and aggregation of forces. A painful and sad necessity must for a long time sunder the intellects of modern Europe; Renan and Strauss can no longer be friends. The difficult problem of the relations of the church and the state is rendered even more complex by the introduction of the political and national elements. Even in this happy Switzerland, protected by neutrality, passions run so high that Geneva has found no better method than the brutal method of exile. Mermillod is now a martyr, and as such he is praised and extolled throughout the whole world. What is there in the air of the Leman that is an incentive to intolerance? Switzerland is always lying like a golden fruit between France, Germany, and Italy. It is perhaps the sentiment of a perpetual danger on the side of France which has always made Geneva so jealous of her rights; but France has at present no desire for annexation; she knows now what annexation means, and how many sufferings are concealed under this Napoleonic word. It would be well for Switzerland if she forgot, or at least if her statesmen forgot for a while, both France and Germany, and settled the relations of church and state in a generous and liberal spirit.

Correspondence.

THE STUDY OF ROMAN LAW.

To the Editor of the Nation:

Sir: In your article on the "Study of Roman Law" in the *Nation* of September 11, you are in error in stating that at none of the law Schools in the United States "is the Roman law taught as a part of the regular and required course." It has been taught as such at the Law School of Yale College since the reorganization of the department in 1870, and questions upon it form part of the annual examination papers for the Senior class.

It was also a subject of instruction at the academical department at Yale thirty years ago, under the late Joseph G. E. Larned, Esq., and at the Law School of Harvard University, a few years later, under the late Luther S. Cushing, Esq., well known as the author of a manual, and also of a larger treatise, on Parliamentary Law. The lectures delivered by Mr. Cushing were published by him in 1854 in a volume of about 250 pages, under the title of an 'Introduction to the Study of Roman Law,' so that to Mr. Cushing, rather than to Professor Hadley, belongs the credit of first introducing this subject to the attention of American law-students.

Yale College, Sept. 15, 1873.

Notes.

IN Petermann's *Mittheilungen* for July 29 will be found a learned summary of the results of the *Polaris* expedition, accompanied by a map showing the routes of this and of former American expeditions by the way of Smith Sound, north of 76°. It comes in good time, just as we hear from the *Tigress* of the discovery of Buddington's winter camp near Littleton's Island (in the vicinity of Cape Olsen, Prudhoe Land), and of the total loss of the *Polaris*.——The historical review of the progress of African discovery, furnished by H. Kiepert in the last number of the Berlin Geographical Society's *Journal*, has been printed separately, together with the valuable maps which accompanied the article, already described in the *Nation*. We learn from the preface that this is but the first of a series by the same competent writer, and that the second number will consider the part which the several nations have taken in the exploration of Africa during the past hundred years.

—The fall list of J. R. Osgood & Co. points to the improvement in the book trade this season of which other signs are not wanting. We cannot undertake to give it in full. Among native productions, Mr. Longfellow's 'Aftermath' takes the lead, finding companions in W. D. Howells's and E. C. Stedman's collected poems, Chas. Warren Stoddard's 'South Sea Idyls,' and, we suppose, 'Sounds from Secret Chambers,' by Laura C. Redden ("Howard Glyndon"). Col. Higginson's 'Oldport Days,' and S. A. Drake's 'Historical Fields and Mansions of Middlesex' (illustrated with heliotypes and woodcuts), may be classed together in the category of history, but are otherwise different enough. Dr. James Freeman Clarke's 'Common-Sense in Religion' stands well recommended by the common-sense in politics which he was not afraid to manifest at Worcester. 'The Voice, and How to Use It,' by an anonymous author; 'Marjorie Daw, and Other People,' by T. B. Aldrich; 'Child-Life in Prose,' by John G. Whittier; 'Trotty's Wedding-Tour and Story-Book,' by Elizabeth Stuart Phelps; and 'Doing His Best,' by J. T. Trowbridge, complete our enumeration of American works to be issued by this house. Foreign authors laid under contribution by them are Geo. Henry Lewes ('The Story of Goethe's Life' and 'Problems of Life and Character'); W. R. Greg ('Literary and Social Judgments'); Henry Blackburn ('Picturesque Normandy' and 'Artists and Arabs,' both illustrated); and Walter Savage Landor ('Cameos'—selections from his poetical works by T. B. Aldrich and E. C. Stedman).——G. P. Putnam's Sons, among other announcements, make the following: 'The Homes of Ober-Ammergau,' by Mrs. Eliza Greatorex; 'The Girlhood of Shakespeare's Heroines,' by Mary Cowden Clarke; and Bastiat's 'Essays on Political Economy.'——John Wiley & Son, continuing their uniform edition of Ruskin's works, will publish his 'Lectures on the Greek and English Birds,' in the first of which the robin and the swallow respectively receive attention.——Mrs. Lydia Maria Child's 'Progress of Religious Ideas,' after having become extremely scarce, is to reappear with the imprint of De Witt C. Lent & Co. ——A new edition of 'Peter Schlemihl,' Bowring's translation and Cruikshank's illustrations, will be issued by A. Denham & Co.——A book which is likely to commend itself to many mothers besides those who are accustomed to read the *Christian Union*, is 'Bec's Bed-Time, and Other Stories,' by Mrs. S. C. Hallowell, announced by Porter & Coates, Philadelphia. Something, too, might be expected for the nursery from 'New Songs for Little People,' by Mrs. Mary C. Anderson, illustrated by Miss L. B. Humphrey (Lee & Shepard).——Hurd & Houghton have in press 'Bianca Cappello,' a five-act tragedy in verse, by Mrs. Elizabeth C. Kinney; and 'The Egyptian Sketch-Book,' by Charles G. Leland.——Scribner, Armstrong & Co. announce 'An Outline Study of Man,' by Dr. Mark Hopkins; the second volume of Ueberweg's 'History of Philosophy'; the fourth volume, comprising Books VI. and VII., of Curtius's 'History of Greece'; 'The Preternatural Origin of the Bible Argued from its Own Characteristics,' by Henry Rogers, author of 'The Eclipse of Faith'; Saxe Holm's 'Stories'; and Jules Verne's 'Journey to the Centre of the Earth.'

—The *Athenæum* having said, apropos of Joaquin Miller's last volume, that "his old gifts, though still remarkable, have rather run to seed, while his faults of imitation and incompleteness have been confirmed," has received from the irate poet of the Sierras a remarkable note, which it has the cruelty to print. Or rather, it gives an extract, in which the editor is desired to tell the reviewer "to his teeth that he is a liar, a *coward*, and a cur." Mr. Miller informs the *Athenæum* that he wrote without consultation with his publisher. Neither, it is clear, did he consult the dictionary, nor any work on good manners. It should be said for him, however, that his view of the critic's nature and office is not by any means peculiar to himself.

—A correspondent in Baltimore writes us as follows: "The efforts that are now made in our large cities to give the children of the poor the benefit of excursions to the country and to the seaside, suggest the thought whether the money might not be laid out in a way to produce much more permanent advantages. Dr. Toner's plan (lately described in the *Nation*) for the establishment of "free sanitariums" throughout the country, is objected to on the ground of the enormous expense that it involves, but may we not have Maritime Hospitals, such as are common in Italy? These buildings are erected at convenient places on the sea-shore, and during the hot months are filled with the weak and sickly children from the large towns. The little ones are kept for a week or two, fed on wholesome food, made to bathe regularly and to romp and play on the beach, and are then sent home to make room for another detachment. I watched the working of one of these institutions in the summer of 1871, and it was most interesting to see the groups of children arrive from the cities, pale and languid, to return again a few days later ruddy, bright, and vigorous. These buildings are more properly temporary asylums than hospitals, for they are not intended for the bedridden or for those afflicted with any infectious disease. Designed only for summer use, they may be light, inexpensive frame buildings; and most of our large cities are so near the coast that suitable sites can be found within easy reach. Where these institutions have been tried, they are found to work admirably, and were a few of them scattered along our Atlantic coast, thousands of young lives would be annually saved to the country. It is a subject well worth the attention of the philanthropist." Our correspondent sends also an extract from the *Journal de Genève*, giving the statistics of these beneficent establishments, from which it appears that the first one was founded as long ago as 1856. They now number fifteen in all, and during the three months of bathing entertain from 2,500 to 3,000 children. The railroads charge less than half rates for this class of travellers, and from thirty to fifty cents per day is found to be the cost of the charity for each child.

—A modern pilgrimage at low rates by special train has in it something irresistibly grotesque, and furnishes scoffers with grounds for doubting whether piety or the pleasure of an excursion is the prime motive with the majority of those who engage in it. Father Hennepin embraced the mission to the Iroquois, as he himself tells us, on account of "a passion for travel and a burning desire to visit strange lands"; and even John Woolman's spiritual yearning towards the West Indies coincided with a bodily condition in which balmy gales and tepid waters must have been extremely pleasant to contemplate. With the pilgrims of the present hour in France we cannot conceive it to be wholly otherwise. An act of faith must be doubly sweet when it involves a change of air and of scene, and a return ticket at half-price. Of one of these pilgrimages to La Salette we read that, when it arrived at Melun,

"The Director of the Pilgrimage there appeared at the carriage door, and handed to each of us a small printed paper, containing the regulations for the five days over which the Pilgrimage extends. These regulations set forth the times of departure and arrival, the places where we were to obtain refreshments, the times, and the prices. In addition, the paper set forth the various hymns which were to be chanted each hour, and also some further practical information connected with the journey. It requested us to give our names at Montereau, to dine at Tonnerre, and it concluded with this order, 'Silence during the night.'"

At the Dijon station there was a delay of an hour and a quarter:

"We had been sent out through a door, in passing through which we were counted like so many sheep, and we were let in through another door, where the counting process was repeated. The official who performed this last task was in despair. He could not make the numbers tally, and he called out, 'I want nine more.' I remarked to him that the officials had omitted to label us. He looked at me askance, and went on with his counting. At last he found the lost sheep, and his mind was at rest."

Previously, at Joigny, when the train had stopped,

"Religious songs were to be heard from many carriages, and the refrain of the Sacred Heart, '*Dieu et Clémence, Dieu Protecteur, sauve Rome et la France, au nom du Sacré Cœur.*' All at once loud hisses burst forth, and cries of '*La Marseillaise!*' '*A Paray!*' As the Pilgrims had been forbidden to sing while at the railway station, they immediately became silent, the hisses also ceased, and the train again started."

—The suggestion that the explanation of these queer proceedings is that there is no way of testifying one's faith so sure as making one's self ridiculous, appears, after all, to be more ingenious than sound. A recent proposal of the *Catholic Review*, at least, on the subject of an American pilgrimage, seems to be too shrewd to admit of such an explanation. The *Review* says that as soon as the popular interest in the subject has reached a proper pitch, it will be found that the greater difficulties in the way have been removed, and that an American pilgrimage is not only practicable, but will also prove "the means of uniting a highly spiritual work with the ordinary relaxation which our people claim during their vacations." It is clear that any suggestions as to unboiled peas would

be thrown away on such pilgrims as these. There is a story, which we believe has never got into print, of an American gentleman being hospitably entertained in mediæval fashion in a retired cave in Switzerland, by a hermit. In the course of conversation, the host showed much interest in the guest's country, and, towards the end of the evening, enquired if the latter would recommend him to emigrate to the United States. The American, somewhat embarrassed, enquired in what capacity, and the holy man gave him to understand that he wished to know what sort of an opening America afforded for hermits. The story was originally told as a joke, but the time seems to be coming, or even now at hand, when all humor of this kind will have to be revised. There are probably in the United States a great many hundreds of thousands of persons of both sexes who would find nothing more funny in the notion of an American hermit than in that of an American pilgrim.

—Few people probably know much about the history of the kingdom of Araucania; a smaller number still anything of the founder, King Aurelius Antonius I. There is indeed a certain French barrister named Aurèle Antoine de Tonneus (or Tounens) who knows all there is to know on the subject, but it is only very lately that he has seen fit to make any of his knowledge public. There are some few facts with regard to him, however, which seem to be well established. That some fifteen years since he made a visit to Araucania; that there he acquired great influence with the natives, and was made by them king of the country under the title above given; that his assumption of royal dignity furnished at first a great deal of food for amusement among the neighboring Chilians, and afterwards food for reflection; that the result of this reflection was the sending some police into Araucania early in 1862, with orders to kidnap the king; that the king was carried off and imprisoned in Chili—all this appears to be established. The subsequent history of M. de Tonnens is said to be this: After being held as a prisoner some time, he was tried as a usurper and sentenced to death. The Araucanians appealed to the French consul, who immediately demanded the release of the king on the ground that he was a French subject; and to this demand the Chilian Government acceded, on condition that he should be taken back to France and never allowed to return to his kingdom. Nevertheless, M. de Tonnens contrived to find means of getting away, and, on his return to his Araucanian subjects, found that they were relapsing into the barbarism out of which, during his short reign, he had done his best to lift them. He determined to go back to Europe, get his position recognized, and obtain what assistance he could in his project of establishing an enlightened government in Araucania. He hoped for assistance from Napoleon, but almost at the time of his arrival the battle of Sedan took place, and the Emperor was driven from power; the succeeding governments have been too much occupied with domestic affairs to give much attention to colonization; but Aurelius Antonius has not been idle, and is trying to interest European capitalists in the development of the country. He wishes to promote emigration, and is willing to make land and mining grants, and to build up a trade in copper, silver, wheat, and hides, wool and hemp, in exchange for English manufactured goods. He is said to be simple in his habits, has a great objection to display, is a very early riser, never makes use of a carriage if he can accomplish a journey by walking, is amiable and brave. This experiment is more interesting than that of Dr. Francia in Paraguay. The Paraguayans, with all their bravery, are very low in the scale of humanity, while the Araucanians are, for Indians, very high. For three centuries they have maintained their independence, first of Spain, then of the Spanish republics which succeeded Spain. They have cultivated oratory and poetry and the arts of peace, and have obtained not only from the Spaniards, who failed to subdue them, but from other observers also, the reputation of being generous, humane, courteous, hospitable, benevolent, and grateful. A South American kingdom of noble savages governed by a philanthropic French lawyer with a Roman title, would indeed be a political curiosity.

—The committee for the celebration in Florence of the fourth centenary of Michael Angelo (born March 6, 1474) have made public those portions of their programme which relate to the literary and artistic features of the celebration. They have decided to print in a luxurious edition Michael Angelo's complete correspondence, as well as his biography, and all the documents, both published and unpublished, that relate either to his life or to his works. Artists everywhere are to be invited to send in designs illustrating remarkable events in his life, and these are first to be photographed for publication and then collected in an album for preservation in some public library or museum. It is also proposed to reproduce, by photography, all the works of Michael Angelo in sculpture and painting, as well as the most important of his drawings. It would seem as if little remained to be done in this direction. The works of Michael Angelo that have not been photographed, either by Braun or by Philpot & Jackson, or by other well-known art-publishers in Europe, must be of slight importance. Other projects of the committee are the striking of a commemorative medal; the affixing of memorial tablets to the house at Caprese, in the Casentino, where Michael Angelo was born, and to the house at Settignano, where he was put to nurse; finally, and this the most important of all, the placing of his statue of "David" (recently removed, July 30, from the Piazza della Signoria to the Belle Arti) in the "Tribune" of the Uffizii, where it is proposed to surround it with casts of all his principal works in sculpture. This last proposition has, it seems to us, little to recommend it. The floor of the Tribune—not a large room at the best—is already crowded with its five marble statues (the Venus de Medicis, the "Venus of the Tribune," alone deserves the honors of the place); but, even if there were room enough, it is no place for statues much larger than life, as nearly all Michael Angelo's are. The "David," for instance, is nearly fifteen feet high. Besides, as all the principal works of the great sculptor, except the "Moses" and the "Pietà" at Rome, and the "Prisoners" or "Slaves" in the Louvre, are in Florence, what need of encumbering the beautiful Tribune with disproportioned and useless casts?

—'Ein Tag aus dem Leben des Königs Darius,' by Prof. Ferdinand Justi, in the collection of popular scientific essays by Virchow and Holtzendorff (Berlin: Carl Habel; New York: L. W. Schmidt), attempts a picture of the court of Darius I. The essay gives numerous details of the retinue of the court, their dress and food; some account of their way of passing the day of a festival, and of the architecture of Persepolis. We miss a reference to the Persian religion, the more as the day chosen for the picture celebrated the god Mithra. The tiara, besides the usual definition, is described by late writers as a covering for the head enveloping the temples and mouth; the mosaic of the Battle of Issus represents the Persian king with such a tiara drawn over his head-dress and covering his chin. The same form occurs on Parthian monuments. Another number of the same series gives a lively biography of Wallenstein, by Prof. Bernhard Kugler. Wallenstein resembles Maurice of Saxony in deserting his early evangelical companions to gain authority with the King, and in turning against his benefactor after accomplishing this object. Maurice, however, could reckon upon the loyalty of his country in carrying out his plans; the army would not follow Wallenstein. Wallenstein's character is still, owing to his obscure ways of speech, in some points uncertain; but his negotiations with Sweden are held to have been really treasonable. The delay before Nuremberg was strategy.

—The rather ostentatious friendship a few years ago between the United States and Russia, which to the English seemed very unnatural, as between a republic and a pure despotism, but which we were fond of explaining by the policy of Russia in regard to our civil war, no doubt had some connection with the similarity of situation as regards emancipation. The emancipation of the American slaves and of the Russian serfs came at very nearly the same time, and with good reason served to draw the two nations nearer together. The connection ought not to end here with a sentimental sympathy, but each nation should learn from the other's failures and successes how to deal with its own problems. The elements are nearly the same in both cases—an immense body of poor and ignorant freedmen suddenly invested with citizenship in the face of a small, cultivated, and haughty aristocracy. By direct enactment in the one case, by the irresistible force of circumstances in the other, these emancipated classes have become landowners, with results not far from the same in the two cases. A pamphlet by Herr von Wurstemberger, entitled 'Die gegenwärtigen Agrarverhältnisse Russlands,' discusses the state of things in Russia from the point of view of a German landed proprietor. He is, as might be expected, opposed to peasant proprietorship, and shows great ignorance as to the historical character of the Russian communities, considering, for example, the periodical redistribution of land as a novel and artificial feature. From whatever point of view, however, the discussion is interesting and timely; the unfavorable effects of the change upon agriculture are described in terms which would apply fairly enough to parts of the South, and which will remind readers of Turgenef's novels of some of his descriptions. On the whole, the view here presented of the prospects of Russian agriculture is more gloomy than we fancy would be appropriate to the South. The remedy proposed is perhaps too elaborate for application to American society, but seems every way adapted to Europe. In lack of the organized agricultural groups which are characteristic of European countries, he urges a systematic division of great estates, or portions of them, into moderate farms, to be leased for long terms to the most thrifty peasants, in such a way that the proprietor shall still retain a certain control over the system of cultivation, and that these farms shall serve as model farms to the mass of the peasants. A leading object is the development of a middle class, in which Slavonic countries are on the whole deficient.

—According to the Calcutta correspondence of the London *Times*, there is a gratifying increase in the production of native literature in India. An act passed some years ago furnished the means of estimating this productiveness by requiring the registration of every book and pamphlet, as well as of every press and printer. Moreover, "three copies of each book must be sold to the Government," in noticeable contrast with the English and American practice, under the copyright law, of appropriating without pay from two to five copies. And, finally, "a catalogue of the works is published quarterly in each local gazette, and every year the whole are, or ought to be, reviewed by the Director of Public Instruction." The writer selects for special comment the statistics of the Punjab and of Bengal. The former province is much the more backward of the two, its native publications averaging about 300 a year, against 900 in Bengal. Here, out of 1,937 Oriental works published in the four years closing with 1871, 1,600 were in the ordinary Bengalee—proof that "there is no need in this, as in other provinces, to offer state rewards for the encouragement of vernacular literature." Indeed, "the copyright of a good school-book is a fortune," as such have been known to reach an edition of 100,000. For the right to publish a geography, not less than £500 has been offered and refused. It is no wonder, therefore, that many a learned Pundit "finds the compilation of school-books pay him better than books which would permanently enrich the language and benefit the country." In the period alluded to, there appeared 118 elementary readers, 55 of a higher grade, 73 classical tales of ancient India, 56 books of verse for school use, 10 dictionaries, 44 grammars, 43 political and 3 physical geographies, 28 school histories, 45 arithmetics, 11 books on metaphysics, 9 on physics, and 11 on physiology and hygiene. In Bengal, as in the Punjab, religious works exceed those of fiction, though outnumbered by "poetry." They are, of course, largely controversial. Out of 253, 91 are Christian, 5 Mussulman, 77 Hindu, 38 of the Baistal sect, and 44 Brahmo.

BAGEHOT'S ENGLISH CONSTITUTION.*

MR. BAGEHOT has written a new and interesting introduction to his well-known work, giving his impressions as to the visible and probable results of the changes wrought in the English Constitution by the legislation which has taken place since 1867, the year in which the first edition appeared. As regards the most important piece of this legislation—the last extension of the suffrage—he says its effects are not yet fully revealed; indeed, it is as yet hardly possible to anticipate them with any approach to accuracy. What he calls the "deferential" element in English politics—that is, the willingness of voters to leave the management of affairs in the hands of the rich and educated class, and to confine themselves to choosing between issues selected and presented by "their betters"—was not seriously weakened by the Reform Bill of 1832, so that that bill really did not produce any striking or palpable change in the machinery of English politics. It altered the mode in which the House of Commons was filled, but did not change the men who filled it. Mr. Bagehot thinks the class which the Act of 1867 admitted to the franchise decidedly an ignorant and politically incompetent class, which has as yet made no impression on politics, because it does not know its own power. "We have not," he says, "enfranchised a class less needing to be guided by their betters than the old class; on the contrary, the new class needs it more than the old. The real question is, Will they submit to it; will they defer in the same way to wealth and rank, and to the higher qualities of which these are the rough symbols and the common accompaniments?"

He thinks the answer to this must depend largely on the tact and discretion displayed by the higher class of English politicians in preparing issues and soliciting votes. Should the upper classes in the two great parties throw aside all scruple in making promises, for the sake of winning popular support, or should they raise questions of a social character which are calculated either to excite extravagant expectations as to what may be done for the poor by legislation, or to array the poor as a body in hostility to the rich among such constituencies as now hold the ballot in England, he thinks the Act will prove "a great calamity to the whole nation."

The effect of the Reform Bill of 1832 on the composition of the House of Commons was retarded by the prolonged survival and influence of the leading statesmen of the "pre-32" period—Palmerston, Russell, and Derby, for instance. These statesmen having died or disappeared from the political arena, the Act of 1867 has completed the change which that of 1832 only began. The spirit of the House of Commons is no longer aristocratic but plutocratic; its most prominent statesmen are not men of ancient descent or great hereditary estate, but of substantial means, and connected more or less with the new trading wealth. But the plutocrats are, nevertheless, very fond of the aristocrats, imitate them, and desire to be of them. Mr. Bagehot thinks it would be very unwise for the latter to repulse this humble worship. They ought, on the contrary, to receive the new-comers cordially, and make common cause with them. It would be a terrible misfortune if the two classes should ever be found bidding against each other for the votes of the workingmen. Moreover, this union is necessary if the House of Lords is to be preserved. That House will not, he thinks, be overturned except in a storm, but it is folly to suppose that the same storm would leave the present settlement of landed property untouched. He thinks the *Alabama* case has demonstrated the desirableness of such a change in the mode of making treaties as will compel their submission to the legislature before ratification. The acrimonious criticism which is now bestowed on treaties in the House of Commons after they are made, and which often has so irritating an effect on the powers with which they have been made, would not be heard if there was a possibility that a change of ministry on it would throw the job into the hands of the Opposition. The fear of responsibility would sober it.

Turning to the foreign illustrations of the views propounded in the first edition, Mr. Bagehot cites the French Republic under Thiers as a proof of the feasibility of the nomination of the chief executive officer by the vote of the National Assembly in a non-monarchical state, something of which he had much difficulty in persuading people when he wrote his book. But he observes, and, as events have shown, truly, that the experiment was tried in France under very unfavorable conditions, partly owing to the want of "rationality" among French politicians—*i.e.*, "not reasoning power, but the power of hearing the reasons of others, comparing them quietly with one's own reasons, and being guided by the result"—which makes debating in French parliamentary bodies almost impossible; and partly owing to the small amount of check imposed on the French Assembly by the French nation. M. Thiers, he predicted, would stay in office as long as his office lasted, and that his dismissal would "be a change of polity, and might bring in a monarchy or empire"—a very accurate description of what has actually happened since Mr. Bagehot wrote.

Turning to America, he makes some observations which we commend to the attention of Mr. Gamaliel Bradford. He points out that, while the weak point of parliamentary government is instability in policy, the weak point of presidential government is that under it you cannot secure thorough or fruitful discussion of any subject in the legislature. If members of the legislature were philosophers you might. But they are not philosophers; they are commonplace men, with but an indifferent interest in questions, and a very strong one in their personal fortunes. If, therefore, a debate was a real attack on the Government, and might end in an adverse vote and a consequent change of ministry, the legislators would throw their whole faculties into it, and the country would listen to them eagerly. But when it can produce no effect whatever on the fortunes of the men in power, nobody cares much about it; the speeches are poor, and the public never thinks of reading them, and legislation is not influenced by them. All this he illustrates by the history of the financial legislation of the United States since 1861, and, one must admit, with great force.

* 'The English Constitution. By Walter Bagehot.' New and Revised Edition. Boston: Little, Brown & Co. 1873.

RECENT NOVELS.*

WE took great pleasure the other day in reading and praising a new novel by a new writer, 'Under the Greenwood Tree,' namely, by Mr. Thomas Hardy, and it was with considerable curiosity that we took up 'A Pair of Blue Eyes,' a later and rather more ambitious story by the same author. The first-named was so different from the familiar novels which crowd the shelves of the circulating library, it was so fresh and natural, and so amusing, that it serves as a high standard by which the author's subsequent productions have to be judged. But in any such comparison, full allowance should be made for the difference in the styles of composition, for the first story is hardly more than a sketch, drawn to be sure with great care, but without the laboriousness of effort which a novel requires, while 'A Pair of Blue Eyes' has all the machinery of a full-grown romance—the

* 'A Pair of Blue Eyes. A Novel. By Thomas Hardy, author of 'Under the Greenwood Tree,' etc.' New York: Holt & Williams. 1873.

'Ingo. The first Novel of a Series entitled Our Forefathers. By Gustav Freytag, author of 'Debit and Credit,' 'The Lost Manuscript,' etc. Translated from the German by Mrs. Malcolm.' New York: Holt & Williams. 1873.

'"He Cometh not," She Said. A Novel. By Annie Thomas (Mrs. Pender Cudlip).' New York: Harper & Bros. 1873.

'Driven from the Path. A Novel. Edited by Dr. Charles Smart.' New York: D. Appleton & Co. 1873.

'Old Kensington. By Miss Thackeray.' New York: Harper & Bros. 1873.

'Innocent. By Mrs. Oliphant.' New York: Harper & Bros. 1873.

young heroine, the rival lovers, plenty of side-characters to fill the background of the stage, and a problem of human nature to be set clearly before the reader with all its far-reaching complications. In this case, the heroine is a girl with a somewhat intricate character—intricate, however, from its shallowness rather than from its depth. She is loving and attractive, and, it must be said, by no means backward in claiming admiration. Her main fault is timidity, the timidity of youth and inexperience. She has no mother to advise her, she has had no training to strengthen her, and the consequence is that where a craftier woman would have acted more wisely and have made herself out better than she really was, she hesitates, is fearful of the truth, and is crushed by the sternness of the man who takes her silence for shame and her piecemeal disclosures for detected guilt. Her story is as follows: At an early age she falls headlong in love with a young man who is of humble birth, and to whom her father objects on that account, and takes steps towards a secret marriage with him, but at the last moment her courage fails her, she sees how serious a matter it is, and she goes back home, promising to love him during his long absence in India. While he is away, his best friend appears and falls in love with her and she with him. She conceals from him the previous incidents of her life from fear of displeasing him, and certainly the way in which she has treated her earlier lover is one which she might very naturally wish forgotten. She is faithless to her first lover and cowardly to the second, who may well be excused for his hardness when we consider how much she tried to blind him, and how natural it is to exaggerate the badness of a fault that is not confessed with candor. He breaks with her, and the novel ends in a very peculiar, original, and heart-breaking way, which we will not here reveal.

In several ways the story is a clever one; it is often injured, however, by certain faults. Many of the talks are amusing, especially those in which the country-people are introduced, but the characters of higher birth are less entertaining. The plot is not over-well managed, and, to our thinking, the heroine might without harm have been made a little coyer. Her step-mother is well-drawn, but the two men stand in a rather improbable relation to one another, and their talk together about the girl they both love is neither very dignified nor very natural. Still, in spite of these blemishes, the novel is very well worth reading, and it is one that will tempt discussion about the quantity of moral guilt to be ascribed to the different characters; though fully to enjoy it one must be willing to overlook the slips of taste, which occasionally give an unintentional bad flavor to the book. The humorous parts, although they hardly belong to the story, are almost without exception very readable. We await a third novel of this author, which we see announced, with considerable interest.

Another volume of the 'Leisure Hours Series' is Gustav Freytag's 'Ingo,' in an English translation. It is the beginning of a series which shall sugar German history with a coating of fiction; and what the result is when a German novel-writer—and even so clever a man as Freytag—announces beforehand that he is going to be instructive as well as entertaining, any one on whom German novels have palled can judge for himself. In the present instance, our author had the heavy task of making the fourth century of the Christian era interesting. That the historical parts are accurate one can be tolerably sure from what he knows of Freytag, but students of early German history will prefer other books for investigation, and the effeminate novel-reader would, we fear, so far forget the necessity of culture as to read the advertisements in the daily papers in preference to such pages as the following:

"'We are at peace with Romans and Alemanni,' he said at last, cautiously; 'and we Thuringians do not fear the might of Cæsar. But thou thyself, as I perceive, wast in the neighborhood when the battle was fought, and thou hast since then avoided the villages of the Kattens, who, as thou sayest, are inclined towards the Romans. I do not ask thee to whom thou hast wished the victory.'

"'I give information without questions,' exclaimed the stranger, proudly. 'I have not taken Roman pay.'

"A ray of kindliness shot from the eyes of the chief. 'Thou art not an Alemann,' he said; 'from thy speech thou art one of the children of our gods, who dwell far in the east.'

"'A Vandal from the Oder,' replied the stranger, hastily," etc., etc., etc.

'"He Cometh Not," She Said,' is the touching and suggestive title of a poor novel by Mrs. Pender Cudlip, who is better known under her maiden name of Annie Thomas. The plot is absurdly impossible. There are two Philip Fletchers—one good, the other bad and fascinating, whom all the women find irresistible; and the novel tells the story of the bad one pretending to be the good one, and the complications to which this gives rise. There is, however, nothing worse in the novel than its utter silliness; and perhaps it may be recommended to people who are recovering from a severe illness, and who are still too weak to enjoy anything really good.

As disagreeable a book as one often finds is 'My Little Girl,' a novel manufactured by the authors of 'Ready-Money Mortiboy.' It is a story reeking in its most innocent passages with brandy-and-soda, and with accounts of black mistresses, mock marriages, illegitimacy, gambling, horse-racing, and every form of evil-doing, which cannot fail to have a bad effect upon readers who may mistake its vulgarity for profound knowledge of the world, and its offensive description of human degradation for a valuable picture of human nature and civilized society. It is, in fact, a shocking book; and it is not rendered more tolerable by the mock jocoseness and artificial sentiment with which it is filled.

'The Wicked Woods of Tobereevil,' in spite of its more ominous title, is an inoffensive work. It is even better than that—it is a story with a plot on which considerable pains have apparently been spent; it is well written, and, although the people are something like old acquaintances, there is a certain ingenuity in the way they are handled which makes this book quite readable. It will never be known as an English classic, but it holds a very fair place among decidedly second or third rate novels.

How much the writing of one novel aids the writing of another, by introducing a conventional type of human beings and an imaginary style of emotions, both of which are readily imitated by different writers, may be seen in numberless instances. For an example, we need not go further than to the novel just mentioned and to 'Driven from the Path.' The last-named seems to have been written with a good deal of care, but with very little else that goes to the composition of a readable story. It is an account of the life of a young Scotchman who leaves his unhappy home to go to sea. In time he reaches this country, and sees a great deal of life in the far West. He enlists in our army, has adventures with the Indians and Mexicans, serves against the South, and finally marries a very flippant young lady of New York, who bears a strong likeness to the bewitching heroine of 'Never Again.' Not always, however, is he busy in right-doing. In the course of his checkered life he has a good deal of experience with its dark corners, although, happily, this part is never dwelt on. There is, too, a villain in the story, who smokes, drinks, disbelieves in a revealed religion, and generally misconducts himself. Perhaps the best thing in it is the account of the hardships of our soldiers on the frontier, which bears the mark of having been written by one who knows his ground well. The poorest part is the love-making and the occasional side-talk of the author to an imaginary friend. It is not every writer who is as interesting as Fielding when he lays the story down for a few minutes and chats with the reader.

We hope that we are not too dilatory in our mention of Miss Thackeray's 'Old Kensington,' which needs no words of ours to commend it to a host of readers. It is a more ambitious story than any she has yet written; and if it is inferior to her 'Story of Elizabeth,' which reads like truth itself, it may yet be deserving of praise. The story is long and quiet; the plot is ingenious, though perhaps a trifle artificial; but the characters are all well-drawn, and the whole novel is marked by a repose which is never dulness. Miss Thackeray always draws young girls and children well, and here, with the honest, frank girl in contrast with her crafty friend, her usual skill does not desert her. Dorothea's earnest and affectionate nature is admirably described. Especially good is the way in which is told the gradual decay of her love for Robert Henley, as she sees him grow up, and she gets a clearer view of his vanity and selfishness. The story abounds, too, in clever, but not too clever, remarks about the different characters, and of delicate descriptions of scenes and places.

Mrs. Oliphant's 'Innocent,' on the other hand, we cannot commend. The heroine who gives her name to the novel is not, to our thinking, a successfully drawn character. There is little to attract in her mysterious ignorance of the ways of the world, and the weak and bad Frederick's mysterious knowledge of those ways. The plot is, in fact, rather disagreeable, not to mention the vulgar people who figure in it. In everything Mrs. Oliphant writes there is a great probability that there will be something very good, as her humor and observation seldom wholly desert her, and in this book the relations to one another of the Eastwood family is well, though not amusingly told. Probably the reason of Mrs. Oliphant's unevenness in her stories is the speed with which she composes them. Mr. Anthony Trollope seems to be almost the only living writer who can write all the time, and keep very near the same level; but of course it is the height of the level which determines the difficulty of the task.

Saggio delle opere di Leonardo da Vinci. (New York: B. Westermann & Co.)—Under this modest title Signor Carlo Belgiojoso has edited for the Royal Academy of Fine Arts in Milan, of which he is the president, twenty-four specimen sheets from the volume of autographs and drawings by Leonardo—

the famous 'Codex Atlanticus'—one of the chief treasures of the Ambrosian Library. The present publication is intended to commemorate the meeting of the Art Congress held at Milan in 1872. The meeting of the previous year had been held at Parma, and the honors of the occasion had been specially paid to the memory of Correggio. In proposing to hold the next meeting at Milan, that city was declared to be selected because it was for so many years the chosen home of Leonardo; and the Minister of Public Instruction, Signor Cesare Correnti, advised the Academy that, since Raffaelle and Michael Angelo, Rome and Florence, had yielded place to Leonardo, Milan ought to see to it that something was done to justify this preference. Signor Correnti had suggested to the Academy as the greatest honor they could pay to the memory of Da Vinci, the publication of an *editio princeps* of his works, but the difficultics in the way of such an undertaking seeming insuperable for the present, it was decided to publish a selection from the Ambrosian volume, accompanied by dissertations on the life and genius of the artist. The present volume is the result of the labors of those distinguished members of the Academy who were named as commissioners by Signor Correnti to take charge of the publication. After a preface by Signor Carlo Belgiojoso, giving a history of the undertaking, there follow a "Biographical Sketch of Leonardo," by Signor G. Mongeri; "Leonardo as Man-of-Letters and Man-of-Science," by Signor Gilberto Govi, the most succinct, methodical, yet exhaustive account of Leonardo's performances in these fields that we are acquainted with; "Leonardo as Sculptor and Painter," by Signor Camillo Boito, another excellent essay, written with soberness and impartial accuracy. The author shows a critical acquaintance with everything that has been written on the subject of Leonardo from Vasari down to the latest French or German essayist. Then follow the plates, printed in photolithography, by the process of Angelo Della Croce, of Milan, adopted by the commission after a careful examination of all the methods by which a fac-simile reproduction could be hoped for.

It would be impossible in a brief notice to give a particular account of these plates. They are introduced by a fac-simile of the famous letter written by Leonardo to the Duke of Milan (Lodovico il Moro) offering his services, and detailing his accomplishments as mechanician and engineer as well as architect, sculptor, and painter and worker in bronze. It may be noted, in passing, that of all the many specimens of Leonardo's handwriting contained in this volume, this is almost the only one which is not written backward, and which is comparatively free from abbreviations and traces of cryptography. This would seem to be an argument against the theory of those who, like Paciolo, explain this singular handwriting by the alleged fact that Leonardo was left-handed. It would seem that he could write like the rest of the world when he would, and he probably adopted this Oriental way of writing, with the additional inconveniences of abbreviations, omissions, and alterations, deliberately, for the purpose of concealment. The drawings that follow the letter to the Duke relate, with but few exceptions, to mechanical inventions. They are all accompanied with explanations in Leonardo's hand, written against each portion of the drawing that needs interpreting, exactly as in a Japanese picture. Here are the canal-lock, and the machine for digging a canal and making the banks at the same time, both of which, we believe, are ascribed as inventions to Leonardo. Then come machines for raising water, among them one in which the Archimedean screw is curiously employed; a drawing showing how mouths may be made for the extraction of water from a canal for irrigation, when the water is at different heights (the "inch of water" of California and Italy?); a curious speculation, with an accompanying sketch-map, as to the means to be employed to bring the Mediterranean Sea, the Red Sea, and the ocean to the same level; and on the same sheet an admirably clear drawing of a machine for cutting files, concerning which Professor G. Colombo, after saying that the conception of this machine is very remarkable when we consider the condition of machinery at that day, goes on to observe that, until within a few years, the operation of file-cutting was always a manual operation, performed with a hammer and a chisel, but that when machines were first introduced the method of working employed was not by percussion, but by abrasion, as if with a graver. The motive-power of Leonardo's machine is a weight regulated by a crank; this moves two cog-wheels, one of which pushes along, with a regular motion by means of a screw, the block to which the piece of iron that is to be a file is fastened, while the other works up and down, like a trip-hammer, the cutter fastened to a long handle. Here, as in almost all Leonardo's mechanical contrivances, and, as Signor Colombo acutely remarks, in almost all first attempts to substitute machinery for the human hand, the actual implement employed and the movements of the hand are imitated, whereas, as every such machine is brought to perfection, the natural processes, to call them so, are one by one eliminated, and purely artificial, mechanical movements are substituted. Further on, we find a flying-bridge to be built before a pursuing or after a retreating enemy, with several ways of tieing the tree-trunks of which it is composed so as not to waste cord; and a remarkable drawing of a *balista*, a sort of machine which seems to have interested Leonardo greatly, since there are several designs here for making them. The reader will do well to compare this drawing with one of a similar machine (with a different motive-power, however), given by Viollet-le-Duc ('Dictionnaire de l'Architecture,' article "Engin"), and drawn by him from sketches found in the album of Villard de Honnecourt. The resemblance is singularly striking. A more remarkable *balista* is given in Plate XI., where we find the principle of the "revolver" oddly enough applied. In this plate we have not only Leonardo's completed drawing of the machine, with the figures of the men that move it cleverly drawn, but also his rough sketch of the thing, where we seem to see him scratching about on the paper with his pen as he works out the crude idea. The operators of this machine are protected by just such a screen working on a pivot as is shown in Viollet-le-Duc (vol. v., p. 256). In Plate XII. is a design, rather amusing than feasible, for shoving off the ladders of the besiegers from a city wall, and on the same sheet a derrick, such as any Irish laborer would hail as an old acquaintance if he were to see it. Next in importance is a machine for shearing the nap of cloth, though we ought not to pass unnoticed a plate showing several methods of communicating motion in different directions by cogged wheels. One of the best drawings in the book is that of a machine for sawing marble; it is very complete, and abundant drawings are given for all the details. Two pages are nearly filled with notes and drawings to illustrate the means of flying, a matter that at one time greatly occupied Leonardo's thoughts. He wrote a treatise on the subject of the flight of birds, which still exists in a private library in Italy. In the corner of one of these sheets is a notion which curiously enough has occurred to some one in our century. It is a rough sketch of a lamp—for all the world like a carcel-lamp—the globe of which being filled with water "a great light will be produced," says Leonardo. A shop-window in Broadway has lately been lighted by horizontal fish-tail burners placed over hemispherical bowls of glass filled with water, by which means a light at once brilliant and diffused is thrown upon the goods below.

These hints of its contents will give the reader a notion of the work. The mode of publication is not very satisfactory. Three hundred copies only have been printed, of which the Italian Government has taken two hundred, thus leaving but one hundred to be distributed among the public of Europe and America. Only one copy has thus far reached this country, and we understand that not more than six copies can be placed at the disposal of the importers. Under these circumstances the price, $27 in currency, cannot be considered high, but it is to be regretted that the genius of Da Vinci, constantly occupied in schemes for the material improvement of society, could not have been honored by a more popular edition of this selection from his sketches.

The Young Lady's Friend. Edited and Revised by the Authoress of 'Unsettled Points of Etiquette.' With preface and introduction by the editress. (Philadelphia: J. B. Lippincott & Co. 1873.)—This book was better known a generation ago than it is likely to be again, though for many reasons the loss of popularity is to be regretted. It was written by a lady of Cambridge, Mass., whose incognito the present editress, as she chooses to call herself, still preserves, and was published in Boston in 1837. The motive for republishing the 'Young Lady's Friend' at this time is stated in the new introduction to be, among other reasons, the belief that it will prove "a most valuable auxiliary to mothers" in education, treating, as it does, of topics that belong to a daughter's education, such as preservation of health, improvement of time, dress, behavior to parents, relatives, gentlemen, teachers, friends, and to domestics, conduct at public places, female companionship; dinner and evening parties; ceremonious and friendly visits; conversation and mental culture. Napoleon once said to Madame Campan: "The old systems of education are good for nothing; what is wanted in order to train up young people properly in France?" "Mothers," said Madame Campan. This word struck the Emperor. "Right," said the great codifier and educator; "therein lies a complete system of education, and it must be your endeavor, Madame, to form mothers who know how to educate their children." Through mothers also the editress of the present volume would work upon the generations to come.

If we divide theories and treatises on the education of young ladies into two kinds, one of them being founded on the opinion that what is good in a girl must be put into her by her parents, guardians, godfathers, or godmothers; and the other, founded on the opinion that only harmonious development of all the faculties through the agencies of love and sympathy is needed, the 'Young Lady's Friend' would belong decidedly to both classes. It cannot be

said to push the first theory to the extent to which it was pushed by the great mistress of the school, Miss Edgeworth, whose books are apt nowadays to convey to an intelligent child the impression that good education means a combination of duress and fraud; indeed, this book, being intended for young ladies and young ladies' mothers, is necessarily conceived in a different spirit from the 'Early Lessons' and 'Rosamond.' The author of the 'Young Lady's Friend,' too, was apparently of a more humane, not to say human, and sympathetic disposition, than her English predecessor. Still, with all their differences, the book is partly cast in the Edgeworthian mould. If the mould is to be judged by what it has moulded, it might fairly be considered a new feather in Miss Edgeworth's cap that her writings should have been the efficient cause of a good part of the contents of this little hand-book. There is a good deal in it that is laughable, but most of it is laughable rather because the ideas of the world on the subject of education have become less serious than they were a generation ago; because the relation of parent and child has so greatly altered its character; and because most young ladies "between the age of fifteen and twenty" among the richer and more cultivated classes—to use the words of the author—as soon as they are old enough "to reflect upon their own characters, to consider in what respects they are weak, in what they are strong; to perceive their own deficiencies, and to wish to supply them," instead of applying themselves to the study of manuals for the conduct of life or being brought into habits of intimate communion with and taught to seek frequent counsel from "well-educated, judicious, and experienced mothers," begin usually to give themselves over to reflections of a very different kind, which tend to leave them, when they are at length married, with far more defined and precise notions about the relative merits of rival dressmakers, party-givers, noted german-leaders, and music-masters, than they have about the management of a household, and a much deeper interest in having dainty, elevated, and refined and poetic spirits, than in becoming good wives and mothers. Or else they begin as soon as possible to qualify themselves for admission to the sisterhood founded, we believe, by Miss Carolina Wilhelmina Amelia Skeggs, and brought to perfection in these latter days of French Imperialistic training-schools, American shoddy, and English loudness.

To be sure, this is an old song. There are, no doubt, a few select households left which keep alive the traditions of the elder time, in which no countenance is given either to the shocking thought, apparently well fixed in the mind of the "Authoress of 'Unsettled Points of Etiquette,'" that it is the "mission of America to vulgarize the world," or to the fancy that all that is needed to make the world go round is a well-filled library and pretty tastes. In such households as these the 'Young Lady's Friend' will be a "valuable auxiliary" to good mothers.

We are obliged to confess, however, that the general effect of the book is a little marred by the occasional introduction of illustrations and suggestions which are really amusing from their exaggerated gravity, or grave exaggeration, whichever it is. On page 182, for instance, is the heart-rending tale of a neglected aunt, told for the purpose of inculcating the necessity of respectful and affectionate treatment of relatives. The author says that she knows a family of very good people who err through thinking that they have a right to treat their relatives with great familiarity; the young ladies have aunts not much older than themselves—single ladies, and often invited to their sister's house; but, through the careless behavior of mother and daughters, these visits are "anything but agreeable." One of the aunts is invited to spend the day, pressed to come early, and spoken to as if her nieces expected to find real pleasure in her society. "She goes accordingly on the appointed day; both nieces are out, and so is their mother." Full of engagements, they do not return till time to dress for dinner; she amuses herself as she can "in the empty drawing-rooms, and perhaps wishes herself at home again." At dinner the assembling of the family is pleasant, the greetings affectionate, and now the aunt hopes to have a sociable time (the nieces would perhaps say a "good time") for the rest of the visit; but the ladies have scarcely retired to the drawing-room before one niece pleads an engagement; the other, who always lies down after dinner, retires to her room; and the mother, who is left, has so many notes to write and accounts to settle, that she is no company for her sister, "and again the unhappy guest wishes herself at home." At tea-time all assemble, except one niece, "who never takes tea, and always reads history at that hour." After tea, "all are going to a concert, and have provided no ticket for the aunt, as they thought she would prefer going home early." "The blank surprise in the face of the aunt" causes several offers of tickets, and the mother says one of the girls will be happy to stay at home and give up her ticket to her aunt, but such offers are not to be accepted; and this slighted relative returns home alienated from her family by their want of common politeness, and resolving that it shall be long before she will again leave her pleasant home to be so treated. This tale of the alienated aunt the editress would do well to strike out from any future editions of this really sensible book; *ne quid nimis* is a good rule, even in the instruction of so reckless a class as nieces.

A History of Greek and Roman Classical Literature. By Rev. A. Louage, Professor of Ancient Classical Literature at Notre Dame University, Indiana. (New York: D. Appleton & Co. 1873.)—Professor Louage's manual has many merits, and is as good as could be expected in a book which professes to be nothing more than a compilation from very second-rate authorities. The sketches of the several authors are for the most part very well done, with good judgment and in an interesting manner, and the book will undoubtedly do good service as a text-book. It is, however, rather a series of such sketches than a consecutive history of literature; the several authors are well and sufficiently delineated, but the history of the literature proper—its development at successive periods—is meagre and inadequate. No doubt, the matter given is that which is most needful to the class of students for whom the book is designed; the other, however, ought not to be neglected.

We find a few errors and a few misprints. *Choephori* (p. 53) is printed *Chœphori;* Aemilius Paulus (p. 138) is called *Aemilianus;* for Lex Sempronia (p. 139) we find *Semproniana;* on the same page the great orator M. Antonius receives the cognomen *Crassus;* Glabrio is printed *Glubrio* (p. 134); the prænomen Decimus is twice written *Decius.*

Whoever at the present day touches the great Pelasgian controversy does so at his peril, and here, as might be expected, Professor Louage has come to grief. Indeed, his ethnology is throughout astonishing. The Pelasgi "were allied to the Iranian tribes in the North of India, and consequently that element in the Greek language which exhibits an affinity for the Sanscrit is the Pelasgian"; while of the Hellenes, "this element of the Greek language is said to have had an affinity to the Persian" (p. 13). Still more wonderful is this (p. 109): "The old Roman language was a compound of Oscan and Pelasgian, the languages of the two peoples who first occupied Italy. The first is of German origin; the Oscans came from Lithuania. The second is of Asiatic origin, as we know." Hardly better is what is said of the Etruscans (p. 115): "Most of the poets [of the Romans] came from Etruria, . . . it is clear that in everything mental and spiritual their neighbors, the Etruscans, were their teachers. . . . To this pure culture the old Roman character owed its vigor, its honesty, and its incorruptible sternness." The queer combination, "honesty and incorruptible sternness," is probably a slip of the pen, for the style is generally correct. In one expression of the preface, and hardly anywhere else, do we find traces of the author's being of foreign birth: "Too extensive, and not systematic enough, *in order* to be given as a text-book." We think that the author hardly does justice to the character of Socrates, while that of Cicero he rates too high: "Antiquity may be challenged to produce an individual so virtuous and so perfectly amiable as Cicero" (p. 172). The illustrations—portrait busts—are disgracefully bad; we should be loth to believe that the great writers of antiquity were such fearful-looking objects.

FREEMAN'S HISTORICAL SERIES.

FISKE'S CLASS-ROOM TAINE.

BAIN'S ENGLISH GRAMMAR.

WHITNEY'S GERMAN COURSE.

OTTO'S GERMAN COURSE.

OTTO'S FRENCH COURSE.

PYLODET'S FRENCH SERIES.

Nearly all the books for modern languages used at Yale, Harvard, and similar institutions. Correspondence invited from educators and students. Catalogues free on application.

HENRY HOLT & CO., PUBLISHERS, New York.

SCRIBNER'S FOR OCTOBER.

CLOSE OF THE VITH VOLUME.

End of Dr. Holland's Splendid Serial.

BRET HARTE'S STORY COMPLETED.

THE GREAT SOUTH.

Demand for *Scribner's* in England.

A NEW MAGAZINE FOR CHILDREN, ETC., ETC.

The illustrated articles of the October *Scribner* are "The Geysers of California," "The Old Van Rensselaer Mansion," and "The Central Park."

Dr. Holland's splendid serial ends with a brilliant chapter of reminiscence and a picture of Rev. Peter Mullins at Home.

The closing scene of Bret Harte's story, "An Episode of Fiddletown," is laid at Genoa, N. Y. The interest is fully sustained to the end, and there is an illustration by Sheppard.

Mr. Blauvelt's third paper on "Modern Scepticism" answers the question, "What Our Laymen must do about it."

There is the usual variety of short stories, poems, essays, sketches, and reviews.

The Editorial Department will be found of special interest and value.

"Home and Society" alone is worth the price of the Monthly.

With the November number begins that splendid series of Illustrated Papers so long in preparation, entitled

"THE GREAT SOUTH,"

of which 2,000 copies have been already ordered for England.

The New Volume will be brilliant beyond any that have preceded it. Now is the time to subscribe.

TERMS: $4 a Year; 35 cts. a Number.

Next month we shall issue

ST. NICHOLAS.

AN ILLUSTRATED MAGAZINE FOR GIRLS AND BOYS.

Price $3 a Year; or $7 for the Two.

SCRIBNER & CO., New York.

ANNOUNCEMENT.

Messrs. J. B. Lippincott & Co. have the pleasure of announcing that they have just published Vol. I. of the

HISTORY OF FERDINAND AND ISABELLA,

Being the first volume of an entirely new edition of the Works of

WILLIAM H. PRESCOTT,

With the author's latest corrections and additions.

EDITED BY

JOHN FOSTER KIRK,

Author of the 'History of Charles the Bold.' To be completed in 15 monthly volumes, 12mo. Illustrated with maps, plates, and portraits. Price per volume, fine English cloth, with black and gold ornamentation, $2 25; library sheep, $2 75; half calf, gilt back, $4 50.

This edition is being elegantly printed from entirely new plates, on fine toned paper, and is intended by the publishers to be, in mechanical execution, every way worthy of the works of the distinguished author.

During the last years of his life, Mr. Prescott devoted much time to the revision of his works, making numerous corrections and additions, some of which were inserted in the later English editions published in his lifetime, while a larger number have hitherto remained in manuscript. The whole, in accordance with his intention, are incorporated in the present edition, which the editor has endeavored to render still more valuable and complete by verifying doubtful references, adding occasional notes where statements in the text, based on insufficient authority, or called in question by recent investigators, needed to be substantiated or corrected, and aiding, by a careful supervision of the press, in securing that high degree of typographical accuracy which is especially desirable in standard works.

☞ For sale by Booksellers generally, or will be sent by mail, post-paid, upon receipt of the price by

J. B. LIPPINCOTT & CO., PUBLISHERS,

715 and 717 Market Street, Philadelphia.

NEW AND OLD BOOKS. Priced Catalogue No. 29, for September (containing many CURIOUS and RARE WORKS not often met with), forwarded free to any address.

DAVID G. FRANCIS,

DEALER IN NEW AND OLD BOOKS,

17 Astor Place, New York.

HENRY K. VAN SICLEN,

BIBLIOPOLE, 133 Nassau Street, New York.

American or Foreign Publications sent by mail, postpaid, at Catalogue prices.

FOREIGN BOOKS Reviewed in the *Nation*, and books in all languages, at SCHOENHOF & MOELLER'S, Importers, 40 Winter Street, Boston.

THE WEEK IN TRADE AND FINANCE.

SEPTEMBER 15.

LAST week was what might be truly termed a lively one in Wall Street. On Monday, the 8th, the announcement was made that the New York Warehouse and Security Co. was in trouble, which soon proved to be true; it was ascertained that their troubles were brought about by making large advances on railroad paper endorsed by certain individuals, among them Messrs. Francis Skiddy and Sheppard Gandy. These gentlemen were forced to suspend, and the Company is left completely in the lurch for the time being, with its own paper soon to mature, which it will be unable to meet. The above failures were followed by another and more important one on Saturday—Messrs. Kenyon Cox & Co., of which firm Mr. Daniel Drew is a general partner, and therefore liable for its debts. The suspension of Kenyon Cox & Co. was caused by their endorsing the paper of the Chicago & Canada Southern R. R. Co.—a road now in process of building, and in which Messrs. Drew, Tracy, and other capitalists are largely interested. These different failures have had a bad effect upon the Street, and quite an unsettled feeling and want of confidence has existed ever since. The suspension of Kenyon Cox & Co., it is thought, will be but temporary. The firm stood very high among Stock Exchange houses, and was almost thought to be beyond the reach of disaster, owing to the connection of Mr. Drew with the house and his great wealth.

The weekly statement of the city banks is again unfavorable. The surplus reserve is entirely lost in both State and National banks. The loss in reserve is $3,287,400, of which $1,962,700 was in legal tenders, which have probably been sent West.

The following are the statements for the past two weeks:

	September 6.	September 13.	Differences.
Loans	$288 374,200	$284,536,200	Dec. $3,838,000
Specie	21.767 000	20,442,300	Dec. 1,324.700
Circulation	27,355.500	27 383.400	Inc. 27,900
Deposits	212,772,700	207,317,500	Dec. 5 455.200
Legal Tenders	38,679,900	36 717 200	Dec. 1.962 700

The following shows the relation between the total reserve and the total liabilities:

	September 6.	September 13.	Differences.
Specie	$21,767 000	$20,442,300	Dec. $1,324,700
Legal tenders	38,679,900	36,717,200	Dec. 1,962,700
Total reserve	$60.446,900	$57,159,500	Dec $3,287.400
Circulation	27,355,500	27,383,400	Inc. 27,900
Deposits	212,772,700	207,317,500	Dec. 5,455,200
Total liabilities	$240,128,200	$234,700,900	Dec. $5,427,300
25 per cent. reserve	60,032 050	58,675,225	
Excess over legal reserve	414,850		
Deficiency in 25 per cent. reserve		1,515,725	Dec. 1,930,575

The annexed table separates the National from the State banks:

	National.	State.	Total.
Loans	$245,117,000	$39,419,200	$284.536,200
Specie	17,655,500	2,786.800	20,442,300
Legal tenders	32,500,800	4,216,400	36,717,200
Deposits	177,850.500	29,467.000	207 317,500
Circulation	27,351,200	32,200	27 383,400
Percentage of reserve to total liabilities	24 44-100 p.c.	23 74-100 p.c.	24 35-100 p.c.

The stock market exhibited more signs of activity, as naturally might have been expected, in view of the number of failures which have taken place. Prices on the entire list, with the exception of Wabash, have been well maintained, while Pacific Mail has taken another jump, which carried the price up to 41⅜ from about 41. Wabash declined 6½ per cent. from the highest quotation of the week (from 65¾ Monday to 59¼ Saturday), owing to the trouble in which Mr. Drew has found himself involved in Canada Southern matters, a large amount of stock being thrown upon the market Saturday. Western Union Telegraph has been very active through out the week, and the party controlling it seems disposed to advance the price to the neighborhood of par as fast as opportunity offers.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending September 13, 1873:

	Monday.		Tuesday.		Wed'day.		Thursday		Friday.		Saturday.		Sales.
N. Y. C. & H. R.	103⅞	104¼	103¾	104¼	103¼	104	103¾	103½	103½	104⅜	103⅜	104⅛	65.700

Government bonds have been quite active, owing to the call recently made by the Comptroller of the Currency on new National banks to deposit bonds in Washington in order to obtain their notes, within a limited time, or forfeit their right to have them. The German Government have recently purchased $5,000,000 more new United States five per cent. bonds, making in all $17,000,000 purchased thus far.

OFFICE OF FISK & HATCH,
No. 5 Nassau Street, New York, Sept. 15, 1873.

☞ The CHESAPEAKE AND OHIO RAILROAD —A GREAT EAST AND WEST TRUNK ROAD—420 miles in length, connecting the Atlantic, by the shortest line, with the commerce of the Ohio and Mississippi Rivers, is completed and in regular operation. The through freight of products to and from the Western States is rapidly increasing, as is also the mineral traffic of the growing coal-mining and iron-making industries along the route.

We are selling for the Company their SEVEN PER CENT. GOLD BONDS, secured by mortgage liens on the whole valuable property, at 90 and accrued interest; $1,000 each, either coupon or registered, payable in gold coin, in New York City, principal and interest; interest January and July.

Being the obligations of a very responsible corporation, secured by a great productive property, worth over $40,000,000, now entering upon a prosperous career, they are very desirable for investors.

We also have a small amount of the OLD SIX PER CENT. GOLD BONDS OF THE CHESAPEAKE AND OHIO; price, 88¼ and accrued interest; denominations, $100, $500, and $1,000, interest payable in New York, May and November.

We recommend both classes of bonds to our friends and customers.

We also continue to deal in Government and Central Pacific and Western Pacific Bonds, execute orders at the Stock Exchange for investment Stocks and Bonds, receive deposits, on which we allow interest at the rate of four per cent. per annum, and conduct a general banking business.

FISK & HATCH.

$5 to $20 per day! Agents wanted! All classes of working people, of either sex, young or old, make more money at work for us in their spare moments, or all the time, than at anything else. Particulars free. Address G. Stinson & Co., Portland, Maine.

MORTGAGE BONDS UPON A
COMPLETED ROAD PAYING
10 *Per Cent. Gold Interest.*

With probable advance of 25 per cent. on the investment in a short period.

For particulars, apply to

JONES & SCHUYLER,
12 Pine Street, New York.

NEW ENGLAND SECURITIES
SAFE AND PROFITABLE.

By the purchase of the First Mortgage Sinking Fund
GOLD BONDS
OF THE
VERMONT DIVISION OF THE PORTLAND AND OGDENSBURG R. R. TRUNK LINE,
A
TEN PER CENT. NEW ENGLAND INVESTMENT
may, at present rate of gold, be secured.

The very large sales of the past few months leave but a limited amount to be offered, and the rapid pushing of the road to completion ensures an early and a large advance on their market value.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 25, 1873.

The Week.

THE week has been literally filled, as far as news is concerned, by the panic in Wall Street. The mind of "the Street" was disturbed in the summer by the failure of the Brooklyn Trust Company, and the discovery that it had been involved by advances on bonds of a new and badly managed railroad—the New Haven and Willimantic—and had been literally plundered by its own managers. This was followed by that of the Mercantile Warehouse and Security Company, owing to advances on bonds of the Missouri, Kansas, and Texas Railroad, and by the failure of the firm of Kenyon Cox & Co. on the 13th inst., of which Daniel Drew is a member, owing to advances to the Canada Southern Railroad. All this produced a high degree of nervousness and distrust, which was aggravated by the increasing reluctance of English investors to purchase American railroad securities, and which was converted into a panic on the morning of Thursday last by the failure of Jay Cooke & Co., owing to their connection with the Northern Pacific. A wild sacrifice of stocks at the Exchange followed, with some failures of minor houses. On Friday morning the situation was aggravated by the failure of another important house, Messrs. Fisk & Hatch, and then began a run on the Union Trust Company, which was supposed to be connected with or managed in the interest of the railroad interest known as the "Vanderbilt clique," and a run on the Fourth National Bank, which had large dealings with brokers. The Trust Company bore the pressure for a while very well, but the difficulty of raising money on its securities increased as the crisis lasted. On Friday evening, too, a defalcation was discovered on the part of the Secretary, and on Saturday morning it suspended. The Bank of the Commonwealth, which has long been considered unsound, closed its doors as a measure of precaution. The result was that the Stock Exchange, to use a boating phrase, went all to pieces. The excitement became so great that business could hardly have been transacted, even if the banks had not begun to refuse each other's certified checks. Under these circumstances, it was resolved to close the Stock Exchange, to allow the brokers to cool off—a tolerably high-handed measure, which has, however, met with general approval. In judging it, it has to be borne in mind that speculation did not cease when the crash began. There was still buying "on margin"; and stocks continuing to fall, the calling in of the margins aggravated the prevailing terror and confusion.

On Sunday, the President and Secretary Richardson arrived from Washington, and held a long consultation with a large number of financial magnates at the Fifth Avenue Hotel, as to the part the Government should play in restoring order. The financial magnates, as might have been expected, tried hard to extract an issue of a part or the whole of the $44,000,000 of greenbacks, which, as we have several times tried to show, ought legally to have been destroyed long ago, but which Mr. Boutwell kept and persisted in calling a "reserve," and $5,000,000 of which Mr. Richardson took upon himself to issue without any authority of law last fall. He has since, however, it would appear, come to take a better view of his position, and on Tuesday both he and the President, to their great credit, firmly refused to make any issue of "the reserve," frankly admitting that it would be contrary to law to do so, even if it would serve any good purpose. What they did agree to do was to purchase bonds with greenbacks, and thus to some extent relieve the money market. The action of the banks was, however, more important than the action of the Government, because if they refused to stand by each other, it is probable that Monday would have driven them all into suspension, and the result would have been a general and prolonged crash. They, however, agreed to "pool their greenbacks" by taking certificates based on securities, 75 per cent. on ordinary ones and par on Government, at the Clearing-House, instead of money. They were thus on Monday morning able to present an unbroken front to the enemy; there was no run, and the crisis seemed over, but late in the afternoon of Tuesday it was renewed by the failure of Henry Clews & Co.

The economical objections to the use of "the reserve" are of course obvious. It would be an increase of an irredeemable currency, which would unsettle the value of all property, inflate prices, and stimulate instead of allaying speculation, and which it would be impossible to withdraw without causing a renewed stringency, to be followed by a renewed panic. The effect of Mr. Boutwell's performance last fall, even on a small scale, was warning enough, even if the experience of other countries did not supply it in abundance. There are plenty of schemes before the public for enabling the banks to prevent panics. Some say specie payments would do it, others free banking, and others the issue of additional currency by the Treasury under proper restrictions, at certain times. But it is safe to say that panics will occur under all systems until human nature is changed. Great houses will overtrade and will make imprudent advances; and, when they get into difficulties, bankers will be restrained by fears of one sort or another from coming to their rescue in time; and when they fail, people will get frightened, no matter how voluminous the currency may be or on what it rests. The utmost we can ever hope is, that bank managers may so grow in wisdom and understanding that they may be able to stop panics before they spread. This can always be done; but then, before a panic is stopped, a bank has to be sure that it *is* a panic, and not a "scare" got up to draw money from them.

The panic, like all panics, has a ludicrous side, of course. The main cause of it has undoubtedly been the overissue of railroad paper, due to the falling off in the sales of railroad bonds in this country under the stringency of the money markets through last fall and winter, and partly to the closing of the English market to American railroad securities under the influence of repeated cases of American rascality—such as the Emma Mine, fathered by the American Minister, and General Fremont's swindling Texas enterprise, and the default made by several new roads in the payment of their coupons. This has, of course, rendered even good bonds of new roads unsalable abroad, and has thus embarrassed the promoters of the roads and their creditors here. In the fever of excitement, however, the newspapers, while wailing in one column over the want of "national highways" and the high rates of freight, and the difficulty of access to the markets of the world, were in another treating railroad-building as a disreputable undertaking, calling new roads "wild-cat roads," and people who put their money into them "gamblers" and other hard names, and making the advances to the Missouri, Kansas, and Texas, and the Canada Southern, and the Midland the text of all sorts of solemn sermons. The firm of George Opdyke & Co. being connected with the Midland, they settled that as other railroad firms had failed, it ought to fail too; and the reporters called two or three times a day on Mr. Opdyke, to know if he had failed, and if not, when he would fail. In vain he assured them he had not, and would not. They would take no denial, but compromised with him finally by announcing that he had "temporarily suspended," which he promptly denied. The *Commercial and Financial Chronicle* has done good service in calling attention to the fact that all the railroads which have brought about the leading failures, except the Northern Pacific, have been completed to through connections, are ample security for their bonds, and are doing, or are certain to do before long, a prosperous business. Holders of their bonds, therefore, ought to think twice before sacrificing them in the present excitement.

It is not yet settled which of the morning papers is under the control of Jay Gould. The *Times* has been accused of helping him to "bear" Erie, the *Tribune* of helping him to "bull" gold, the *World* of aiding him generally in all sorts of odd jobs. It is surprising that he has not been made to figure more prominently in the present panic. Indeed, he seems to have gained reputation by it, as he made an appearance as a supporter of falling stocks.

Mr. William Windom, Chairman of the Senate Cheap Transportation Committee, has probably learnt within the past week more about cheap transportation than he ever before knew, through the failure of the house of Jay Cooke & Co.; or, in other words, of the Northern Pacific Railroad. Mr. Windom is one of the directors of this road, of which the authorized share capital is $100,000,000. Of this sum, two millions were required to be subscribed and 10 per cent. paid in before the organization of the Company. This ten per cent., or $200,000, was paid in, and the gentlemen who paid it in thus obtained control of a line two thousand miles long, running from Lake Superior to Puget Sound, and a land grant of 47,000,000 acres, or 74,423 square miles, with full power to issue bonds, which they at once proceeded to do at the rate of $50,000 a mile, creating a mortgage payable in thirty years at $7\frac{3}{10}$ per cent. in gold. The secrecy with which the operations of the road have been conducted makes it impossible to say how much it has cost per mile; but it is extremely unlikely, when commissions and profits to construction companies are taken into account, that it will fall below $50,000. At this rate, the six hundred miles constructed have cost some $30,000,000, on which the interest would be over two millions. This amount the road cannot earn, and its inability to make good the advance of Jay Cooke & Co. for $15,000,000 is not unnatural.

A very competent observer, writing from San Francisco to the *Railroad Gazette* on the eve of the late election, compares the prevailing fierce denunciation of the Central Pacific Road with the extravagant demonstrations five years ago over its completion. In seeking for the cause of this wonderful change of sentiment, he finds, first, that the railroad, through no fault of its own, has disappointed popular expectation, particularly in regard to the enhancement of the price of land. It had on all interests a levelling effect, and "the real-estate market suffered an immediate and great collapse." In the next place, there was the road's interference in politics; "among the few real grievances of the people against the Railroad Company, this is perhaps the greatest and most obnoxious." Third, the refusal to pay assessed taxes. On this head the correspondent remarks that in Placer County the Company insisted repeatedly, through its attorneys, "that the road ought to be taxed for no more than the ties and rails are worth as old wood and iron—say, $6,000 a mile"; whereas a few years ago the Company's documents persuaded the people that "the taxable property of their county would be increased some $13,000,000, or thereabouts, the taxes on which would more than compensate them for the subsidy asked." Finally, the road has been guilty of favoritism in rates, especially directed against the troublesome inhabitants of Placer County. As for the accusation of extortionate freight charges, Mr. Powers meets it by presenting a table in which Central Pacific rates per distance of equal miles are compared with Illinois Central rates according to the latest enactments in that State. It will interest the Grange orators to learn that the rates established by their influence as equitable are nearly or quite double those which the California monopoly adheres to; and they will perhaps take to heart this summing up of the grievances of their California brethren: "The farmers are very far from the great grain markets of Europe, the tariff oppresses them, the San Francisco middlemen gnaw their profits, the men who charter ships devour their hard-earned gains, while the railroad refuses to pay its share of taxes. Among all these evils and inflictions, the railroad is close before their doors; they can see that, and they strike at it for all the others which are unseen."

The organs of Governor Shepherd, of the District of Columbia "Ring," are making a great outcry because no specifications of the charges made against him are brought forward. They say that if every man who is accused of malversation in office by a newspaper is to be disqualified from office-holding, the President might as well abandon all idea of filling any vacancies. This is very true, but the appointment is nevertheless scandalous. In the first place, the charges, as a matter of fact, are as precise as the nature of the case admits. The new Governor is charged with having, through the Board of Works, involved the District in enterprises which have made him rich and the District bankrupt, and with having done this in flagrant violation of law. The President is charged with having appointed him to the office of Governor while laboring under this grave suspicion, without any examination into the truth of the charges. When such a staunch Republican paper as the Boston *Advertiser* calls this proceeding "another instance of a weakness of the President, which the people find it hard to reconcile with a faithful performance of his duty or a careful regard for the public welfare," and says that "it would be well for him to bear in mind that he is responsible for every member of the Washington Board of Public Works, and that for all their delinquencies, when they are ascertained, the Republican party, whose official head he is, will suffer harm," it is absurd for the Administration to try to bolster itself up with editorials in petty local sheets, proving the popularity of the new Governor by the production of resolutions passed by the Republicans "of all the twenty-two election districts." We have heard a great deal of the credulity of the President, but if he is imposed upon by party resolutions and platforms of this sort, he must indeed be a simple-minded man.

Mr. Filley, the St. Louis postmaster, has made a statement with reference to the assessments in his office, which clears up the whole matter. It seems that being unaware of any provision in the civil-service rules making it illegal to assess clerks, and having gathered from common report that taxation of this kind was an old-established custom in the service, he collected $1,648, not for any political purpose, but to provide for emergencies. Having obtained lately a copy of the rules, he sees that he is in the wrong, and therefore returns the money to the clerks. This nefarious proceeding, which in an ordinary business would not merely cost an official his place, but make it very difficult for him ever to get another, has given Mr. Filley only the trouble of returning his stolen money. Theft—or at least obtaining money under false pretenses—we take to be the proper term for a process which consists virtually in getting money by a fraudulent representation by one subordinate to another that unless he contributes to a fund (the fund being illegal), he will be removed by the head of the concern.

It seems from the recent convention of the Spiritualists at Chicago that the regular Spiritualists were some time ago "captured" by the Free-lovers under Victoria Woodhull, who have since been "running" the organization. The Woodhull faction having in this convention secured the passage by a large vote of resolutions pledging the body to a very disgusting statement of doctrine, the minority bolted. Judge Holbrook made a formal protest on their behalf, stating that their reasons for withdrawing from the convention were that Woodhull, as soon as she was elected president of the convention, treated the election as an endorsement of her "aspirations to the Presidential chair of the United States," and conducted herself accordingly; that having failed in her satanic ambition, and being abandoned by her associates in the woman-suffrage movement, she became the most unscrupulous advocate of "free-love in its worst features." This the signers of the protest hold to be an element foreign to true Spiritualism, and abhorrent to the views, sentiments, and sensibilities of cultivated and refined society. The speeches at this meeting have been so indecent that any newspaper publishing them probably makes itself liable to penalties provided by the statutes relating to obscene literature.

Mr. Joseph Arch and Mr. Charles Bradlaugh have both reached America. While the former is pursuing his investigations in Canada as to the opening afforded to agricultural laborers in this country, the latter is pursuing his enquiries, which relate to the feasibility of establishing a republic in England, at the Fifth Avenue Hotel in this city. Everything is being done to assist Mr. Arch, who has made a plain and evidently honest statement of his object in coming here. It is rather a curious commentary upon Bradlaugh's terrible denunciation of the tyranny of the English aristocracy that the first dinner-party made for Mr. Arch on his arrival in Canada should have been given by the Governor-General, Lord Dufferin. It is probably only among the noble families of Boston that he will find himself absolutely cut off from all human intercourse.

The Court of Queen's Bench has at last tried the American prisoners captured in the Gordon-Gordon raid, and let them off with a twenty-four hours' imprisonment. The trial seems to have been conducted in a very amicable and decent manner, Governor Austin, of the invading State of Minnesota, being invited to take a seat on the Bench with the Canadian judges representing the violated territory of Manitoba. The investigation into the Pacific Railroad scandal still continues at Ottawa. From Sir Hugh Allan's and Sir John Macdonald's testimony, it is clear that large sums of money were contributed for election expenses by the former, in consideration of the support of the Pacific Railroad scheme by the Government. So far as this part of the case goes, the following letter seems to be enough:

"MONTREAL, 30th July, 1872.

"DEAR SIR HUGH: The friends of the Government will expect to be assisted with funds in the pending elections, and any amount which you or your Company shall advance for that purpose shall be recouped to you. A memorandum of immediate requirements is below:

"Very truly yours, (Signed) G. E. CARTIER.

"Now wanted—Sir John A. Macdonald, $25,000; Hon. Mr. Langevin, $15,000; Sir G. E. Cartier, $20,000; Sir John A. additional, $10,000; Hon. Mr. Langevin, $10,000; Sir Geo. E. Cartier, $30,000."

These sums were paid, Sir Hugh says, though he did not see how the money was to be "recouped," and it never has been. In all, his expenses were $350,000, the sum originally mentioned in Mr. Huntington's charges having been $360,000. Of course, all the witnesses swear that their motives were pure. Sir Hugh wished to support the Government because he approved of its general policy, and thought it really deserving of support by all who really cared for the development of the resources of the country. A Canadian correspondent writes to complain of our calling the witnesses in this case "Government" witnesses, and says the names were taken from a list published by the prosecution. There is no prosecution, however, and no cross-examination, and if we do not call them "Government" witnesses, we do not well know what to call them.

Captain Buddington and the greater part of his company from the *Polaris* have arrived at Dundee, Scotland, and are now on their way to this country. As was anticipated, they fell in with whaling vessels, which picked them up while yet far from being in an exhausted condition, and they have not the loss of a man to report. Their experience and that of the ice-floe party certainly form one of the most romantic chapters in the history of Arctic adventure.

The war between church and state still continues in Germany, and thus far certainly the arm of flesh has had the better of it. Archbishop Ledochowski's seminary in Posen has been closed, and will remain closed until he and the regent of the seminary shall have submitted themselves to the law. At Speyer, Bishop Haneberg has been fined for libel for having spoken of somebody's mixed marriage as "concubinage," but has appealed from the sentence; and another bishop (of Fulda) is awaiting trial for a similar offence. Bishop Martin of Paderborn is, however, avenging the church by praying bitterly—if we may use the phrase—for her persecutors. Those who have listened to the petitions of our Congressional chaplains know what use a passionate ecclesiastic may make of this weapon. In Switzerland, a considerable body of the native Catholics, both lay and clerical, are strongly and openly supporting the state against the recent Papal pretensions in the matter of the appointment of bishops. At Zurich, which is nothing if not Catholic, the cantonal government has just expelled a priest from his parish for going into France to make ultramontane speeches.

In Spain, things look somewhat better. The Government troops have occupied Malaga, and Cartagena seems to be on the point of surrendering. On the other hand, the insurgent fleet is wandering up and down the coast levying contributions, and at the last accounts was on the point of bombarding Alicante, and was only delayed by the remonstrances of the British Admiral. But it must be admitted that the courage of the friends of the Government at Madrid is kept up by amusingly small crumbs of comfort. For instance, one of them announced the other day, as a great thing, that the extraordinary loan asked for by Castelar had been voted by the Cortes. Of course, all that this means is that he may raise the money if he can. That he cannot borrow anywhere at present appears one of the most notorious facts of the day; and that he will not be able to borrow until affairs look better, and until the revenue is put on a much better footing, is almost equally certain, although a rumor is afloat that the Bank of France has agreed to advance $20,000,000. The winter will help the regular Government against the Carlists; but those who look for the speedy subsidence of the trouble in that quarter need to be reminded that old Don Carlos kept the field for seven years against the old Spanish army in its best condition, aided for a portion of the time by a British Legion.

One of the most significant events of the day in Europe is the visit of Victor Emanuel to Vienna and Berlin. The Ultramontane journals are beside themselves at the thought of it, and the comments of the French press betray the usual amount of misinformation, jealousy, and meddlesome disposition towards foreign nations. While all parties in Italy, except the clerical (which studiously affects indifference), are singularly unanimous in approval of the royal journey, even a journal like the *Débats* represents public sentiment there as divided between a party favorable to a French alliance and another favorable to a German alliance—a bit of imagination, not to say invention out of the whole cloth, which breaks down the patience of Italian journals of decidedly French proclivities, and impels them to ask if it is really possible to argue with Frenchmen. Anything more exasperating, indeed, than some of these articles, or more imprudent as affecting the relations of France to the rest of Europe, it would be hard to conceive of. But the writers think nothing of resenting the king's movements as a conspiracy against the free action of France, and of menacing Italy with the consequences of "placing herself with respect to France on the same footing as Germany"—language which, as in the case of the South after reconstruction, makes one almost regret that the German occupation has come to an end. For the rest, the French instinct, like the clerical, is probably not at fault in this matter, and Victor Emanuel's cordial reception by a late enemy, and a former ally whose friendship he will not lightly forfeit, certainly bodes no good to schemes which have their origin in French arrogance and restlessness, or in Papal ambition. He takes with him his minister of foreign affairs, and perhaps his new premier, Minghetti. They will hardly seek to conceal the settled conviction of their countrymen that any change in French politics which threatens to revive the question of the temporal power, and to incite the clerical faction to fresh deeds of disloyalty and obstructiveness, will have one inevitable effect—to unite Italy and Germany in a common policy and a common defence.

THE WALL-STREET CRASH.

DURING such a crisis as that which has taken place in Wall Street during the past week, the newspapers and the "prominent financiers" whom the reporters "interview" at their offices and on the sidewalks form a kind of Greek chorus, which looks on as the tragedy unrolls itself, and explains the various incidents to the spectator, and draws the appropriate moral. According to this authority, the whole trouble comes from "railroad bonds," which is to a certain extent true. The unsuccessful attempt of two or three houses to help on the construction of great lines of railroad, pending the sale of bonds, has resulted disastrously. It was a mistake on the part of these houses to engage in enterprises of this kind to an extent that put them in jeopardy in case of miscarriage; it was especially a mistake on the part of a house filling a position towards the Government which Messrs. Jay Cooke & Co. did. But then it does not follow from this, as so many commentators would have us believe, that there is anything nefarious about railroad-building, or that it is improper under all circumstances for bankers or moneyed institutions to lend to railroad builders, or that the issue of railroad bonds for purposes of construction is an unworthy act. It is the business of banks and bankers to advance money for all sorts of enterprises which are likely to pay, railroad-building as well as other things. Had bankers always refused to do so, it is safe to say that one-half the railroads in the country would not now be in existence. The practice is not peculiar to the United States. As Mr. Bagehot says, in his work on Lombard Street: "If any nation wants even to make a railway, it is sure to come to this country, the country of banks [England], for the money. It is true that English bankers are not themselves very great lenders to foreign states, but they are great lenders to those who lend. They advance on foreign stocks, as the phrase is, with a margin; that is, they find eighty per cent. of the money, and the nominal lender finds the rest. And it is in this way that vast works are achieved with English aid which, but for that aid, would never have been planned." The question of a money-lender's duty in this matter, as in so many others, is one of degree; or, in other words, a question of how much. It might have been quite right for Jay Cooke & Co. to advance $100,000 to aid in the construction of the Northern Pacific, and yet quite wrong for them to advance $500,000. The enterprise was clearly too large for any one house to shoulder. The line was of enormous length, for the most part through a howling wilderness, and led out into a wilderness, and the sale of bonds to small investors was a source of supply which, if not essentially precarious, could only have been prevented from being precarious by making unwarrantable representations to simple-minded people as to the prospects of the road. We have no hesitation in saying, as we have often said before in these columns, that the construction of new lines of railroad by what are called "popular loans"—that is, the retailing of bonds to small investors—constitutes what has been really scandalous and disreputable in recent railroad-building. Some of these bonds, of course, have turned out very good; but a large number, if they have not turned out worthless, have proved incapable of paying interest from the outset to the unfortunate purchasers. The making of a new railroad is essentially a hazardous and uncertain enterprise; it ought, therefore, to be left to the capitalist class—that is, the class which can afford to wait long for the returns on its investments, or can afford to lose its money altogether. The business of enlisting the poor in it by the contribution of their small savings is a business on its very face tainted with fraud, and one of the worst signs of the times is the extent to which railroad projectors have been able to induce the religious papers to engage in it. In fact, the puffing and sale of railroad bonds, advertised in their columns, has been made for some years back a prominent feature of the conduct of several of these periodicals. If the late explosion in Wall Street puts a stop to this nefarious practice, it will have done a good deal for the purification of public morals. We have again and again been solicited to recommend bonds to investors as a condition of having them advertised in our columns, and we have invariably declined, for the simple reason that, however high our opinion of the security, we had no right to back it with other people's money. A rich capitalist would not be influenced by it, and a poor widow, or minister, or farmer ought not to be.

But is it right to construct railroads by the sale of bonds—that is, by borrowing money at all? Some of the objections which have been made to this system are on their face absurd. There is no moral objection to borrowing money from a shrewd and well-informed investor upon any security with which he is satisfied. If capitalists are willing to supply money to construct a road, and take mortgage bonds on it, it is folly to say that they ought not to be allowed to do so. Whether this is a good way, from a business point of view, to have roads constructed, and whether any road can, from a business point of view, be properly constructed for which the capital has not been supplied by subscriptions to stock, is another matter, on which there is a variety of opinion. The first argument in favor of construction by loans is, however, a very powerful one, viz., that the great bulk of the railroads built in this country within the last fifteen years could not have been built in any other way. Those who think that they ought to have been built by the stockholders are under the influence of the traditions of the days of small things, when railroading first began, and the funds for a new fifty or seventy-five mile line were supplied by a small knot of men in the immediate neighborhood, who could themselves supervise its working, look after the accounts, and attend the elections. Nowadays, when the cost of a road amounts to millions, and the money has to be raised in England and Germany, and Boston and New York, for investment in Texas and Minnesota, investors will not become stockholders unless they know personally the projectors of the road, and have confidence in their character. Stockholding means exposure within certain limits to all the risks of the enterprise, including total loss, and men will not subject themselves to this in any remote business likely to be managed by unknown hands. They say they will become creditors in a security they understand, but partners they will not become. Consequently, they have to be made creditors, if the money is to be got at all. This not unnatural caution has naturally forced railroad projectors to become borrowers; but it has had another effect, which has proved in the eyes of many people a justification as well as an effect. It has made railroad managers reckless, unscrupulous, and arbitrary in their dealings with the stock. The mortgagees, who are the real owners of the road, feeling sure about their dues, give themselves little or no concern about the management, and the directors are consequently exempted from all healthy supervision, and, having once got the control of a majority of the stock, amuse themselves by the formation of "rings" and combinations, by which the interests of the minority are totally disregarded, and the stock is used as an instrument of gambling on the exchange.

Now, what is wanted above all things in the way of railroad reform is some assimilation of the rights of stockholders to those of mortgagees. The individual mortgagee does not care what tricks the majority may play or who holds the majority of the mortgages, because he knows that his rights are strictly defined by law, and that, come what may, he will come in for his share of the property. If the stockholder had similar security against the action of the majority—that is, if he knew that no combination could destroy or lower the value of his property without his knowledge or consent, and that the majority of the shareholders could not hold him at their mercy—roads owned and controlled by stockholders would be more common. Under the present system, they must become rarer and rarer, and roads built by bonds more and more the rule, and the frauds and recklessness of railroad management must continue.

Denunciations of bonds are in the meantime idle and somewhat foolish. They are a commercial device, adapted to the existing financial and moral conditions of American society. They are indeed the natural mode of obtaining capital from distant strangers for use in a new country. If anybody makes larger advances on them, or depends on selling more of them, than prudence justifies, he

ought to suffer the ordinary penalty of imprudence. But let us not add to the numerous follies inseparable from a panic the new folly of abusing and decrying the construction of railroads by private enterprise in the same breath in which we pronounce them the public highways of the United States. If they are public highways, they are something of which it is difficult for a civilized and growing country to have too many, and the men who run the risk of making them are public benefactors. If they are not public highways, what is the meaning of all the declamation about cheap freights and the necessity for easier access to the markets of the world? Is it not time either to leave off crowing over our prodigious development and enormous increase of population, or refrain just now from denouncing railroads as if they were public nuisances? The lessons of the hour seem to be plain enough. Do not undertake enterprises beyond your capital; do not believe all that you read in advertisements and in "the publisher's department" of religious newspapers about the bonds of new railroads; but do not, on the other hand, fancy that there are no good railroad bonds, and that all new railroad projectors are a sort of lottery-dealers; and if three or four bankers have broken down through imprudence, do not flatter yourself that new light has been let in on the world, and go rushing about wildly as if the secret of honest and successful trade had now for the first time been revealed.

THE PRESIDENTIAL INFLUENCE ON POLITICS.

THE appointment of the great Washington jobber, Mr. Shepherd, to the position of Governor of the District of Columbia while fresh from a series of "improvements" closely resembling in character and results those bestowed by Tweed and Sweeny on this city, is raising once more all over the country the question whether reform within the party be possible, and if so, how it is to be brought about. The arguments that were used in favor of leaving the work in the hands of the present party managers during the last Presidential campaign have been rendered useless by the Crédit Mobilier exposure. That proved to the satisfaction of most people, that even if the work was to be done "inside the party lines," Providence had not yet provided the machinery by which it was to be effected. It must be admitted, too, that the hopelessness caused by the history of the last session of Congress has not been relieved or diminished by the influences emanating from the White House. The "salary grab" was an incident of the same nature as the Crédit Mobilier scandal. It was marked by the same eagerness for money, and indifference to public opinion in the pursuit of money, and the same inclination to make identity of pecuniary interest take the place, as a bond of union in public life, of identity of feeling or opinion on great questions of public policy. We presume, therefore, that while few were surprised that Butler should have "engineered" it, a great many were surprised and grieved that it should, while putting a handsome sum into the President's pocket, have called forth no word of criticism or remonstrance from him. We do not pretend that his salary is now too large, or that he is not fairly entitled on general grounds to what he has got, but we think the country was not prepared to see him accept the increase in silence and under conditions so repulsive. If, however, he felt perplexed, as he well might, as to the proper mode of dealing with such extraordinary legislation, there was little ground for hesitation as to what his attitude and that of the Administration should be towards its promoters and their kind. The cause of decency as well as of civil-service reform certainly required that the support of the Government should not be extended to Butler in Massachusetts; and people were asking themselves how the President could be betrayed into such indiscretions, when the appointment of Shepherd, backed by a testimonial letter, set them to asking still further whether there is really a certain liking at the White House for the class of men to which Butler, Shepherd, Murphy, Cameron, and others belong—that is, the pushing, audacious, unscrupulous, energetic class which make politics and money-getting go hand in hand, and work for governorships, and senatorships, and collectorships under the influence of the same motives, and with almost the same language, with which they engage in a real-estate or railroad speculation. What is quite certain is that this class, the class of not over-nice but thoroughly successful money-getters, have apparently more weight in Washington than any other class in the community, and get from the Executive marks of esteem and even of affection which the men whom the best part of the American community really honors look for in vain. We doubt if there has ever been a time when signs of intellectual superiority in any field were of less use or of more disadvantage to a man in the highest political circles than they are in Washington to-day, and when the possession of a comfortable "pile" of money, acquired no matter how, counted for more. This is a hard thing to say, and a harder thing to believe; but it is what the most intelligent and public-spirited observers are saying and believing in private. The worst thing that can happen from blurting it out is that it may "divide the party," or, in other words, produce the calamity that would have resulted from telling Butler at Worcester that under no circumstances would the Republican party support him; but then people are beginning to look on a division of the party as by no means the worst thing that can happen them.
